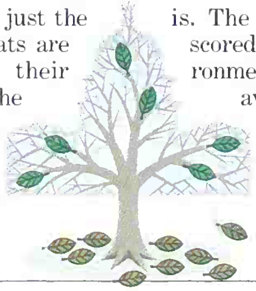
TALK SHOW “The Constitution gives me relevance, the power of our ideas gives me relevance. The President is rel vant here.” *—President Bill Clinton, on why his views are imp tant despite the assertive GOP Congress*

SLUGFESTS

CONGRESS: BLACK DAYS FOR THE GREENS



ENVIRONMENTALISTS HAVE plenty to raise a stink about on Apr. 22, the 25th anniversary of the first Earth Day. The new Republican-led Congress has hurt their cause mightily. Nor is it just the GOP: Key Democrats are working against their agenda, too. The greens recently lost votes on softening environmental safeguards and compensating property owners claiming losses from federal rules.

A study of the first 100 days by the League of Conservation Voters shows just how staunch the opposition is. The 73 GOP freshmen scored a paltry pro-environment rating of 3% on average, vs. 10% for veteran Republicans. Worse, 23 conservative Democrats backed Republicans on the environment. Led by Representative Billy Tauzin (D-La.), they scored 13%, vs. 77% for other Dems.

It won’t get any better in the Senate, where important votes are coming up. League of Conservation Voters President Jim Maddy expects new GOP senators to team up with the likes of Senator Howell Heflin (D-Ala.), offsetting pro-environment moderate Republicans. The enviros hope to chop down a clump of their foes in the 1996 election, including Representative Rick White (R-Wash.). However, unless they can find a message that sells in the Newtoid ’90s, prospects for the greens don’t look too rosy at all. *Mary Beth Regan*

I-WAY PATROL

DESPERATELY SEEKING SPECTRUM

THE SATELLITE VENTURE backed by moguls Bill Gates and Craig McCaw is wobbling in orbit. They are lead investors in Teledesic, which wants to provide wireless phone service to remote parts of the globe. The hitch: Wireless cable-TV companies are occupying the section of the radio spectrum that the Gates-McCaw outfit covets, and they won’t make way.

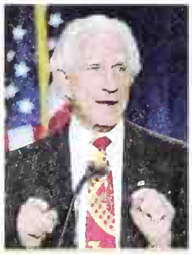
The wireless cable folks, led by CellularVision of New York, offer to share the spectrum with Teledesic and other satellite providers now gearing up. CellularVision wants to blanket the country with wireless cable TV and local phone service. Teledesic and its allies say spectrum sharing would create too much interference. The wireless outfits disagree. Each side argues its service is the more important to the U.S. economy. The entire matter will be refereed by the FCC.

Gates and McCaw each invested $5 million last year in Teledesic—adding undisclosed sums since. Gates is a passive investor; McCaw is more active. McCaw and Teledesic President Russell Daggett have met twice with FCC Chairman Reed Hundt, seeking liftoff. *Mark Lewyn*

VEXED: *Investors Gates and McCaw*

APPOINTED ROUNDS

THE CHIEF MAILMAN KEEPS HIS ROUTE



RUNYON: *Curbed*

THE TRIP TO THE dead-letter bin is off for Postmaster General Marvin Runyon. Last year, as the Postal Service suffered a $914 million deficit and many delivery screwups, there was talk its board of governors would fire Runyon. When the board meets on May 1, however, most of the members will be behind him.

How did Runyon survive? Partly by fixing a lot of delivery snags. First-class and overnight mail, while hardly perfect, are more prompt, a Price Waterhouse study says. Also, January’s rate hike will produce an estimated $210 million surplus this year.

Another factor: The board has tightened its grip on Runyon. Some governors felt he didn’t consult with them enough before going public. Example: In January, he made a speech calling for changing postal laws. So Chairman Sam Winters told him to clear such speeches with the board. Some also felt Runyon’s aides kept bad news from them. In February, the board voted to require its O.K. on senior managers’ salaries. Runyon’s spokesman calls the procedural changes minor and says Runyon has kept the board fully informed. Presumably, not by mail. *Mark Lewyn*

CHERRY DEAL: *Schimbe*

IN THE CHIN DYNASTY, THEY BUILT A WALL. NOW THEY'RE USING AST COMPUTERS TO ADD A HIGHWAY.

CHINA IS EXPERIENCING A REVOLUTION OF telephone lines, satellite dishes, fax machines - and personal computers. Many of them, ours.

Nearly one out of three personal computers in China is made by AST. From Shanghai to Beijing, you hear the same question, "Is it AST compatible?" For that, we say *xie-xie*. Or thanks.

While some companies have only recently discovered China's explosive economic growth, we've been there all along. Even the *South China Morning Post* has noticed that AST is "at the forefront of marketing innovations."

Years ago, we began donating our computers to local schools. We've even sponsored contests to promote computer literacy.

We also opened a Hong Kong headquarters, followed by a manufacturing plant in Tianjin. Today, it delivers computer systems pre-loaded with Chinese software as far away as Manchuria.

With plants in Asia and other countries around the world, AST is one of the largest manufacturers of personal computers anywhere.

For business users, we make Premmia™ high performance desktops, affordable Bravo desktops, a full range of Ascentia™ notebooks along with Manhattan™ servers. Our Advantage!® PC's are perfect for home or small office.

In China, AST computers are hard at work improving communications among a billion people, and creating the infrastructure of a free market. Whatever your needs, chances are we can help. Please call 800-876-4AST.

Or on your next business trip to China, look for our computers. You'll find them wherever the Great Wall meets the information highway.

YOU'LL LIKE THE WAY WE WORK

FEMALE RECRUITS: *A $7 million ad drive*

MAD AVE

HERE'S THE DRILL: MORE WOMEN

THE MILITARY IS LOOKING for a few good women. Its $7 million ad drive to attract women recruits dwarfs past campaigns by the individual services. So from now through September, the military's agency, Bates USA, is placing ads in magazines read by young women, such as *Seventeen* and *Sassy*. In July, TV spots will start. But don't look for macho ads with troops rappelling from helicopters. The focus is on personal growth and education. Print ads show a woman in civilian clothes in an academic setting.

With the just-out-of-high-school population pool shrinking, the Pentagon is turning to young women to fill the gap in the traditionally male armed forces. Last year, it allowed women to perform such previously off-limits military duties as jet fighter pilot, with only ground combat and submarine jobs still *verboten*. Today, women make up 12% of the armed forces, up from 5% two decades ago. By one estimate, their share will almost double in 10 years. ☐

DIVERSITY

LILY-WHITE IN LA-LA LAND?

HOLLYWOOD, PLEASE TURN the spotlight on thyself. Affirmative action, a much-maligned concept in Newtville-on-the-Potomac, has its own set of problems in Tinseltown, that bastion of tanned knees jerking. Over the past decade, the Writers Guild has set up 11 programs with TV studios to temporarily bring aboard nonwhite or female scriptwriters—in hopes they would be hired as full-fledged staffers later.

MR. COOPER: *Few black TV writers*

The catch: They work for reduced wages. At studios producing sitcoms for CBS, the affirmative-action hires get half the guild's $2,500 weekly minimum. Publicly, most participants say it's a good opportunity. But some grouse they should be hired full-time at a regular salary. Migdia Chinea-Varela, who has written for *The Facts of Life*, turned down the program, saying the guild is telling her to "sit at the back of the bus." The guild argues that the programs are a good way to expose talent.

Has this push worked? No one tracks how many diversity-program writers have become full-time. But a 1993 Writers Guild study found that minorities make up only 4% of its membership. Even on black-oriented shows, white male writers tend to predominate: Among the 10-member staff at ABC's *Hangin' With Mr. Cooper* sitcom, only 3 are black. *Jennifer Holland*

TRACKED

NEW BUSINESS

$ These days, a prime source of new business is the business you already have. For Norwest Corporation, selling more products meant fully understanding their existing customers' needs. But with customer profiles fragmented across 12 different databases, it became increasingly difficult to determine who needed what. $ How was Norwest able to better manage its commercial banking relationships and increase revenues in the process? With the help of Gemini,™* a consolidated sales and marketing account management system, built on a foundation of Microsoft® products, including Windows NT™ Server and Microsoft SQL Server,™ part of the BackOffice family. $ "We evaluated other systems, but only Microsoft gave us the power and flexibility we needed to reach our goals," says Daniel G. Pocrnich, Chief Financial Officer at Norwest Bank Minnesota. Gemini provides a comprehensive view of ever-changing customer profiles. So customers receive more personalized service. And cross-selling opportunities become abundantly clear. The result? Products sold to existing customers increased by 34 percent. What's more, Norwest increased account fee revenues from 39 to 60 percent of total revenue. $ To get more information on how Microsoft can help you gain a business advantage using computers, call (800) 437-3119, Dept. GN4.

Readers Report

IS JAPAN BENT ON DOMINATION?

Your Apr. 10 issue, with various articles on Japan ("Japan's new identity," Cover Story), paints a rather alarming picture of an emerging giant, sword in hand, whose dominating ambition seems to be hidden in the shadows.

What was never stated outright is the question of whether Japan in the '90s is deeply reminiscent of prewar Imperial Japan. There seem to be hints of the philosophy that gave rise to Japan's rallying cry before World War II: a strategy to exert influence via economic power rather than military might, using that power as both a defensive and an offensive weapon. Although a defensive posture can be explained by the fear of a growing and stronger China in the Far East, there is also the offensive mind-set of an island nation bent on expansion of territorial riches measured not in geographical terms but in derived economic value.

Economic dependence can be just as strong a weapon as military occupation and much less costly, but with all the benefits flowing to the conqueror.

Let us hope that the premise of an Imperial Japan is not forthcoming and that the Japanese will use their economic muscle to improve life in the emerging nations they operate in, and foster peaceful economic coexistence in the Pacific Rim, thereby benefiting the world as a whole.

Lawrence A. Beer
Paradise Valley, Ariz.

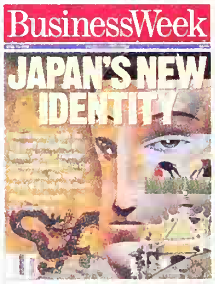
As a non-American and a student of Asia, I am appalled at the shortsightedness of the American attitude toward Japan. Whenever the yen appreciates against the dollar, there is a spate of articles such as your Cover Story.

The gist of all this is that Japan is some monstrous, monolithic entity bent on subverting the "American way." This is remarkably silly. The real th to the U.S. is not Japan but Ch

There are two possibilities, fraught with danger. The first is China succeeds wildly. Then imagin alliance that marries Japanese brai Chinese brawn. The second possibilit that China implodes into open fratric war. This will certainly spill over Southeast Asia and South Asia. W plenty of nuclear weapons, the Chi can wreak a lot of havoc.

In either scenario, the U.S. ne Japan as a counterweight and an Instead of alienating Japan and blam it for your own budgetary proflig and lack of competitiveness, you Am icans ought to cooperate with To more, not be shrill scolds.

Eureka Kingsley-Raj
Stanford, Ca



WHO'S REALLY AT FAULT

"Instead of alienating Japan and blaming it for your own budgetar profligacy and lack of competitiveness, you Americans ought to cooperate with Tokyo"

In our current circumstances of de oping an export-intensive profita economy, I thought the issue of Japa turning to East Asia was very tim well-written, and thoughtful. I beli Japan is trying to develop an econo community similar to the European ion and NAFTA to buffer global econ ic tremors and landslides.

Basically, for the U.S. to escape tionalistic and regionalistic paroch ism in Europe and East Asia, it has overcome the economic weakness now have and make a charge at EC and East Asia. Easier said th done, I'd say. I believe I might not l long enough to see U.S. workers a leaders develop the seamless soc political, and ideological unity th Asians find possible to achieve becau

HEWLETT®
PACKARD

of their philosophy and temperament.

Lawrence E. Dunlap
Houston

In response to your editorial "What Japan's Asia tilt means" (Apr. 10), I say shame on this country and the leaders running it. More so, shame on the American people who put them there and do nothing about it. This trade problem is not going to go away on its own. It's long overdue that we as a nation stand up strong against the Asian bloc and start putting our interests in the foreground.

Anthony R. Zopich
Staten Island, N.Y.

BILL GATES, PRO AND CON

If Microsoft Corp. is anywhere near as contentious as its chairman ("Bill Gates, uncensored," Information Processing, Apr. 10), I'm not surprised its competitors are so upset.

David Frank
Baldwin, N.Y.

Bill Gates helped create a new world of opportunity for millions. If it were not for the advent of the personal computer, I could still be working at a cemetery digging graves for a living. Bill Gates should be appreciated for his contribution to the PC. He is a savvy visionary who, like Henry Ford, gives the average person mobility. Gates has molded a very complex industry from infancy to maturity. He has aided in unlocking the human mind to its greater potential, allowing individuals the independence to work anytime and anywhere.

Let the cynics and critics whine and whimper about Bill Gates's short-term failures. As for me, one who benefited greatly from his long-term successes, I say: Thank you very much, Mr. Gates.

Marc Rinehart
Clinton, Ohio

Bill Gates says that everything Microsoft does is for the benefit of the industry, that the company has never knowingly done anything wrong. This sounds like IBM's position in 1969, when it was sued by the Justice Dept. for antitrust violations for the third time.

Today, a new menace dominates the industry in the form of Microsoft. And the tactics it used to dominate today's software industry are identical to those used by IBM. An entire industry—one responsible for much of the innovation and leadership that keeps America at the forefront of technology—is at risk. Here are the things Justice should do to aggressively pursue Microsoft:

1. Bring suit against Microsoft. The suit would bring immediate relief for software companies, since Microsoft will necessarily become more cautious—just as IBM reacted in the 1970s.

2. Openly propose to break Microsoft up. In the past, the courts have applied the principle of maximum separation to prevent the use of economic power in one distinct line of commerce for competitive advantage in another. By dividing Microsoft into an operating systems company, an applications company, a multimedia company, and a network services company, the Justice Dept. can level the playing field and create an environment where innovation and advancement can take place.

3. In the shorter term, the government should seek a preliminary injunction against Microsoft. Some immediate relief is needed by other software companies and by users. Most important, software vendors need to be able to reverse-engineer Microsoft's operating system. The government should also require Microsoft to operate its Network service as a separate subsidiary and force Microsoft to erect "Chinese walls" between its operating system groups and its application groups.

4. Turn down the Intuit acquisition. If this acquisition is approved, it should only be under the condition that it operates as a separate company.

A healthy market for growth and innovation demands that Microsoft be reined in. No one is in a stronger position to do that than the Justice Dept.

Martin A. Goetz
Teaneck, N.J.

Editor's note: Goetz co-founded and was president of the software company Applied Data Research. In that role, he assisted the Justice Dept. in its suit against IBM, testifying at the trial as a government witness.

CORRECTIONS & CLARIFICATIONS

In "Japan's new identity" (Cover Story, Apr. 10), Faye Wang should have been identified as a Hong Kong, rather than a Taiwanese, singer.

In "Jock market" (Up Front, Apr. 17), Viacom was incorrectly said to have 100% ownership of the Florida Panthers. The team is owned by H. Wayne Huizenga, a Viacom board member, who has the right to transfer that ownership to Viacom.

nobile with more than just sumptuous ıities. Beneath its luxury lies a vibrant ·rplant, a four-wheel double-wishbone ·nsion, and an engineering philosophy ed decidedly toward owning the road.

'he new Acura TL is a touring luxury n that does more than reward a sophisti- l sense of taste. It also proves you haven't en boring along the way.

SOME THINGS ARE WORTH THE PRICE

ACURA

BY STEPHEN H. WILDSTROM

A CLONE THAT'S AN APPLE AT ITS CORE

At first glance, the new machine from Power Computing Corp. looks like just another no-name PC clone. But look closer and you'll notice there are two little buttons where the reset switch should be, and the floppy drive has no eject button. Yes, Macintosh clones are here, and an early look suggests their arrival is good news for users.

When IBM clones appeared in the early '80s, they ushered in the era of super-cheap computing. They also introduced incompatibilities that plague the Windows/DOS world to this day. The Mac clones are off to a different start. Apple Computer Inc., which blocked imitators for over a decade by refusing to license its basic operating system, now fully backs the cloning effort as a way to build market share for its software (BW—Apr. 24). The Power Computing units use Apple-designed chips, have Apple software loaded in read-only memory, run the Mac OS operating system, and boot up displaying the familiar "happy Mac" icon. For all practical purposes, they're Macs.

FIT AND FINISH. As with PC clones, price is the main attraction. Power Computing's Power 80, without a monitor, sells for $2,599, about $400 less than the street price of a comparable Power Mac 7100/80. They will begin shipping in May, although the machines will be in short supply until midsummer. Both to minimize costs and to avoid direct competition with Apple's established retail channels, Power Computing will stick to direct sales (800 999-7279, or E-mail to info@powercc.com).

Power Computing's clone lacks some of the industrial-design touches for which Apple is famous. The modified PC case is clunky, and the power supply is an off-the-shelf PC unit from Taiwan. Other than that, it shows few signs of cost-cutting efforts. First-quality components, including an Apple keyboard and mouse, are used throughout. The circuit boards, even on the preproduction Power 100 that I used for evaluation, were free of the patches that indicate last-minute repairs. Probably the most significant functional departure from the Mac design is the inclusion of an extra video connection that allows you to hook up a standard PC monitor without an adapter.

Given this high level of compatibility, it's not surprising that in a weekend of putting the Power 100 through its paces, it gave every appearance of being simply a very fast Power Mac. I connected it to AppleTalk and NetWare networks without difficulty. The quad-speed CD-ROM drive did fine with multimedia presentations. Programs that challenge memory and processor power, including Wolfram Research Inc.'s Mathematica and KPT Bryce, performed without a hitch. The Power 100, with its 100-megahertz PowerPC 601, 16 megabytes of memory, and high-performance video system, is designed to compete with Apple's top-of-the-line Power Mac 8100/100. Predictably, it knocked the socks off my Power Mac 6100/60.

The initial Power Computing models compete with the top of the Apple line. Future offerings will go up against low-end Power Macs, the 6100 and Performa series. And like the clonemakers of a decade ago, Power Computing isn't content just to imitate: "Later this year, we'll start to add features that are unique to our own boxes," says Bob LeVitus, director of evangelism.

That could be a mixed blessing for consumers. Competition and larger market share could bring users better, cheaper machines. But it could also destroy the Apple-enforced consistency and uniformity that have long made using Macs such a pleasure.

PRINTERS

COST-CONSCIOUS COLOR

If you've wanted a top-quali color printer for your network but balked at the $10,000 price tag, your wait may be over. With a list price under $5,000, the new Phaser 340 from Tektronix (503 682-7377) uses a crayon-like sol ink to produce beautiful colo output at four pages a minute. Color laser printers, whose prices start at around $7,000, can turn out black-only text at high speed. But the Phaser 340 is really only practical for color work. A te page takes as long to print a a color graphic, and the wax gloss that makes the color output more vibrant than the laser's muted tones can be distracting on straight text.

SOFTWARE

KILLER APPLICATIONS

Spring graduates looking for their first real job can get a bit of help in the grueling pr cess from Resume 3.0 from WinWay Corp. (800 494-6929). The $50 Windows program helps you prepare a résumé and application letters The CD-ROM version includes interactive videos designed t prepare applicants for interviews. While much of the information is a bit simplistic for the seasoned job-seeker, the help in preparing an effective résumé and advice or how to handle tough intervie questions could give first-time applicants a leg up.

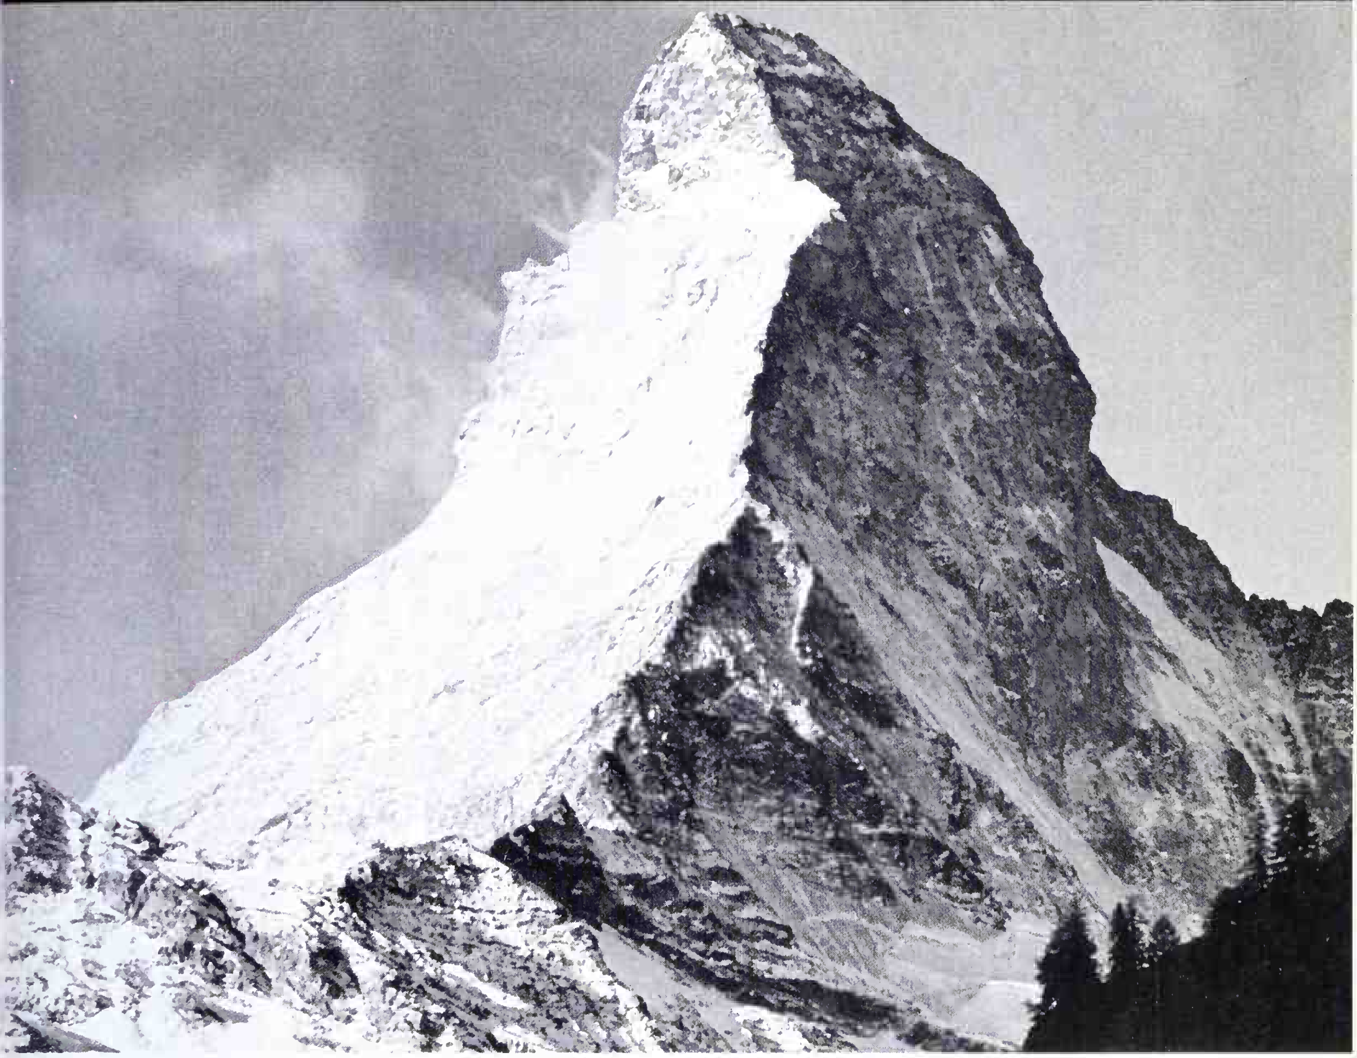
CONCORD ON...



CHARACTER

Every man has a character, but not all are *of character.*

"...Character is founded on the living rock of principle." It is the mettle of the man...his underlying core. It has unspoken power; it is solid, resolute, doesn't "blink."

Over 2500 years ago, a philosopher said, "Character is destiny." In the centuries since, thinkers have defined it as..."beyond intellect" and..."the governing element of life."

In an era when there's glory in glitz and greed, does this still apply: "There is no higher praise than...He is a man of character?"

The truth remains, only character endures over time. (A principle well-heeded in the crafting of a quality timepiece.)

Letter From a Kibbutz

CHICKEN PLUCKERS IN THE PROMISED LAND

BLUE-COLLAR KIBBUTZ: *The author on the factory floor*

PHOTOGRAPH BY REUVEN KOPITCHINSKI, CHART BY ALAN BASEDEN

It's 3:45 a.m. on a Wednesday, and my injection-molding machine hasn't broken down so far. It's a small blessing, sure, but one of the delights that helps get you through the night shift at the Duram Rubber Products factory here on Kibbutz Ramat Hakovesh in Israel.

I make widgets. Actually, I make chicken pluckers, which are used to pull feathers off poultry, but I've never been in a poultry processing plant. As far as I'm concerned, the pieces I help make might as well be widgets. The Duram rubber factory makes a wide range of chicken pluckers for a wide range of chickens. There's a difference, you know, in how hard it is to pull feathers off various sorts of chickens. This is what a kibbutznik told me when I first started working in the factory. I'm learning a lot here. I've almost mastered the injection-molding process. One of the mechanics is teaching me how to troubleshoot the two Italian-made machines in my charge. I wear work boots and heavy gloves, and it's hard to remember that I once sat behind a desk in the midtown Manhattan headquarters of BUSINESS WEEK and pondered corporate takeovers and trade negotiations. Indeed, in the nearly three months I've been on Kibbutz Ramat Hakovesh as a volunteer and Hebrew student, I believe I've adapted well. I think light manufacturing becomes me.

Today, many of the 280 kibbutzim in Israel depend on some form of manufacturing for a percentage of their income. Some of these factories, like the Duram plant, bring in the bulk of kibbutz revenues, linking the success of the kibbutz as a whole to the plants' health and profitability. That capitalism would play such a big role in supporting the socialist communal ideal on which the kibbutzim were based is probably something the Zionist founders of the collective movement would not have endorsed. But changes are necessary if the kibbutzim are to survive into the next cent

Letter From a Kibbutz

BACKBREAKING PHYSICAL LABOR: *Building a kibbutz in 1949 in northern Israel*

AP/WIDE WORLD

would hurt the whole kibbutz," says Haim Routzky, 44, the plant's general manager. Like the other workers here, he does not draw a salary but gets a quarterly allocation that takes care of family expenses apart from food, housing, and health care, which are entirely paid for by the kibbutz. The factory gives most of its revenues to the kibbutz for these expenses, while allocating a percentage each year for factory upkeep and expansion.

RUSSIAN INFLUX. Running a successful business isn't easy on a kibbutz. Individuals don't stand to gain from innovation or higher quality. And until recently, the idea of profit and moneymaking for its own sake weren't values much embraced by hardscrabble kibbutzniks. Each time Routzky wanted to send workers on important business trips, say, to trade shows or seminars, he had to convince the governing body of the kibbutz that the travel wasn't frivolous. Travel paid for by the kibbutz was seen as a reward—the idea of travel for business was a strange concept. As business grew, however, Routzky, a tall, affable man whose family came from Poland and who was born and raised on Ramat Hakovesh, was eventually able to show the links between travel and new-business generation.

Another problem: With no plant hierarchy and no individual monetary rewards, how could workers be expected to put their all into productivity and efficiency? "All members own a piece of the factory," says Routzky. "But that doesn't necessarily translate into harder work.

The influx of Russian Jews into Israel, however, has brought highly motivated and skilled workers to kibbutz factories. Some 540,000 such immigrants have landed since 1989, and to stave off overcrowding in Israel's immigrant housing, the government asked the kibbutzim to house, employ, and teach Hebrew to some. There are 15 such new immigrant families living in temporary trailer homes at Ramat Hakovesh. These families are not members of the kibbutz and are expected to leave and make their own way after two years. But while here, they earn salaries (triple time for night shift), study Hebrew and Judaism, and generally become acclimated to their new country.

It used to be said that anyone working at a kibbutz but not a member would find it hard to get to know the permanent kibbutzniks. I have not had that problem: Kibbutzniks have invited me into their homes for dinner, and they seem to appreciate hard work and friendliness.

As the factory continues to prosper, the benefits are hitting the kibbutzniks where they live. Members of the kibbutz today have luxuries undreamed of 15 years ago. Each fa ly is allotted a p sonal stipend whatever expen the kibbutz does cover. That me you can find a and a couple of PC just about any k butznik's home th days. Since the fac ry accounts for 6 of the kibbutz' come, keeping fac ry production up a direct impact on worker's well-bei That is directly in with the original k butz ethic. "The mi set is not for perso profit," says Routz "The mind-set is the kibbutz."

Unfortunately, this attitude is cha ing, especially with the younger gene tion. Money, with the material poss sions and personal freedom it brings drawing many young kibbutzniks out their cloistered lives. The kibbutz populations are aging, and in some ca this means a shortage of labor. Risi costs, foreign competition for produ sales, and ongoing political tensions also taking their toll on the moveme

MODERN WAYS. More and more, k butzniks are encouraged to take o side employment, with the understa ing that they remit their salaries b to the kibbutz. This also lures aw members, some because they want keep their own money and make th way on the outside. Others marry n kibbutzniks and leave the movement

But Ramat Hakovesh has shown t a kibbutz can modernize and compete the open market while maintaining roots in the land and its commitment a communal lifestyle. When my sh ends at 5 a.m., I'll walk to the edge the fields and watch the sun rise ov the West Bank, less than two mil away. Then I'll have breakfast in t communal dining room and watch t old kibbutzniks with their memories a the young kibbutzniks with their hop for the future.

JULIE TILSNE

BOOK BRIEFS

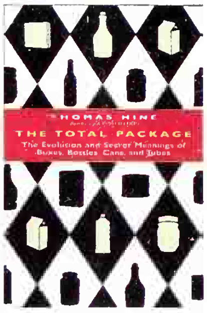
THE TOTAL PACKAGE
The Evolution and Secret Meanings of Boxes, Bottles, Cans, and Tubes
By Thomas Hine
Little, Brown • 289pp • $24.95

WRAP SESSION

Anyone who has ever pushed a cart through a supermarket knows that packaging is more than just paper and cardboard. Every stroll through the aisles subjects us to the screaming messages of 30,000 bagged, boxed, canned, and frozen bundles. Candy wrappers, fast-food containers, soda cans—packages are so ubiquitous that most of them fail to register in our consciousness.

But that doesn't mean containers go completely unnoticed. In *The Total Package*, Thomas Hine tackles the more subtle roles that packages play, from substitute sales clerk to subliminal emotional trigger.

Hine, a design critic for the *Philadelphia Inquirer*, starts with the earliest packages of antiquity—the clay vessels that allowed traders to tell an amphora of oil from an amphora of wine. Today, Hine points out, rather than packages arising as a means to distinguish products, we have products arising as a way to fulfill the promise of a successful package.



THOMAS HINE
THE TOTAL PACKAGE
The Evolution and Secret Meanings of Boxes, Bottles, Cans, and Tubes

But the heart of Hine's book traces the rise of the mass-market, consumer-goods package, and it's here that he is at his best. At the start of the century, everything from sugar to soap was bought and sold as a commodity. Then, the arrival of packages, with their promise of predictability and quality, allowed the emergence of national brands. And instead of asking a grocer to measure out five pounds of flour, buyers helped themselves to premeasured bags. Ninety years later, pa ages have almost eliminated the gro or sales clerk from the store. Lab bearing instructions, recipes, and pr uct specifications do the job now.

By bypassing the retailer, packag allow the manufacturer to speak dire ly to the customer. In a si of a second, they communic volumes about price, val quality—even class aspiratio

Hine does a good job showing the transformation packages from mere conta ers to sophisticated commu cation devices, though he ters when he gets a lit further afield—for examp trying to relate the fall of co munism to poor packaging. In an age which everything from the food we to the political candidates who wo lead us come prepackaged, it's importa to think occasionally about the wra ping that veils the substance.

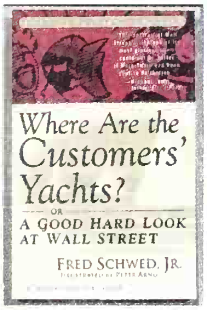
WHERE ARE THE CUSTOMERS' YACHTS?
A Good Hard Look at Wall Street
By Fred Schwed Jr.
Wiley • 215pp • $16.95 paper

GOLDEN OLDIE

Fred Schwed Jr.'s classic look at the world of high finance begins with a bit of cynicism: " 'Wall Street,' reads the sinister old gag, 'is a street with a river at one end and a graveyard at the other.' This is striking but incomplete. It omits the kindergarten in the middle…." A novices' guide to the Street first published in 1940, *Where Are the Customers' Yachts?* is now being brought before a new generation of investment tyros thanks to John Wiley & Sons, the publisher that last year revived another account of bygone years, Edwin Lefèvre's *Reminiscences of a Stock Operator.*



Where Are the Customers' Yachts?
OR
A GOOD HARD LOOK AT WALL STREET
FRED SCHWED, JR.

The "kindergarten" that Schwed refers to is actually more of a dartboard—with the investor as the target. Throwing the darts, and getting a lashing from Schwed and famed *New Yorker* cartoonist Peter Arno, are an assortment of suspects that have stood the test of time—speculators, bankers, economists, fund managers, and financial seers. Still, the book at times seems antique: Of the archetypical banker, Schwed observes: "He says 'yes' only a few times a year. His rule is that he reserves his yesses for organizations so wealthy that if he said 'no,' some other banker would quickly say 'yes.'" My, how times have changed.

A few words of caution are in order: The author's style is old-fashioned, and the portrait of Wall Street's mores wouldn't pass a 1990s political-correctness exam. The Street back then was even more a white man's world than it is today, with women relegated to the secretarial pool.

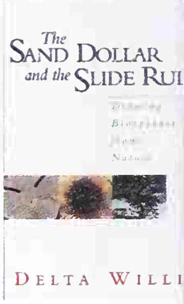
BY GARY WEISS

THE SAND DOLLAR AND THE SLIDE RULE
Drawing Blueprints from Nature
By Delta Willis
Addison-Wesley • 234pp • $23

NATURE AS MUSE

Engineers have sought inspiration from nature for centuries, but never more so than today. Each week brings fresh news of projects to use DNA as a computer or to build airplane wings with microflaps that function like feathers on birds' wings. The timing is right for *The Sand Dollar and the Slide Rule* by journalist Delta Willis, which probes how the forms of plants and animals are uniquely suited to environmental challenges, from kelp that withstands crashing waves to the skeleton of the frigate bird, which has a seven-foot wingspan yet weighs only fo ounces. And it shows how these ha influenced engineers and designe ranging from Leonardo da Vinci to Pa MacCready, inventor of the Gossam Condor ultralight aircraft and Gene Motors Corp.'s Impact electric vehic

Willis' book has enough examples a thousand cocktail-party asides. Did you know, for instance, that the Romans were able to fling 90-pound rocks a quarter-mile by using human tendons for springs? Or that the Eiffel Tower's spreading base was inspired by the oak tree?



Willis introduces dozens of scienti who try to extract the engineering crets of Mother Nature. The one w comes through most clearly and sy pathetically is D'Arcy Thompson, t Scottish biologist whose 1917 classic *Growth and Form* disputed Darwinis by arguing that physical forces, such wind and gravity, not natural selecti determined the shapes of living thin

Sand Dollar has some flaws: It h too few illustrations and photograp And Willis has a jumpy, kinetic writi style that is long on anecdote and sh on methodical explanation. Nonethele *Sand Dollar* is a good read for en neers, naturalists, and wannabes.

RETROSPECT
TRAGEDY AND LESSONS OF VIETNAM
Robert S. McNamara with Brian VanDeMark
es • 414pp • $27.50

McNAMARA SPEAKS—
UT STILL DOESN'T SEE

First, cards on the table: There was a time when I hated Robert McNamara. In 1966-67, when he nearing the end of his tenure as ense Secretary, I was a student at umbia University. I bitterly opposed Vietnam War, and he was so identi- with it that many people called it :Namara's war."

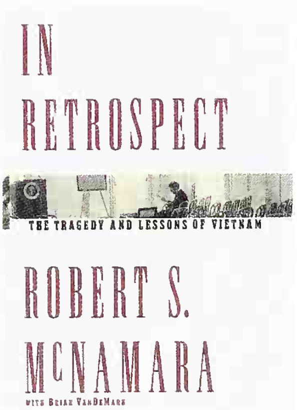
wenty years later, while research- a book on Vietnam, I found that ings about McNamara still ran hot. I ecially recall one vet who had lost an to "friendly" helicopter fire. During interview, he suddenly broke out: u know who I really can't forgive? McNamara. Where does he get off ning that war and then quitting and er saying another word about it? I an, who gave him the right to re- n silent?"

Vell, now McNamara has spoken. His noir *In Retrospect* breaks the public nce he has maintained concerning tnam for some 27 years, ever since left the Pentagon on Feb. 29, 1968, ake over the World Bank. The book n insider's account of what he sees one of the catastrophes of American ory—and while it is disappointing, it lso fascinating.

IcNamara is a figure of such stature t the tale of his involvement with tnam approaches tragedy. President Ford Motor Co. at age 44, he was ied as a manager, a genius of sys- s analysis and quantification. He was uably the very brightest of "the best the brightest" whom Kennedy ught to Washington. He presided r U.S. escalation in Vietnam, yet wly became convinced the war could be won, making it impossible for to remain in Johnson's Cabinet.

Jnfortunately, McNamara plays down personal drama of this story, so his k has the personality he projected as fense Secretary: cool, stiff, and technocratic. His long silence, he says, stemmed from fear that anything he said "might appear self-serving, defensive, or vindictive." So why does he speak now? The main reason "is that I have grown sick at heart witnessing the cynicism and even contempt with which so many people view our political institutions and leaders." He rightly traces some of that contempt to Vietnam, and hopes to combat it by showing that he and other officials did the wrong things—but for the right reasons.

It is hard to credit these selfless motives; *In Retrospect* seems written at least in part to answer Deborah Shapley's unflattering 1993 biography, *Promise and Power*. But for a memoir by a high government official, it is remarkably self-critical. Tracing the slide down the "slippery slope," McNamara admits he too readily swallowed assertions that given enough troops, the U.S. military could crush the communists. "I had spent 20 years as a manager identifying problems and forcing organizations—often against their will—to think deeply and realistically about alternative courses of action.... I doubt I will ever fully understand why I did not do so here."



Not surprisingly, McNamara views Vietnam in no small part as a management problem. One point he makes is that, faced with a plethora of crises—the civil rights upheavals, the Six-Day War—he and the other policy players simply didn't have enough time to fully thrash out fundamental questions about the war. Other "lessons" he cites—that cold warriors were blinded by their ideology and by the domino theory, that policymakers grossly misjudged the Vietnamese, and that they should have reversed course when the Saigon regime's fecklessness became obvious—are hardly fresh, having already been drawn by a generation of scholars.

Still, it is good to have McNamara himself weigh in at last on this side of a still-raging debate over the meaning of the war. He demolishes the notion that the great mistake lay in not "letting our boys win," and refutes the notion, maintained by other geopolitical Big Thinkers, that by taking a stand in Vietnam, Washington stopped communism from spreading throughout Southeast Asia.

McNamara, however, still displays one blind spot typical of most Americans writing about the war: The Vietnamese are virtually absent. For example, he talks of South Vietnam being invaded by North Vietnam as though the two had forever been separate countries, when in fact they had been divided only since 1954. And in the coda to his book, he writes: "By the time the United States finally left South Vietnam in 1973, we had lost over 58,000 men and women; our economy had been damaged by years of heavy and improperly financed war spending; and the political unity of our society had been shattered, not to be restored for decades. Were such high costs justified?"

The paragraph is breathtaking in its Ameri-centrism. Vietnam, a small country, lost an estimated 3 million dead in the war, 50 times the U.S. losses, and its society was "shattered" to a degree that makes America's dislocations look puny. To omit such facts from any tally of the "costs" bespeaks an indifference closely related to the way the war was prosecuted. The central reason for the Vietnam disaster was America's ignorance of the politics and culture of an Asian peasant society, and that ignorance stemmed largely from not giving a damn. But Robert McNamara still doesn't seem to get it.

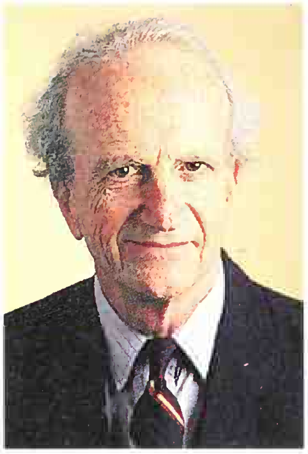
THE BEST REASON TO GET PEOPLE OFF THE DOLE



INITIATIVE: Free markets foster thrift, self-reliance, and other virtues, while programs such as welfare promote the wrong values

Economic systems that rely on private behavior and competitive markets are more efficient than those with extensive government control. However, the effects of a free-market system on self-reliance, initiative, and other virtues may be of even greater importance in the long run.

That's why economists and many other defenders of a free-market system in the 19th century often emphasized the system's effect on values rather than on efficiency. Alexis de Tocqueville, after a long visit to the U. S., observed in his remarkable study *Democracy in America* that "the principle of self-interest . . . disciplines a number of persons in habits of regularity, temperance, moderation, foresight, self-command; and if it does not lead men straight to virtue by the will, it gradually draws them in that direction by their habits."

These insights on the relationship between self-reliance and good habits should help guide the reform of public programs that corrupt the values of their participants. The welfare system is a good example, because leaders of both political parties agree it is not working well and needs to be changed. Although many families on welfare get off the rolls within a year, about 40% continue to receive benefits for longer than two years, becoming more and more dependent on government support.

People generally become thriftier and more self-reliant and develop other good habits when they are forced to make decisions and provide for themselves. But they lose the habits necessary to function well on their own—habits as simple as getting to work on time—when the government continues to support them. The importance of habits is revealed by the difficulties older workers in the formerly communist nations have encountered in adjusting to the different behavior needed to function in a free-market system.

TOO MUCH TIME? Many families appear to recognize the harmful consequences of becoming part of the welfare system: Several studies show that one of every four families eligible for welfare doesn't participate in the system. I believe the recently passed House welfare bill should have more sharply limited the length of time families can collect benefits. The present bill allows a family to be on the rolls for up to five years. Fortunately,
many states will use the block grants t
bill provides to impose lower time limits.

President Clinton has threatened to v
the House bill because it will follow the
ample set by a few states of denying a
tional cash benefits to mothers already
ceiving welfare when they have childr
born out of wedlock. The President and o
er critics claim that such provisions pun
children in poor and broken families for th
parents' mistakes since the parents wo
not have enough resources without gove
ment assistance to provide adequately
their children.

CORRUPTION. The effect of welfare refo
on children should have the highest prior
but these critics fail to appreciate how t
present system corrupts the values tra
mitted to children. Changing the system
increase the responsibility and initiative
poor parents will help their children—ever
the parents receive much less financial s
port from the government. Children use th
parents as role models and absorb their p
ents' values. The values acquired by ch
dren have a much larger effect on their e
ployment, education, and other achieveme
as adults than the amount of money th
parents have.

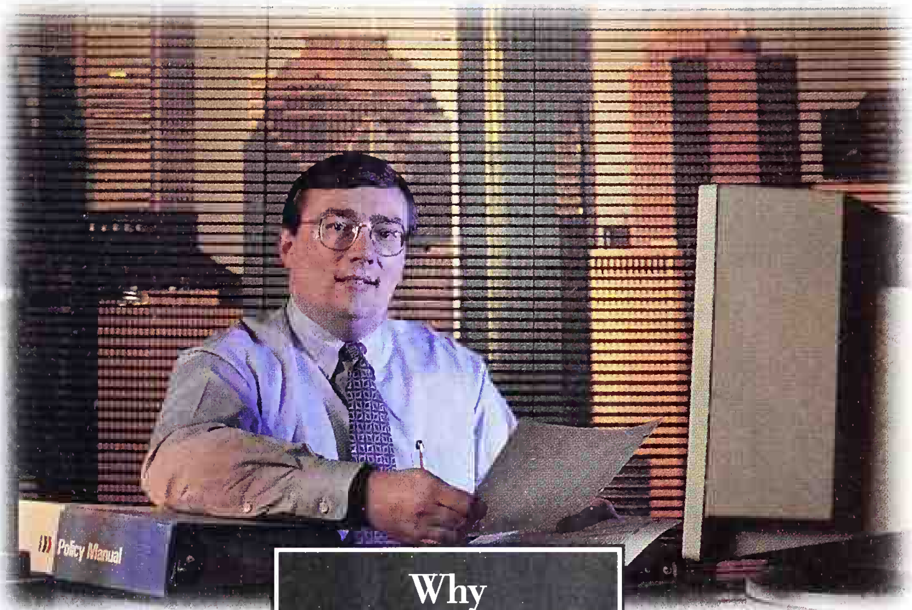
Although I have used welfare to illustr
the harmful effects of government progra
on the values of participants, programs t
do not cater to the poor often also sap t
sense of responsibility and other good valu
of participants. Examples include affirm
tive-action initiatives that help individu
get ahead not through their own accompli
ments but because they belong to favor
groups, aid to small and large business
that subsidizes their profits and insures th
against losses, and regulations that prot
companies against competition. Social Sec
ity is another example, because it encour
es many families to count on the gover
ment to provide their retirement inco
rather than saving for their old age wh
they are working—hence discouraging p
vate savings, some studies show.

Voter pressure is forcing state legislatu
as well as Congress to require evidence th
the benefits of government programs and r
ulations tend to exceed their costs. Those c
culations must take into account their effe
on initiative, responsibility, and other essent
values of a good society.

MICHAEL L. ABRAMSON

Gary S. Becker, the 1992 Nobel laureate, teaches at the University of Chicago and is a Fellow of the Hoover Institution

With the SAS® System, we can integrate large amounts of data and build a picture of how our fields are performing.



Why Chevron U.S.A. Production Company Relies on the SAS System

Chevron

At Chevron U.S.A. Production Company, the quest is to be better than the best. Out in the field, engineers join forces with earth scientists, operations staff, and support personnel to produce millions of barrels of oil reserves...find and develop new sources of energy... and maintain quality and low cost at every stage of the oil and gas production process.

The Means to Make Better Decisions

Providing the means to deliver accurate and timely information to improve work processes and make better business decisions is the job of George Alameda, Chevron U.S.A. Production Company's Manager of Information Technology.

The company is using the SAS System to help with enterprise-wide information delivery. "Our mission is to make financial, operational, and reservoir data available in an easy-to-use format to all the asset teams at work in CUSA Production Co.," says Alameda. "We've found the SAS System is a superior solution for analyzing data, turning data into useful metrics, and guiding our cross-functional teams toward improved work processes."

One team, in CUSA Production's Western Business Unit, is tracking the profitability of individual wells. "It's a tremendously difficult task to optimize our field operations for maximum profitability," says Alameda. "With the SAS System, we can integrate large amounts of data and build a picture to compare one field against another and challenge our asset teams to identify and share best operating practices."

Reaching for the Best

Alameda looks forward to extending the use of the metrics and performance monitoring data to employees trying to improve their work processes. He admits his vision is far reaching, but so is the SAS System. "Our challenge is to be better than the best," he concludes, "and the SAS System is helping us reach that goal."

The Canon Cartridge. In laser beam printers, personal copiers and plain paper fax machines, it's the heart of the desktop publishing revolution that's transformed homes and offices around the globe.

The key components of the imaging mechanism are combined with the toner in an all-in-one cartridge so simple to replace that anyone can do it. Replacing the cartridge ensures the highest output quality. It also makes your equipment virtually maintenance free. It's clean as well as simple, too; so there's no need to dirty your hands.

Please return your spent Canon cartridges.

For output quality and operating convenience, no other system comes close. And here's the point we'd like to emphasize — when the cartridge is returned to Canon, the environment is benefited because landfill waste is reduced.

When returned to Canon, cartridges are carefully disassembled. Reusable parts are painstakingly screened and cleaned. Over 95 % by weight of collected cartridges' parts and materials are used in making cartridges or other products. The result: It's good for you. It's also good for the earth. Return your Canon cartridges when they are of no further use. Please.

As part of our Clean Earth Campaign in the United States, Canon makes donations to charitable organizations dedicated to environmental issues. Used cartridges are returned under the Clean Earth Campaign via the United Parcel Service (UPS) or Mail Boxes Etc. Shipping costs are paid by Canon, so there's no charge to our customers. Easy shipping instructions can be found in the cartridge box.

For your home or office, choose any of the wide range of products that use Canon cartridges.

Economic Trends

BY GENE KORETZ

PRICE PRESSURES IN THE PIPELINE?

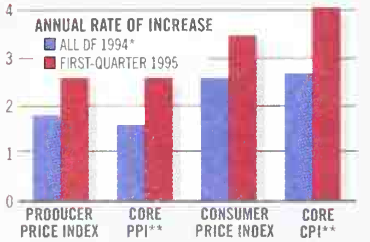
If you look hard, you can find them

Judging by the U.S. bond market, inflation seems to be yesterday's nightmare. As demonstrated by March's subdued readings for the consumer and producer price indexes, prices have remained remarkably restrained after four full years of expansion. Continued price moderation, in fact, has led some economists to predict that the Federal Reserve's next move will be to ease monetary policy.

Charles Lieberman of Chemical Securities Inc. is unconvinced, however. He points out that the PPI for finished goods has risen at a 2.6% annual rate so far in 1995, vs. 1.8% in the year ended in December (chart). The figures for the core PPI (which excludes food and energy prices) are 2.6% and 1.6%, respectively. And producer prices of crude and intermediate goods over the past 12 months are up 16.4% and 7.1%.

Latent inflationary pressures are also apparent in consumer prices and in tabs for imported goods. So far this year, the consumer price index and the "core" CPI have risen at 3.5% and 4.1% annual rates, compared with 2.6% and 2.7% in 1994. And nonoil import prices, at last count, were up 4.4% in the past 12 months, compared with 1.8% prior to that.

IS INFLATION BREWING?



▲PERCENT

*12 MONTHS ENDING IN DECEMBER
**INDEX LESS FOOD AND ENERGY PRICES

DATA: BUREAU OF LABOR STATISTICS

Labor costs are also stirring. While wages have moved moderately higher over the past year, Lieberman notes that unit labor costs have jumped from a 0.5% rise in the year ended in March, 1994, to 2% over the past year. He expects them to continue to climb as productivity gains slacken in line with the aging expansion.

If the economy slows sharply, such pressures may remain subdued. But Lieberman thinks consumption could bounce back in the months ahead. If that happens, he warns, "inflationary pressures and wage rates could suddenly start to accelerate, prompting the Fed to tighten money one more time."

ALASKA'S LOST OPPORTUNITY

Budget woes might have vanished

Lady luck has not given many states the chance to virtually eliminate the tax burdens of their residents. But that, as Stephen L. Jackstadt of the University of Alaska and Dwight R. Lee of the University of Georgia argue in the current issue of *Society*, is exactly the opportunity Alaska has thrown away.

In 1967, the year before oil was discovered at Prudhoe Bay, real per capita state spending in Alaska, adjusted for its higher cost of living, was already 1.6 times the national average. As oil revenues climbed, however, the state slashed tax rates for its residents and accelerated spending, boosting outlays twentyfold from 1981 through 1988. As a result, Alaska has the lowest state personal tax burden and highest per capita spending in the nation.

Recognizing that its oil wealth is a temporary windfall, the state did put some money away in a Permanent Fund, whose investments totaled $15.6 billion at the end of 1993. However, most of the fund's earnings after inflation are paid out to Alaska's citizens via annual dividends ($949 per person in 1993).

Meanwhile, say Jackstadt and Lee, much of the oil take has been wasted on questionable spending programs. As examples, they list $70 million in unpaid loans to would-be Alaskan barley and dairy farmers, European field trips for high school students, a $70 million performing arts center in Anchorage that loses over $1 million annually, and hundreds of millions of dollars lost in loans for businesses based on renewable resources, including a project to develop dog-powered washing machines.

The long-run economic reality for Alaska is that its oil reserves are being depleted: Output is expected to decline 50% by 2004. A University of Alaska study says the state is spending $1.2 billion a year more than can be sustained in the long run.

It didn't have to be. Jackstadt and Lee calculate that if the state had allowed real per capita spending to g at the U.S. average rate over the 25 years and earned an average rate of return of 5.15% on its accumu ed excess revenues, it would have h jackpot of $75 billion at the end of 1 That's enough to earn about $1 bi more in annual interest than the s spent in 1993.

Thus, Alaska has lost a chance perpetual fiscal health. Looking ah the economists see hard times for A kans as oil revenues continue to dry

SLIPPERY SLOPE FOR RUSSIAN OIL

Poor profits and falling producti

In the late 1980s, Russia was world's largest oil producer. Today, No. 3, and the drop in output that celerated after the Soviet Uni breakup continues. Despite its substan potential, says Adam Sieminski of N West Washington Analysis, Russia's industry is unlikely to recover soon.

The problem is poor profitability. W oil exports provide hard currency, the dustry is heavily taxed, and its dome prices are still held below the costs production. Meanwhile, efforts to exp output and exports are hampered by reaucracy and inadequate investment

Since 1991, Russian oil output has en by about a third, and the World B estimates that the industry would h to invest $8 billion a year for the n six years to get back to 1991 output els. In 1993, it was able to shell out c $2 billion to $3 billion.

The irony is that Russia faces oversupply of oil at home, even as net exports have continued to decline. With its economy on the rocks, domestic consumption has fallen by about 30% since 1991. To raise profits, the industry needs to increase exports, but that requires more investment in infrastructure.

At best, says Sieminski, Russia is likely to experience "only a grad and moderate rise in oil production a exports through the rest of the decad

How Apple is making it easier to move a refrigerator like this.

Today's sales environment is more competitive than ever. Which is why Whirlpool armed its field force with the ultimate sales weapon: the Macintosh® PowerBook® computer.

The reason? Says Erv Barnes, "After evaluating all the notebooks on the market, we chose PowerBook because it was by far the easiest for any salesperson to learn. Instead of becoming a doorstop, the PowerBook is being adopted by the field with unbelievable enthusiasm."

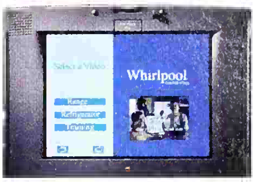
Salespeople are able to tap into Whirlpool's information base at the home office to get competitive information, pricing, inventory data—instantly, during a sales call. This way, they can answer questions more quickly and accurately, make better-informed decisions, appear more professional and, ultimately, close more sales. Plus, with the built-in multimedia capabilities of the PowerBook computer, salespeople can show videos and animations, making a normal sales presentation more persuasive than ever.

All of which can give your salespeople a new power, too. The power to be more responsive, more productive, more effective. The power of Macintosh. The power to be your best.®

Erv Barnes (left),
Director of Information
Technology, and
Ed Herrelko (right),
xecutive Vice President
of Group Sales, at
Whirlpool Corporation,
enton Harbor, Michigan

"Making the sale means having the answer. With this computer, we can get the information our customers need, right on the spot. Making the sale means being persuasive. By delivering presentations on the PowerBook, we can get our point across with enormous impact. Combine this with the fact that it works with our mainframes, Intel-based PCs and Windows, and we're talking about a tool that's not just giving us a competitive edge. It's transforming the way we do business."

–Ed Herrelko



This is Whirlpool's interactive on-screen sales presentation. With it, salespeople can show video clips of Whirlpool commercials and product demonstrations—a more dramatic and impactful way to sell competitive product advantages.

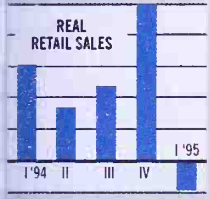
JAMES C. COOPER & KATHLEEN MADIGAN

'HIS SLOWDOWN
S CAUSING SOME WHIPLASH

U.S. ECONOMY The past few weeks have seen scattered hints that the econ-y is cooling off. Now, the signs are clearer: This wdown is for real.

Vhen the Commerce Dept. takes a look back at t-quarter economic growth on Apr. 28, the numbers l have a lot to say about the rest of 1995 as well. at's because last quarter's real gross domestic prod- got most of its strength from surging invento-s and only a smidgen of growth from demand. That nbination is sure to curb growth in the second arter and perhaps beyond.



CONSUMER DEMAND SLOWS SHARPLY

QUARTERLY PERCENT CHANGE, ANNUAL RATE
ATA: COMMERCE DEPT., BUSINESS WEEK

Here's what to expect: a steep falloff in demand growth last quarter led by a sharply slower pace of consumer spending, a decline in housing construction, and a huge widening of the trade gap. That weakness swamped the continued strength in business investment in equipment and buildings.

On the plus side for GDP is uge buildup in nonfarm inventories. Like the previ-s three quarters, inventories accumulated at one of fastest paces in the postwar era. Unlike in 1994, ough, the buildup last quarter appears to have been intentional.

Add up the numbers, and first-quarter GDP growth ks to have been about 2.5%, half the fourth quarter's % rate. How much the reported number varies from t pace will depend largely on Commerce's assump-ns for unknown March data, especially for inventories l foreign trade.

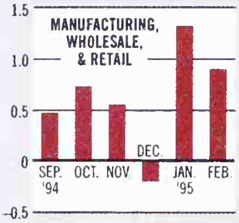
E FEDERAL RESERVE should be especially pleased th the languid growth rate of demand, which should ne in well below 2%. More important to policymak-, the new softness in consumer demand is not just nporary. Purchases of autos, home-related durable ods, and other items sensitive to interest rates are ding the pullback (chart). And new-home construction March dropped to the lowest level in two years.

This pattern suggests that the Federal Reserve's e hikes are responsible for the indifferent buying— t delayed tax refunds, the "O.J. effect" (wherein ople would rather watch the trial than shop), or any ner transitory factor. So the central bank is sure to ld rates steady at its next policy meeting, on May 23, and possibly even for the remainder of the year.

The size of the recent drop-off in retail sales shows a seismic shift in spending behavior. Retailers eked out a 0.2% gain in March receipts. But that followed a 1% drop in February, and March buying was no higher than it was five months ago. For the quarter, real retail sales fell at an estimated annual rate of 1.9%, the first quarterly decline in three years.

The jury is still out on April buying. A late Easter hurt sales in March, but it should help them this month. The weekly *Johnson Redbook Report* showed that department and chain-store sales for the first two weeks of April were 0.3% above their March average. Retailers have described sales in the first two weeks of the month as "on or below plan." Car sales in early April look weak compared with a year ago.

However, in the first quarter, at least, it's not just domestic demand that is downshifting. Export growth also slowed, partly due to the Mexican meltdown. Shipments to Mexico plunged in both January and February. March exports were likely down as well.



A SUDDEN PILEUP OF INVENTORIES

▲MONTHLY PERCENT CHANGE
DATA: COMMERCE DEPT.

Overall exports rebounded in February, as aircraft shipments recovered from a January decline. Exports of goods and services rose 2.4%, but that followed January's 4.2% drop. So far in the quarter, shipments abroad are slightly below the fourth-quarter level.

The February export gain, plus a 2% decline in imports, narrowed the month's trade deficit by $2.9 billion, to $9 billion. The import drop is another sign that domestic demand is waning.

The smaller-than-expected gap should have bolstered the U.S. dollar, especially since the deficit with Japan narrowed for the fourth consecutive month. However, the buck continued to get bashed.

Even with the February improvement, though, foreign trade was a big drag on first-quarter GDP growth. Depending upon Commerce's assumptions for March, net exports appear to have subtracted about 1.5 percentage points from growth.

THE DROP-OFF in demand has come so swiftly that businesses were caught off guard. As a result, inventories piled up across all sectors in the first two months of the first quarter (chart). Stock levels of manufacturers, wholesalers, and retailers rose 0.9% in February, on

ERIC HOFFMANN/BW

the heels of an even steeper 1.3% jump in January. That was the largest two-month increase in inventories in more than a decade.

Most of last year's accumulation occurred in wholesale and retail trade in support of strong consumer spending. Now, however, stock levels are starting to look more burdensome, meaning that production and worktime will have to be cut.

Manufacturers have already started to respond. Factory inventories posted unusually large increases in January and February, a sign that retail-demand weakness is working its way back to the factory floor. The accumulation has been especially noticeable in factory inventories of finished goods and work-in-process.

NOT SURPRISINGLY, industrial production fell 0.3% in March. As a result of weather patterns, a large drop in utility output, following a big gain in February, exaggerated the March decline. However, manufacturing output alone fell 0.1% for the second consecutive month, something that hasn't happened in more than three years. Autos, trucks, and housing-related durable goods led the declines. Even business-equipment production slowed, although the high-tech sector of equipment remains in high gear.

Excessive inventories will slow production lines in the second quarter as well. Although factory output still grew at a solid 6% for the entire first quarter, down only a bit from 7.7% in the fourth, the recent declin
will result in a sharply lower pace of second-quar
output. And without a pickup in demand, that outp
slowdown will extend into the third quarter.

Output of construction supplies slowed sharply l
quarter, and it's little wonder. Housing starts plung
7.9% in March, to an annual rate of 1.21 million (cha
That drop was the third in a row, and the single-fa
ly sector has led the decline. The three-month fall is t
largest since the 1981-82 recession.

With industrial output slowing, capacity pressures and supply bottlenecks that usually push up prices are also easing. Operating rates fell in March for the second consecutive month, to 84.9%, the lowest rate since November. Already, inflation pressures from crude materials are easing: Industrial commodity prices are down from their recent peaks.

A handful of economists still believe that the emer
ing slowdown is only temporary. They argue that b
cause of continued tightness in the markets for both
bor and goods, building price pressures will cause t
Fed to hike rates further. But the data now on t
books—and yet to come—just don't support that notio

DATA: COMMERCE DEPT.

ITALY

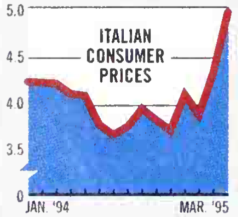
INFLATION IS SIMMERING AGAIN

After four years of improvement, inflation once again clouds the outlook in Italy. A growing economy, higher taxes, and a slumping currency have fueled worries that inflation in 1995 will top 5% for the first time since 1991.

Clearly, the export-led recovery remains in place. Although the real gross domestic product was flat in 1994's fourth quarter compared with the third, for the year the economy grew 2.2%, after dropping 0.7% in 1993.

Exports rose a strong 10.3% in the year ended in the fourth quarter. The data for 1995 look promising also: January and February exports shipped outside of the European Union are up 20.3% from a year ago. Italy's industry is benefiting: Production rose 0.5% in February, to stand 7.6% above year-ago levels. Exports should lead the healthy 3% GDP growth expected in 1995.

AN OMINOUS PICKUP



▲PERCENT CHANGE FROM A YEAR AGO

DATA: DRI/McGRAW-HILL, BUSINESS WEEK

Consumer spending is where the Italian economy needs a boost. Spending grew only 1.6% in 1994, less than expected. Weak wage growth and increased taxes are squeezing incomes. Plus, unemployment remains high, especially in the impoverished south.

With the economy on the mend, however, inflation is picking up. Consumer prices in March jumped 4.9% from a year ago, the fastest pace in almost 2½ years (chart). Rome's National Institute of Statistics said indirect taxes initiated back in 1992 added to the broad increase in prices last month, and it forecast that new taxes passed in February could add an additional 0.72% to the 1995 rate of inflation.

The lira will also exert price pressures. The currency has fallen 16% against the mark since Jan. 1. In response, the Bank of Italy lifted official short-term rates by three-quarters of a percentage point on Feb. 20. Since then, it has nudged up market rates further, leading Italian banks to raise their prime rate on Apr. 13, to 10.75% from 10%. However, higher taxes and a falling currency are a volatile mix that can only hurt the inflation outlook and lead to even more rate hikes in 1995.

RESPONSIBLE CARE®

DEALS

AN OLD-FASHIONED FEEDING FRENZY

Is it the 1980s redux? Not quite…

Shades of the 1980s? In the wake of Kirk Kerkorian and Lee Iacocca's hostile $20.5 billion bid for Chrysler, a lot of analysts are wondering: Is the takeover party getting out of control?

There's little doubt that corporate buyouts are booming—or that acquisition prices are rising fast. U. S. merger volume in 1995's first quarter totaled $73.2 billion, up 36% from the year before—the highest first-quarter figure since 1989, according to Securities Data Co.

The second quarter shows no signs of a letup, either: In recent weeks, Seagram said it will spend $5.7 billion acquiring 80% of MCA, and Coram Healthcare struck a merger deal with Lincare Holdings for about $1 billion. At Chase Manhattan Bank, mutual-fund manager Michael Price is pressing management to get the stock up, and NationsBank says it might be interested in taking Chase over. (Chase says it can maximize shareholder value on its own.) Plenty of other companies could be vulnerable, too. At Scott Paper Co.'s annual meeting on Apr. 18, Chief Executive Albert J. Dunlap pretty much summed up the atmosphere—and fueled rumors that the paper giant is on the block—saying: "Everything but your family and your dogs in this world is for sale at the right price. And anybody who denies that is a hypocrite."

DOLLAR DAYS. Sounds familiar, right? Yet unlike the merger frenzy of the late 1980s, there are plenty of solid business reasons for the latest upswing in deals. The most important: CEOs, caught in a Darwinian struggle for survival in a world of international competition, deregulation, and technological upheaval, are snatching up competitors at home and abroad to expand their global market share and improve earnings. Says Allen L. Sinai, Lehman Brothers Inc.'s chief economist: "We are on the cusp of a major takeover boom, and it will be global in scope."

In the U. S., the dollar's steep fall adds a further incentive for corporate combinations. For German and Japanese buyers in particular, U. S. assets now

Prime Takeover Bait?

Some companies Wall Street thinks could be ripe for buyouts, based on industry trends and relatively low **price/earnings ratios**

BAYBANKS	**10.9**	The Boston-based bank is a buyout candidate for bigger institutions that want to expand.
CHASE MANHATTAN	**7.3**	Investor Michael Price thinks the No. 6 U. S. bank would be worth more broken up into pieces.
BRISTOL-MYERS SQUIBB	**17.6**	As the industry consolidates, Bristol's stock is up on expectations of a deal, possibly with a rival.
CBS	**17.0**	Ratings are off from last year, but Morgan Stanley says it's worth $80, vs. a share price of $62.

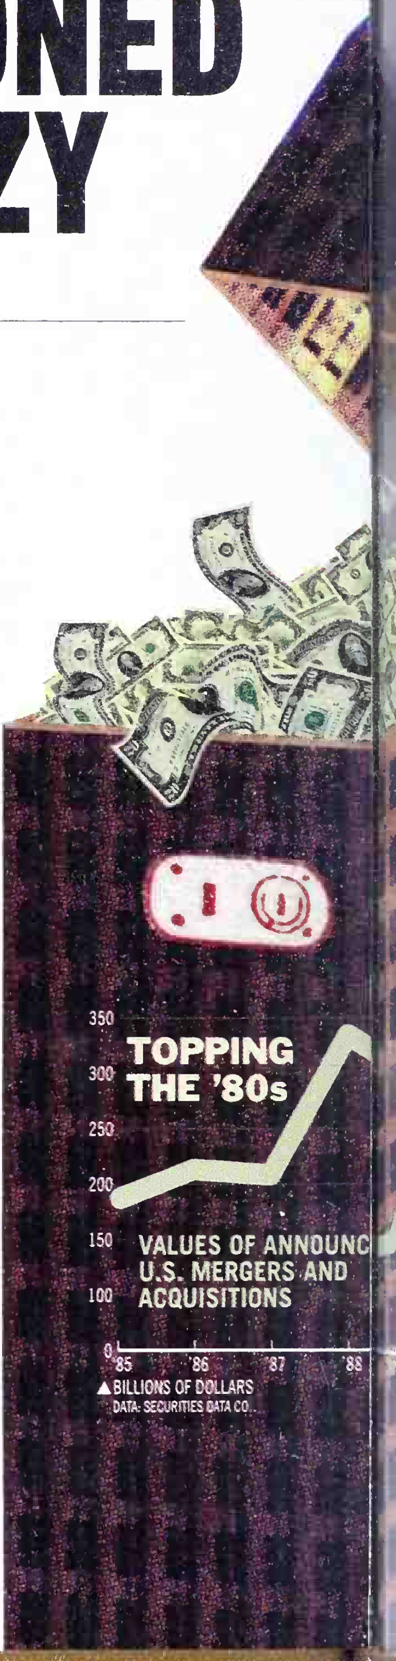

ILLUSTRATION BY [illegible] CHART BY LISA KNOUSE BRAIMAN/BW

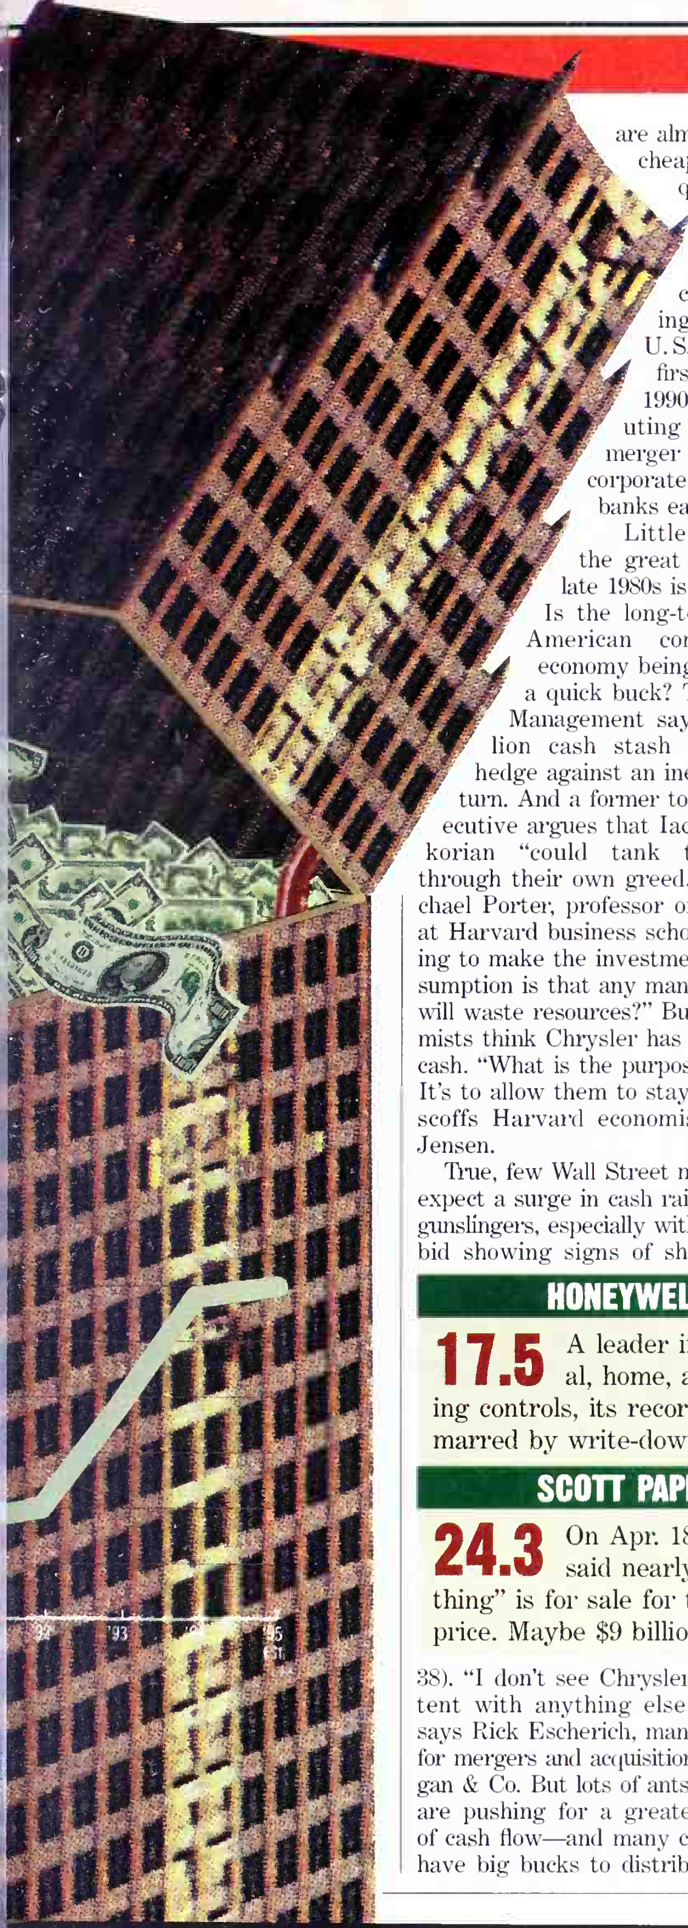


are almost irresistibly cheap. In the first quarter, overseas companies went on a $19.3 billion corporate buying spree in the U. S., the strongest first quarter since 1990. Also contributing to America's merger wave is strong corporate cash flow and banks eager to lend.

Little wonder that the great debate of the late 1980s is being revived: Is the long-term health of American companies and economy being sacrificed for a quick buck? Take Chrysler. Management says its $7.3 billion cash stash is a prudent hedge against an inevitable downturn. And a former top Chrysler executive argues that Iacocca and Kerkorian "could tank the company through their own greed." Worries Michael Porter, professor of management at Harvard business school: "Who's going to make the investments if the presumption is that any management team will waste resources?" But many economists think Chrysler has way too much cash. "What is the purpose of the cash? It's to allow them to stay fat and lazy," scoffs Harvard economist Michael C. Jensen.

True, few Wall Street merger mavens expect a surge in cash raids by financial gunslingers, especially with the Chrysler bid showing signs of shakiness (page 38). "I don't see Chrysler being consistent with anything else we've seen," says Rick Escherich, managing director for mergers and acquisitions at J. P. Morgan & Co. But lots of antsy shareholders are pushing for a greater distribution of cash flow—and many companies now have big bucks to distribute. The dividend payout ratio for Standard & Poor's 500 companies is "among the lowest in history," says Charles Clough, chief investment strategist at Merrill Lynch & Co. And during the past three years, corporate cash flows have risen by around 29%, to over $480 billion, says Mark Zandi, an economist at Regional Financial Associates Inc.

HONEYWELL

17.5 A leader in industrial, home, and building controls, its record has been marred by write-downs.

SCOTT PAPER

24.3 On Apr. 18, its CEO said nearly "everything" is for sale for the right price. Maybe $9 billion?

In the rapidly consolidating drug industry, large companies such as Warner-Lambert and Bristol-Myers Squibb are feeling the heat. Take Warner. With its stock trading at around $80 a share, it might go for more than $15 billion. Yet it still could be vulnerable. Perhaps to help forestall a hostile bid, Warner CEO Melvin R. Goodes and his top aides assured analysts on Apr. 13 that they plan to sell some $200 million worth of assets in the next two years.

With other industries also consolidating, plenty of other companies may be vulnerable. Some analysts think that Sundstrand, a smallish military and industrial supplier, could be a breakup candidate. Even if Chase resists pressures to do a deal, smaller banks, such as Boston's BayBanks, clearly could be gobbled up. Multimedia also is hot, as software, telecommunications, and other companies jockey for position.

GLOBAL TREMORS. Feeling similar pressures, European companies now are avid shoppers in the world's largest market. The fall of the dollar aside, many Eurogiants have strong balance sheets to finance acquisitions. Among their bigger U. S. deals so far this year: Germany's Hoechst is trying to close its purchase of Marion Merrell Dow for $7.1 billion, and Italy's Luxottica will pay some $1.3 billion for U. S. Shoe.

SUNDSTRAND

18.4 This small player is likely to get caught up in defense industry consolidation, Wall Street thinks.

WARNER-LAMBERT

15.9 A drugmaker in need of restructuring, Warner may attract a big European buyer eager for U.S. share.

The merger wave, however, is not just an American phenomenon. Worldwide merger volume, including the U. S., hit $135.2 billion in the first quarter, 26% more than in last year's first quarter, Securities Data says. Japanese companies may spend more time undoing past mistakes than launching new bids, as Matsushita is doing by selling MCA to Seagram (page 37). But they're quite actively striking alliances in Asia.

Some huge deals, moreover, have occurred or are brewing in Europe. Britain's Glaxo Holdings PLC acquired Wellcome for $14.3 billion, and Hanson PLC is strongly rumored to be gunning for British Gas PLC, the world's largest natural-gas company. PolyGram, the Anglo-Dutch entertainment group, recently increased its stake in Music India, a Bombay record company, to 51%. Germany's Siemens is sitting on some $17 billion in cash. Says CEO Heinrich von Pierer: "This is a time of consolidation. I prefer alliances, but other acquisitions may come if we need to fill in any gaps in our core businesses."

Translation: The takeover wave may hit hardest in the U.S., where sha holders wield the most power. Bu an era of globalization, compan everywhere are repeating the mar of the rambunctious '80s: Acquire be acquired.

By Christopher Farrell, with Phi L. Zweig, in New York, Joseph Webe Philadelphia, Paula Dwyer in Lond and bureau reports

---

COMMENTARY

By Michael J. Mandel

CAN U.S. COMPANIES AFFORD TO TAKE THE LONG VIEW?

It has been a virtuoso performance by Japanese manufacturers. Faced with economic turmoil at home and a soaring yen abroad, Japan's exporters have followed the same long-haul strategy that worked in the past: Hold down prices to build demand, then drive down costs enough to make a profit. As a result, even as the yen has jumped some 50% in the past five years, the price of Japanese imports to the U.S. has risen only 15%, keeping Japanese cars, consumer electronics, and high-tech goods competitive.

The superiority of this market-share strategy has been proven by the global success of Japanese and East Asian manufacturers—in industries from steel to memory chips. By comparison, experience has shown that a company that earns big profits today by boosting prices runs the risk of becoming less hungry to cut costs—a potentially deadly failing over the long run.

***KEIRETSU* CAPITAL.** But Chrysler Corp.'s experience shows how difficult it is for even well-run U.S. companies to take the long view. Having rescued itself from the scrap heap, Chrysler was attempting to behave like its Japanese competitors, socking away billions of dollars that it earmarked for developing new products. Now, Kirk Kerkorian's bid for the auto maker—even if he does not win—probably means that Chrysler will have to pay out much of its cash to shareholders.

It's not just Chrysler, either. U.S. investors do not trust most domestic manufacturers to invest their money wisely. They recall the ill-fated diversification attempts of the steel and oil companies and the billions that General Motors Corp. wasted in the 1980s. That's why a big pot of cash turns a company into a takeover target.

Shareholders of a U.S. company are unlikely to accept lower short-run profits while a company patiently builds market share. Cross-border comparisons can be misleading, but reported operating profits for Japanese manufacturers, as a percentage of sales, seem to average about 1 to 1½ points less than for comparable U.S. companies.

JAMES YANG

In part, Japanese executives can live with lower profits because they have access to cheaper capital. Japanese companies still have as big a capital-cost advantage as they did in the late 1980s. Real 10-year interest rates in Japan are about one percentage point lower than they are in the U.S., just as before. Moreover, the price-earnings ratio for the Japanese stock market remains about four times that for the U.S. market.

Another reason Japanese companies feel less need to focus on short-term profits: A big chunk of their shares often is held by related corporations. These ties help companies expand market share by making borrowing easier and spreading risks. For example, Sumitomo Bank Ltd. helped fellow *keiretsu* member NEC Corp. build a strong position in integrated circuits by making loans available when a U.S. bank might have balked.

FRAGILE REVIVAL. Even without such a system of mutual support, some U.S. industries manage to be market-share-driven. Semiconductor makers learned their lesson from the 1980s and now develop new chips even as they aggressively price the old ones. U.S. airlines, too, are more focused on maintaining market share than they are on keeping up profits. As a result, they run up big losses in bad times—but they have also been forced to become the most productive carriers in the world, according to a 1992 McKinsey & Co. study.

As long as U.S. companies have to pay primary attention to short-run concerns, the U.S. manufacturing revival will be fragile. The Chrysler bid shows that prudent planning for the longer haul just may be too dangerous.

Mandel writes about economics from New York.

ASH IS KING OR CORPORATE JAPAN

d companies keep it under lock and key–unlike Chrysler

TOYOTA
TOYC

DEL OF EFFICIENCY: *Toyota can afford to hold on to its cash*

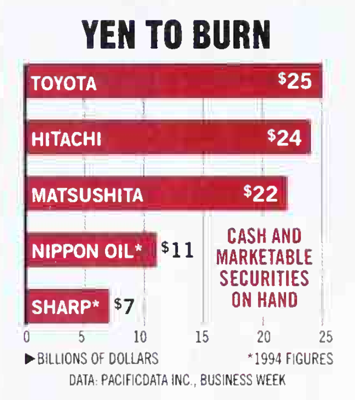
apan's corporate barons are probably bemused at Chrysler Corp.'s current predicament. Kirk Kerkori- $20.5 billion takeover gambit would n the auto maker's $7.3 billion cash erves and add $10.7 billion in new t. Such money grabs are unheard-of lubby corporate Japan—and so are shareholders bent on instant gratifi- on. Small wonder: Compared with ysler's, the huge cash hoards at Toy- Motor, Matsushita Electric Industri- ınd Hitachi are under lock and key.

nstead of rewarding stockholders ı dividends and buybacks, Japan's ıstrial giants have historically used r cash troves as war chests. Fat ı cushions have allowed exporters lash prices abroad, grabbing more ket share without worrying about its. When Japan's bubble economy ; at its airiest in the late 1980s, an's corporate leviathans gobbled up rseas assets. Indeed, part of their sent wealth comes from big depreci- n write-offs of plants and equipment ght during that investment spree. y also gambled in the stock and cur- cy markets and took some big losses rophy investments such as the Peb- Beach (Calif.) golf course.

Now, with the yen crashing through 80-to-the-dollar barrier, corporate n is staying home. Big multinationals to cut costs to offset their less-competitive exports are simply sitting on their money, keeping it in yen-denominated bonds and short-term cash accounts. Middle-tier exporters are using their cash to offset lower profit margins, so they won't have to raise prices abroad to maintain market share. Domestic companies are burning up their cash as they scramble to cope with a growing flood of cheap imports.

With Japan's recovery so fragile, corporate treasurers are uninterested in domestic expansion, and capital spending has all but dried up. The downside of sitting on all those yen is that with interest rates at record lows, conservative cash management doesn't pay very well. Companies will be lucky to earn 2% aftertax on their short-term cash. "The opportunities are limited" for effective use of free cash, says Peter Tasker, equity strategist at Kleinwort Benson.

Nevertheless, treasurers are being more cautious than usual. They're putting corporate cash into domestic bonds and currency hedging—some lucky companies have locked in futures contracts at 100 yen to the dollar. And indebted companies are paying off their loans.



DATA: PACIFICDATA INC., BUSINESS WEEK

Then there are the Japanese executives who want to keep a safety net for the future—even if it means zero profits now. Toyota Motor Corp., for instance, can afford to sit back and watch the yen keep rising. It could break even with the yen as low as 50 to the buck, figures Lehman Brothers Inc. auto analyst Koji Endo. So it isn't transferring any of its $24.6 billion in cash into profits, letting margins fall rather than raise prices and sacrifice market share. "Nobody wants to be blamed as the generation that lost the money," says Fujio Cho, a managing director at Toyota.

MULTIMEDIA MOVES. Besides wanting a buffer against yen-induced earnings declines, companies have other reasons to save up. Beginning in 1997, they'll have to use current market value to measure their pension fund investments. Corporate Japan "has a 20% hole in the pension funds" thanks to the prolonged bear market that has battered their stock holdings, figures James Capel Inc. economist Jason James.

Plus, in its emergency yen-busting package released on Apr. 14, the Finance Ministry encouraged companies to buy back their shares to help the slumping Nikkei, now off 17% on the year and 58% from its peak in 1989. Buybacks would do wonders for Japanese companies' paltry 3.5% return on equity—vs. 18.5% in the U.S.—figures Tasker.

There's no denying Japan's flagship companies still have plenty of financial brawn. Matsushita Electric Industrial Co., which recently beat a retreat from its venture into Hollywood, will pocket about $5.7 billion from the sale of MCA Inc., less any currency losses. That's on top of the roughly $22 billion it has in cash and short-term instruments. With its Panasonic and Technics consumer-electronics units under pressure from weak demand and the strong yen, Matsushita President Yoichi Morishita says the company will use the MCA proceeds "in our important multimedia" and related businesses during the next few years.

Whether Matsushita's foray into the much-hyped multimedia field will be any more successful than its fling with Hollywood is anybody's guess. But in a system that shields corporate cash from predators and virtually ignores shareholders, Japan's corporate chieftains have plenty of freedom to fail.

TAKEOVERS

THE CHRYSLER BID: ANY BACKERS OUT THERE?

The plan has few details, lots of obstacles, and little time to work

Can Kirk Kerkorian and Lee A. Iacocca come up with financing for their $20.5 billion bid to buy Chrysler Corp.? Could be doubtful. Seven days after announcing their offer, the pair still had provided virtually no details on the deal's funding, even though they need close to $12 billion in debt and $3 billion in equity to make it work. Then, on Apr. 19, Bear, Stearns & Co., Kerkorian's longtime investment banker, said it will play no role in the effort—a blow to the deal's credibility.

Even before the Bear Stearns move, bankers were growing increasingly skeptical that the dealmakers could line up bank financing quickly. In all likelihood, only a major U.S. bank or banks would have the credibility to lure in enough other lenders to make the deal work. But even as Kerkorian & Co. shop for a backer, regulators are warning U.S. banks that they may be lending too aggressively. "We will be spending an increasing amount of time talking to bankers about our concerns [about loan quality]," warns Comptroller of the Currency Eugene A. Ludwig.

The other major problem for Kerkorian and Iacocca: Many of the biggest U.S. banks have close ties to Chrysler and are unlikely to antagonize a major client to do a deal that may not come together. "We support our clients. We don't turn around and bite them," says one banker. The size of the deal also may be working against it. "It's a big number," says Stewart M. Boswell, managing director of NationsBank Corp.'s advisory-services group.

Certainly, Kerkorian and Iacocca could yet come up with the money they need. Banks still have big appetites for acquisition financing, and many bankers say they would be more eager to lend if the pair could get an industrial partner to take a stake in Chrysler. Analysts think Peugeot and Fiat are among their potential partners. Kerkorian's spokesman could not be reached for comment.

"JUST A LITTLE PIECE." But the bankers' reluctance still begs the pesky question: Who will go first? Chemical Bank, the nation's leading bank-loan syndicator, would seem a prime candidate. But in late 1991, it merged with Manufacturers Hanover Corp., which led the 1979 government bailout of Chrysler—and became Chrysler's lead bank. That makes it unlikely to back Kerkorian. J.P. Morgan & Co. and Chase Manhattan Bank also have strong ties to Chrysler. Chemical, Morgan, and Chase all declined to comment publicly.

What banks don't have close links to Chrysler? Citibank, for one. And while Bankers Trust and BankAmerica Co have done business with Chrysler, t also have worked for Kerkorian in past. All three banks declined pu comment. But sources say they are likely to get involved in a hostile bi

Even if a big bank or two jump i syndicate large enough to fund Chrysler deal might have to include m than 100 lenders all told. That's beca few banks now will hold more than million worth of any one loan—vs. $ million in the 1980s. "Everybody wa just a little piece," says Christopher Snyder, president of Loan Pricing Co

DRIFTING DOWN. Chrysler, meanwhile working hard to fend off the bid. It hired three investment banks—Mor Stanley, Salomon Brothers, and CS F Boston—to help craft strategy. And Robert Eaton said at a recent press c ference that the company won't give to Kerkorian. "Obviously, the board and will consider any offer out there," said, adding that "we're going to con ue running the business exactly the v we have been." Also, in daily conver tions with dozens of bankers, Thomas Capo, Chrysler's treasurer, and other finance officials are playing up the de risks.

What are the bid's chances now? former top Chrysler executive puts th at 50-50—and says he sold his stock day of the announcement. "I genuflec to the west, thanked [Kerkorian] for n points, and got out," he says. That v smart: The stock has steadily drif down since then. Maybe the market sensing something Kerkorian hasn' yet.

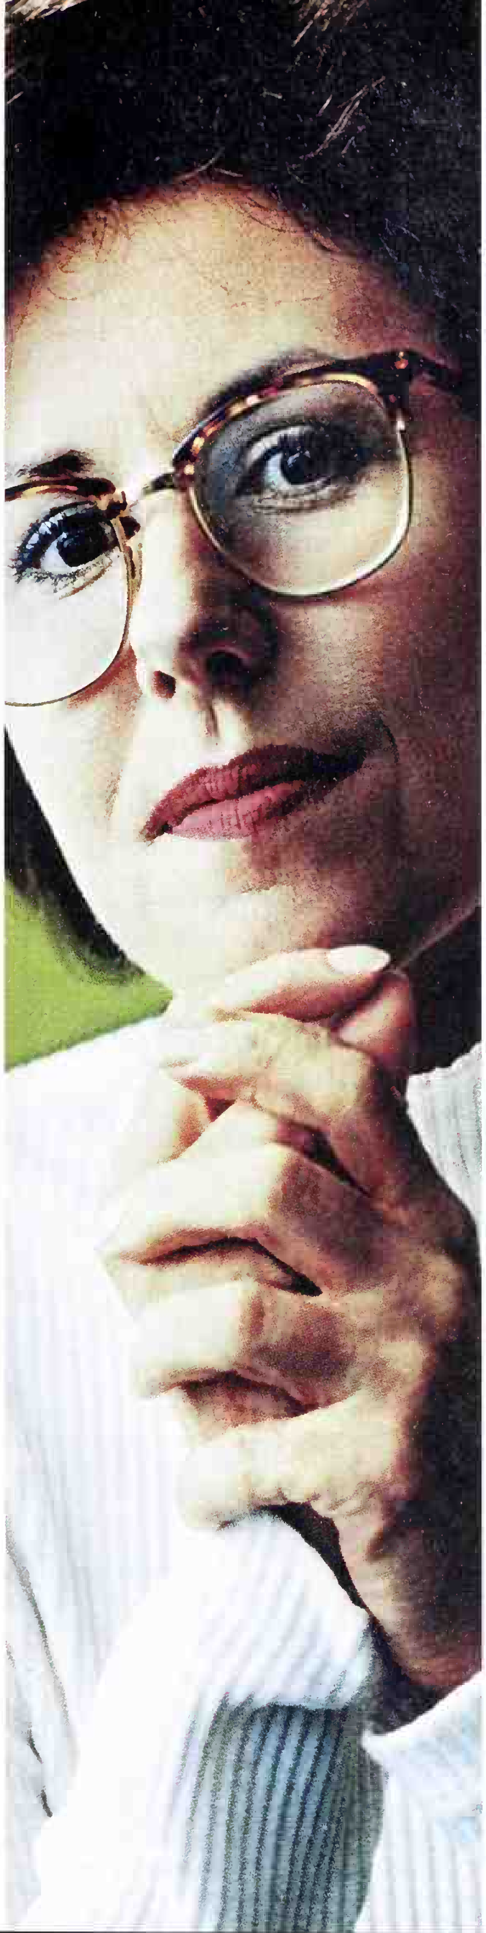
Mac OS

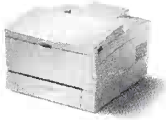


1 in a series

The Mac OS Promise

Macintosh
System 7.5

The Mac™ OS. It's what computer programmers call an operating system. It's what you'll call easy. It's what makes a Macintosh® a Macintosh. It makes you more productive. How can you be sure you're getting everything the Mac OS has to offer? Just look for the logo. On software. On hardware. Everywhere.



Plug and Play. It's a revolutionary concept pioneered by Apple. And promised by many. The difference is, with the Mac OS, you actually get it today. So when you want to connect to a network or set up a printer or a CD-ROM drive or any of hundreds of other peripherals and accessories, all you have to do is plug it in and get right to work. Or play. It's that simple.

What exactly is multimedia? Use a PC running the Mac OS and it's anything you want. You can add music, motion and magic to presentations, school reports, memos and more. You can edit videos. Watch TV. Or run the hottest new multimedia titles.

CLARIS
Claris Organizer
MYST

No matter what you want to do, Mac OS helps you do it. How? By providing a consistent way to work with everything you buy. From business software and home finance packages to educational titles and jazzy new games — thousands of powerful (and fun) applications run under Mac OS.

Used to be, the only way to get your hands on the Mac OS was to get your hands on an Apple® Macintosh. Today, you'll find it on PCs from Radius, Power Computing and more. The same places, in fact, where you'll find our new logo. For more information, call **800-472-4342, ext. 100**, today. Or contact us via the Internet at http://www.info.apple.com/macos/macosmain.html.

CORPORATE PROFITS

THIS COULD BE AS GOOD AS 1995 GETS

The first quarter was flush with tough-to-beat surprises

Is this what a soft landing feels like? Profits were up a robust **24%** on an **11%** revenue gain in BUSINESS WEEK's flash report on the first quarter. **Ford's** **71%** profit jump was a surprise, especially with U.S. car sales softer overall. Ford was able to make more money by selling high-profit Explorer sport-utility trucks and Windstar minivans. Over at **Coke**, the weaker dollar helped drive up soft-drink results: Profits were **22%** higher on **15%** sales growth. More surprises from **General Electric**, where its plastics and appliance units and NBC each generated double-digit profit increases, leading to a **13%** earnings gain. **Eastman Kodak's** **81%** profit jump caught Wall Street off guard, too. Its core film business registered **27%** profit growth and benefited from favorable currency exchange rates. Turnaround of the quarter? **Digital Equipment**. Riding strong Alpha computer sales, **DEC** made **$73.7** million, a major improvement over last year's big loss. Soft landing, indeed.

NOT GRIEVING FOR THE GREENBACK

Exporters cheer the lift the dollar's plunge is giving them

Some call it a crisis. But Douglas R. Oberhelman, chief financial officer of Caterpillar Inc., has nothing but kind words for the dollar's recent plunge. Caterpillar, a big exporter of earthmoving and other machinery, saw an 18% increase in overseas sales, to $1.8 billion, in the first quarter of 1995. And Oberhelman gives the currency chaos a lot of credit: "The weaker dollar helps us around the world," he says.

Since December, the greenback has plunged 18% against the yen and 11.5% against the German mark. The dollar's decline may be worrisome to central bankers, but it's great news for American exporters: A weaker currency allows U.S. companies to increase earnings overseas without hiking prices or cutting costs, and puts them on a stronger competitive footing abroad. At home, they can raise prices without fearing that foreign rivals will undercut them.

Earnings reports from globe-trott companies point to the advantage. Upjohn Co., international sales soa 24%, with exchange-rate fluctuations counting for one-third of the gain. U john also benefited from double-di overseas sales growth of drugs such Halcion. Cleveland-based Parker H nifin Corp., a manufacturer of moti control products, saw international dustrial sales surge by more than 7 from the same quarter a year ago. Ab one-fifth of that increase was court of currency rate changes. The rest ca from acquisitions and stronger dema from improving economies overseas.

Currency fluctuations are aiding U

MICHAEL L. ABRAMSON

THE KNIGHTS OF BUSINESS

In a crop of corporate dramas, Knights of Malta are everywhere

FULL-DRESS CEREMONY: *The order traces its history to the Crusades*

When W. R. Grace & Co. Chief Executive J. P. Bolduc sensed a few months ago that his strained relations with Chairman J. Peter Grace were putting his job in jeopardy, he took his case to a rather unorthodox authority: John Cardinal O'Connor, Archbishop of the Archdiocese of New York. At Bolduc's request, the cardinal asked Grace to patch things up, hoping to avoid the scandals and the corporate upheaval that have since cost both men their jobs.

Grace rebuffed the advice, say sources close to the company; Grace, Bolduc, and the cardinal won't comment. But why did O'Connor even attempt to referee a boardroom blowup at W. R. Grace, a publicly held chemicals giant? Grace, Bolduc, and three other company directors—former Fidelity mutual fund whiz Peter Lynch, former Borden CEO Eugene Sullivan, and former University of Notre Dame administrator James Frick—all are Knights of Malta, an elite, secretive, Catholic lay order that counts O'Connor as its spiritual leader in the U.S.

The knights trace their history back some 900 years, to a band of warrior-monks who tended to the injured during the Crusades. Though the order has only about 2,600 U.S. members, several have played roles in recent high-profile corporate meltdowns. William J. Agee, ousted in February as CEO of Morrison Knudsen Corp., is a member, as are his wife, Mary Cunningham Agee, and at least two directors, Lynch and headhunter Gerard R. Roche.

The boards of both Grace and Morrison Knudsen have come under fire for not living up to their duties to shareholders. At Morrison Knudsen, the b
was widely criticized for allowing

ry Joseph A. Califano. Other knights ude Domino's Pizza founder Thomas aghan, Chase Manhattan CEO Thom-Labrecque, and public-relations ma- Robert Dilenschneider, who counts R. Grace as a client. Well-known col-ists Michael Novak and William F. kley Jr. are knights. So is Senator e Domenici (R-N.M.), along with for- Cabinet Secretaries William Simon Alexander Haig.

he knights also figure prominently the board of Ingersoll-Rand Co., ch recently agreed to acquire Clark ipment Co. Peter Grace is a director ritus at Ingersoll-Rand, and knights odore Black and Joseph Flannery e on the board. Former Ingersoll-d CEO Thomas A. Holmes, while not ight, is now the acting CEO at Grace.

n Europe, it takes four generations oble ancestry to become a knight. In New World, though, the rules for ission are somewhat relaxed by ne-ity. Still, being inducted is a big deal. u're joining select company," says Ia-a. Knights are asked to make regu- pilgrimages to Lourdes, a holy site Catholics, and to be active volun-s in charity work. Joining "had noth- to do with business," says recent in-tee Richard Torrenzano, former kesman for the New York Stock Ex-nge who now runs his own firm. "It an opportunity to really do some-ng substantial for people in need."

N COZIER? But to some critics, the s between knights reinforce com-nts that boards are too frequently mmy, nonconfrontational clubs. hen board members have other alle-ces [tying them] together, it may e it difficult for them to be objective loing their job in an independent ion," says Harvard business school fessor Jay W. Lorsch. The problem ot being a Knight of Malta, Lorsch es. Rather, any common membership n exclusive group can indicate per-al ties between some directors and CEO that should be publicly dis-ed. "Public shareholders have the t to know what the connections on t board are," Lorsch says.

imon, for one, would like to see the ghts become even more of a force: ere is a close bond when you meet ghts in other parts of the U.S. [and] iously a camaraderie. But [we're] not lose as I'd like to see." In the board-m, that may not be desirable. Clearly, ties that bind the knights weren't ng enough to prevent Bolduc or Agee n losing their jobs. But the camarad- instilled by the Knights of Malta y have affected the speed and charac- of directors' decisions—and that may e cost their shareholders dearly.

CEO Schofield insists USAir can be a viable, national airline

SCHOFIELD: *"A significant improvement"*

KATHERINE LAMBERT

Can USAir survive? On Apr. 13, the airline's auditor, KPMG Peat Marwick, released a report on 1994's results that questioned the carrier's financial viability. Six days later, though, USAir announced a narrower-than-expected first-quarter loss of $96.9 million and a surprising profit of $42.2 million for March. What's more, the carrier recently has wrested concessions from its pilots and is negotiating givebacks with other unions. On Apr. 19, BUSINESS WEEK's Christina Del Valle interviewed CEO Seth E. Schofield about USAir's prospects.

Q: *What has changed since the auditors' report was written? And how likely is a Chapter 11 bankruptcy filing?*
A: There is no anticipation of a bankruptcy filing. At the end of the first quarter, we had unrestricted cash in excess of $400 million. And we've indicated that at yearend, we would expect to get at least that much in cash, barring unforeseen circumstances.... For the auditors to be comfortable, we would have to have all of the labor deals completed and approved, and that was not possible.

Q: *Is the $400 million enough to give the company the cushion it needs to carry it into the summer?*
A: Yes, based on forecasts that we are looking at for the balance of the year—barring unforeseen circumstances. If you look at first-quarter results, you can see a significant improvement. And if you focus on March, the beginning of the strength of the season, I think it bodes well.

Q: *The pilots' concessions represent 40% of USAir's $2.5 billion savings goal. Will the other unions provide the rest?*
A: A lot of time has been spent on the allocation among employee groups. Nearly 40% from the pilots is what the labor participants feel is fair. So the answer is yes.

Q: *How will you compensate for a rise in fuel costs?*
A: We have a higher fuel number in the budget for the balance of the year than what we experienced in January. Our employee productivity for March on a year-over-year basis was up 10.1%, which is very significant. We have 1,700 fewer employees than we had a year ago. Before yearend, I expect to reduce staffing by between 1,200 and 1,500 employees.

Q: *British Airways PLC has been patient with its [$300 million] investment [in USAir]. Will it invest more?*
A: In the short term, we do not have a need for new capital. After we take delivery of eight 757s this year, we will not have any new deliveries of aircraft in '96 or '97. With respect to BA, our relationship is stronger today than on the day we signed the agreement. BA has seen either cost reductions or revenue enhancements in the $100 million range. When USAir returns to profitability, they intend to invest more money.

Q: *Will USAir continue to be a national carrier?*
A: We want to be the prominent airline from the East Coast to any place in the world. We can do that ourselves or through our alliance with British Airways. We're not trying to be a niche carrier.

KELLNER: *The boy on this death
certificate was alive and well in Ma*

STEVE SKOLL

INSURANCE

BATTLING THE LIVING DEAD

A rash of fake claims has insurers, well, sick to death

Insurance investigator Diane Kellner was suspicious at once. Last fall, a big insurer asked her and associates at First Services, based in Jericho, N. Y., to check out a $10,000 life-insurance claim involving the death of a 9-year-old boy in a taxi accident in Mali. The policy was new, and the boy's father, who was living in New York, said his son had been buried in the West African nation before his family was notified of his death. In Mali, however, an investigator found the child playing in his grandfather's yard. The official who signed the death certificate acknowledged that he had been paid to do so and had never seen a body. "It's a scenario that is so common—and has proven false so many times," sighs Kellner.

Indeed, life insurers are up in arms over the latest hot insurance scam: faked deaths. A spokesman for the Coalition Against Insurance Fraud says the trade group has noted an alarming increase in anecdotal reports of the swindles, especially those involving deaths staged abroad. The reason, says Sam Lawrence, an independent investigator based in Springfield, Mo.: "The profits are enormous, and usually the chance of prosecution is small."

It also has become an easy scam to pull off. Desktop publishing systems can churn out authentic-looking copies of death certificates. Plus, officials in some Caribbean and African countries are happy—for a fee—to hand out documents showing death has occurred. Closer to home, one investigator, Miles A. Hebding of Long Beach, Calif., says gangs are selling what appear to be official Los Angeles County certificates on the streets. The price: between $500 and $1,000 each.

What's more, the culprits face little risk—so far. Insurance antifraud effo
are focused on more traditional chic
ery, such as workers' compensat
fraud. Even when insurers laur
heavy-duty investigations, the benefic
ies they nab often get off with impun

Just ask Michael J. Zanardi, direc
of life and health claims at State Fa
Insurance Cos. Last year, the insu
hired an investigator to verify the de
of a policyholder who was report
killed in a car accident while visit
his homeland of Vietnam. The hospi
where the victim supposedly died h
no record of the incident, and the de
certificate turned out to be a fake. St
Farm passed on the information to t
state where the man's wife had m
the claim, but no charges have b

Scoping Out Scams

The telltale signs of a fraudulent life-insurance claim

DEATH OCCURRED OVERSEAS In places such as Haiti and Zaire, political turmoil makes investigations difficult and false death certificates often are easy to get.

LACK OF PHYSICAL EVIDENCE Fake claims often say the deceased was cremated. Or some beneficiaries claim unidentified bodies from foreign morgues and use their burial papers to support a claim.

PAPERS PERFECTLY IN ORDER Relatives of someone who has died often do not know what paperwork is required for insurance. A red flag is raised when the beneficiary quickly provides all the required documentation.

employees "were friendly and ned genuinely happy to be doing their s... the wait was minimal. Thank n for a most positive experience...."
—Letter to Connecticut's Department of Motor Vehicles

ardly the kind of feedback you would expect to hear about the old state DMV. Traditionally, long lines, ly staff, and an abyss of red tape e made visiting these agencies a ıtmare for drivers. However, under ncial pressure to cut costs and polit- pressure to reengineer government, 's are remaking themselves in the ge of private enterprise, as service inesses whose aim is to keep costs and the customer happy.

Connecticut's kinder, gentler DMV is a d example. Forced to close eight nches, the agency asked shopping ls to provide 15 rent-free offices. l developers figured the DMVs would rease traffic to their stores and eed. The state is eking out savings other ways as well: Connecticut erican Automobile Assn. offices now vide photo licensing at no cost to state, and companies such as Gen- l Electric Co. and Aetna Life & sualty pay for DMV clerks to make ular visits to their offices to serve ir employees. The agency bought l rebuilt three used buses to travel the companies and other locations.

NO MORE DMV HELL

How states are "reengineering" departments of motor vehicles

KIOSKS California and Virginia will try ATM-style machines at which drivers can order plates and renew registrations. Oregon, Georgia, and Massachusetts have put offices in malls.

MOBILE UNITS Florida and Connecticut run mobile DMV offices to serve big companies.

DMV-TV Time Warner is talking with some states about creating an interactive cable channel on which drivers could call up their records, renew registrations, and take written driving tests.

PHOTOGRAPHIC IMAGING Many states are switching to digital license pictures, which can be stored in computers so renewals can be done by mail.

The result: With 250 fewer employees, Connecticut has 22 more outlets than before—and is saving $7.5 million annually, says DMV Commissioner Michael W. Kozlowski.

Wherever possible, states are farming out DMV business to save money. Illinois and Oregon, among others, allow auto dealers to register new cars on site when they're sold. In Arizona, where DMV division director Russell Pearce says his wife was once afraid to tell people where he worked, the state made $40 million partly by creating lifetime licenses. These cost up to $25, vs. $7 for the four-year licenses, but needn't be renewed until age 60.

MALL PIT STOP: *Now, you can renew your license on a lunch break*

New technology also is helping pull the agencies out of the Dark Ages. In Massachusetts, where the DMV was notorious for not answering the phone, reforms such as interactive-phone banks and credit-card fee payments have streamlined the process. Now, speeding tickets can be paid on the spot—by punching a credit-card number into a cellular phone.

Other innovations are on the way. Some states now use digital photo-imaging for license pictures, so photos can be stored on computers. That way, DMVs can renew or replace lost licenses by mail. Florida and other states are talking to Time Warner Inc. about creating an interactive cable channel that would provide information and testing for written driving tests and allow viewers to call up records, outstanding tickets, and renewal times. Using information provided by the channel, residents also could pay fees electronically or by touch-tone phone.

NOTHING PERSONAL. In fact, doing business with some DMVs soon may be as easy as using a bank card. Virginia, Washington, and California are planning to roll out ATM-style kiosks made by the likes of AT&T and IBM where drivers can transact DMV business. Eventually, licenses may have magnetic strips like credit cards that can be swiped through a machine to verify information. The goal of such changes, says Massachusetts Registrar of Motor Vehicles Jerold A. Gnazzo, is "to never see the customer again."

In the meantime, though, the DMVs claim that customer satisfaction is way up. Partly, officials say, that's because employees themselves are more pleasant, since their workloads are lighter. Plus, waits in line often are way down. Just ask Chicago lobbyist Mark Pufundt, who remembers taking a 25-minute drive on his lunch break to spend two hours getting new plates. "Me and half the world who got there ahead of me would stand in line, and then wait in line No. 2, and then line No. 3," he recalls. No more. Pufundt recently purchased his new plates in less than five minutes using a touch-tone phone. Now, that's reengineering.

MARKETING

EXTRA-STRENGTH ASPIRATION

Can Bayer's new owners expand the market?

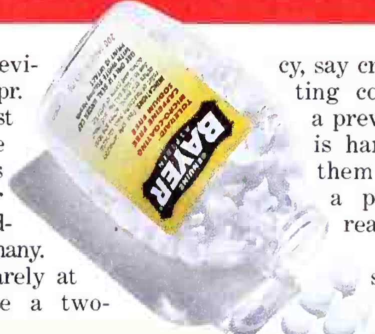
Bayer AG, the giant German drugmaker, spent 75 years trying to win back the rights to its name in the U.S. Last September, it finally recaptured its American trophy, paying SmithKline Beecham $1 billion for the business stripped from it after World War I. German executives were jubilant.

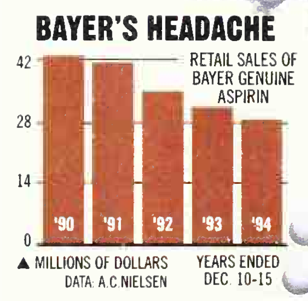
But oh, what a headache.

Bad enough that the Bayer brand's U.S. sales, battered by generic rivals, fell 8% last year to $110 million. But aspirin products all are fighting to keep market share from Tylenol, Advil, and other nonaspirin remedies. Supermarket sales of flagship Genuine Bayer Aspirin slipped from $42.4 million in 1990 to $28.1 million last year, according to A.C. Nielsen Co. (chart).

Now, Bayer is launching its own version of pain relief: a $40 million marketing campaign, including television ads set to debut on Apr. 21. That's a 33% hike over last year's spending. "We are ready to fight back," says Klaus Kluthe, a consumer care executive at Bayer headquarters in Leverkusen, Germany.

The new ads, aimed squarely at aging baby boomers, take a two-pronged approach. TV spots for Extra Strength Bayer—featuring, for example, an older father painlessly horsing around with his young son—will stress efficacy. Meanwhile, a print campaign for Aspirin Regimen Bayer, which debuted in February, plugs aspirin's ability to ward off heart attacks and strokes.





DATA: A.C.NIELSEN

EROSION. With such tactics, Bayer hopes to double its U.S. market share to between 8% and 10% by 2000. That may be a tall order. "I can see them turning this around. I can't see them making it a top brand," says Samuel D. Isaly, a partner at health-care research firm Mehta and Isaly. Bayer's push to sell aspirin as a heart-attack fighter is chancy, say critics, because g ting consumers to t a preventative typica is harder than sell them a remedy a problem they ready have.

Even if Bay succeeds in panding the m ket for aspi it will conti to be hurt private-lab products th sell for one-th the price. Bay says it will res slashing prices buy market share. also will introduce n formulations: An as rin/sleep aid combination, for one, coming this summer.

Bayer's big edge: After 100 years use, it has nearly universal name rec nition. Analysts, furthermore, say U.S. operations generate plenty of ca For the boost to its corporate ego, t may be one headache Bayer can affo

TOURISM

THE TRAVEL BUCK STOPS HERE

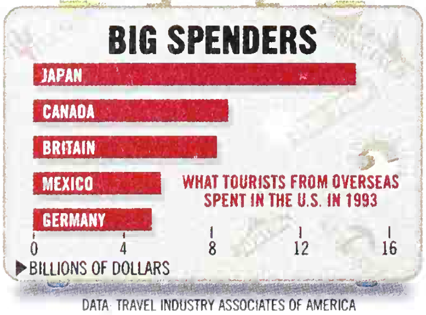
A weak dollar is making the U.S. a hot spot for vacationers

America, give a warm welcome to Naomi Sasaki. The 27-year-old Tokyo resident will spend six days in Oahu this July, and she plans to bring her wallet. She'll lay out perhaps $3,700 for food, transportation, and clothes for her toddler and a surfboard for her husband. "It's lucky that the yen is strong now," she says.

Summer is coming, and so are the Japanese. And the Germans, and many others. With the dollar near all-time lows vs. the yen and the mark, the U.S. tourism industry—everyone from Denver dude ranchers to helicopter flight operators out of Juneau, Alaska—is expecting a boom season. "This will be the best summer in the history of Best Western without question," says Thomas Waffle, director of North American reservations at the 3,400-hotel chain, whose advance summer reservations are up by 14%.

Los Angeles is bracing for a flood of foreign visitors. The riots of 1992 and last year's Northridge earthquake combined to severely dampen Japanese travel to Southern California. Now, though, tour operators report that May and June bookings to the city by Japanese travelers—who spend 50% more than Americans—are up 15% from last year; bookings for July through September are up 10%. At the Universal Studios Hollywood theme park, the Japanese-visitor count this March was more than 50% higher than a year ago.

German visitors, meanwhile, are winging westward. In Washington, German tourism has increased 52%, to 172,000 in 1994, from five years ago. German travel companies are predicting an overall increase of 5% to 10% in Germans vacationing in the U.S. For now, the crow from Germany and Japan may be b anced by fewer visitors from Mexico a Canada, whose currencies have we ened against the dollar. In the long r though, "it will be a positive net impa says Greg Farmer, Commerce Und Secretary for Travel & Tourism, si German and Japanese tourists tend return once they've visited the U.S.



DATA: TRAVEL INDUSTRY ASSOCIATES OF AMERICA

CHEAP GAS. Dollar woes haven't mu curbed Americans' appetite for forei adventure: The European Travel Co mission is expecting 8.7 million Ame can travelers this year, and the U. State Dept. expects to issue a rec number of passports. Trafalgar Tou a London company that specializes European bus tours, says this summe bookings from Americans are up 2 over last year.

But many Americans will stay home, too. Gasoline, at an average $1.13 a gallon, is reasonable, and a lines have plenty of unsold seats. Ur ed Airlines Inc. says advance U.S. ti et sales for the summer are up 5% fr 1994—but adds that capacity is up to 4%. Come July, Sasaki will have pl ty of company on Oahu's beaches.

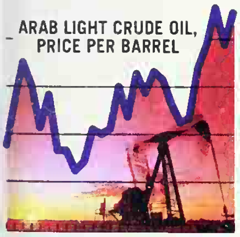
STON CO. BRASS 'S THE ROAD

LON BANK HAS SUFFERED :her blow in its push to ›me a money-management erhouse. On Apr. 19, the top executives at its Bos- Co. asset-management , including President Des- ıd Heathwood, resigned. y say they plan to launch r own investment firm. exodus follows Mellon's ction of a buyout offer by thwood—his second since 2. And it caps a history lisputes over compensa- and control since Mellon $1.5 billion for the unit 992. A major source of ion, say insiders: the fir- of two Boston Co. traders year following $130 mil- in derivative losses. Mellon faulted Boston Co., but Heathwood is said to have believed Mellon should have shared the blame. Heathwood, whose team brought in most of Boston Co.'s assets under management, did not return calls. Mellon, which also has lost key personnel at its Dreyfus mutual-fund unit, cited "significant philosophical differences between Mr. Heathwood and us" in explaining the exodus.

CLOSING BELL

'UMPED BACK UP

prices' roller-coaster ride ı't over. The U.N. Security uncil's offer to allow limit- oil sales by Iraq sent ıde prices tumbling 5% on r. 13. But contracts spurt- back up on Apr. 18, after ddam Hussein snubbed plan. More upside could in store. With oil prices nominated in weak dollars, mand in Europe and Asia s been surging. Plus, the nton Administration's ıgh line on Iran already is using big buyers, such as ‹on and Mobil, to scramble supplies elsewhere.



DATA: BLOOMBERG FINANCIAL MARKETS

CLINTON TURNS UP THE HEAT ON JAPAN

THE CLINTON ADMINISTRATION trade warriors are wielding some big clubs to force Japan to open its market for autos and auto parts. The most recent round of negotiations ended on Apr. 18 with no breakthroughs. Now, Administration sources say the U.S. will slap extraordinary 100% punitive tariffs on Japanese luxury cars imported from Asia if Tokyo doesn't make concessions. Officials also are weighing tariffs on Japanese-made parts. Japanese negotiators say they will pull out of talks if the U.S. continues to threaten trade sanctions.

REICH VS. EXECUTIVE PAY

EXECUTIVE PAY DROPPED from the stratosphere in 1994, but it's still in the Clinton Administration's sights. Labor Secretary Robert Reich, in an Apr. 21 speech, is expected to lambaste the widening compensation gap between companies' top executives and workers as evidence of "the breakdown of the corporate contract." Most companies, he says, aren't sharing the fruits of rising productivity with their employees. The speech contains no proposals to limit CEO pay, but Reich's musings—such as last fall's speech on "corporate welfare"—often signal future Clinton initiatives.

HEADLINER: RONALD ALLEN

THE PILOTS BLOCK DELTA'S FLIGHT PATH

There's turbulence ahead for Delta Air Lines. A year into a three-year program to trim operating costs by $2 billion, Chief Executive Ronald Allen has made great progress. He has cut 10,000 jobs, experimented with ticketless flying, slashed agents' commissions, outsourced data processing, and agreed to share routes with foreign airlines. By June 30, the savings will be $1.2 billion.

But on one vital issue—cutting pilot costs—Allen has hit a wall. Delta aims to cut $340 million, but there has been little headway since October. The two sides still are "hundreds of millions of dollars apart," says Harry C. Alger, operations vice-president. So, on Apr. 17, Delta asked a federal mediator to help resolve things.

Pilots say Delta is turning outside only because it fears running behind on internal cost-cutting goals. "We're not at an impasse, we're not at a stopping point, we're not at a face-off," says Cameron Foster, communications chairman for Delta's Air Line Pilots Assn. The pilots say they'll cut pay but want stock and a board seat in return. So far, Allen isn't offering either.

By David Greising

BANK LENDING: NEW RULES—AGAIN

AFTER NEARLY TWO YEARS OF debate, regulators on Apr. 19 unveiled new Community Reinvestment Act regulations to streamline supervision of bank lending in inner-city and rural areas. Earlier versions had drawn fire from bankers, and one of the most controversial provisions, requiring banks to report small business loans by race and gender, has been cut. This is unlikely to be the last word. Republicans have proposed bills to exempt small banks.

THE FCC AUCTION CAN PROCEED

TELEPHONE ELECTRONICS IS backing down. On Apr. 18, the rural phone company withdrew a suit that had blocked the Federal Communications Commission's auction of wireless phone licenses. TEC had challenged rules that kept it out of the next round of bidding, reserved for small business, minorities, and women. But now TEC is getting what it really wanted: a deal with a group that includes AirTouch, U S West, Bell Atlantic, and Nynex will allow it to build PCS systems where it already provides local service.

ET CETERA...

- ▪ Sallie Mae dissidents will meet investors on Apr. 20 in their push for board seats.
- ▪ Time Warner will sell 51% of Six Flags, whose CEO, Robert Pittman, is quitting.
- ▪ DreamWorks SKG won a $300 million investment from Korea's Lee family.
- ▪ Pacific Telesis will pay $120 million for Cross Country, a wireless-cable outfit.

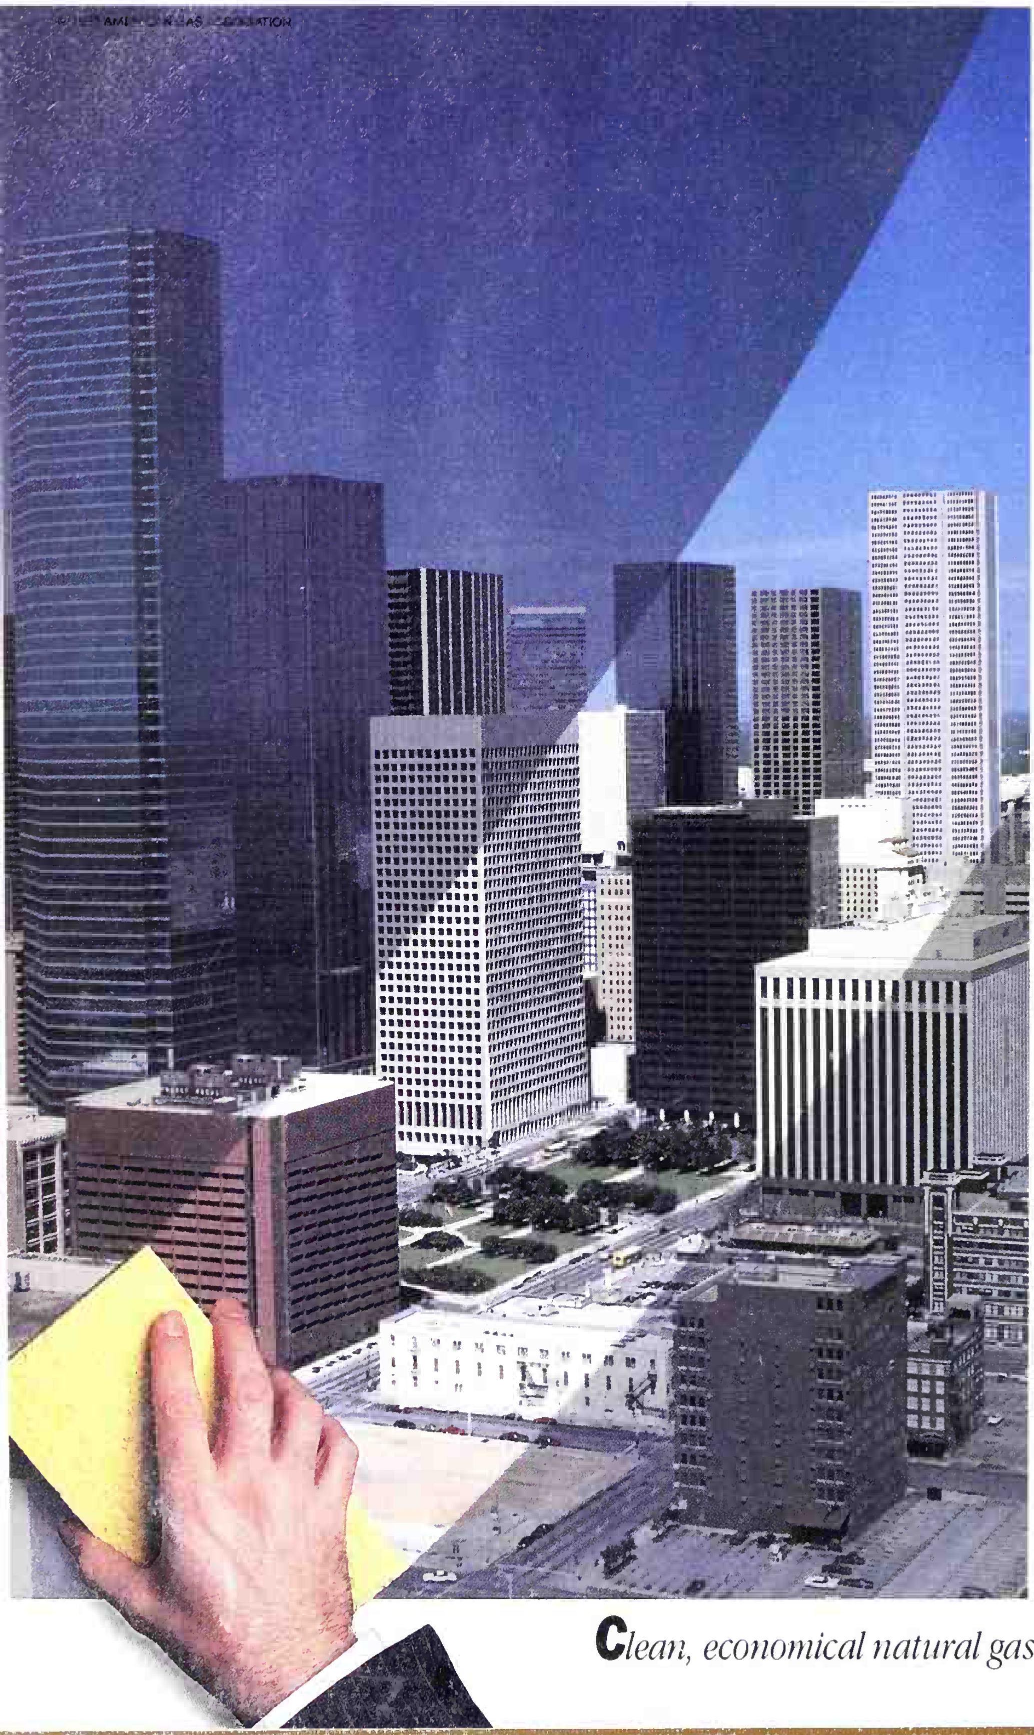
Don't you wish
we could just do this to CFC



In a way we can—if we cool our buildings with natural gas.

Natural gas absorption cooling equipment cools with water, rather than with CFCs, which deplete the ozone laye

It also has fewer moving parts than conventional cooli systems, which means mainte-nance costs are lower.

And, because it costs much less to operate, it cuts th energy costs of cooling—by up to 50%.

There's another big benef too. It saves electricity during the heat of the summer, when demand is at its highest.

As a result, we can help our cities avoid brownouts. And help reduce the need for power plants. Best of all, we can help America balance the use of its energy resources.

No doubt about it, natura gas is a high-tech, low-cost way to keep cool without CFCs.

It's a cool way to help sav our ozone layer, too.

Clean, economical natural gas. Think what we'll save.

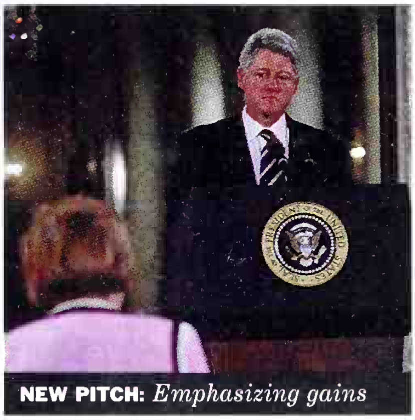
ITED BY DOUGLAS HARBRECHT

LINTON HAS WOMAN PROBLEMS. O, IT'S NOT WHAT YOU THINK

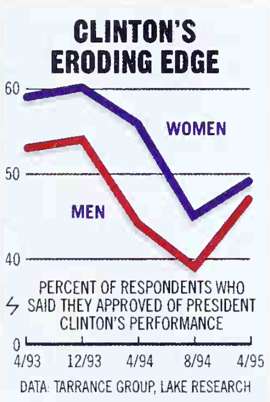
ill Clinton likes to talk about the strong women in his life—his wife, mother, and grandmother. He has depended on another female source of strength as well: the nan voter. In 1992, Clinton won the Presidency by winning more female support than did George Bush.

ince early in his Presidency, though, Clinton's approval ngs among women have slipped. White House political isers worry even more about another phenomenon: Wom- who vote more Democratic than men, stayed home in the 4 congressional elections. Exit polls showed that 51% of 4 voters were female, n from 54% in 1992.

uch slumping turnout—pled with strong male port of Republicans—led he GOP takeover of Con- ss. Democratic pollster inda Lake argues her ty must now pay as h attention to these “am- alent women” as to “an- white men.” Says Lake: 1994, if women were as husiastic for Democrats men were for Republi- s, then Democrats would e won the House and Senate.”



NEW PITCH: *Emphasizing gains*



DEN GAINS. Anti-Clinton sentiment was a big reason for lethargy, and the White House is working on a pitch it es will energize females in time for 1996. Clintonites say t battles over deficit reduction and trade masked such ns as new money for breast-cancer research. “We didn't nd enough time reinforcing a message that resonates h women,” says White House aide Alexis M. Herman.

)ne target: women who are telling pollsters that Clinton n't keep his promise to help them in their struggles to e their families. The polls say the failure of health-care reform angered women more than it did men. Also, women are more pessimistic about the economy. While men focus on taxes and the deficit, women worry about jobs and income stagnation, surveys show.

So, the White House is trying to appeal to struggling women. Clinton talks about the burdens families carry and how his proposed child tax credits and job-training grants will help. He has proposed a minimum-wage hike, noting that two-thirds of minimum-wage earners are women. And he hopes attacks on the GOP for “heartlessness” in attempts to overhaul welfare and child-nutrition programs will strike a chord with females.

The strategy may be paying off. Clinton's ratings among women have turned up recently. Aides hope he'll win more points by fighting for Surgeon General nominee Henry Foster, who's under GOP fire for doing abortions. The White House even sees a silver lining in the affirmative action debate. Polls show such programs are more popular with voters overall when they're seen to be helping women rather than minorities. And, says White House Deputy Chief of Staff Harold M. Ickes: “What's been overlooked in the debate is how strongly women feel about affirmative action.”

Yet while affirmative action may be popular with Clinton's strongest supporters—college-educated women—it holds little sway over female swing voters, homemakers and non-college-educated women. Clintonites think they too can be won over. Perhaps. But if he can't shore up the constituency that won for him in 1992, his hopes for 1996 could be dashed.

By Susan B. Garland in Washington

CAPITAL WRAPUP

0 MORE FREE AIR

Republicans are looking in some un- xpected places for cash to pay for eir proposed tax cuts. The GOP-con- olled Congress wants to require oadcasters to cough up unspecified ervice fees” for use of new space on e public airwaves. The provision is rt of a major revision of the nation's mmunications laws set for Senate tion next month. House leaders also ck the fee for use of space originally t aside for high-definition television. andwidth for HDTV is unneeded now that the industry is leapfrogging to digital TV, which hogs less spectrum. Broadcasters say they're willing to pony up millions in service fees—if it means escaping paying the $10 billion to $100 billion that critics say the airwaves would fetch on the auction block. The Treasury has raked in nearly $9 billion from other spectrum auctions in the last year.

PLYING PRYOR

▶ Faced with mounting Democratic retirements on Capitol Hill, the White House is pressuring Senator David H. Pryor (D-Ark.) to run for a fourth term next year. The push comes from fellow Arkansans President Clinton and his senior adviser, Thomas F. McLarty III. Pryor, who suffered a heart attack four years ago, looks like a shoo-in for reelection. But he is wavering on whether to make another run because of health concerns. Democrats fear that his seat is at risk if he leaves. With four Democratic senators already calling it quits, the GOP could win a filibuster-proof majority of 60 in 1996.

WOLFGANG KNAPP/THEMA

GERMANY

SIEMENS SHAPES UP

So long, plodding perfectionism. Hello, aggressiveness

For Wolfgang Knüpfer and his 11 subordinates, it was a nerve-racking ordeal. Seated at a conference table, the 52-year-old Siemens manager listened for two hours while staffers critiqued his performance. Shaking off their fear of offending their boss, they urged him to make decisions faster and improve his rapport with employees. Says Knüpfer, who runs X-ray tube production and development: "I realized they thought I was a bit authoritarian."

It was hardly a typical encounter between a German executive and his employees. But Knüpfer survived. Now, after a session with the company psychologist, he's learning how to manage differently. He gives more positive feedback and acts more decisively. His 11 staffers have since been critiqued by their employees, and soon, such bottom-up reviews will be expanded throughout the $60.4 billion company. It's all part of an upheaval in Siemens' stolid, hierarchical, and very German corporate culture.

Step inside the new Siemens. After nearly a decade of hit-or-miss efforts to speed product development and restructure, Siemens has finally shed its plodding perfectionism. Gone are the endless meetings, the aimless research, the fear of taking risks. Now, a new generation of managers is fostering cooperation across the company: They are setting up teams to develop products and attack new markets. They are trying hiking expeditions and weekend workshops to spur ideas and new work methods.

Siemens' brass call it a cultural revolution. There's a new emphasis on revving up innovation and pleasing the customer. "It's a completely different way of thinking," says Siemens Chief Executive Heinrich von Pierer, 54. The result: a different approach to produc
everything from hearing aids to po
plants. "This is exactly what we ne
he says. "People are no longer af
to speak out with an idea."

Von Pierer is clearly the guiding f

Last year, Kunerth ched a high-profile educational cam- n aimed at employees at all levels.

nder TOP, Siemens has taken radical sures to force managers to adapt ern market demands. The company d in blue-ribbon customers such as , Ford, and Sony. At one workshop, Corp. blasted chip managers for en service and erratic delivery. ere were plenty of shocked faces," lls David Vicker, deputy manufactur- chief of Sony's TV plant in Wales. "It brutal," admits a Siemens manager. unit got the message.

on Pierer's whole campaign is aimed getting Siemens into new high- wth markets, especially in Asia. Sie- s has historic ties—it sold China its power generator in 1872—but it not kept up with the Americans Japanese. Now, von Pierer plans to st $3.4 billion by the year 2000 in Asia and to double sales, to $14.3 billion.

Power generation is one growth area. Siemens formed a "Taiwan Team" to break into a market dominated by GE and won the bidding for its first two projects: $715 million power stations in southern Taiwan. "We are fighting ferociously over there," says Robert W. Schubert Jr., director of marketing for ABB's power business, which is vying with Siemens in Asia.

PAYOFFS. Perhaps the single largest sore point left is computer division SNI, the last unit still posting losses. Gerhard Schulmeyer, former chief of ABB's U.S. operations, has been cleaning house since taking over the $8.4 billion unit last spring. Sales are up 8%, and Schulmeyer expects SNI, which bled an estimated $1.4 billion in the past four years, to post an operating profit this year.

Even with SNI still lagging, the cultural revolution at Siemens is starting to pay off. While net profits slipped 17%, to $1.18 billion, in the year ended last September, earnings jumped 8% in the three months to December, and analysts see a 20% increase for the year. Siemens' share price has risen 10.3% since mid-December, even as the Frankfurt market stayed flat.

With lower margins than global rivals GE and ABB, Siemens still has a ways to go. Its pretax return on sales was just 2.5% in 1994, compared with 4.9% for ABB and 14.4% for GE. But "Siemens is now on the right track," says management consultant Roland Berger.

Even so, von Pierer knows that he can't let up. "We have to keep asking ourselves: Are we flexible enough? Are we changing enough?" he says. Recently, he included self-addressed postcards in the company magazine, urging employees to keep sending him their ideas. He expects a torrent of responses. Only with that kind of attitude can von Pierer keep Siemens in fighting form.

By Karen Lowry Miller in Munich, with bureau reports

VON PIERER IS SHAKING UP SIEMENS...

CULTURE Replaced hierarchical structure and engineering focus with new emphasis on innovation and service. Set up special teams to develop products and markets faster. Appointed new generation of managers in their 40s.

NEW STRUCTURE Slashed two layers of middle management. Gave managers in local markets free rein to cut costs and bid for projects. Required research labs to work directly with product divisions.

DOWNSIZING Slashed workforce by 7.5% through early retirement. Sold $2 billion in noncore businesses. Cut operating expenses. Plans further layoffs and asset sales.

GLOBAL REACH Setting up facilities in Asia and Eastern Europe to lower costs and reach new customers. Bought telecommunications units in U.S. and Italy. Plans further acquisitions to move more production out of Germany.

SALES ARE CLIMBING... ...WILL PROFITS FOLLOW?

FRANCE

ONLY TRAILBLAZERS NEED APPLY

Battered Alcatel has to find a reform-minded CEO–fast

The last act came abruptly. On Apr. 18, the board of French telecom giant Alcatel Alsthom replaced embattled Chief Executive Pierre Suard with a temporary chief, Marc Viénot. The board members—the elite of French industry—had little choice, since judges had ordered Suard to sever all contacts with Alcatel following a series of investigations over charges of fraud and corruption.

VIENOT: *A rare opportunity to trigger radical change*

BIG CHORES FOR ALCATEL'S NEXT CEO

A STRONGER BOARD To boost competitiveness and avoid more scandal, the company must have a supervisory board with real power over management

A NEW CHAIN OF COMMAND Alcatel should shed layers of management to improve speed and flexibility in a global marketplace

BETTER PRODUCTS The company needs new products for a market where telecom, computer, and media technologies are converging

DATA: BUSINESS WEEK

For now, all eyes are on Viénot, chairman of French bank Société Générale, which is Alcatel's largest stockholder with 9.1% of voting rights. Viénot must nominate a new CEO by July 31. Rumored candidates for the job include Jozef Cornu, an Alcatel director and a Belgian national; Serge Tchuruk, chairman of oil company Total; and Pierre Faurre, president of communications and electronics company Sagem. Viénot may actually choose two new bosses: one for telecom unit Alcatel, which represents two-thirds of the company's revenues of $35 billion, and one for the holding company, which includes the engineering and train subsidiaries.

With his choice, Viénot has a rare opportunity to trigger radical change at Alcatel (table). He and other Alcatel board members also are likely to pioneer a new, more vigilant style of corporate governance at the telecom giant. The board already has created a permanent committee of five directors that will consult with the new CEO on important issues. The committee includes ITT President Rand Araskog and Crédit Lyonnais Chairman Jean Peyrelevade. Just as important, Alcatel needs a hard charger to reverse its slumping market share and dramatic profit decline of 49% last year.

Ideally, Alcatel's new boss should have the same kind of international qualifications as 45-year-old Ron Sommer, the newly appointed CEO at Deutsche Telekom, who previously ran Sony Corp.'s European operations. The next boss must break with Suard's management style, which lacked the flexibility needed to deal with the rapid pace of change in telecom and information technology. Board members admit privately they were astonished at Suard's monarchic control, which left Alcatel with no one to step in and run the parent company. "The emperor approach to managing a global company—the *patron* who is never wrong—won't work anymore," says Nigel Deighton, research director at Gartner Group Europe.

To prevent the recurrence of scandal and bolster Alcatel's competitiveness, the board will have to reshape its relationship with the new CEO. Instead of rubber-stamping decisions as in the
subcommittees may supervise the

PLAGUE OF
ISJOINTED VENTURES

any partnerships from the Gorbachev era are at odds

n the seventh-floor corridor of Moscow's Radisson-Slavjanskaya Hotel, Paul E. Tatum hoists an electric drill and announces: "It's time." his 10 bodyguards watch, the presint of Americom Business Centers, ich owns a 40% stake in the hotel, s to work. He puffs and sweats as he zzes away at the new lock that his esnged Russian partners have installed keep him out of his office. Forty mines later, Tatum, who is earing a bulletproof vest der his dress shirt, breaks rough. But the victory is eting. The Russians soon ut off his power.

So went the latest round what is perhaps the rest of foreign joint ventres in Russia. The Run partners, an arm of the oscow city government, im the joint venture owes em about $7 million in ck rent, while Radisson otels International says tum owes $300,000 in peral debt. Tatum says room rvice and other items re part of his deal, and Russians are trying to sh him aside now that the mplex is churning out $50 llion in annual revenues. 's part of the creeping retionalization that's going throughout Russia," he ys.

W DEAL. Although his edicament is extreme and ny say he's a publicity und, Tatum may have a int. A number of joint ntures launched in the amor of the Gorbachev ars are on the rocks. at's not to say all foreign als are going down the ain. Multinationals such as Mars, ca-Cola, and Procter & Gamble are ing quite well. But they're big and t started later when Russian authores allowed foreigners other ways to t up shop.

By contrast, joint ventures were the ly options for pioneers, including ny entrepreneurs and small compaes. Most were built on high hopes, shaky laws, and naivete. By far the biggest complaint among foreigners is that once their joint venture gets running and turns a profit, the Russian side suddenly wants a controlling interest or total ownership. "Usually, the Russian partner was to bring market access, and the U.S. partner brought the capital and knowhow. But after four or five years, the Russians realize, this isn't so hard," says Peter Charow, executive director of the American Chamber of Commerce in Moscow.

EMBATTLED: *Paul Tatum and bodyguards*

POWER PLAY Once a venture turns a profit, foreigners say, Russians want a new deal

That sort of learning curve seems to be working against Seattle-based Radio Page. The paging service operator entered into a joint venture with the Moscow Public Telephone Network and another Russian company in 1992. Together, they built a system of telephone pagers in the Moscow region, with Radio Page getting a 51% stake.

At first, the partners worked well together, says Radio Page President Lawrence P. Childs. Revenues soon hit $5 million a year, and the venture expected to make $1 million this year. The arrangement started unraveling six months ago, however, when some executives on the Russian side sought control. Things got meaner three months ago when the Russians threatened to pull the critical radio frequencies if they didn't get their way. Moscow Public Telephone won't comment until a shareholders meeting in June.

Other American ventures have been plagued by all sorts of strong-arm tactics, but Tatum's case seems to be the most bizarre. He got started in 1990 with help from the late H. R. "Bob" Haldeman of Watergate fame, who worked in the hotel business following his jail term. The current local partner is the Moscow City Property Committee, which manages and privatizes state-owned assets in the capital.

Tatum had problems from the start, but things got a lot worse last summer when his Russian partner tried to evict him forcibly from the Radisson-Slavjanskaya—where President Clinton stayed during the 1994 summit. The main activity of Tatum's company, which is based in Irvine, Calif., is the Moscow venture. It manages several floors of offices in the hotel.

"UNWORKABLE." Tatum claims that the Russian partner and Radisson are scheming to dump Americom so the hotel can be sold off. The Russians do have a plan to sell the hotel for $60 million, with Radisson retaining the management contract. Umar Dzhabrailov, the venture's first deputy general director, says the matter could be cleared up if Tatum's Americom company pays the debt Dzhabrailov says it owes.

Meanwhile, Radisson has prevailed in a lawsuit in Minnesota to dissolve the joint venture, and Tatum has counterattacked by seeking arbitration in Sweden. Says John Norlander, president of the Minneapolis-based Radisson Hotel Corp.: "Mr. Tatum has made the partnership between Radisson and Americom unworkable and has put the joint venture at risk."

A lot of this controversy over joint ventures will probably die down as the deals themselves become less common. But Tatum's experience suggests that the Russian market is still only for the thick-skinned.

CHINA

TAKE A NAP. READ A BOOK. IT'S THE SHANGHAI BOURSE

Half-baked reforms are stalling China's markets and economy

When the Chinese government ordered Shanghai's go-go stock exchange to suspend new listings of "A shares" last July, even loyal investors applauded. A flood of new issues and collapsing interest in emerging markets had sent the Shanghai A-share index crashing by two-thirds since January, 1994. The index has since regained about half of its loss. But Shanghai is still waiting for Beijing's green light for new issues. Volume is so limp that bored brokers sleep or read newspapers.

Their lethargy reflects the policy gridlock that has stalled many of China's once-ambitious financial reforms. As the Communist Party braces for transition after the death of Deng Xiaoping, leaders worry that dramatic economic actions might fuel social instability or inflation, now raging at 24%. Such measures as selling or closing money-losing enterprises and setting up modern securities regulation are stuck on Beijing's back burner. And no action is expected soon. Says Carl E. Walter, the director of CS First Boston's Beijing office: "In terms of deals, the next six months are dead."

STOCK TRADERS: *The state fears losing control*

ERICA LANSNER/BLACK STAR

NO TRADE COPS. Chinese technocrats concede that the drive to establish a modern market economy has gotten sidetracked by politics and bureaucratic turf battles. Many of the financial reforms launched so far, such as the new stock market and the first attempts at a modern banking system, remain incomplete or badly flawed. And because most of China's financial problems are intertwined with its state-owned industries, which Beijing stubbornly refuses to privatize, planners now say it may take decades rather than years before China will have an efficient market economy.

Many Asian countries have a long way to go before their financial markets are as open as Western investors would like (page 58). But the price of half-baked reform has been painfully visible in China. Take the bond market. Last year, the treasury placed $12 billion in bonds—triple the 1993 level. This year, it plans to raise nearly $18 billion. Beijing has even allowed futures trading in the bonds but hasn't set up a system to police such trading.

and other dubious investments. Rather than improve the markets' behavior by regulating them, Beijing's solution was to halt new stock flotations and corporate debt issues.

But closing off access to private money markets means 100,000 state enterprises, half of which lose money, remain dependent on the banks. And the bad debts are piling up. Despite years of management reforms and massive capital injections, the amount of "triangular debt"—money that state enterprises owe to each other—is larger than ever, estimated at up to $60 billion. Concedes Chinese Academy of Social Sciences economist Wang Guogang: "We haven't been able to solve the basic problem: The enterprises aren't profitable."

The debt burden is threatening another pillar of China's market reforms: turning four state-owned banks into commercial institutions. If the banks wrote off their delinquent loans, they would be insolvent. In addition, they must keep the state enterprises afloat with fresh funds. For the future, "banks still will have to make loans they know they will never get back," admits Feng Bing, deputy secretary-general of the State Commission for Restructuring the Economic System.

With no painless way to fix the st

COMMENTARY

By Pete Engardio

ASIA CAN'T AFFORD TO SIDESTEP FINANCIAL REFORM

Before last fall's Asia-Pacific Economic Cooperation forum in Jakarta, Clinton Administration officials had a compelling argument for developing countries wary of joining an ambitious free-trade pact: Look at Mexico—where exports and foreign investment were booming because of the North American Free Trade Agreement. But the Mexico analogy came back to haunt U.S. Treasury Secretary Robert E. Rubin in mid-April when the APEC finance ministers convened again in Bali.

In a year when financial markets from Indonesia to China have been walloped by currency fluctuations and derivative-trading debacles, Rubin's proposals to further open Asia's capital markets got little response. Although the Asian ministers signed a bland statement citing the need for "broad, deep capital markets," Rubin admitted that "many of them feel they need to do it in a deliberate and phased fashion."

"SCARCE SAVINGS." Asian technocrats can hardly be blamed for feeling skeptical about advice from Washington on how to manage their economies. Over the past decade, East Asian Tigers such as Malaysia, Singapore, Taiwan, and Thailand have produced spectacular growth with low inflation, balanced budgets, and enviable savings rates. U.S. economic performance hasn't come close.

Still, many of Rubin's suggestions deserve to move higher on Asia's agenda. Some of those fixes include greater disclosure of financial data, better accounting standards, and policing against insider trading. In its just-released 261-page report on the region's outlook, the Asian Development Bank warned that heavy restrictions on capital flows cause many Asian nations to "squander scarce savings on unproductive investments." What's more, the report noted, accounting standards, disclosure, and investor protection in cases of default remain woefully weak in such countries as India, Indonesia, South Korea, and Taiwan.

RUBIN IN NEW DELHI: *Pushing deregulation*

CRAIG FUJII—AP WIDE WORLD

Few Asian nations can afford to ignore the structural flaws in their financial systems. Competition is intensifying for the estimated $1 trillion needed over the next five years to finance infrastructure. Even though the region is full of companies boasting 20% to 30% annual earnings growth, Western investors are unlikely to regain their excitement over Asia's emerging markets as long as they are perceived as high-risk bets.

Fortunately, aside from China, most Asian countries are moving in the right direction. Take India, where critics of free-market reforms had used the Mexico debacle to call for a go-slow approach. In January, the country lifted a 38-year ban on stock options, and it is now expected to reintroduce margin trading soon. A new computerized stock-trading system is also in the works, which will make trading less opaque. Regulators have taken action to beef up oversight, after a shoe company in March failed to meet a margin call while trading in its own stock and wound up $6 million in default. The incident forced the Bombay exchange to close for three days.

Thailand is pushing ahead with a five-year blueprint to open up its financial markets, even though foreign fund managers yanked billions out of the stock market in 1993 and sparked a run on the Thai baht in January. In addition, Singapore is improving its oversight of futures trading, in the wake of the $1 billion Barings Securities fiasco in March.

To Washington's free-market crusaders, the pace may seem like it's in slow motion. But Asian nations that stay the course now are likely to attract a lot more foreign capital over the long haul.

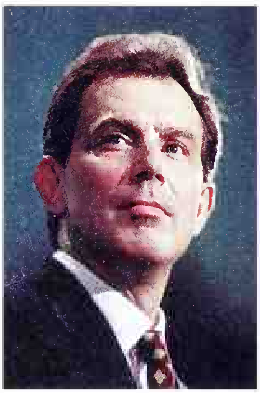
VHY BRITAIN'S LABORITES ARE FRANTICALLY WOOING BUSINESS

n Apr. 29, Britain's Labor Party is likely to vote to quash the controversial clause in its constitution calling for the "common ownership of the means of production, tribution, and exchange." Expunging this bit of Marxist gma may not seem like a big deal, but it will be a landmark tory for Labor's leader, Tony Blair. The telegenic 42-year- has been struggling for years to drag his party back o Britain's mainstream.

Few outside Britain realize it, but Blair has already taken ge strides in this direction. One sign of his ogress is Labor's 30-point lead in the polls over me Minister John Major's Conservatives. The ventional wisdom is that Blair will be Britain's xt Premier.



MAINSTREAMER BLAIR

ANDREW WIARD/NETWORK

NING RECOVERY. But Blair's big lead could ckly evaporate if he doesn't keep his rehabili- ion campaign on track. His next big task is to sh out the specifics of what a Labor govern- nt would do, especially on the economy. His icies could damage an economic recovery al- dy showing signs of waning. They could also ect billions of dollars in direct investment that itain has grown accustomed to receiving annu- from the U.S., Japan, Korea, and others dur- 16 years of Conservative rule. Because of uncertainty, the markets have already im- sed costly political-risk premiums on the pound, equity ces, and government-bond yields.

Blair's strategy is to win over white-collar office workers l suburban homeowners, Britain's fastest-growing voting c. These people are weary of Tory rule, but they are also ptical of Labor. To gain the credibility he needs on the nomy, Blair is now frantically wooing business leaders. He l his youthful aides, dubbed Blairheads, have dined with dia magnate Rupert Murdoch, whose newspapers helped eat Labor in 1992. They have also met privately with a up of top bankers, made the rounds among fund managers in Edinburgh, and given numerous after-dinner speeches to local business groups.

But the charm offensive has had limited success. "I don't know what Labor stands for," says Martin Taylor, CEO of Barclays Bank PLC. Lord Hanson, chairman of conglomerate Hanson PLC, is more explicit. "Remember what happened to inflation and the pound the last time we had a Labor government"—in 1974-79, he warns.

So far, Blair's economic agenda is vague. For new tax revenue, he would look to "the undeserving rich." He's offering some costly new benefit programs but doesn't say how he would pay for them. Blair's people are in regular contact with President Clinton's political consultants James Carville and Paul E. Begala. Like Clinton, Blair vows to make his country more competitive in the world economy. But he's short on specifics.

Business is already concerned about some of Blair's plans. He pledges that one of the first acts of a Labor government will be to implement the "social chapter," the part of the European Union treaty that spells out workers' rights and from which Major negotiated an opt-out in 1991. Executives worry that rigid, costly labor rules will be imposed on them. Blair also supports a minimum wage, which Britain now lacks.

City of London insiders fear that Labor could put a damper on the financial industry that now employs 2.5 million people and accounts for 20% of Britain's economy. The fear is that Labor's financial guru, Alastair Darling, will use the collapse of Barings PLC and other scandals as an excuse to push for tighter regulation of everything from banking and insurance to executive pay.

Blair can't afford to inspire such doubts because they will turn off voters he is targeting. His challenge is to convince voters he will create and protect jobs, not wreck the economy.

By Paula Dwyer in London

APAN'S DR. NO

Shintaro Ishihara, the ultranational- st politician who gained global noto- iety for co-authoring *The Japan 'hat Can Say "No"* and *The Asia 'hat Can Say "No,"* now has said No" to politics. On Apr. 14, the flam- oyant former novelist and yachts- ian, 62, unexpectedly announced his nmediate resignation from the Iouse of Representatives, where he serving his eighth term. He didn't xplain the timing of his decision but eclared that he feels "guilty and ashamed" about the state of Japanese politics, which he said is filled with parties and lawmakers who pursue their own "mean, selfish aims."

MUSIC VIDEOS FOR ASIA

▶ Music powerhouse Polygram and Viacom's MTV Networks are joining forces to challenge the hold Rupert Murdoch's Star TV has on the booming Asian youth market. On Apr. 21, the 50-50 partnership will launch a Mandarin Chinese MTV channel that will initially target cable viewers in Taiwan. They'll follow on May 5 with an English MTV venture that will focus on India. Polygram CEO Alain Levy says Asia is the hottest market for the company's music and discs, accounting for more than 20% of its $5 billion world sales and growing at a double-digit clip.

MTV CEO Thomas E. Freston says the Asian satellite and cable market is expected to grow explosively over the next two decades. But he cautions that the venture, like other Asian TV operations, expects to lose money for a few years because the market isn't large enough yet to cover costs.

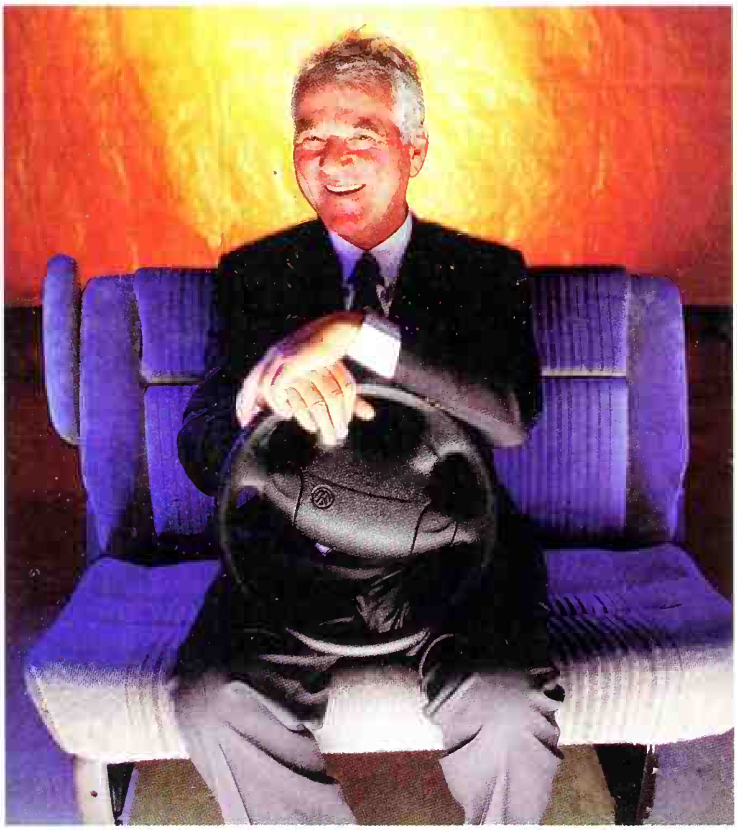
The latest word on asset management from the people who started the conversation.

With the introduction of NetFinity™ 2.01*–part of the SystemView® family–on our PC servers, PC 300s and 700s last fall, we gave IS administrators a powerful new way to troubleshoot a networked system. Now, your servers and PCs can be managed remotely. And failures waiting to happen can be corrected in advance. The idea is to make PCs and servers easier to manage, so you get the most out of your investment. And *that's* what asset management is really all about. For more information, call IBM at 1 800 IBM-4FAX (key in ID# 8202509).

There is a difference™ IBM®

RANK STRONACH'S SECRET? ALL IT EMPOWER STEERING

ow Magna's chairman keeps the entrepreneurial spirit alive at 86 auto-parts plants



STRONACH: *Generous incentives keep Magna in the passing lane*

CHRIS TRENT

The hardest part of breaking into the European market, says Frank Stronach, irman of Canadian auto- 'ts giant Magna Inter- ional Inc., is attracting management. So he's ering a lure unheard-of central Europe: homes a luxurious golf-course 'elopment, built on the unds of a 400-year-old tle in Oberwaltersdorf, stria. The castle, which onach bought last year, iow part of Magna's Eu- ean headquarters. When residences are finished, nagers "will be able to e home for lunch," mises Robert Gruber, gna's European finance ector.

t's just the latest exam- of how Stronach has d incentives to build the iness he founded in a ted garage near Toronto one of North Ameri- fastest-growing compa- s. Over the past decade, gna, which makes every- ng from air bags to bumpers, has wn at a compound clip of 21% a year. st year—its best—sales soared 37%, to billion, while profits jumped 67%, to 6 million. Stronach took home $28 lion, counting gains from exercising ions—the highest earnings ever by a lic-company executive in Canada.

TNERS IN CHROME. Magna's great ength is the entrepreneurial culture t Stronach, 62, has created. "Frank s into empowerment long before the iness schools had ever heard of it," s Peter C. Godsoe, CEO of Bank of va Scotia, which lent him $1,000 to nch the business in 1957. By offering ployees huge financial incentives, onach has made profit-oriented innova- one of Magna's key products. Since 1993, the company "has given us 148 different proposals for cutting costs," marvels Thomas T. Stallkamp, Chrysler Corp.'s powerful purchasing chief, who says the ideas could save more than $93 million a year. No wonder he expects Magna to remain his No. 1 supplier.

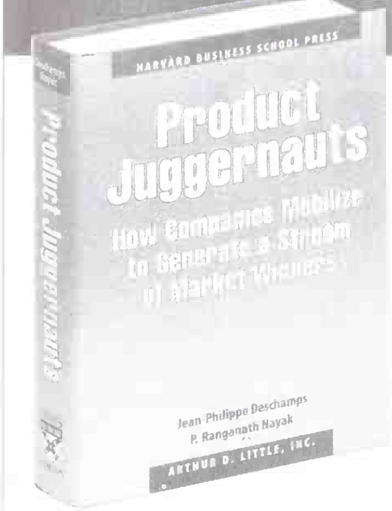
Skeptics note that Stronach has made his share of mistakes. The worst came in the late 1980s when, distracted by an unsuccessful run for Parliament, he let Magna's borrowing get out of hand. Debt soared over $700 million. Then auto sales plunged. It looked like Stronach, who controls 73.4% of voting stock, would lose everything. Instead, he pulled off what Godsoe calls "one of the greatest turnarounds of the modern era."

Magna's near-death experience reenergized Stronach. In 1994, he moved his principal residence to Switzerland—not least because its top tax rate is 30%, vs. Ontario's 53%. There, he logs 14-hour days directing Magna's European expansion. "We still only have 1% of the global market. There's no reason why we shouldn't have 10%," he says.

As Stronach tells it, his drive and his entrepreneurial philosophy stem from growing up in war-ravaged Austria. "If you've never been hungry," he says, "you don't know what it means." When he was 14, his mother sent him to train as a tool-and-die maker. Even then, he dreamed of starting his own business, recalls boyhood friend Franz Deutsch, now chairman of Austrian ski-equipment maker Tyrolia. At 21, with Europe still on its knees, Stronach emigrated to Canada, arriving with one suitcase and $200.

Within six months of joining a small tool shop near Toronto, he had an experience he says shaped his management approach. The owner, praising his work, said he would make him a partner. "At first, I felt pretty good," Stronach recalls. But the owner "kept dragging his feet," so Stronach quit and set up his own shop in a garage. Within two years, he employed 20 workers. Then his foreman asked to become a partner. Thinking it over, Stronach reasoned that if the foreman left, he'd have to do all the work. "The next morning, I said, 'Why don't we open up a new factory and give you an ownership in it?'"

That formula, replicated time and again, carried Magna to revenues of $1.3 billion by 1990. But as the company grew



“Must reading for those committed to real change and improvement.”

— Ray Stata, Chairman of the Board and CEO, Analog Devices

Featuring lessons from the best product creators in the world – including Canon, Ford, Philips, Rubbermaid, and Toshiba – *Product Juggernauts* shows that the key to constantly creating world-class products is to focus the entire organization on the product creation process. This holistic, practical, and original book will show organizations how to realign the organization, mobilize for continuous improvement, and achieve sustained high performance.

“Throws new light on the mysteries of product creation.” —*The Economist*

People

to 100 independently operated facto “we ignored the budgeting proces Stronach admits. In the late 1980s, wh he focused on politics, plant mana piled on debt to grow. Stronach, a L al, was trounced in 1988's Conserva landslide. And in 1990, Magna lost million. The stock fell to less than 2 a high of more than 25, and Magna lated some loan covenants.

By early 1990, some of Magna's b ers wanted to put someone else charge, says then-board member Ja McCallum. Reacting with rage, St ach convinced them he “would do w ever it takes,” says Godsoe. Wi months, he jettisoned 36 factories, headquarters staff by more than and instituted a plan to slash debt. also imposed discipline and plann Now, factory managers must clear m spending with senior executives, approve only projects that fit Magna's strategic plan. All debt has erased, and new debt is *verboten*. Ma Godsoe says, has “a rock-solid bala sheet and lots of capital for expansi

Even with the new constraints, M na remains “far more entrepreneu than most North American compan says Chrysler's Stallkamp. Each of it plants is a separate profit center, managers enjoy almost total con plus a giant incentive: 3% of gross p its. Magna pays managers an avera $60,000 a year, but bonuses can $500,000, which has made “many them millionaires,” Stronach says.

“FRANK'S WAY.” It's a tactic that h talent and fuels dedication. Ross MacLean, a 39-year-old mechanical e neer, left General Motors Corp. for M na because “I saw the opportunity make a lot of money.” Since taking mand in 1991 of Polycon Industrie joint venture with Ford Motor Co. was losing $12 million a year, MacL has poured 70 hours a week into re citation efforts. Last year, Poly earned $6 million on sales of about million. MacLean says he'll be abl “comfortably retire in 10 years years sooner than I would have at

But however much autonomy St ach grants plant managers, at headq ters he's known as difficult and for ding. “It's Frank's way or no way,” one of many executives who have The latest casualty, John Doddridge, signed last October after two years CEO. Stronach admits that Doddri found “being CEO doesn't mean much at Magna.” New CEO Do Walker is Stronach's son-in-law.

Stronach's current strategy is make Magna a leader in producing t parts but systems—finished seats, , or outer body shells. Analyst Frede- < K. Larkin of Bunting Warburg Inc. nks the tactic could boost Magna's rth American market share by 75%, an average $275 per car, by 2000. il, that big pothole just ahead—the mp in North American auto sales— , sent Magna's stock, like other auto cks, plunging. It's at 37 on the New ·k Stock Exchange, down about a rd from last year's high. That's a ·oss overreaction," says Philip K. cke of Prudential Securities Inc., who ects Magna to keep growing, albeit re slowly, through any downturn.

Vith Walker in charge in Toronto, onach is focusing on Europe, where gna is a relative newcomer. But over years, it has hired some 500 Europe- managers and technicians, so it can ve fast now. Magna has 20 European its, generating sales of more than $700 lion. Finance head Gruber predicts t will double in three to five years.

ECONOMIC DIPLOMACY

PEDDLERS IN PINSTRIPES

At the new State Dept., trad is taking center stage

Frank G. Wisner, U.S. Ambassad to India, had a crisis on his han Authorities in the state of Ma rashtra were threatening to cance $900 million electric-power-plant c tract with three American compan in March. Although his expertise is litical security, the career foreign serv officer had to play commercial brok “At every step of the way, Frank h helped keep the project on track,” sa R. Michael Gadbaw, a vice-president General Electric Co., which is supply power-generation equipment along w Bechtel Group Inc. and Enron Corp.

Welcome to the New World of Di macy. The State Dept. still calls its f eign outposts “embassies,” but it's tre ing them increasingly like a chain business-promotion centers called F ports ‘R’ Us. Ambassadors long stee in arms-control arcana and politi problem-solving are now unabashed p dlers in pinstripes, vigorously lobby local officials on behalf of Corpor America. “State deserves high ma for its engagement,” says Leslie G. M

.L, SELL, SELL: *The new mind-set State is largely Spero's work*

iw, CEO of Fluor Corp. "The depth of olvement and the level of coordina- ı is better than what we've seen m previous Administrations."

t's about time. Europeans and the ›anese have never been shy about ıg a little diplomatic arm-twisting to ı deals. State's economic diplomacy ve is part of a coordinated, high-pro- Clinton Administration campaign to ›st U.S. business overseas. The Com- rce Dept. has the lead on commercial rocacy. While State's diplomats help se deals, their chief contribution is push for structural changes in for- n markets that improve the climate U.S. business. A recent example is a v State-led economic partnership with ia aimed at eliminating barriers to its ;e infrastructure market.

AMATIC SHIFT. The business-friendly phasis is largely the work of Joan Spero, Under Secretary for Econom- Business & Agricultural Affairs. The mer American Express Co. execu- e vice-president is expanding on a me launched by the Bush Adminis- tion, and her modest success to date ects the dramatic extent to which focus of foreign policy has shifted ce the end of the cold war. "It's no ger just about war and peace," she s. "We have new constituencies, and iness is one of them."

Spero argues that boosting trade and estment buttresses U.S. strategic ıls by promoting stability in hot spots

Managing Strategic Innovation & Change

June 4 - 9 1995

Draw on the best.

Perform today, while innovating for tomorrow. To meet this challenge you must develop a strategy that links R&D, marketing, manufacturing and human resources throughout a product's life cycle.

This powerful program was the first in this field, and, true to its title, stays a step ahead of the relentless change in businesses like yours.

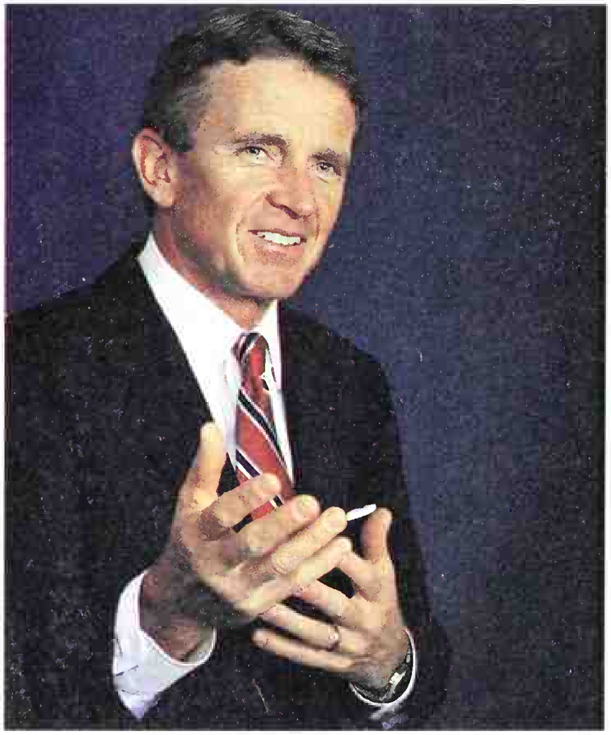
Q&A with Tim Finchem

Q: You have been Commissioner of the PGA TOUR for nearly a full year. Has the job been what you expected?
A: Having been the Deputy Commissioner under Deane Beman and having been involved in the operation of the TOUR for a number of years, I knew how the TOUR worked and understood the operational details. The difference now is in having the final decision-making responsibility. That has been the primary adjustment. Deane was very generous in the amount of responsibility he gave me during my years as Deputy Commissioner, so I was prepared for the operational aspects of the job; but the old saying, "The Buck Stops Here," certainly applies to the Commissioner's job. I am literally on call 24 hours a day, every day of the week.



Q: How did you establish your priorities for the transition?
A: I felt it was important to use the transition period to reconfirm that our structure is in line with our strategic objectives. I needed to understand how our various constituencies viewed the TOUR and the job that we were doing, so I spent a great deal of time on the road, visiting players, tournament sponsors, television networks, title sponsors, other golf organizations, our other corporate clients – everyone who has a working relationship with the TOUR. I wanted to gather as much information as I possibly could before we made any organizational or structural changes. I followed that course for a couple of reasons. One, I was comfortable with the ability of our current staff, so that no drastic overhaul was contemplated; and, two, I felt it was important to find out how other people viewed us before we undertook any structural or procedural changes. As I said when the Tournament Policy Board selected m as Commissioner, the choice was at least in part a reflection of the Board's opinion that things were running smoothly and we didn't need major surgery. That was as much a compliment to the staff as it was to me as Deputy Commissioner.

Q: Have you completed your fact-finding efforts?
A: Well, obviously, the inform tion-gathering aspect of my job will never be finished. I think it is very important to keep lines o communication open with every one in the golf world; however, we have started to examine our staff structure in a very detailed way and I would anticipate some changes in the way we operate over the next few mont We want to run a streamlined operation and we will be looki for ways to eliminate some of the overlapping responsibilities and perhaps change some reporting lines during the rest of this year.

Q: The PGA TOUR is held up as an example of how to run a professiona sports organization. How healthy is the PGA TOUR – and golf in general – in your mind?
A: The structure of the game is very sound. All the research indicates that

COVER ILLUSTRATION: BERNIE FUCHS

FOR THOSE OF US WHO WOULD RATHER NOT SLEEP IN.

If you're a golfer who would rather act on a dream, instead of dozing on a sunny morning replaying it in your head, PGA TOUR Partners is for you.

What exactly is PGA TOUR Partners?

We're a group created by the PGA TOUR especially for golfers who share a love of the game.

INTRODUCING PGA TOUR PARTNERS

As a PGA TOUR Partner, you're offered a number of ways to get closer to your favorite sport. For example, you are eligible to enter in Partners Classics tournaments on courses such as TPC at Sawgrass.

Other Partners' benefits include a complimentary PGA TOUR tournament guest pass, 10 issues of ON TOUR magazine, and a personalized bag tag. All this for only $25.

You'll also have the opportunity to attend clinics hosted by instructors to PGA TOUR players, get on famous courses and participate in tournament Pro-Ams.

So put joining PGA TOUR Partners at the top of your list of things to do this year.

And remember, the early bird gets the empty fairway.

PGA TOUR
PARTNERS

95 PGA TOUR Partners

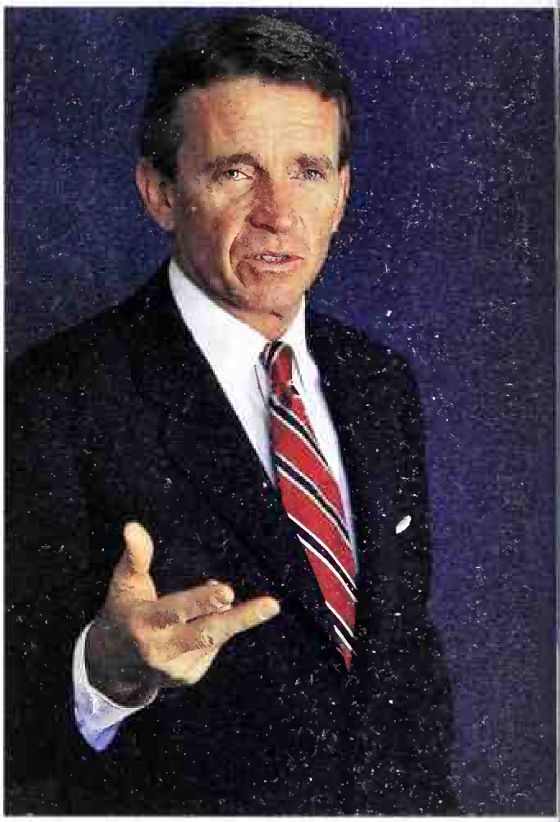
golf continues to grow in popularity, and we are pleased to see the game broadening its base. One of our objectives is for the people inside the ropes at a tournament to reflect the population outside the ropes, those millions of people who support the PGA TOUR and golf as a sport.

Q: How do you accomplish that?

A: We can't do it by ourselves, but our players are the most visible representatives of the game. We need to have programs that will help develop a broader base of participation. We have had a number of outstanding African-American athletes on the PGA TOUR, but it is a relatively small number. We should be competing with the other major sports – baseball, basketball, football – for the best young athletes regardless of their race. If we have a limited number of minority role models among our current membership, we should be using some of the prominent athletes in other sports who love golf. Golf is a game everyone can enjoy.

Q: What other kinds of things can you do to "broaden the base"?

A: We have had a minority internship program in place at the PGA TOUR for several years, and it has brought some outstanding young people into golf. We place college students into various organizations, including our own, during a summer program. Based on the quality of the people we have had participate, we feel confident that we can help minority students find real leadership and administrative positions in the game. Not everyone can have the playing ability of a Tiger Woods, but there definitely are young people out there who can contribute to the game in other ways.



Q: What are some of the other challenges facing golf and the PGA TOUR?

A: We have some threats to the game from the public sector, but we hope to have those sorted out in the not-too-distant future. The Federal Trade Commission has been looking at a couple of our rules for the last five years. They say that two of our rules in particular – the "conflicting event rule" and the "television release rule" – have restricted output. Our view is exactly the opposite: those rules have helped increase output. The number of players, the number of playing opportunities, hours on television, prize money, charitable contributions – there has been tremendous growth and expansion in all of those areas. We would not be able to put on the quality of the events that we do without those rules, so we hope to have the FTC's questions resolved soon so we can get back to our purpose: providing playing opportunities for our members and helping to raise money for charity.

Raising money for charity is a key ingredient in our success. Last year, the PGA TOUR raised nearly $32 million through the tournaments on our three tours.

Q: Why is charity so important to the PGA TOUR?

A: Raising money for charity is a key ingredient in our success. Last year, the PGA TOUR raised nearly $32 million through the tournaments on our three tours. That money flows directly back into the communities where the events are played, so that the thousands of volunteers who work at our various tournaments can see the benefits in their own areas. That is one of the reasons for our success and acceptance in so many communities. When you go to visit some of the charities that have received money from a PGA TOUR event, you really feel good about that aspect of our operation. I think that is why so many of our players have gotten involved in charity efforts in their own communities in addition to what the TOUR does as an organization.

HOW MANY IMAGINARY CHAMPIONSHIPS HAVE YOU PLAYED?

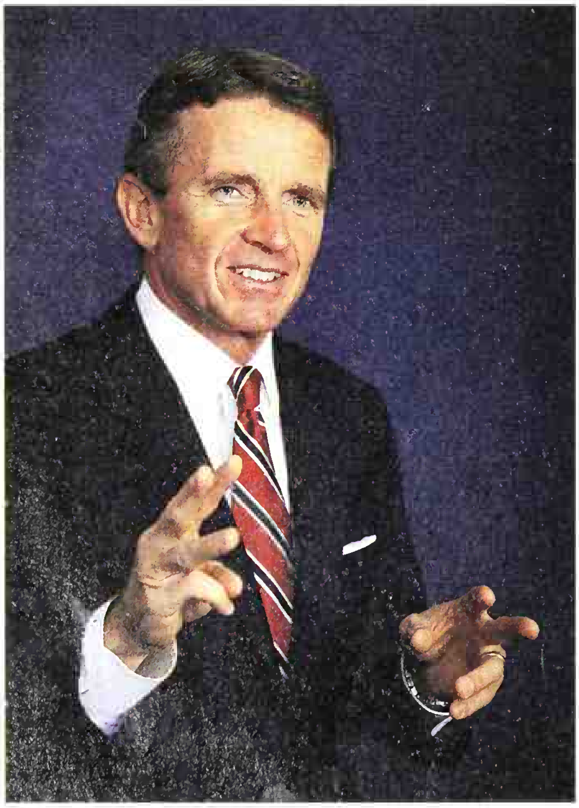
) 1995 PGA TOUR Partners

Q: What are some of the other reasons for your success?

A: The three main reasons for our success are the image of the players and the game, the growth in popularity of golf and the structure of the sport. By far, the most important reason for our success is the image of the game and the image of our players. Some surveys that have been done indicate that 94% of the fans surveyed view our players as positive role models. We don't take that for granted. We are constantly reminding our players of their responsibility to the game and their organization. Not that the players need a great deal of reminding. They are individual contractors as well as being PGA TOUR members, so they know the value of presenting themselves in a favorable light to the fans at our tournaments and the television viewing audience. Also, golf has been very fortunate in that many of its outstanding players have been great sportsmen as well. From Francis Ouimet and Bobby Jones through Gene Sarazen and Byron Nelson to Arnold Palmer and Jack Nicklaus, young golfers have had a rich tradition of sportsmanship among its very best players. That is a tradition we need to maintain, and we will.



STEVE FONTAINE/PGA TOUR

Q: You mentioned television. Has TV had a major impact on the PGA TOUR?

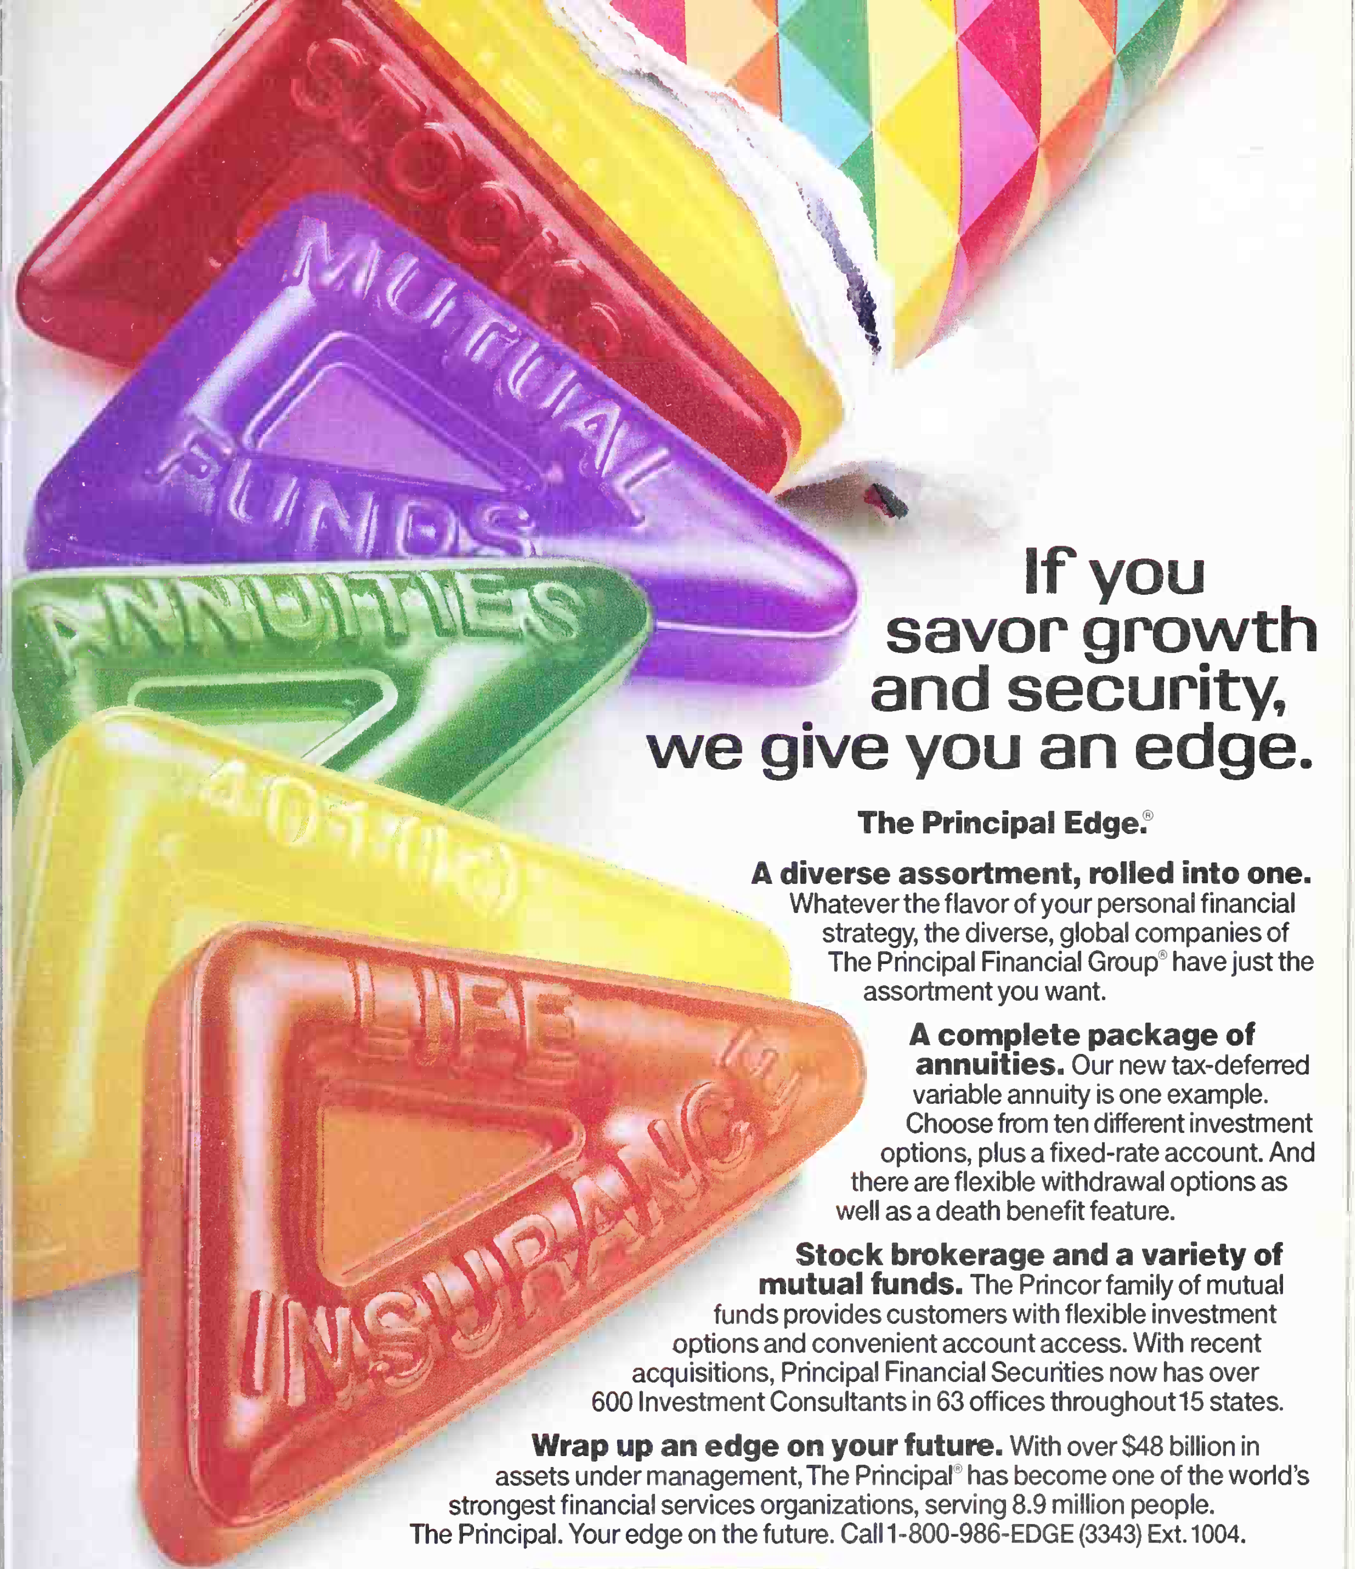
A: Television is certainly one of the cornerstones of our success. PGA TOUR golf is on practically every network around the world. That national and international exposure is not only beneficial to our players, it helps attract title sponsorship for our tournaments. We are on television in more than 100 countries around the world this year and the PGA TOUR brand is synonymous with quality in every market. The image of our players and the international exposure of our events throughout the world are two of the keys to our ability to stage the best tournaments and attract the best players to play in them.

Q: What do you see for the future?

A: We have an obligation to our members to provide them with the best playing opportunities and most attractive purses that we can. We choose to do that within a charitable structure, and our members support that decision. There is no reason professional golf should not continue to prosper if we don't lose sight of why we have succeeded thus far and if we continue to anticipate where the opportunities wil be for growth in the future. We know that television is changing and that viewers' choices are going to expand rapidly in the coming years. We want to start ahead of the trends in that are and take advantage of the marketplac in a shrinking globe.

Q: When you talk about a global marketplace, does that mean the PGA TOUR is going international?

A: We already are an international organization in many ways. As I mentioned earlier, the PGA TOUR is televised around the world, which gives t PGA TOUR brand name great value internationally. We have many of the best international players – Ernie Els, Nick Faldo, Greg Norman, Nick Pric and many others – as full-time members of the PGA TOUR. In fact, 37 of the top 50 players on the Sony World Rankings are full-time members of th PGA TOUR. It is our goal to have th best tour in the world, which means attracting the best players. The intern tional nature of the TOUR, combined with the international television exposure our events and players receive, boosts the PGA TOUR's recognition and value in the marketplace throughout the world. We have developed International Tournaments Players Clubs in Asia and Japan, including a site in China which will be the host club for the 1995 World Cup; and we expect the ITPC network to grow as interest in golf continues to boom internationally. So, yes, we are aware of the international opportunities for the PGA TOUR and we want to be properly positioned to take advantage of those opportunities.



If you savor growth and security, we give you an edge.

YOU WOULDN'T BUY A CHEAP PACEMAKER.

YOU WOULDN'T BUY A CHEAP CRASH HELMET.

LET'S DISCUSS CARS.

There are some things in life that are simply too important to scrimp on. And yet every day, people do exactly that when choosing the one piece of equipment statistically most likely to determine their fate—their car. ¶ Despite clear evidence to the contrary, many people still think of their car more as a fashion accessory than a serious piece of life-saving equipment. ¶ Fortunately, this attitude has never been fashionable at Mercedes-Benz. ¶ Which is why in every category that the government has set technical standards for safety, Mercedes-Benz automobiles not only meet them, but in many cases exceed them. ¶ And why in categories which the government does not require a standard, we have created our own. For instance, the government sets no standard for occupied seats absorbing rear impacts. But to pass the Mercedes-Benz standard, our occupied front seats must withstand a 30 mph car-to-car rear impact. ¶ Is there a less expensive way to build cars? To be sure. Is there a better way? If there is, you can be sure we will find it. ¶ Ultimately, the question you must ask yourself is not whether you can afford to buy a car built as well as a Mercedes-Benz. The question you must ask yourself is whether you can afford not to. ¶ If we can assist you in any way, please call 1-800-FOR-MERCEDES.

Gil Morgan on the fairway.

Open the car door, and the pungent, sweet aroma of barbecue smoking in the building nearby greets you and invites you inside.

Those lip-smacking sandwiches of well-seasoned, chopped pork served up in the Germantown Commissary are popular items year-round. But business really picks up when the FedEx St. Jude Classic is played each summer just about a mile down the road.

Stop for lunch on your way to the TPC at Southwind. Or cool off, rest your feet and have dinner after you've followed your favorite PGA TOUR pro around the course.

If you're lucky, one of the golfers might even stop by. Jim Gallagher, Jr., Jodie Mudd and Peter Jacobsen like to eat there, and mementos from their visits hang on the wood-paneled walls.

Walker Taylor, who owns the Germantown Commissary, sees about a 25 percent increase in sales during the week of the tournament – "a nice little boost," he says. "A lot of our waitresses and catering personnel don't want to take their vacation that week."

The lunch crowd usually starts arriving at 11:15 a.m. But when the tournament's in town, Taylor opens up around 10. Business is steady most of the afternoon, "then, boom, around four o'clock people start coming for dinner," he says.

The Germantown Commissary's catering business picks up during the FedEx St. Jude Classic, too. Taylor says people living in the Southwind development particularly like to give parties during the tournament.

Businesses all over Memphis are affected by the FedEx St. Jude Classic. Some do business directly with the

Loren Roberts and many TOUR players generously donate their time visiting patients at the St. Jude Children's Research Hospital.

ırly one-third of all the people who attend the FedEx St. Jude Classic come from out-of-town.

ırnament. Others, like the German- wn Commissary, do more business their own because the PGA TOUR in town.

Memphis is located on the western- ost border of Tennessee, separated m Arkansas by the wide, rambling ississippi River. The city is called merica's Distribution Center," and e tournament's benefactor, Federal press, is the area's largest employer.

The St. Jude Classic, staged since '58, is something of an institution in and around Memphis, not unlike the home of Elvis Presley, Graceland. There is no other PGA TOUR event within a 250-mile radius of Memphis – extending in various directions to Chicago, Dallas, New Orleans and Atlanta.

"As far as this area is concerned, we are the mecca to see a PGA TOUR event," says Dwight Drinkard, who has directed the tournament for the last eight years.

Economic impact studies indicate that nearly one-third of all the people who attend the FedEx St. Jude Classic come from out-of-town. That's a boost for restaurants, hotels and nearby shopping centers – even gas stations, as well as for the tournament.

"The study shows that the average out-of-town stay is for 2.65 days," Drinkard says. "We were surprised and pleased at how high that was."

Since the study indicates many of the visitors stay overnight, the tournament arranges special packages with local hotels. The hotels get reduced-rate

If so many golfers are doctors and lawyers, why do they dress like used car salesmen?

tickets, bus passes and visors to offer guests. The hotels often throw in a social event on site as an added inticement.

"They really take it and run with it," Drinkard says.

Overall out-of-town spending has been estimated at $4.4 million of the $12.6 million generally regarded as the total economic impact of the FedEx St. Jude Classic each year. Not surprisingly, tournament marketing efforts take pains to target the outlying areas.

"We make a definite public relations effort to specific small town newspapers," Drinkard says. "And through the Memphis Commercial Appeal, we have over 200,000 stuffers specifically included in the regional editions."

Tournament officials make sure that it's easy to buy a ticket, too. The Delta region for the Kroger grocery store chain corresponds to the St. Jude Classic's target areas, and the supermarkets serve as ticket outlets.

But Memphis benefits from more than just the money spent by the roughly 130,000-150,000 people who attend the tournament each year. According to the economic impact study, the FedEx St. Jude Classic pumps another $1.2 million back into the city annually.

Davis Love III and Greg Cesario provide a helping hand.

First and foremost is the annual contribution to the St. Jude Children's Hospital, the tournament's sole beneficiary for the last 25 years. The 1994 gift was $555,000 and the total contribution exceeds $6.25 million. Some 79 percent of that total has come since 1986, when Federal Express became the tournament's sponsor.

Then there are taxes, phone bills and utilities to be paid, and insurance to be purchased. Programs, signs and tickets must be printed. Companies are commissioned to erect and air-condition the corporate hospitality tents. Security and caterers must be hired.

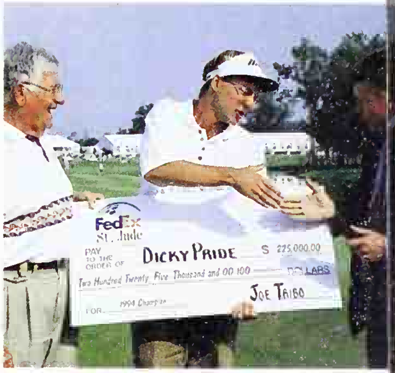
And those are just a few of the expenditures. Tournament manager Phil Cannon estimates that as much as 95 percent of the money the FedEx St. Jude Classic spends each year stays in Memphis.

"All things being equal, if we had a choice between an in-town vendor and an out-of-town vendor, we would choose the in-town one," Drinkard says. "There are obvious reasons – loyalty and civic concerns, as well as the fact that most local companies support the tournament."

As Drinkard said, the relationship is symbolic. Local companies purchase sponsor packages and buy corporate hospitality tents. Businessmen work with the Committee of 100, the St. Jude Classic's volunteer sales force.

"And that allows us to continue to impact the local economy," Cannon explains.

Mahaffey Tent Company is one of the many businesses that does business with the FedEx St. Jude Classic. The Memphis-based company, founded in 1923, has



1994 champion of the FedEx St. Jude Classic Dicky Pride is presented with his winner's check.

12 full-time employees and another dozen temporary workers.

For a golf tournament, Mahaffey president William Pretsch estimates the work force triples. It takes nearly three weeks to set up and equip the tents, another 10 days to two weeks to take everything down.

At one time, the FedEx St. Jude Classic was the only golf tournament with which Mahaffey was involved. But as corporate executives saw firsthand the things the company could do, its client list increased. Mahaffey now works with four golf events.

"The clientele and patrons at a golf tournament are so high up in income and position," Pretsch explains. The exposure Mahaffey gets pays off handsomely as a result.

"It's important from so many angle he says. "The bottom line is the impac of a big project. So many people see us and get ideas for what they want t do. Then they call the (office) of the St. Jude Classic, and they say, 'Oh, it was Mahaffey Tents.'

"I don't know how you quantify that multiplier effect. But we do get quite a lot of phone calls afterward."

The FedEx St. Jude Classic also is fortunate in that it hasn't had to compe for entertainment dollars with any professional sports teams. But that is chan ing this year. Both the Arena Football League and the Canadian Football Leagu will field franchises in Memphis.

"I think we can withstand the competition," says Cannon confidently. "W are firmly established as an annual rite of summer."

IBM Scores Again

BY CHELLE DELANEY

IBM and the PGA TOUR have been thinking about how improved scoring could enhance the tournaments for the fans.

They've been thinking along these lines:

"Suppose we could communicate the drama and excitement that hang on every stroke? Suppose we could know exactly where each shot went? Suppose, if the player birdied, we could know how the other players in the tournament had done on that hole? And how other players in previous tournaments had done? And know it immediately, in real time?"

Just imagine what that would be like. It would be an advancement in tournament golf that would be comparable to stadium golf.

But fans won't have to suppose or imagine for very long. IBM and the PGA TOUR are already working on the solution.

Tom Burke, IBM's manager of sports marketing, says, "Prior to IBM becoming the technology sponsor for the TOUR, there were any number of different ways to get the scores to the scoreboards, the press and the players. The networks and the press might generate their own numbers. At some tournaments, there might be three different scoring methods used."

Moreover, prior to IBM, it could take between one and two minutes to get the scores from greenside to the Coca-Cola scoreboards.

IBM provided its first solution by creating a single system, the IBM Gol Scoring System, that makes the scores at the end of each hole available to pla ers, fans and media. . .in seconds.

"We basically provided everybody with the same score and the same stats from the greens as a player putted out," Burke says. "It was a win-win for everybody."

SAM GREENWOOD/PGA TOUR

Players as well as fans can get up-to-the-minute results and statistics.

STAN BADZ / PGA TOUR

IBM and the PGA TOUR have ;ned an agreement for four more years 1995 through 1998. So as IBM con- ıues as the "Official Computer of the ;A TOUR," fans can look forward to ore advancements in the IBM Golf oring System.

"There are two things that make a challenge at the tournaments," ırke says. "Basically, it's like run- ng a small business, spread over 0 acres, and moving it every week. ıere's been some interesting chal- ıges, but so far things have worked mendously."

At the first PGA TOUR event of is year, the Mercedes Championships, e computer giant replaced desktop mputers with the IBM ThinkPad, notepad computer with CD-ROM d speakers. Much smaller than the sktop PCs, the ThinkPad is easier to carry from tournament to tournament and easier to set up at each event.

"That's the direction our technology is heading, smaller and more portable," Burke says.

The ThinkPad is also easy for fans and volunteers to operate. "User friendly?" It has to be because the walking scorers and greenside scorers are volunteers who are new to the equipment. "Every day of every tournament, we have to train someone to enter these statistics," says Jack White, the PGA TOUR's director of tournament operations.

Also new at the Mercedes Championships: "The scoring stats are available as the players complete each hole. That's another technology update provided by the score entry terminal that now sits greenside," says Steve Evans, the PGA TOUR's information systems manager.

"So, for the golf fans on the course, the television people and the television audiences, that's a lot more meaningful than what we have had in the past."

After The Masters, IBM introduced its consumer multimedia PC, the IBM Aptiva Personal Computer, to the tournaments. Displayed at kiosks in areas such as the 19th hole, the Aptiva, with its video capabilities, will show the fans an aerial view of a particular hole, demonstrate how a pro typically strategizes and plays that hole. Also, player bios can be brought up on the screen, and they're just not text. They show the players in action.

Another solution, real-time golf scores throughout a tournament are not that far off.

"The next improvement will be to give spectators information as a round is progressing," Burke says. Today's scoring information must wait until the walking scorers, who are with each group of players, reach the green and turn in their scoring tickets to the greenside reporters.

In the future, the walking scorers will have lightweight portables that will directly input the scores, stroke-by-stroke, into the central system, says Burke.

"Sometime in 1996, individual shots and their associated stats will be shown instantly as each shot is played," Burke says.

Leo P. McCullagh, Jr., vice president, marketing and retail licensing for the PGA TOUR, says, "There has never been the kind of statistical collection and measurement systems in golf that baseball's had for years and years. . .But this real-time scoring will allow us to do some improved statistical collection."

SAM GREENWOOD / PGA TOUR

TOUR players Rick Fehr and Tom Lehman check their stats.

Evans says, "We know which shot went on the green. But what we'd like to know is: 'Did his third shot go into the left-hand rough or the deep left-hand rough?' And then collect all that information and analyze it, so we can tell fans how hard it is to get out of the deep left-hand rough."

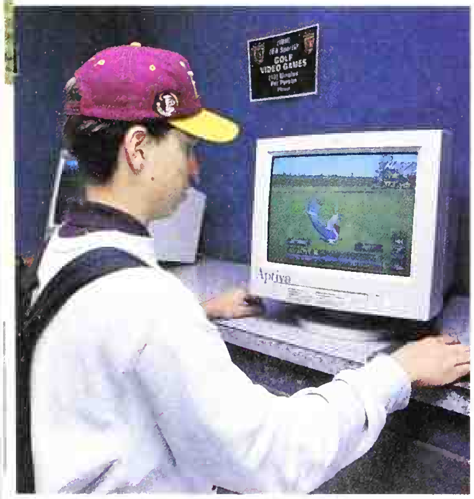
"With this system," McCullagh adds, "we'll know that one in a hundred shots from this position will hit the green."

Burke says, "Our next really interesting piece, as the worlds of television and computers get more and more intertwined, is to network and bring them together."

For example, Burke envisions a spectator at a tournament being able to go up to a computer and view the action at any hole on live television.

"All of these things are possible," McCullagh says. "These are not pipe dreams. These are all things that we can do to take the presentation of our game, in a technology sense, to the state of the art. But it will take time."

White sums it up this way: "In partnership with IBM, we're using technology to better present golf."



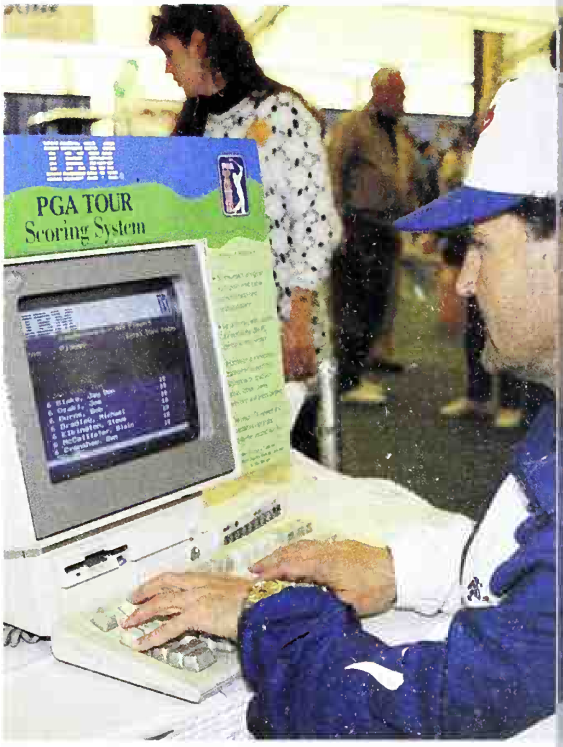
SAM GREENWOOD PGA TOUR

A Nissan Open fan checks out the IBM Scoring System.

And IBM is using golf to present its computers, as well as its solutions, to customers and potential customers.

International Business Machines, Inc., based in Armonk, NY, is the world's largest computer maker. In 1994, the company had earnings of $3 billion. Its sports marketing programs focus on premier sports and events such as the PGA TOUR, the NBA, Grand Slam events, and the Olympics.

"The PGA TOUR events match very well with our customer audience," Burke says. "The TOUR gives us an opportunity to demonstrate how we can provide a solution in a sport that they enjoy; enhance the sport for all the spectators; and give them a chance to see, feel and use our product lines. It's really been a win-win situation."



STAN BADZ PGA TOUR

It is easy to follow the leaders with IBM.

IBM's name and logo are seen on television in millions of homes. The computer maker also gets worldwide recognition and credit for its IBM Golf Scoring System in more than 100 countries, where the PGA TOUR is televised.

And this year, without television, IBM representatives are demonstrating the IBM Golf Scoring System in action to customers thousands of miles away from the tournaments.

For example, "We were in Orlando," Burke says, "and we could demonstrate the ThinkPad and scoring system by dialing into the tournament at Phoenix and bringing up scores and stats instantly – just as if we were right there in Phoenix. This really expands the demonstration capabilities of the ThinkPad, its speed, versatility and graphic capability. You can see the score – in color – updated every second. It's good for marketing."

McCullagh says, "We've gone from just an information system to an interactive and proactive sales vehicle for them; a place where IBM demonstrates and tries technologies; a system that definitely enhances fan value on-site; and a tie-in with television that will improve the broadcasting of golf, over time, through information technologies."

The partnership of the PGA TOU and IBM gives IBM continued access to the game that's a favorite of the nation's executives, IBM's best customers, and the fastest-growing participant sport.

"That's basically the reason we're in the game," Burke says. "We know that our customers are interested in golf. At PGA TOUR events they come across IBM's different product lines. . .and the solutions we bring to the TOUR."

Being on the TOUR, he says, gives IBM an opportunity to tell thei customers:

"Here's a sport you like. Here's a sport we thought we could bring a solution to. And here's the solution we brought to it."

That's what IBM is doing on the PGA TOUR today. . .and will be doin tomorrow – in real time.

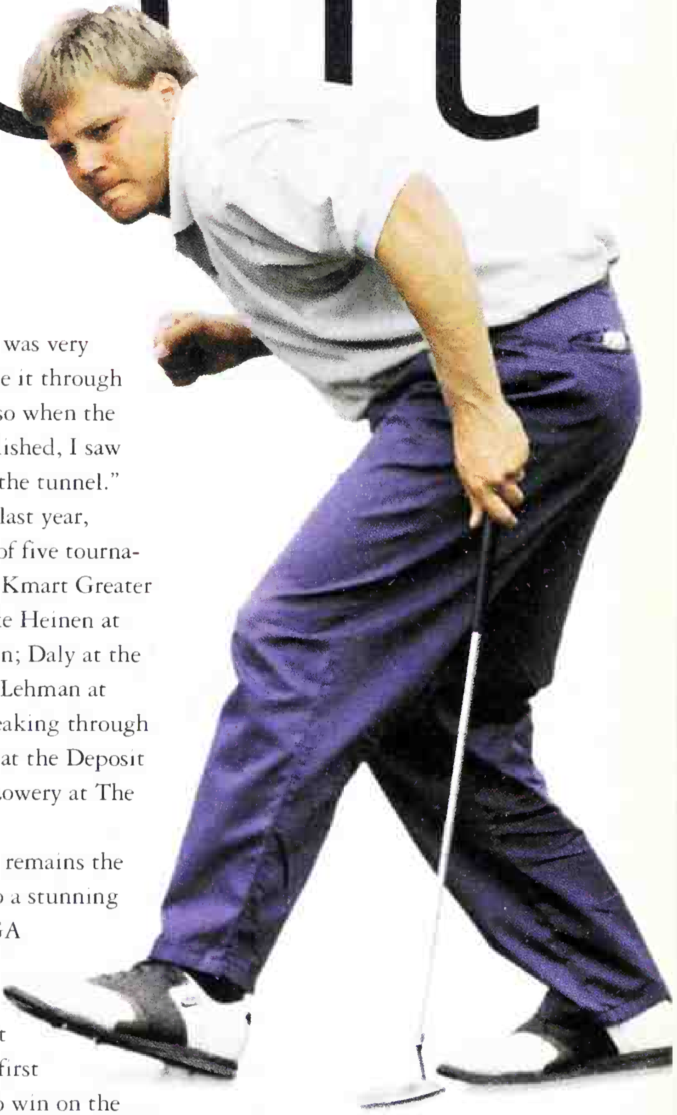
During one stretch last year, NIKE grads won four of five tournaments: Mike Springer at the Kmart Greater Greensboro Open; Mike Heinen at the Shell Houston Open; John Daly at the BellSouth Classic; and Tom Lehman at the Memorial. Also breaking through were Brian Henninger at the Deposit Guaranty Classic and Steve Lowery at The Sprint International.

Just Do It

BY MARK SOLTAU

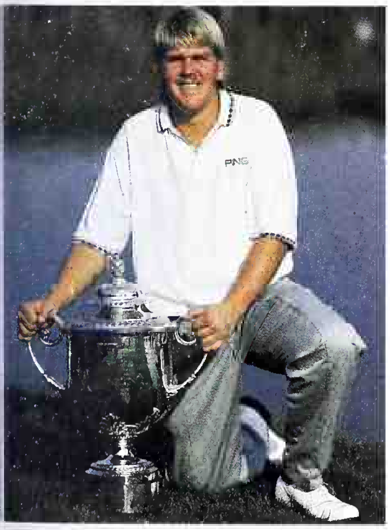


Mike Heinen

If it wasn't for the NIKE TOUR,
John Daly, Tom Lehman, Jeff
Maggert, Mike Springer, Steve
wery and Dave Stockton Jr. may
ver have found their way to the PGA
)UR. All used the circuit, formerly
led the Ben Hogan Tour, as a prov-
g ground to hone their games and
d out if they had the right stuff.

Daly, Lehman, Maggert and Springer
t only belong, they've become stand-
ts. All but Maggert captured PGA
)UR titles in 1994, bringing the
-year total to 14.

"Certainly, it was a boost," Maggert
d of the new Tour. "More important
getting your confidence up. I've
d four good years out here. I think
elong."



n Daly is one of many players who have graduated
he PGA TOUR.

Added Lehman, "It was very difficult for me to make it through the qualifying school, so when the Hogan Tour was established, I saw the light at the end of the tunnel."

During one stretch last year, NIKE grads won four of five tournaments: Springer at the Kmart Greater Greensboro Open; Mike Heinen at the Shell Houston Open; Daly at the BellSouth Classic; and Lehman at the Memorial. Also breaking through were Brian Henninger at the Deposit Guaranty Classic and Lowery at The Sprint International.

Daly, class of 1990, remains the most famous, thanks to a stunning victory in the 1991 PGA Championship at Crooked Stick Golf Club in Carmel, IN. At age 25, he became the first NIKE TOUR player to win on the PGA TOUR.

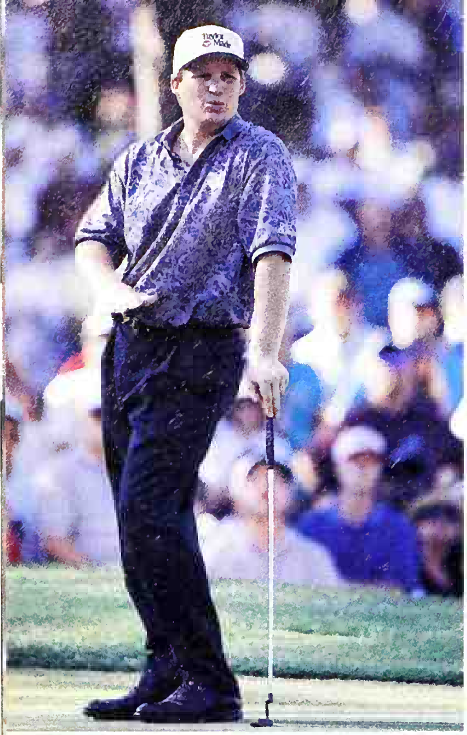
Since the Tour's inception in 1990, prize money has doubled from $3,050,000 to $6,125,000 in 1995.

"This has had size, scope and a mission from the start," said Dale Antram, Vice President of NIKE TOUR Operations, who also helped launch the Senior PGA TOUR. "We kind of ran that out of our hip pockets."

In addition, more than $6.8 million has been generated for charity, including more than $1.1 million last year.

"It's important for me to remember the opportunities that were given me," said Lehman. "I always like to give back as many times as I can. It's always nice to know that something that's given you an opportunity is also giving other people an opportunity."

When Hogan decided to sever ties with the PGA TOUR in 1992, there was legitimate concern. As it turned out, the parting may have been a blessing. Oregon-based NIKE, the world's



STAN BADZ PGA TOUR

Mike Springer

largest manufacturer of athletic shoes, agreed to take over sponsorship and pledged a five-year commitment.

"The transition from Hogan to NIKE was significant," said Antram. "Instead of a passive partner, we have a large, aggressive partner. It reversed a sinking feeling we had."

It also secured instant credibility for NIKE in the golf market. For years, the company had been trying to get a foot in the door. Now they have both feet in, and have become a force in the industry.

"It has legitimized NIKE in the golf business," said Mick McCormick, Director of Sales for NIKE Golf.

Not only does the NIKE TOUR provide an arena for newcomers and veterans, it also gives the game added exposure in new areas throughout the country. Thirty events will be contested in 1995 with minimum purses of $200,000. In addition, as many as seven tournaments will be shown on The Golf Channel. Also, the year-ending NIKE TOUR Championship in Atlanta will be aired on ESPN.

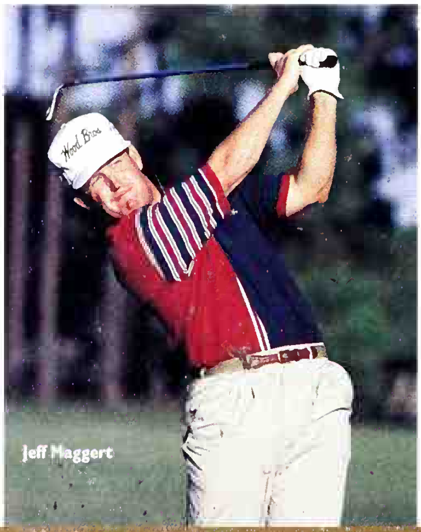
"The NIKE TOUR provides a great development opportunity for players and allows NIKE to be involved in grassroots, community-oriented golf events around the country," said Tom Clarke, President and COO of NIKE. "The first two years of our sponsorship have helped strengthen our links to the golf world and will provide us a great base from which to continue to grow our business and our involvement with a great game."

The top 10 money winners from the NIKE TOUR automatically earn PGA TOUR playing privileges for the following year. In all, 22 NIKE TOUR alums jumped to the big TOUR in 1995, 12 advancing through the PGA TOUR Qualifying School, including medalist Woody Austin.

In 1993, two former PGA TOUR winners, Curt Byrum (1989 Hardee's Golf Classic) and Stan Utley (1989 Chattanooga Classic) regained their cards by finishing among the top 10 on the NIKE TOUR. In 1994, Chris Perry, another former PGA TOUR regular, led the NIKE TOUR in earnings and is back with the big boys.

"It helps you test yourself," said Springer, who finished fourth on the Hogan Tour money list in 1990, and has now accumulated more than $1.3 million on the PGA TOUR. "The only difference is not as many people watch. It's good conditioning for the PGA TOUR.

Lehman agreed.



STAN BADZ PGA TOUR

Jeff Maggert

"Because the PGA TOUR made th effort to have all the Ben Hogan event emulate the TOUR, it was a much eas er transition," he said. "The field on today's NIKE TOUR is so competitiv making a cut out there is just as difficu as making a cut on the PGA TOUR."

Stockton, whose father Dave is a star on the Senior PGA TOUR, echoe those sentiments.

"It's like Triple A baseball," he said. "When I won my first NIKE TOUR event, it gave me so much confidence. I believed in myself and knew I could win."

"Junior" won two NIKE TOUR titles in 1993 and shared medalist honors in the 1993 PGA TOUR Qualifying School. He was in contention twice last year, securing a pair of third-place finishes, and retained his card by banking $185,205.

"The guys you're watching on the NIKE TOUR now are the guys you'r going to see on the PGA TOUR the next five or six years," said Stockton. "It's a wave. They're going to be the stars of the future."

NIKE will help sponsor PGA TOU rookie Pat Bates this year, and has also begun a new clothing program for members of its own circuit.

"We'll probably have as many as 50 NIKE TOUR players from head to toe," McCormick said.

In the early years, galleries were sparse. But last August, the NIKE Ozarks Open in Springfield, MO drew 40,000 spectators, further evidence the NIKE TOUR is making an impact.

"What the NIKE name means is a lot of energy, credibility and active involvement," said Antram. "The talen keeps increasing each year."

Daly, Heinen, Henninger, Lehman Lowery, Maggert, Springer and Stockt are proof positive.

Wherever The International Language Of Business Is Spoken, We'll Make Sure You Don't Miss A Word.

They speak it in England, France and Germany. It sounds the same in the U.S., Hong Kong and Tokyo. It's the international language of business. And at Delta Air Lines, we understand how important it is for you to be a part of the conversation. Company Benefits

BY JAY WILLI

Birdies, bogies, fliers, three-putts. The words that swirl around the world of the PGA TOUR often define the day-to-day, shot-to-shot guts of the sport, of fortunes won or lost by a stroke while going about the business of being a professional golfer.

When David Robertson thinks of the PGA TOUR, the words he sometimes conjures are "mind share." David Robertson, you see, goes about the business of being the director of business advertising for AT&T and when he looks at the TOUR from his corporate perspective, he sees a way into the hearts and minds of the international business community.

AT&T is the official telecommunications company of the PGA TOUR as well as being the title sponsor of the one of the TOUR's oldest and proudest events, the AT&T Pebble Beach National Pro-Am. AT&T is one of dozens of corporations with official ties to the PGA TOUR, and all are seeking the same basic benefit: to belong to an exclusive club in which everybody wants to be a member.

This is a look at how a few corporate members of the club see their relationship with the TOUR and the benefits they derive from it.

THE PLAYERS
CHAMPIONSHIP
SKYTEL

STAN BADZ PGA TOUR

SkyTel is the official wireless messaging company of the PGA TOUR.

Robertson is looking for something special. He's looking for a way to connect with executives of major companies who do business or who might do business with AT&T. He knows that most business executives love golf, that there is a very dedicated share of their minds that loves the game. So maybe most of the time that mind share is dedicated t double bogeys, shanks and $10 Nassaus. Robertson knows, however, that he can use that mind share to connect AT&T to business opportunities, he can do so most effectively by being involved with the PGA TOUR.

"We believe that our involvement in golf help us with our long-term business dealings," said Robertson. "So many of the executives of the companies we do business with or would like to do business with play golf, so it makes sense that we involve ourselves in the game in a meaningful way from the corporate standpoint."

For Robertson, the PGA TOUR provides an unique business forum, one where the actual

Cadillac attributes $230 million in sales to its association with the Senior PGA TOUR.

ing of business isn't as important as e personal relationships that can be rmed in such an intimate atmosphere.

"The PGA TOUR has the kind of edible image that we want to be asso- ated with," said Robertson. "Pebble ach helps us bring together many ecutives in a great environment that's ry conducive to establishing or main- ning relationships. And that's what r PGA TOUR involvement is about, ilding and maintaining relationships."

Jim Merrigan is events manager for T&T, which has been the title sponsor Pebble Beach since 1985 and a corpo- e sponsor of the TOUR since last ar. AT&T provides the TOUR and players with telecommunications istance and equipment.

"We don't really track or try to antify the benefits of being associated th the TOUR," said Merrigan. "We st know that it is very beneficial to r company and we want to continue that relationship. We can easily see how our clients enjoy being in the golf environment."

PLAYER FITNESS CENTER
BAYER
This January, Bayer Aspirin became the official pain reliever of the PGA TOUR.

At TOUR and Senior TOUR stops across the country, the Centinela Hospital fitness trailer is a familiar sight to golf fans and a welcoming one to professional golfers. Inside the trailers players can get therapy for an aching back and exercise to extend a backswing. Centinela's corporate involvement with the TOUR is definitely hands on.

Centinela is the official hospital and research center of the TOUR, an involvement that grew out of research into the golf swing during the mid-'80s. The Centinela hospital network includes a 403-bed facility not far from the Great Western Forum in Los Angeles, and 11 other satellite hospitals. Centinela doctors deliver babies, extract appendixes and do heart surgery. But the hospital is known best for its work in sports medicine.

So many great professional athletes have come to Centinela for surgical repair and therapeutic rehabilitation. Pro baseball's Orel Hershheiser, pro football's Jim McMahon, tennis' Ivan Lendl are among thousands of athletes to come under Centinela's care. Paul Azinger took his cancer treatment at Centinela. And there are dozens of Senior TOUR players who will tell you that, without the Centinela fitness trailer, their careers might have withered away.

"Our association with the TOUR keeps our name out there nationally and internationally," said Russell Stromberg, president of Centinela Hospital. "We are a world-class sports medicine facility. We have done extensive research on the golf swing and the injuries that are specific to it. It seemed natural that we should become involved corporately with the TOUR. We feel very comfortable with this association.

de the Centinela fitness trailers you will find Bayer Aspirin products.

Here's one way to
cut costs.

Chevrolet, the Chevrolet Emblem, Astro, Blazer, Cavalier, Corsica, Lumina and Monte Carlo are registered trademarks and Chevy is a trademark of the GM Corp. ©1994 GM Corp. All Rights Reserved. Buckle up, America!

On the other hand, we've come up with **more effective** ways to get **more** for your **money.**

All over the world, companies are making sacrifices to stay competitive. They're looking for products that not only deliver exceptional performance, but exceptional value, as well. That's the essence of Genuine Chevrolet. Chevy has introduced more new cars and trucks than any other manufacturer in the past year, and each one has been thoughtfully engineered to keep your employees comfortable and your company profitable. Lumina, Monte Carlo, Blazer, and coming soon, the new Cavalier. All vehicles that offer much more than just "basic" transportation. To find out more, call us at 1-800-FLEET-OPS (353-3867).

Astro Cargo Van

GENUINE CHEVROLET™

We draw much of our business nationally, and the TOUR gives us more than just advertising. We get to prove on a national scale what we can do."

Inside the Centinela trailers you will find Bayer Aspirin products. This January, Bayer became the official pain reliever of the TOUR. Bayer has a promotional slogan that reads: "As you get older, you get smarter, you get Bayer." That slogan goes directly to the golf audience.

SAM GREENWOOD/PGA TOUR

Kenny Knox with a young fan.

"Our association with the TOUR delivers the demographic target audience we are looking for," says Michelle Priefer, who is manager of medical marketing and public relations for Bayer. "Our research shows that the people who watch golf and play golf are 40-plus years old. That's just who we are looking for."

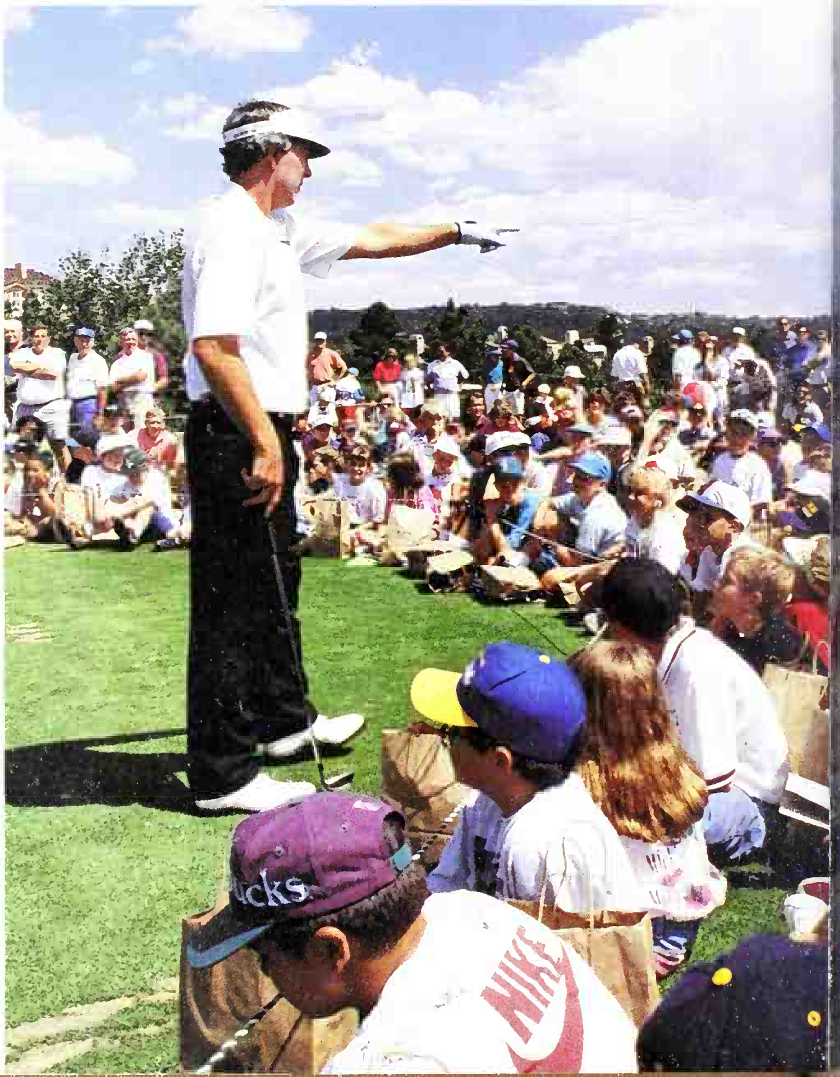
NIKE is looking for a somewhat younger audience. In the 1970s, the NIKE shoe people created Athletics West, a program to nurture Olympic-class athletes. It reflected a philosophy of being involved with sports at the grassroots level.

What better sport to be involved with at the grassroots level than golf, and, in 1993, the footwear giant signed on to be the sponsor of the NIKE TOUR, the PGA TOUR's entry level to stardom. It is a commitment often rumored to be at least $20,000,000, a rumor not denied.

NIKE began making golf shoes in the 1980s and when Curtis Strange won back-to-back U.S. Opens wearin NIKE shoes in 1988 and 1989, it allowed NIKE a grand stage to tout it golf line. But sponsorship of the NIKE TOUR allows NIKE an even grander setting to promote its products, which also include apparel and accessories such as gloves and hats.

"We've always wanted to be associated with supporting athletics from t grassroots level, which is why we thin the NIKE TOUR is a perfect fit for u said Merle Marting, NIKE's promotions manager.

It isn't just the sales and marketin aspect that appeals to NIKE. "We're youngsters in the golf business," said



SAM GREENWOOD/PGA TOUR

rting. "We're able to learn ot about the golf business m this association. The PGA)UR has been able to coach along in the golf business, ich you know is highly npetitive. We want to be used on the sport, be totally grossed in it and not just e a few contracted athletes.

Curtis Strange's back-to-k wins put us on the map. t we were looking for more. We nk the NIKE TOUR is on the growth ve of the Senior TOUR, and we hope will be able to grow right along h it."

THE NIKE SHOP
THE NIKE SHOP

STAN BADZ PGA TOUR

Sponsorship of the NIKE TOUR provides NIKE a grand setting to promote its products.

And there are some numbers that bear out the benefits of NIKE's sponsorship. Marting said that golf footwear bookings are up 44 percent over 1994, and apparel bookings are up 150 percent. "Everybody here thinks it's been a tremendous opportunity," said Marting. "Our sponsorship of the NIKE TOUR means that NIKE is looked at as a credible company in the golf business."

Alex Morton, as executive vice president of advertising at DMB&B, puts about eight percent of Cadillac's advertising and marketing budget into the PGA TOUR. The largest commitment by far is to the Senior TOUR, where 20 events come under the heading of The Cadillac Series. All 20 events are televised on ESPN with Cadillac as the sole automobile sponsor.

"We were fortunate enough to anticipate the phenomenal growth of the Senior TOUR and get in at the start in the mid-'80s," said Morton.

"The Senior TOUR is perfect with Cadillac's demographics: Older, affluent, active."

And Morton has a pretty big number to proclaim that Cadillac and the Senior TOUR are the perfect match. Try $230 million. "It's been wildly successful," said Morton. "We have sold $230 million worth of product directly attributable to our involvement with the Cadillac Series. My feeling is that we actually generate a lot more sales than this."

Cadillac gets its local dealer groups involved, offering test drives in exchange for tickets to Senior TOUR events, and setting up sales displays at the events themselves. This allows DMB&B to pay close attention to the benefits of its association with the TOUR.

There is one year remaining on Cadillac's contract to underwrite the Cadillac Series, and Morton has every intention of continuing the relationship. "Our market research shows that Cadillac is known as the number one sponsor in all of golf, and that includes all the equipment companies. A lot of companies spend more money and don't get the exposure we do. It's far exceeded our expectations for success. This will be written some day as the classic program of integrated marketing where image, preference and purchase come together."

Irwin entertains a group nding a Coke clinic.

Here's to You

BY ART SPANDER

Golf seems as much a passion as a pastime. If you don't take it seriously, someone mused, it's not fun. And if you do, it breaks your heart.

Surely, of the games people play and watch, nothing equals golf's compelling blend of joy and heartbreak – a slice of life if not a slice off the tee.

Indifference has never been a failing of the golfing crowd. Golfers and golf fans are fervent toward the brand of clubs they swing, the pros they follow, the clothes they wear and, not insignificantly, the beverages they drink.

Thus did executives from Michelob, at the upper end of the spectrum of Anheuser-Busch beers, sign a five-year contract early last year to become a part of the PGA TOUR Marketing Partners. They sought a distinct and a distinctive segment of consumers with which to build a relationship.

And, apropos of nothing but pertinent to a great deal, Michelob already was recognized for an advertising slogan that reflects the varied emotions of golf.

Bobby Jones once said golfers were dogged victims of an inexorable fate. Michelob puts it a little more succinctly: Some days are better than others.

Michelob has been involved with golf for more than three decades and even sponsors Roger Maltbie, listed as a member of the Michelob Advisory Staff. But not until last year did it become a PGA TOUR Marketing Partner, joining such corporate leaders as AT&T, Merrill Lynch, IBM, Delta Air Lines and Buick.

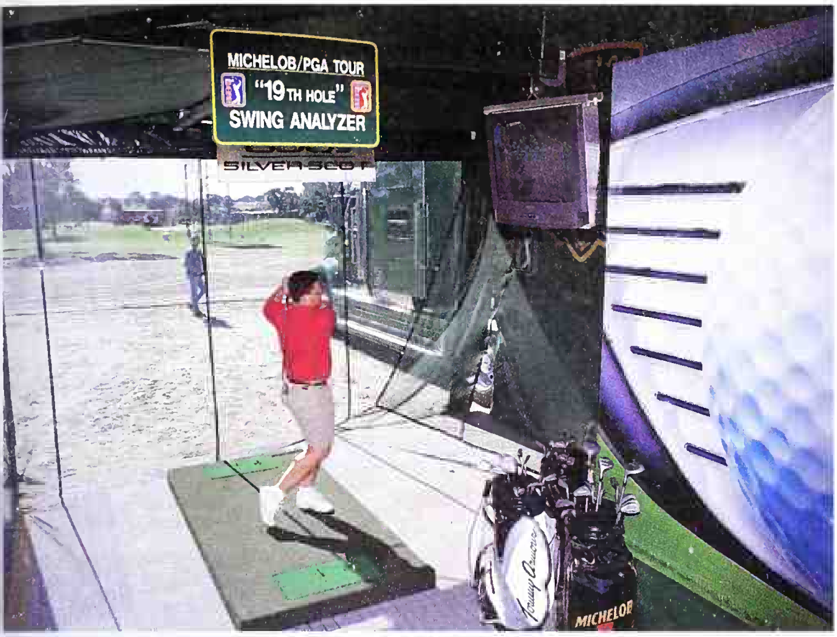
"We are matching up the audiences on demographics and image," said Tim Schoen, senior brand manager for the Michelob Family. "Golf is on an incredible rise.

"But more importantly, the increa of consumers that are golfing more an buying more equipment are younger and more of the common man, or wh we refer to as the beer drinker."

Becoming a marketing partner mea more than just paying a fee to the PGA TOUR and then declaring yourself the "official" this or "official" that although that is not to be ignored.

Leo McCullagh, vice president of marketing and retail licensing for th TOUR, said the marketing partners, as implied, are now involved in a partnership."It's no longer just a question of giving these corporations a few spots in the pro-am or some tickets to the tournament," said McCullagh. "We've become pro-active.

"We learn their business. We try t understand what their objectives are. And we work with them to help them realize a return on their investment from golf."



swing analyzer provides fans with an opportunity to test their game.

In what has been called the largest gle marketing commitment in the ırly 100-year history of the brand, chelob became a co-sponsor with ·rcedes of THE TOUR Championship, : final official event on the schedule; ›duced the "19th Hole," a mobile play vehicle with interactive features; ›nsored the "Michelob Moment" ESPN's weekly programs on the TOUR and Senior TOUR; and bought time on tournament TV coverage.

Anheuser-Busch also came out with a unique method of combining the sport it is sponsoring and the item it sells, offering cans of Michelob, Michelob Dry and Michelob Light with graphics and descriptions of 18 different holes from PGA TOUR and Senior TOUR events.

The 18th at Harbour Town Golf Links is there. So is the 18th of Doral's Blue Monster, where both Nick Faldo and Greg Norman found water during this year's Doral-Ryder Open, won by Faldo. The famous 17th from the TPC at Sawgrass, with its island green, is also featured.

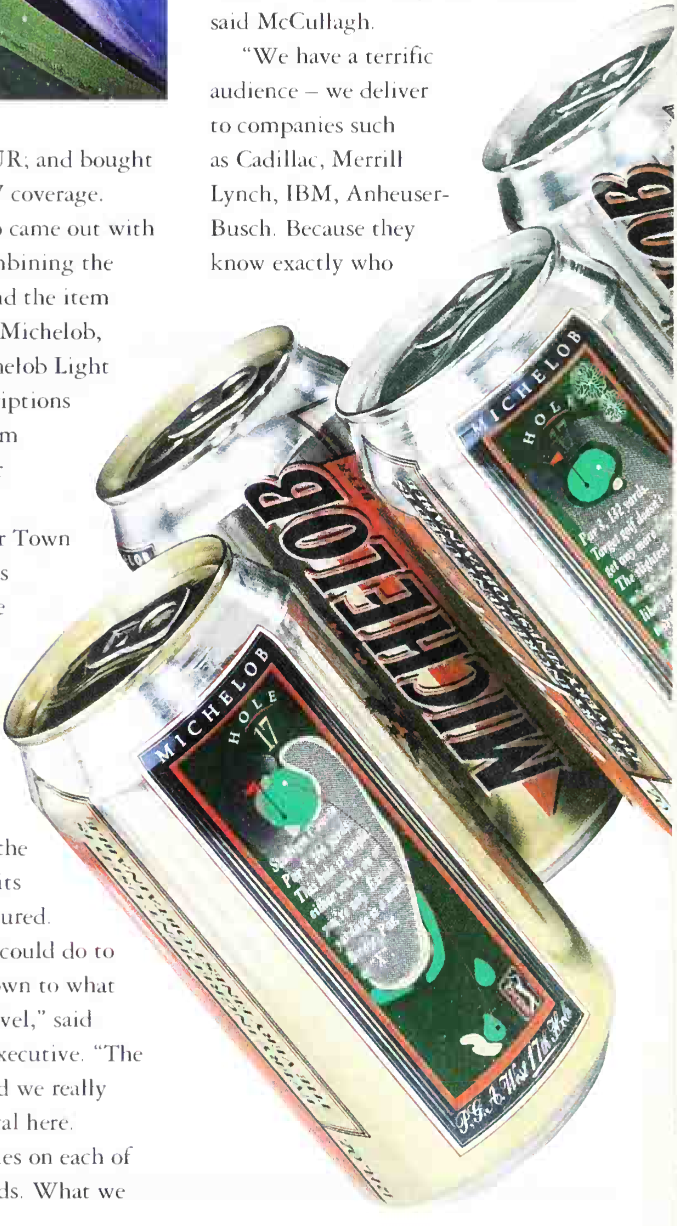
"We asked what we could do to take our sponsorship down to what we call the grassroots level," said Schoen, the Michelob executive. "The in-store promotion. And we really found something magical here.

"We have the 18 holes on each of the three different brands. What we found is that the reception from retailers and consumers has been extraordinary. Our bottle business hasn't lost out at all. It's given the Michelob franchise a boost altogether. It's been a win-win situation."

McCullagh is not surprised. Michelob has studied the market; the PGA TOUR has done the same.

"We present to the title sponsors who our golf audience is and how it indexes out against other sports audiences in various categories of influence," said McCullagh.

"We have a terrific audience – we deliver to companies such as Cadillac, Merrill Lynch, IBM, Anheuser-Busch. Because they know exactly who



Fans can learn more about the history of golf, the PGA TOUR and their favorite players at the Michelob 19th Hole Exhibit.

the customer is. And the customer in almost every case parallels a customer that they're after.

PETE FONTAINE PGA TOUR

"We have the best demographic in sports in terms of household income and disposable income, investments, those kinds of things. Our fan is highly educated, generally affluent and very much involved in the game."

Indeed. During last year's TOUR Championship, at San Francisco's Olympic Club, fans who weren't under the fir trees watching the final-round duel between Mark McCumber and Fuzzy Zoeller, McCumber winning in a playoff, invariably were at the "19th Hole," testing the swing analyzers or golf simulators.

Golf
ORLANDO

There's Got To Be A Reason...

Why 50 touring professionals settle in Orlando, why every major architect designs a course within a 3-wood's distance of each other, why so many top instructors come together to establish teaching academies.

There's got to be a reason why Orlando is a golfer's paradise with 90 unique courses, ready to be experienced by those who appreciate golf with distinction. From residents Arnold Palmer to Payne Stewart, from architects Tom Fazio to Pete Dye, from the high handicapper to the scratch golfer, everyone loves Orlando golf. There's got to be a reason.

What's the reason? Come to Orlando and find out.

Call 1-800-819-7084 to receive the new Orlando Golf Guide and area information.

Orlando/Orange County Convention & Visitors Bureau, Inc.

"At Michelob," Schoen pointed out, "we position ourselves as a tradeup occasion product. For a special occasion. You just won that big contract, want to get out and celebrate. If it's a little more than just an average occasion, Michelob is there for you.

"That's why golf fits. Because it is a more prestigious sport." And a very social sport. Golfers relish conversation, whining about the "ifas, wouldas and couldas," as it were, usually over a cold one, preferably, in this sponsor's case, over a Michelob.

"I think," said Schoen, "the whole sports marketing area is becoming a lot more sophisticated. Consumer product companies like ours – although we've been a leader – well, other companies are learning this can all work.

"It can increase your brand awareness, your brand image and basically help your business overall."

Schoen has been with St. Louis-based Anheuser-Busch 13 years and, in his three years with the entertainment business side of the company, helped bring about Budweiser's deal with the Rolling Stones tours.

He knew it was only rock and roll, but he liked it. Schoen also LIKES golf, which he plays well, and having Michelob as a PGA TOUR Marketing Partner.

"Our sponsorship is for brand awar ness and advertising purposes," Schoe explained.

"It's hard to look at immediate sal as a barometer. That's not what we equate success to. Success to us is foun through a traditional focus group environment. We'll ask key questions abou what they remember about a brand, what they think about a brand, do the remember the sponsorship."

"19TH HOLE" SWING ANALYZER
855s SILVER SCOT

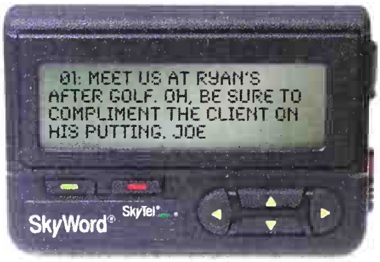
The simulator allows fans to play some of the most famous golf courses on a 9'x10' high-resolution projection screen.

For those who attend TOUR events or watch the weekly ESPN shows, "Inside the PGA TOUR" or "Inside the Senior PGA TOUR," Michelob may be very difficult to forget.

"The matchup between the golf industry and Michelob consumers is better than ever," said Schoen. "And the PGA TOUR package was so enticing, it was something we thought we could build a great relationship with."

Sounds like an arrangement that should be saluted with a Michelob.

Travels great distances to arrive at a designated point in a matter of seconds.



Ditto.

Whether you do business locally, nationwide or internationally, SkyTel® delivers the important information you need. Instantly. On top of that, we can design a communications program around the way your business works. You'll stay productive with customized services like text messaging, e-mail and voice mail integration, even personalized stock quotes. Help Wanted

SAM GREENWOOD PGA TOUR

The PGA TOUR intern program has provided practi
work exposure for its participants.

BY CHRIS SMITH

Perhaps the names aren't readily recognized, as are those actually playing the PGA TOUR. But the significance of what they represent to the TOUR, and the golf industry in general, cannot be trivialized.

Those students participating each summer in the PGA TOUR's intern program are helping to blaze a vocational trail that very well could lead to a more representative proportion of minorities in the golf industry.

That, at least, was the intention when the summer program was launched in 1992. And though it essentially remains in its infancy, the internships already are churning out an encouraging number of success stories.

The first three years provided 52 students with practical work exposure to the TOUR, and another 20 are targeted for the summer of 1995. Internships have been created in a number of departments, including communications, corporate marketing, tournament operations, PGA TOUR Productions, food and beverage, maintenance, golf shop operations, data processing and design services.

More than a half-dozen former interns from the first two years have found full-time employment in the golf industry, and others have gone on to related fields.

"Basically, our goal was to begin the move to insure cultural diversity of the work force that would reflect the cultural diversity of the community," says Richard Bowers, the PGA TOUR director of government affairs who now oversees the program. "That is coming about.

"It is a beacon within the industry that it is possible to do this, that the ki are there who want the opportunity. is a very positive effort. And by the co tinuation and growth, it contributes the elimination of the stereotype that golf is an elitist sport."

Consider, for instance, the case of Malcolm Turner, a member of the PG

MERRILL LYNCH
SHOOT-OUT
© 1995 Merrill Lynch & Co., Inc.

AT THE MERRILL LYNCH SHOOT-OUT YOU CAN EXPECT THE UNEXPECTED

If there's one thing we've learned in sponsoring the Merrill Lynch Shoot-Out series for nine years, it's that golfing's best are a breed unto themselves. Maybe that's why the Shoot-Out Series has earned the loyal following it has everywhere we go.

You never know who you'll see or what they'll do. What you can expect to see is outstanding golf. Each week, top pros will play in PGA TOUR, Senior PGA TOUR and LPGA TOUR events, competing for a purse and a shot at a Merrill Lynch Retirement Plus Annuity.

So expect the greats of golf to maintain peak performance. But expect a slightly different game of golf.

This is one golf game with a difference.

The difference is Merrill Lynch.

Merrill Lynch
A tradition of trust.

UR's promotion staff the past two
rs. A Rhodes Scholarship finalist
he University of North Carolina,
rner was accepted to Harvard Law
ool about the same time the PGA
UR offered him a full-time position
he spring of 1993.

He subsequently wrote to Harvard
uesting a deferral, explaining that he
ieved time with the TOUR would
vide valuable experience. Harvard
iged, granting what Turner says was
ry rare two-year deferral.

"I obviously was very grateful they
e willing to work with me on that,"
l Turner, a 23-year-old resident of
tle Creek, MI. "I've had a great time
there; I've had some really great
eriences with the TOUR. Now,
el I'm ready for law school and am
king to enter this fall. It couldn't
e worked out any better."

There's also Princeton graduate
nklin Greene, a South Carolinian
se first hands-on involvement with
TOUR was through his six years
volunteer with the MCI Heritage
ssic. A member of the state champion
h school golf team, Greene interned
he Merrill Lynch Shoot-Out program
993. Now, with diploma in hand,
s overseeing the LPGA Tour junior
f program in Wilmington, DE.

Maria Mills was an honor student in
rts Management at Florida Interna-
al University when she joined the
ern program in 1993, working
Professional Services at the TPC
awgrass. An aspiring professional
fer, the native of St. Thomas was
d full-time following her graduation.

"The intern program gives you a
ahead of everyone else," says Mills,
now is preparing for LPGA Tour
lifying in the fall. "It's not like
e summer jobs where you are the
est person and don't learn a thing.
You are thrown into the middle of what everyone else is working on, so you learn a lot more. You're not just a lackey. You're in there working on major projects."

Dierdra Girardeau of Jacksonville, FL, a graduate of Central Florida University, was a member of the inaugural intern class. Her internship with the PGA TOUR's communications department included an opportunity to work in the press room at the Walt Disney World/Oldsmobile Classic. It was there that she met a Disney official from publicity, who asked Girardeau whether she might be interested in an internship with Disney World. She subsequently interned there for three semesters. After returning to school to earn her diploma, Girardeau was offered a full-time position with Walt Disney World's Florida Resident Marketing Department.

SAM GREENWOOD PGA TOUR

Internships have been created in a number of departments including design services.

"I am full of praise for the PGA TOUR's intern program because of how it helped me," Girardeau says. "Being part of the inaugural group, we were able to help shape its direction. They didn't have us come in there as tokens or just to show everyone they had minority interns. And we didn't just do grudge work. I was responsible for a lot of information and had to step up and meet all expectations. It definitely helped to further our careers."

Others have branched into other sports-related areas. Derrick Heggans, who in 1992 interned on the Senior PGA TOUR Promotions staff, was hired by Cadillac's advertising agency to work on the Senior PGA TOUR account. He since has been hired by management firm Advantage International, where 1993 intern Brian Colbert also is employed.

Additionally, two others had the opportunity to accept full-time employment, but opted to take a different direction. Cedrick Smith turned down a position with the U.S. Golf Association to go to medical school, and Lucien Blankenship declined employment with Advantage International to take the bar exam and practice law.

Heated Mirrors with tilt-down feature. When reverse gear is engaged, both mirrors automatically lower to show what's directly behind the rear wheels.

Smart Locks prevent the doors from being locked with the engine off and the key in the ignition.

Easy Entry/Exit Driver's Seat automatically moves back two inches when ignition key is removed.

LINCOLN
What A Luxury Car Should Be

Many former PGA TOUR interns have found full-time employment in the golf industry and related fields.

So initial feedback from the program indicates success in fulfilling its ultimate objective.

"The PGA TOUR has invested in people, young people such as myself, and exposed them to the game through various opportunities," Turner says. "For me, it provided an opportunity to grow and learn more about the grass-roots business of the PGA TOUR. That experience and exposure can be everything. So without a doubt, I think it is a very positive program and a step in the right direction. I am proof positive."

Consequently, it is helping to fight the stereotype of golf being an elitist sport, an image that more or less was quietly acknowledged before becoming imprinted upon the American conscience by the Shoal Creek incident of 1990. The private country club outside Birmingham, AL, was preparing to play host to the PGA Championship when its discriminatory membership policy was brought to light and swept national headlines.

The PGA TOUR, in fact, already had been discussing ways to create more opportunities for minorities in the industry during long-range strategy sessions. Shoal Creek, though, became the catalytic force that intensified efforts to put a vehicle in place.

"Going back before Shoal Creek, we had discussed the difficulty of attracting minorities on the business side," PGA TOUR Commissioner Tim Finchem says. "We felt we had to work to create diversity. We finally determined that in order to have an impact on the long-term availability, we had to get students interested at an early age."

Then Shoal Creek elevated everyone's consciousness. Following a year of strategizing and analyzing, the PGA TOUR intern program was implemented in the summer of 1992.

"In the year following the Shoal Creek incident, the staff met often to discuss how we could best impact the issue," says Ruffin Beckwith, who created the program. "We talked to a lot of people outside the TOUR, to people in the minority community, college coaches, directors of junior golf programs."

It became clear to Beckwith that the minority community was largely unaware of the opportunities in golf beyond the competitive side exposed on television. One of the reasons there weren't more minorities on the business side is that few ever applied.

"In the final analysis, we decided to take advantage of the fact that we have many diverse aspects to our business," Beckwith says. "We felt that by creating this internship program, we could accomplish two major objectives: to expose to the minority community that there are a multitude of career opportunities in golf, and to identify qualified kids who might eventually come to work for the PGA TOUR or elsewhe in the industry."

A minority-owned firm, Stringer Marketing Group of Washington, D was retained to help distribute appli- tions and screen students. It took ab a year to set up the program and est- lish positions.

The first year provided eight-wee internships for 14 students. The nex year, 20 students participated. Anot 18 took part last year and about 20 a targeted for the coming summer.

"What's encouraging is that we ca get students to take advantage of th internship availability, students wh have an interest in pursuing opportu- ties in the business," Finchem says. "We are moving in the right directio

As successful as these first years h been, it's only the beginning.

"We are not pumping our chest about it, because it is a slow process Finchem adds. "It's a small step. Bu it's a step in the right direction and consistent with the overall objective creating diversity on the business sid of golf, as we work to establish more opportunity on the playing side. Th longtime objective is to make golf lo more like the rest of the country, and 25 to 30 years, it can become a reality

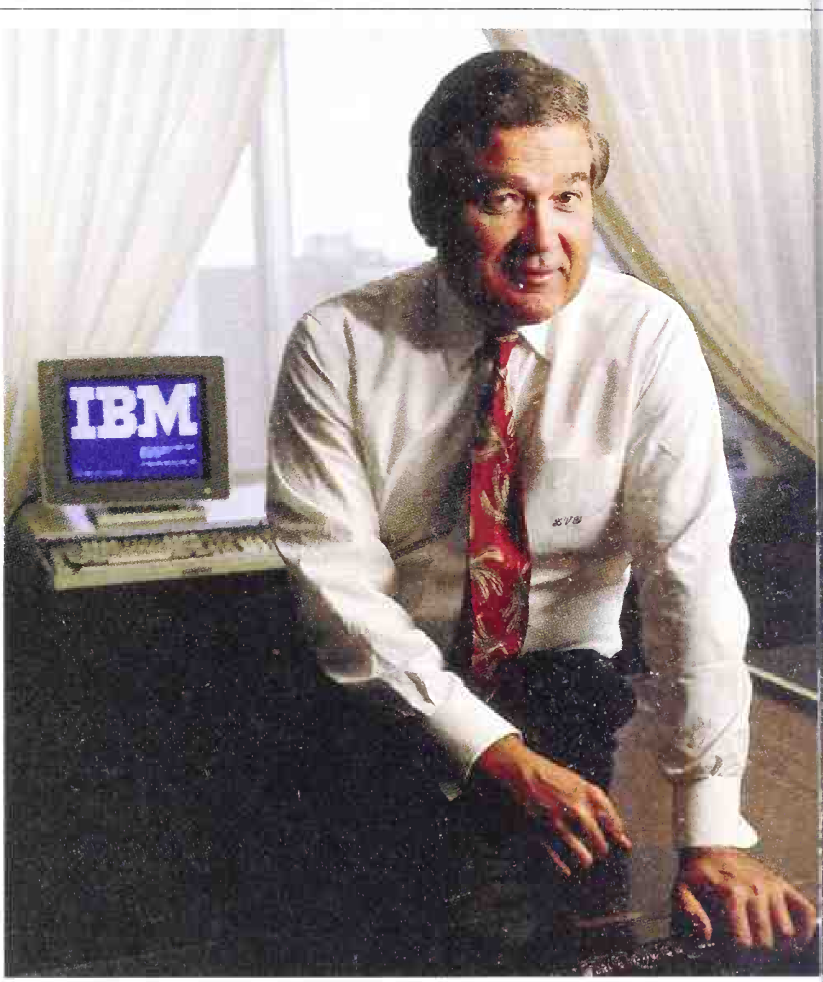
'WE WON'T STOP . . . UNTIL WE FIND OUR WAY BACK'

IBM's Gerstner admits: "There are still a couple of four-minute miles that have to be ru

As IBM begins its third year under Chairman Louis V. Gerstner Jr., the computer giant's turnaround remains a work in progress. His cost-cutting has produced an earnings rebound that has doubled IBM's stock from its nadir. Core businesses such as mainframes and minicomputers are showing surprising strength, and the company is also seeing good results in new markets—such as services and selling components. In anticipation of a strong first-quarter earnings report on Apr. 20, analysts have been boosting their estimates.

But there are problems, too. IBM's $11 billion software business remains in turmoil, and the $10 billion IBM PC Co. is digging out from a disastrous 1994. On the eve of the annual shareholders meeting, Gerstner surveyed his realm in an exclusive interview with BUSINESS WEEK Department Editor Ira Sager.



DANUTA OTFINOWSKI

Q: *Last year, you set priorities for the company: return to profitability, be more competitive, increase shareholder value, and grow. What are the priorities for the next 12 to 18 months?*
A: Well, return to profitability—we've done that. And we've increased shareholder value. But there is a never-ending quest for increasing shareholder value in this company. You see that chart [points to a 1990-94 stock chart]? You see that peak? We won't stop this journey until we find our way back.

Increasing revenue is absolutely essential because this is an industry where if you don't grow, you fall backwards. Competitiveness I would probably translate into an objective of increasing our market share, which is, in effect, the same thing. That is still a very high priority.

Q: *One competitiveness problem has been getting products out on time. The PC company, I'm told, missed every deadline last year.*
A: Well, first let me agree with you that time to market is one of our highest priorities, and one in which we are far from satisfied. The PC company has been the most glaring weakness.

But at the same time, as I think our annual report indicates, nearly half of our hardware sales in 1994 came from products we introduced in the last 18 months. We had a phenomenal new-product-introduction year last year. But I would give us a "C" grade on this because there is still more to do. And the areas where we've got to do better are principally in our PC business and in our desktop software business.

Q: *How critical are those efforts—the PC business, the desktop softwar*
the future of IBM, to the turnarou
A: We consider them very impor
We simply will not accept anything
than success in our PC company a
our software company. And we
see any reason to accept anything
than success. That doesn't mean
we're going to be in every marke

Ve have a lot of money invested in uilding our software company. OS/2 is hottest product in the stores ay. It's increasing share. By the way, : of our software company problem been that we're terrible marketers of ware. Our biggest competi-in software is not a very good techni- company. But it's one of the marketing companies I've ever seen, I've spent 20 years in marketing.

>)ur biggest competitor in tware is not a very good hnical company. But it's one he best marketing npanies I've ever seen”
>
>)UIS GERSTNER, IBM

What about the personal computer iness, where IBM has slipped badly?
Well, our PC company made some improvement in the first quarter. they done? Huh! Far from it. Let tell you something. [IBM PC Co. Prest G. Richard] Thoman made a very, brave decision that I supported: nake a whole lot of fundamental nges simultaneously. We could have e things that kind of allowed us to rn gradually. But we made the deci-, at his urging, to take the shortn hit and really attack the problems. the problems he found were very siderable, and so it's been a rocky 8 0 months.

sense that there is a very clear erstanding today in the division as what they have to do. There's ensiasm to prove to the world that can do it. Yet there are a couple of four-minute s that have to be run before get the gold medal.

How much of what they're g is a model for the rest of company?
The PC company is not the el for the rest of the compa- When I got here, everybody : Look at this hot PC compa- They're doing all the things the rest of IBM should be g. But when you peeled it away, they were doing things that were—thank God—not adopted by the rest of the company.

Q: *You talk about the need for computer makers to deliver real value to customers. What do you mean?*
A: I am probably the only customer who has ever run a significant information-technology company. Most of this industry is run by propeller heads who absolutely love the technology. I spent 20 years buying and using this technology, and I have a great respect for its ability to transform industries and create competitive advantages. But I also know that creating that kind of value requires a lot more than just the pure technology.

Q: *Yet the customers continue to snap up the latest technology....*
A: I would say we are at a very important inflection point right now. More and more customers are saying: "Simply giving me more raw power is not enough." When I talk to customers who are trying to reengineer, they often ask me the following question: "It takes me 36 months to do a major reengineering project. How do I fit your one-year product cycle into my 36-month problem-solving cycle? How do I design systems that are supposed to last, hopefully, for 5 to 10 years on a set of technology that may change in a year?"

We're not going to slow down the pace of technology. We will not change the pace of microprocessor technology, storage technologies, and communications technologies—the three basic drivers of the industry. The answer is to do a better job of packaging technology into workable, long-term solutions for the customer.

Q: *How does this translate into IBM's bringing value to its customers?*
A: We will continue to have people buy off-the-shelf pieces of technology. And you compete there on the basis of who has got the best technology, best price, best delivery. At the same time, the same customer or others are going to say: "I need somebody to really deliver solutions." Solutions involve hardware, software, and what we call services.

One of the most important new demands that our customers are making is for something called systems management. You have a whole set of network management and security issues that require the kind of sophisticated software development that IBM has been known for. And it requires digital network capability, which we also have done for years.

Q: *What do you see as the long-range identity of IBM now?*
A: Our first strategic initiative is exploiting our technology. We have consistently developed the vast majority of the intellectual capital in this industry, whether it was in processors or storage or software or data communications. It's easy to look at technology companies and say: There's Intel and there's Advanced Micro [Devices] and there's EMC. But we've got one of those inside of IBM. And then you look at software companies. Well, we've got one of those, too. And then you go look at services, and there's Andersen Consulting, there's EDS Corp. Well, we're the biggest one of those, too. And networking. You know, the IBM global network is emerging as one of the most important data networks in the world.

Yeah, we've kind of stubbed our toe badly in personal computers. But we're still No. 2. And that's a rather significant position to have. And we haven't given up on No. 1. This was a short-term aberration. Mainframes? People seem to think that business is going to go away. We don't. And our share of that business keeps going up. We're opening the gap between us and competitors.

The answer to your question is, we are going to continue to be an industry leader. We're going to be the company that has the capacity to deliver total

WE'RE MAKING YOUR HOME CONSERVE AS MUCH ENERGY AS YOU DO.

These days, the last thing anyone wants to do is waste energy. After all, rising costs and environmental concerns have made energy conservation more important than ever. So you'll be pleased to know that someone you didn't expect is helping to make homes more energy efficient. Bayer. Almost 60 years ago we invented polyurethane. Today our polyurethane insulation materials go into just about every part of your home. Under the siding, in the walls, under your roof and even in your refrigerator, freezer and hot water heater. Together our materials can increase thermal efficiency by up to 50%. Helping you conserve more energy without even lifting a finger. At Bayer, we like to think of that as just one more headache you won't have to worry about.

Bayer

WE CURE MORE HEADACHES THAN YOU THINK.

Bayer is an international, research-based company in health care, chemicals, and imaging technologies.

solutions and a multiproduct, multisector approach to the market. There will always be some companies—I call them the meteors—that have some hot product and shoot off for five years or so. Five years later, they're dead on their feet, single-product companies. But I think that, day in and day out, our diversity and our capacity to integrate will be a very powerful tool for us, and for shareholders and customers.

Q: *Do you have the management to translate this into results?*

A: What I've found in IBM is that the very core strengths had always been there and were still there. [The problem] was more the attitudes, the kind of management structures and the management behavior that got built up in the face of success. I call it the curse of success.

So we had to change the way people behaved around here—we didn't have to change IBM's fundamentals. We still had powerful technology. We had very smart people. And we have a geographic reach that others would kill for. Everybody's talking about the age of Asia. Look at the size of IBM's Asian operations and how long they've been there. And Latin America.

We had all these great skills and, despite that, we managed to screw up. So that gets to behavioral issues. I've been fortunate enough to have to only work on the behavioral side. I was also blessed by the fact that you need a crisis to focus on the need for change. Basically what I said to people around here is: We just lost $17 billion and 150,000 people lost their jobs, and the media is throwing us on the junkyard pile. It appears that what we were doing wasn't working. Would you not agree? And, therefore, we ought to try something different.

The ability to appeal to a bunch of smart people, who obviously saw that the old system wasn't working, was very constructive. Then we did things relating to the compensation system and to breaking down the feifdoms. And we had a few public hangings of people who didn't want to get on the new programs. That told everybody we were serious. So it's been a long two years.

Q: *You feel good about where the company's headed?*

A: Yes, I'm feeling good about it because IBM people are feeling good. There's a renewal of spirit in the company that is highly constructive and will be an important part of continuing the transformation. We're all feeling good now, but not complacent. The first person who acts complacent around here is going to get a two-by-four on the side of his or her head.

CALL IT THE SUPERNET

vBNS links supercomputers to tackle monster problems

The coolest new place in cyberspace is so cool, it's not even on the Internet. It doesn't have chat rooms or car ads or sexy graphics files or a user-friendly interface or nodes in every major and minor city. What it does have is blazing speed—connections at up to 155 megabits per second, or more than 10,000 times the speed of that 14.4-kilobit modem you just bought for your home computer. It's called vBNS, for very-high-speed Backbone Network Service, and it's run by MCI Communications Corp. for the National Science Foundation (NSF).

vBNS, scheduled to make its public debut on Apr. 24, is a peek into the future of scientific computing. It's not connected to the Internet because browsers aren't welcome. vBNS is strictly for "Grand Challenge" problems that only networks of supercomputers can hope to crack—problems such as predicting global climate change and designing better drugs. vBNS has been quietly getting up to speed for several weeks. It connects five of the most important concentrations of supercomputing power in the U.S. (map, page 125), with lower-speed links for other "meritorious" users via sites in Chicago, New York, San Francisco, and Washington.

vBNS blasts data at speeds that make the Net look like the Erie Canal. But only five of the top U.S. computing centers can communicate at that rate

MCI Chairman Bert C. Roberts Jr. says winning the contract to operate vBNS helps burnish the high-tech credentials of MCI, which will pump an unspecified amount of its own money into the network in addition to the $50 million over five years it's getting from the NSF. "Those of us who do science have been bored to death by the Internet and its speeds for about two yea

The 1995 Business Week Presidents Forum

21st Century Capitalism New Rules for the Global Economy

The demise of Communism, the fall of trade barriers, and the rise of networked information have unleashed a revolution in business. Market capitalism guides every major country on earth; goods and services flow across borders more freely than ever; vast information networks instantly link nations, companies, and people. The result — 21st century capitalism.

Former President George Bush defines the new era as an opportunity, "This global transformation we have witnessed in recent years has given us a world with a greater potential for peace and economic prosperity than at any time in history."

But President Bush urged an audience of corporate leaders at The Business Week Presidents Forum not to retreat. "Winning the peace and expanding the promise of democratic capitalism are possible only if America continues to lead in the world. We cannot turn inward. We must stay engaged."

Against this backdrop, more than 150 corporate presidents assessed how 21st century capitalism is transforming their businesses.

ner President
rge Bush

Percy Barnevik's "Multidomestic" Corporation

No one knows global like Percy Barnevik. The Asea Brown Boveri ABB president and CEO heads a $25 billion powerhouse operating in 25 countries and employing 210,000 people.

A global monolith? On the contrary. In ABB, Barnevik has created the model 21st century organization — the "multidomestic" corporation. It combines small-company entrepreneurialism with big-company economies of scale — a global paradox. ABB is at once international and local.

"Global players must be insiders," says Barnevik. "ABB is a 'global federation' of national companies employing and managed by their own nationals. All plugged into a global network."

Decentralization helps ABB avoid "big-company syndrome," breaking the company down into 1,000 legal entities and 5,000 distinct profit centers and P&L balance sheets. And with only five managers per profit center and three management layers, ABB is very flat. "We've recreated the small company/entrepreneurial atmosphere within the framework of the big

Alex Young
president and COO,
Thomas Group, Inc.

company. At the same time, when you make this army of 25,000 managers move together, they're a major force."

Barnevik commands that army with an elite cadre of 500 global managers — ABB's central nervous system. They assign contracts, coordinate international purchasing, push standardization, and facilitate technology exchange throughout the corporation.

By deploying global cadets from country to country, Barnevik develops their language skills and heightens their cultural sensitivity. "The ultimate goal is to enable them to create and lead mixed-nationality teams," he says. "Blood is still thicker than water; these managers must respect differences among national cultures while creating a long-term vision that everyone can buy into and be proud of."

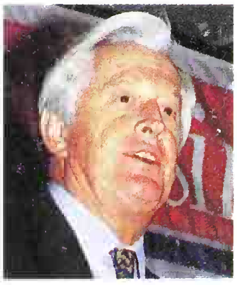
Radical Change, Fast

Slow and steady doesn't win every race. Ask Albin Moschner, president and COO, Zenith Electronics Corporation. In the last decade the company did a slow bleed — one profitable year out of 10, eight consecutive years of shrinking market share. Meanwhile Asian and European competitors were driving down prices with lower costs.

To survive, Zenith had to change — radical Alex Young, president and COO of the consu ing firm, Thomas Group, Inc., set three chan imperatives to help them to do it. "First, Zeni had to commit themselves to radical change; then they had to focus on speed — respondin to customers and changes in the market more quickly; and finally, they needed to identify th driver of the desired change: in this case it wa cycle times."

Says Moschner, "We were losing an averag of 10% of additional business opportunities e month because our cycle times were too slow. We simply could not respond quickly enough demand changes."

So the company re-engineered primary cycle processes and then focused on getting n products to market faster. By improving desig methodology, shortening development time, a cutting the number of design teams in half, th reduced cycle time for product development. They redeployed the freed resources to devel innovative products and product enhancemen features to differentiate its products — a key competitive advantage. The result was a prod tivity improvement of almost 100%.



"Domestic diversification was not enough. International expansion was the best growth strategy we could devise."

Lee M. Gammill, Jr.
vice chairman,
New York Life
Insurance Company

Young says the Zenith lesson is fund mental. "Ask yourself what gets in the way responding quickly t customers. Then fin drivers to drive chan down and across you entire organization. Doing this today will substantially increase your global competiti ness in the future."

New York Life Insurance Company wanted to change by taking advantage of increasing customer demand in foreign m kets. "The virtually unlimited marketplac we enjoyed domestic for so long is a thing of the past," explains Lee M. Gammill, Jr., vice chairman, New York Life Insurance Company. "Domestic diversification is not enough. International expansion provided th best growth potential of any strategy we could devise."

BROWN LETS THE NUMBERS SPEAK FOR THEMSELVES

Ron Brown
Secretary of Commerce

Secretary of Commerce Ron Brown, under fire for his dealings with First International Communications, fires back in defense of the Clinton Administration's economic record. Brown points to the numbers — six million new jobs, 4.6% GDP growth, 2.8% inflation — as proof that the Clinton economic policy has been better for business than business admits.

"In the short term, judge us by the numbers," says Brown. "Economic growth, corporate earnings, investment spending, housing starts, durable goods orders, unemployment, inflation — whatever statistics you desire — what ought to be up is up, what ought to be down is down, and we've got a plan to keep it that way."

The plan is a four-part long-term strategy to encourage private investment, educate the workforce, open foreign markets, and spur investment on innovative technologies.

Brown says the strategy is in step with the massive realignments underway in the global economy. "This is a time of extraordinary change and opportunity. It requires new ways to approach the international marketplace. I'd even like to present an exotic notion — that corporate America ought to be natural allies with this administration."

GE's Family Values

Boundarylessness. Speed. Stretch. From Peoria to Bombay, ask any GE employee what they mean and you'll get the same answer. They're the values driving GE's global expansion and creating a truly global corporate culture. "When all is said and done," says GE Appliances President and CEO J. Richard Stonesifer, "lines on paper, organizational charts, and books on management techniques won't carry the day. What will win is a boundaryless culture with empowered people striving to stretch and excel every day."

The GE lexicon:

Boundarylessness – an organization-wide obsession for finding a better way, uninhibited by organizational walls, rank, or geographic boundaries.

Speed – the critical enabler of boundarylessness, essential in a global environment with real-time information changes.

Stretch – the inspiration required for the other two. Simply stated: nothing is impossible.

But it's not for everyone. Says Stonesifer, "These values can only flourish in an environment where everyone is totally committed to outperforming every one of our global competitors in every market."

The 1995 BusinessWeek Presidents Forum

QUICK TALLY SURVEY SAYS . . .

✓ Using **Quick Tally's** anonymous interactive polling system, delegates at **The 1995 Business Week Presidents Forum** weighed in on a host of issues defining 21st century capitalism:

My business is:	
Greatly affected by foreign change	**44%**
Somewhat affected	**35%**
Slightly affected	**20%**
Untouched by the global flux	**1%**

My globalization 1995 vs. 1990:	
Major foreign expansion	**57%**
Minor, "testing the water"	**31%**
Still wholly domestic	**10%**
I've reduced foreign activity	**2%**

My globalization 2000 vs. 1995:	
Major foreign expansion	**74%**
Minor, "testing the water"	**20%**
Still wholly domestic	**7%**
I'll reduce foreign activity	**0%**

My greatest single concern about doing more business in developing countries is:	
Policy shifts/cloudy legal issues	**35%**
Far-flung, multi-lingual activities	**15%**
Plenty of growth in the U.S.	**11%**
Cross-cultural HR	**11%**
Can't beat the competition there	**7%**
Currency risk	**6%**
Corruption	**6%**
Costs/access to capital	**6%**
Coups, wars, anti-Americanism	**2%**

I'd rather employ an American than a foreigner:	
Rather an American	**49.5%**
Doesn't matter	**50.5%**

In-hall polling courtesy of Quick Tally, Beverly Hills, California.

The 1995 BusinessWeek Presidents Forum

Find the Transformation that Fits

The company knew it had to do something. Competition had lowered prices 35% on a key product. Profits fell 25% at home; revenues dropped 17%. So in the middle of 1992, six senior executives of ICI's U.S. agribusiness shut themselves up in a house until they emerged with a plan. At the same time, executives in the U.K. decided to de-merge ICI into two businesses. ICI's bioscience businesses — agrichemicals, pharmaceuticals, and specialties — would split from ICI to create a new company, Zeneca.

De-merger is one of several options corporations are exploring to unlock shareholder value and release potential within the business.

Gemini Consulting was called in by the U.S. agrichemical company, Zeneca Ag Products, to help address some of these issues. Zeneca Ag Products President Robert Woods recalls that getting employees to buy in to the plan was the first step. "We weren't looking to reduce a certain number of people, we were interested in getting the business to run itself from a cash point of view as efficiently as possible. We had to convince people to put the organization under a microscope and that this was essential in order to meet the target of the new Zeneca."

With assistance from Gemini Consulting, Zeneca Ag Products formed a team of employee from several management levels to keep employe focused on making processes more efficient, adopted the SAP software system, and defined a new externally focused vision for the company.

"We needed to understand the customer bette so that his needs could direct our organization change," says Woods. So Zeneca set performanc goals and kept workers focused on them to help g them through the trauma of reorganization. By th end of 1994, one year ahead of schedule, Zenec Ag Products has surpassed its goal of RONA improvement through both significant increases i sales and profits and a large reduction in the work ing capital positions held throughout the year.

"The challenge for Zeneca and other corporations is to get into a mode of continuous improvement," says Francis Gouillart, senior vice-president, Gemini Consulting. "Companies must convince their people that change isn't bad it's necessary for survival. Improving continuousl by setting stretch goals at various levels each year i the only way for companies to remain competitive."

"Companies must convince their people that change isn't bad, it's necessary for survival."

Francis Gouillart
senior vice-president,
Gemini Consulting

DERIVATIVES: THE REAL STORY

Richard C. Marston
The Wharton School

Widely publicized horror stories of derivatives-gone-bad have provoked distrust among many corporate executives. But based on the recent Wharton/Chase Survey of Derivative Usage Among 530 U.S. Non-Financial Firms, Richard C. Marston, director of The Wharton School's George Weiss Center for International Financial Research puts derivatives in perspective.

Are derivatives being abused?

"What we are not seeing is the use of these derivatives to deliberately speculate on interest rate or exchange rate fluctuations. For the most part what we find is that corporations are doing with derivatives what they should be doing — hedging commitments, hedging future transactions, reducing exchange risk, and reducing interest rate risk."

Do firms understand enough about derivatives?

"Over 50% of the firms are concerned that their firms do not understand enough about derivatives. Since derivatives are almost exclusively used to manage risk, it is crucial that executives be able to justify those positions to boards. Lack of understanding is a serious problem."

What can corporations do to protect themselves from undue risk?

"There needs to be greater accountability on the part of the treasurer to the board of directors. More than 50% of the firms surveyed still do not have a set schedule for reporting on derivatives positions. Boards of directors need to understand the use of derivatives better, and treasurers need to really explain what is being done within the firm to control risk."

What advice would you offer corporate executives?

"Information clarifying derivatives positions can be reported to the board of directors very easily if it is provided by the banks who sell the derivatives. If you are dealing with a complex derivative, insist that the bank provide information on what happens if interest rates or exchange rates change. *Get it on paper.*"

an Francisco, and
Vashington.

MCI Chairman Bert
. Roberts Jr. says
inning the contract
o operate vBNS helps burnish the high-
ech credentials of MCI, which will pump
n unspecified amount of its own money
nto the network in addition to the $50
nillion over five years it's getting from
he NSF. "Those of us who do science
ave been bored to death by the Inter-
et and its speeds for about two years,"
ays Richard T. Liebhaber, who is
cheduled to retire at the end of May from his job as MCI's chief strategy and technology officer. "Our mind-set now is on full-motion visualization of things," Liebhaber says. "For that, you need a gazillion MIPS of processing power."

Indeed, by networking together two or more top-flight supercomputers, vBNS makes possible some of the largest computations ever attempted. Sure, any single supercomputer could do a big computation alone, but it might be out of date by the time it was completed—as in a forecast today of yesterday's weather. vBNS also promotes collaboration by transmitting ultrahigh-fidelity video images so researchers in different cities can watch a virtual experiment as it unfolds inside a computer. All in all, it has researchers ecstatic: "In problem after scientific problem, it turns out that you're groping in the dark until you get the insights and pictures that you can only get from contemporary computers," says Malvin H. Kalos, director of the Cornell Theory Center, a collection of high-powered iron at Cornell University.

DOUBLE TEAM. One of the first calculations attempted using vBNS illustrated its potential. In mid-April, researchers in San Diego and Pittsburgh yoked together two similar Cray Research Inc. supercomputers—one at each site—to calculate global weather patterns. One computer used software from Princeton University to calculate temperatures and current speeds in the ocean, while the other tended to the atmosphere using software from the University of California at Los Angeles. Every 10 seconds the Crays swapped results and used the data for new calculations. Massaging the two programs so two remote computers could use them together took years of "hand-tuning," says San Diego staff scientist Bilal Chinoy. Eventually, he says, the remote computers will be of different types, so each can focus on the type of calculation it's best at.

The weather at your local airport, rather than over some ocean, is among the vBNS projects planned by the National Center for Atmospheric Research in Boulder, Colo. NCAR's Aviation Weather Development Laboratory hopes to use vBNS to aid aviation by improving the ability to predict killers such as wind shear and ice storms. That project, however, is endangered by expected cutbacks in funding by the Federal Aviation Administration, says William P. Mahoney, the aviation lab's manager.

Developments to Watch

EDITED BY OTIS PORT

CHOCOLATE, GARLIC, AND BEEF FAT: EAT UP?

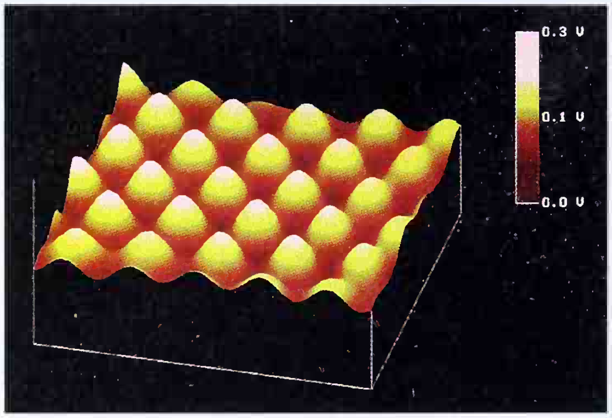
FOLKLORE HAS LONG REgarded garlic as good for you. The first support for this notion was evidence that garlic kills cultured human cancer cells in the lab. Now, researchers at Pennsylvania State University have shown that a compound in garlic, diallyl disulfide, can shut down or kill human colon cancer cells transplanted into mice. The experiments were performed by Sujatha Sundaram, a PhD nutrition student, and department head John A. Milner. They presented their results at a conference in Atlanta on Apr. 12.

On the other hand, another Penn State team has debunked a different piece of accepted wisdom. Associate professor Yu-Yan Yeh and his student, T. K. Pai, reported that saturated fat in beef and chocolate may not be so terrible after all. In fact, they may help lower "bad" cholesterol. Rat liver cells were treated with fatty acids from palm oil and coconut oil, or stearic acid from chocolate and meat. The latter resulted in much lower levels of triglyceride—a precursor to bad cholesterol.

TRUTH THAT'S STRANGER THAN FRICTION

RESEARCHERS AT OHIO STATE UNIVERSITY HAVE MEAsured the friction of one atom rubbing against another—and it's not what textbooks say it should be. At the atomic level, explains Bharat Bhushan, head of OSU's microtribology work, the classical theory of friction doesn't hold up. So for tomorrow's nanotechnology products, which will get stitched together atom by atom, a new theory of friction will be necessary. A paper co-authored by Bhushan in the Apr. 13 *Nature* outlines the implications—not all of which are in the distant future.

Within five years, Bhushan believes the new theory of friction could yield far smaller computer hard drives. His team has tested supersmooth aluminum surfaces, similar to the platters used in hard drives, that were lubricated with a film only one molecule thick. The film resisted abrasion 80 times better than predicted. Thus, a hard drive's read/write head could be reduced to a fraction of its current size and moved closer to the disk. This would decrease the size of the area needed to store bits of data, increasing capacity by as much as 400 times.



IT'S A DRAG: *Graphite surface after abrasion*

HOW TO SOUP UP SUPERCONDUCTORS

IT HAS BEEN NEARLY A decade since the world was shocked by the discovery of "warm" superconductors—materials that carry current without any resistance at relatively high temperatures. Unfortunately, that breakthrough hasn't yet led to major commercial products, in part because the materials can't carry enough current.

Now, researchers at Los Alamos National Laboratory have broken through a key barrier. At a scientific meeting on Apr. 19, they announced development of a flexible, ribbon-like superconductor that can carry more than 1 million amperes of current per square centimeter of "wire." That's 100 times more than the previous record.

There's nothing unusual about the basic idea: depositing a layer of superconducting ceramic onto an inexpensive nickel-alloy tape. The secret is in between. Before the ceramic is put down, the nickel surface is primed with a layer of cubic zirconia. The extra layer keeps the ceramic crystals aligned, and that ensures higher current capability.

Now, predicts team member Xin Di Wu, superconducting wire will finally find widespread applications, ranging from smaller magnetic resonance imaging (MRI) machines to better motors that can be cooled with inexpensive liquid nitrogen.

NANOTECH TOOLS FOR TOMORROW'S TEENY ROBOTS

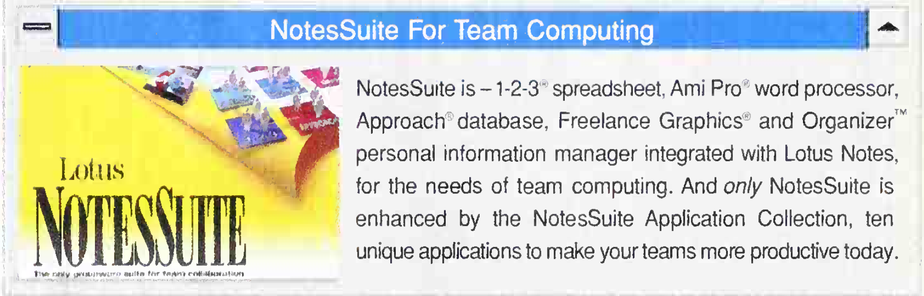
Introducing
Lotus
NotesSuite.
It beats
Microsoft Office
2 to 1,

Not to mention
10 to 1,
27 to 1, and
1282 to 1.

We have nothing against Microsoft® Office. And if you're an individual who works alone, then you probably have nothing against it either.



NotesSuite For Team Computing
Lotus
NOTESSUITE
The only groupware suite for team collaboration

NotesSuite is – 1-2-3® spreadsheet, Ami Pro® word processor, Approach® database, Freelance Graphics® and Organizer™ personal information manager integrated with Lotus Notes, for the needs of team computing. And *only* NotesSuite is enhanced by the NotesSuite Application Collection, ten unique applications to make your teams more productive today.

However (and it's a big however), if you think the most productive way of working is by communicating, collaborating and sharing information with other people, you need the only business solution created to make teams more productive.

Introducing Lotus® NotesSuite,™ the powerful new combination of SmartSuite,® our five leading business software applications for the desktop, integrated with Lotus Notes,® the groupware standard, plus ten unique applications to enhance team productivity. They're optimized for the computing needs of teams, whether it be a team of two, of 1282, or even more.

With The Team Computing Benefits Of NotesSuite You Will Fully Realize The Potential Of Your People. Everyone, at every level, will be a contributor, a collaborator, a true colleague. Imagine, for example, being able to expedite the budget process by having all parties work on the same spreadsheet simultaneously. Or being able to create a database filled with new product information, sales presentations and customer profiles that can be accessed remotely and updated continuously by members of a sales team no matter where they happen to be. People and groups of people will feel empowered. Because, for the very first time, they are empowered.

To find out more about how Lotus NotesSuite is helping successful companies become more competitive, get our FREE video, "Team Computing: The Art and Science of Collaboration," by calling 1-800-TRADE-UP, EXTENSION A737.* Your company can be using the new Lotus NotesSuite for as little as $299.** Do it today, the team is counting on you.

Lotus.

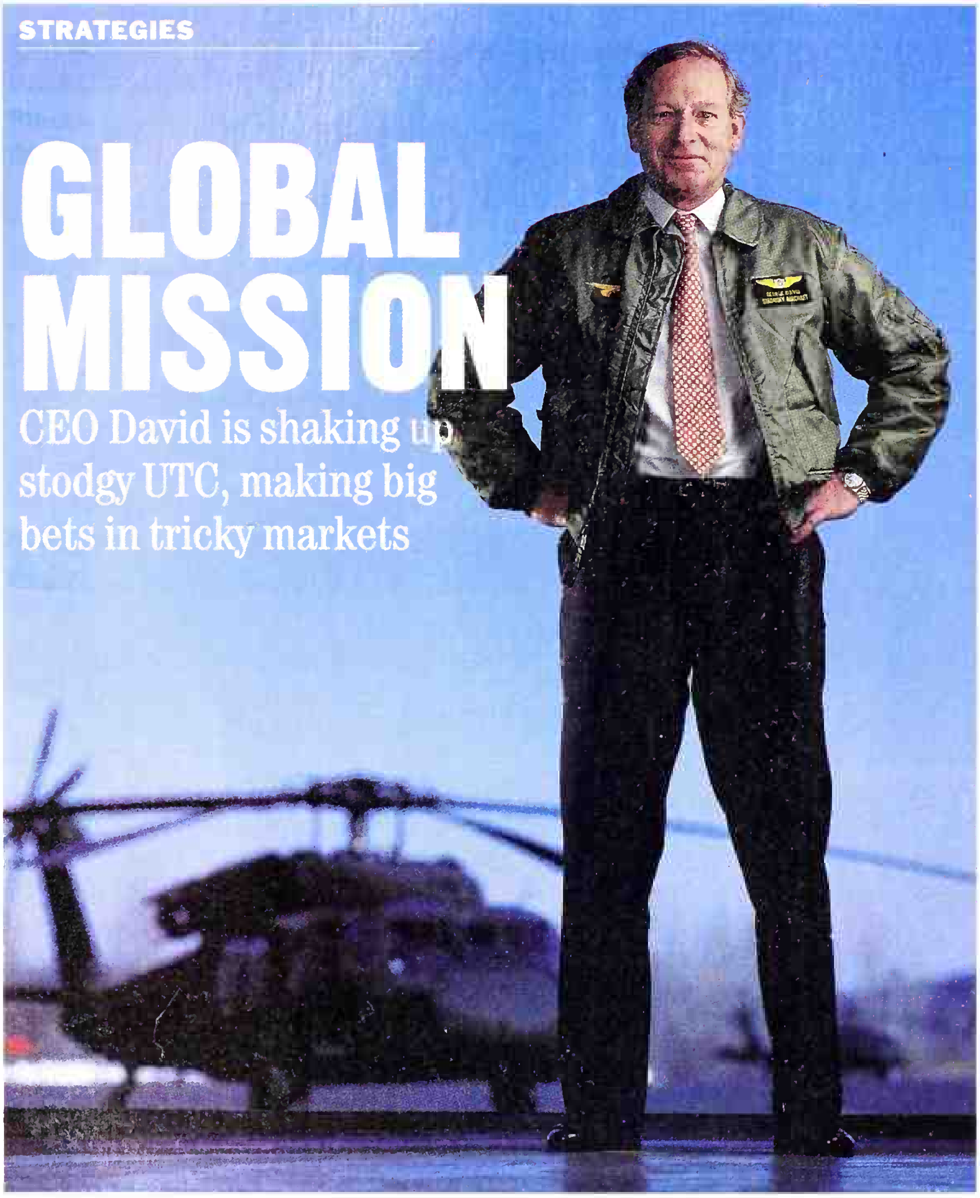
STRATEGIES

GLOBAL MISSION

CEO David is shaking up stodgy UTC, making big bets in tricky markets



BRAD TRENT

FIERCE COMPETITOR: *David pushing the "Otis model"*

George David hates to lose. In a week of international sailboat racing off Key West, Fla., in January, his $1 million, custom-built, 45-foot craft missed first place by a mere 40 seconds. The United Technologies Corp. chief executive, who captained the boat himself, now dreams of adding a laser range finder like those used in America's Cup races to give his boat an edge. In sailboat racing, David explains, "you win with preparation and teamwork." Business, he adds, "is sailboat racing on a larger scale."

From headquarters in Hartford to operations scattered in 183 countries, employees of United Technologies are beginning to grasp that message. Since taking over as CEO a year ago, David has been spreading his sense of competition throughout the stodgy, inbred $21 billion conglomerate. Clocking more than 250,000 miles a year to meet with workers and managers from Manhattan to Moscow, David aims to whip his company's six units—Pratt & Whitney engines, Otis elevators, Carrier air conditioners, Hamilton Standard aviation systems, Sikorsky helicopters, and UT automotive systems—into shape.

It is a painful process, fraught with risk. Old-school managers, among others, are paying a huge price. No more can the hierarchical, inflexible style of its long-dominant Pratt & Whitney engine unit drive the company, David says. Now, UTC must adopt the commercially driven, internationally oriented approach of its Otis Elevator Co.—what David calls the "Otis model." That means elevator people are moving into key positions in managing the proud old jet-engine business and other unit

It also means placing hu bets on such tricky markets Russia, China, and Vietna even while David takes he from unions for hollowing o UTC in Connecticut (page 13 And though the company ge a hefty 60% of its sales outsi the U.S., profits can be elusiv In the former Soviet Unio UTC has 15,000 workers and not repatriating any profit.

David and other top mana ers argue that they are doi what a once U.S-dependent d fense giant must do to surviv Says Otis President Jean-Pier van Rooy: "It's a very cle strategy—recalibrating t company not only toward inte national but toward more co mercial business."

NUMBERS MAN. David doesn underestimate the challeng "There's no overnight chang It changes a micro-inch a da But the micro-changes have b gun to add up. The compa surprised Wall Street in 19 with a 20% increase in ear ings, to $585 million, on just 1% rise in sales, to $21 billio David expects another 20 earnings increase in 1995 commercial business grows a cost-cutting at Pratt flows the bottom line. "David is doi the right thing," says Lehm Brothers Inc. analyst Joseph Campbell. "The next few yea should be pretty good."

A fiercely competitive man, Davi 53, walks around with blue-ring binde that lay out just where UTC stands different measures: percent of sales fro international operations, return on a sets, return on equity, operating incom cash flow. He developed his fondne for number-crunching while moving u at UTC. He joined Otis as a corpora planner in 1975, then oversaw jobs Latin America and Asia before bei named CEO in 1986. In 1992, he w named president and chief operating o ficer of UTC, becoming CEO in 1994.

For David, the "Otis model" is t key to boosting UTC's performance. T Otis mind-set is international, entrepr neurial, quick-moving, and custome driven. UTC relies mostly on non-Ame icans to manage the company sprawling global operations, while kee

UTC MOVED QUICKLY TO OPEN OFFICES IN VIETNAM

David doesn't underestimate the challenge: UTC "changes a micro-inch a day," he admits

g oversight through ad-
nced communications.
npowering operating
inagers is crucial, and
adquarters staff in Hart-
rd has been halved, to
0, since 1990. "I'm a
mpant believer in decen-
ilization," David says.
David learned some of
ese lessons in the 1970s,
ien he helped build up
is' joint venture with
atsushita Electric Indus-
al Co., Nippon Otis. He
ked Masaharu Matsushita, chairman
Japan's largest electronics conglomer-
e, for advice, and Matsushita suggest-
that Otis aim its all-out focus on
ality and technology not just at pur-
asers but at elevator users, too. David
ganized a team to deal with the Japa-
se market. "Japanese consumer confi-
nce in the quality of Nippon Otis ele-
tors rose rapidly," says Matsushita.
e union has been financially success-
, too, with revenues in 1994 of $740
llion—up 24 times from 1975.
Later, through his work in China, Da-
l learned how to play in emerging
arkets. The idea is to get into a mar-
t early, commit enough resources for
al partners to take you seriously,
am up Western and local managers—
d be patient. Says Bruno Grob, head
Otis' European operations: "We have
hilosophy that when something opens
, we have to be there."
The strategy worked in China, where
avid negotiated joint ventures in the
rly 1980s. Otis had sold its first elevator
China at the turn of the century but
s forced out after the 1949 revolution.
hen China opened up, David argued
plunging back in. His enthusiasm met
th some misgivings among board mem-
rs. But Otis bought 30% of the Tianjin
evator Co. for $1.5 million in 1984 and
er bought an additional 14%. Today,
is sales in China exceed $250 million—
times a decade ago and half of UTC's
total sales there. Overall, UTC's annual operating profit in China is $60 million.

Now, David is extending the Otis model. He is pushing all six UTC companies into emerging markets, where demand should grow for airplane engines, car parts, and air-conditioning—as well as elevators. The Otis model means "we are endlessly patient," he tells his managers. "We wait forever."

"CRAPSHOOT." Perhaps the ultimate test of his vision will be Russia. Though Otis and UTC are betting big on the former Soviet Union, it hasn't been smooth sailing so far. From 1990 to 1992, Otis launched four joint ventures to make and service elevators, while Pratt & Whitney is working with Perm Motors to improve engines for the Aeroflot fleet and with the aircraft maker Ilyushin to modernize its large passenger jets. Altogether, UTC has committed $250 million, of which about $100 million has been invested. But with the state-of-the-art plant Otis built in St. Petersburg operating at barely a quarter of capacity, profits will be some time in coming. "It's a very long crapshoot," David concedes.

Still, David is moving UTC even further afield. Otis opened a new elevator factory in Malaysia in 1993, and it moved to open offices in Vietnam the day President Clinton reopened commercial ties there in 1994. Chasing after Otis, Carrier is also pushing into Asia.

Internally, David's energies are focused on convincing managers that the "Otis model" is the key to UTC's future. The engineering mind-set, reflected by Pratt's dependence on big capital expenditures and long lead times, is still second nature to many UTC managers and workers. And though Carrier, Otis, and Sikorksy helicopters enjoy leading positions in their industries, complacency remains a problem at Pratt.

David wants products made more quickly, at less expense. In redoing its product line, Carrier designed simpler, more easily maintained air conditioners with fewer parts. Hamilton Standard has sped development time for new aviation products from four to two years. Meanwhile, David is relentlessly cost-cutting—especially at Pratt.

That long-dominant unit, in fact, is where resistance is highest. Privately, Pratt people question how you can build a jet engine the same way as an elevator. They ask how such a capital-intensive, high-tech business as jet engines can adopt the informal mode of an Otis. But David has no time for naysayers: "There are some things about business that Pratt needs to be alert to," he snaps. "The days of building engines in the U.S. and laying them on the heads of innocent foreigners are long over."

Leading the cultural revolution at Pratt & Whitney is Karl J. Krapek, a David protégé who was installed as president in late 1992. Since taking over, Krapek has led a massive restructuring. The workforce has been cut 40%

and 600,000 square feet of manufacturing space idled. Managers plan 7% annual cost reductions with no end in sight.

But it's a struggle. "Culture change in a monopoly comes hard," says Krapek. "The hourly people understand it, but the middle managers have a hard time. They were paid to do the wrong thing—to build inventory."

After losing $570 million in 1991 and 1992, Pratt reversed gears and earned $536 million in 1993 and 1994. The worst may now be behind it. After spending $500 million on developing the PW4084 engine, Pratt was first with a new engine for Boeing Co.'s new 777 aircraft.

Pratt's one glaring weakness is the lack of an engine for the latest model Boeing 737. Although Pratt was the exclusive engine supplier for early 737s, it believed the plane had reached its peak and chose instead to develop an engine for the larger 757. That proved a miscue—and GE jumped in. The 737, ideal for the shorter routes that have evolved since airline deregulation, is now popular. "The 737-100 and 737-200 were both powered exclusively by Pratt & Whitney engines," says Jim Eckes, managing director of Indoswiss Aviation, an aircraft-leasing company. "Now it's all going to GE. That was a stupid mistake."

Pratt's stumbles have cost UTC dearly in recent years. As Pratt gets fixed, David's goal is to get all the units working well at the same time, for the first time since UTC diversified. But a stray wind can blow a sailboat off course, and David faces many uncertainties as he steers the new UTC. Apart from continuing to indoctrinate his team in the new competitive mentality, he will confront difficult choices in Russia about just how much to invest. Already, his joint-venture partners are arguing for greater commitments. Then there is Carrier, which remains a laggard, with operating margins last year of just 5.7%.

Still, the changes wrought so far by David and his team are beginning to gain notice. UTC shares are now trading close to 70—up from the low 40s in late 1993. Key customers, such as United Airlines Inc., say they have seen a new, more cooperative spirit at Pratt.

But with competition still intense, there will be no rest for UTC's chief executive. David will have to sustain his frenetic remolding efforts for years, while still betting big on faraway markets where the only certainty is surprise. His ultimate success is still poised on the knife's edge. Kind of like a day spent racing sailboats.

By Tim Smart in Moscow, with bureau reports

IN CONNECTICUT, THE HUMAN COST OF GOING GLOBAL

SOUTHINGTON
74

TONY BACEWICZ/THE HARTFORD COURANT

LOCAL ANGER Unionists demonstrate outside UTC headquarters in Hartford

You don't have to look far to see just how the changes at United Technologies Corp. have shaken the economy of Connecticut. Once the state's largest employer, UTC provided more than 51,000 jobs in 1990. Today, jobs have fallen to fewer than 32,000—a 38% drop.

The victims are everywhere. Unemployed factory workers at Pratt & Whitney jet engines. Engineers who took early retirement at Sikorsky Aircraft helicopters. Middle managers laid off from Hamilton Standard, which makes environmental controls and propellers.

EMPTY STORES. Then there are people like Frank Porto. Porto owns the Aircraft Package Store in North Haven, directly across the street from a Pratt factory. On a recent Friday afternoon, the liquor store was empty. "It used to be really bustling at this hour," says Porto.

All along Washington Avenue, the main drag of North Haven, the story is the same: abandoned storefronts, "for lease" signs. And it isn't just UTC that has wielded the knife. Throughout the state, one company after another has pared its payroll—Xerox, U.S. Surgical, Electric Boat, Aetna, Travelers, and others.

In part, Connecticut shows how the promise of globalization—that new markets overseas would ultimately boost the U.S. economy—is an empty one for some. "While you can make a strong case that we are net beneficiaries as a country from free trade, oftentimes the gainers and losers are different people," says Shawmut Bank economist Nicholas Perna.

Altogether, Connecticut has lost about 200,000 jobs since the peak of employment in early 1989. While some industries, especially pharmaceutical research, have been adding jobs, the only significant new source of employment has been the Native American-owned Foxwoods casino complex in Ledyard, Conn. But salarie average about ha the $13 to $15 an hour earned in defense factories.

BOASTING. Those who survive at UTC are under increasing pressure to improve productivity. "One of the things we old-time machinists wonder about is that the people running the company now are the bean-counters," says James Flanagan, president of Flanagan Brothers, a sheet-metal shop that supplies Pratt. Indeed, the whole relationship between UTC and the community of workers, suppliers, and politicians seems under siege. A 1994 survey o employee morale at Pratt found that while 78% of those surveyed had pride in their work, fewer than half said they felt strong loyalty to the company. "We tore up the social contract here," acknowledges Pratt President Karl J. Krapek.

What's more, unionists see United Technologies boasting to Wall Street that its earnings have improved—yet continuing to shift work to lower-cost locales. "Right now, the only reason they are having more layoffs is for th greed," says Andrew Romegialli, labo representative at District 91 of the International Association of Machinists. Greed or survival: It's a matter o perspective. But as U.S. companies move abroad, the shouting over lost jobs and wages will only grow louder.

COMMENTARY

By Paul Magnusson

SOCIAL SECURITY: APOCALYPSE SOON—OR SOONER

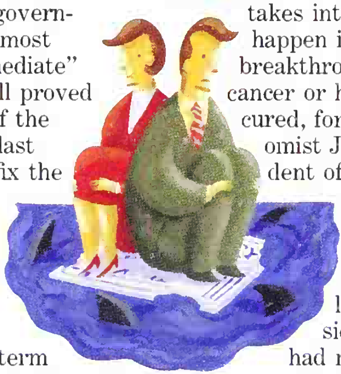
Economists generally shy away from predicting growth or interest rates beyond the next four quarters. Longer horizons are considered too hazy for accuracy. But when it comes to the debate over the financial solvency of Social Security and Medicare, 10 years is considered the near term, and 75-year forecasts are just part of the job.

Yet Social Security is so large a program that being off by a fraction can lead to errors with huge fiscal consequences. With 43 million elderly people receiving $428 billion each year—a quarter of all government spending—small mistakes can force big benefit cuts or payroll-tax hikes to make up the shortfall.

Right now, the great danger is that even the government's worst-case scenario may be too upbeat. The pace of real wage gains is the main determinant of how fast Social Security revenues grow. The most pessimistic official projection calls for wages to rise by an average of 0.4% annually over the next 35 years. But the economy has eked out only a 0.1% rate of real wage growth over the past five years. If earnings stay depressed, Social Security cash flow could go negative much sooner than anyone has been willing to admit: 1997.

ROSY AND ROSIER. Unfortunately, the Clinton Administration is still singing *Happy Days Are Here Again*, despite mounting evidence to the contrary. True, economic assumptions were toned down after the disappointing experience of the 1970s and 80s. But when it comes to economic prognostication, things have a way of going wrong more often than right. "Even the most pessimistic assumptions don't give you any idea of what would happen if the next 25 years matched the last 25," says Roland E. King, chief actuary of the Medicare system until 1994.

Indeed, the numbers have been breaking badly for the government's forecasters. The most widely accepted "intermediate" economic projections still proved too optimistic in eight of the past 10 years. And the last two major attempts to fix the Social Security system—the latest led by Alan Greenspan in 1983—fell short because they were based on overly rosy assumptions. To close the long-term gap expected in just the retirement and disability portion would require a payroll-tax increase of 2.17 percentage points—a huge jump.



Actuaries have had their biggest problems predicting real wage growth, which they have consistently overestimated over the past 20 years. The reasons? The slowdown in productivity growth and the surge in the proportion of compensation going for health-care benefits, which are not subject to the payroll tax. The latest projections bank on a rebound in wage growth, as health-care costs moderate and as productivity grows again. But there's still no proof that real wages are rising (chart).

Changes in life expectancy could also throw all the calculations out of whack. Today's 65-year-old man can expect to live a further 15.3 years, an improvement of nearly two years since 1975. But the latest Social Security report, released on Apr. 3, assumes that life expectancy will grow at half that rate—less than an extra year in all. None of the projections takes into account "what coul happen if there is a radical breakthrough in science—if cancer or heart disease were cured, for example," says economist John Goodman, president of the National Center for Policy Analysis.

Another hit to the system could occur if people start living longer once they get sick. So far, AIDS hasn't had much negative effect on Social Security payouts, since HIV-positive people tend to work and pay taxes until they become ill. They then die fairly quickly. But if a more potent drug were developed to prolong life expectancy, "it could add a tremendously high cost to the system," admits Robert Myers, former chief Social Security actuary and deputy commissioner in 1981 and 1982. In fact, disability payments in general are climbing far faster than expected, perhaps because examiners are getting more sympathetic. The disability fund ran out of money in 1992 and 1993, and taxes from the retirement program had to be diverted to bail it out.

Politicians have long counted on the multibillion-dollar surpluses from Social Security to help hold down the budget deficit for the rest of this decade. But if current trends continue, the entire system may be running a deficit of its own—and sooner than anyone expects.

TRAVEL

THE LOVE BOATS ARE BRAWLING

They're launching lush new ships–and small lines may sink

"A WHOLE NEW FEEL": *Cruise ships in the port of Miami*

RANDY TAYLOR/GAMMA-LIAISON

When Joyce Landry began her cruise-booking business in 1982, a 1,200-passenger liner was considered enormous, seagoing spas were unheard of, and guests had just one place to dine: the main restaurant. Today's 2,600-passenger vessels boast dining choices ranging from pizzerias to sushi bars, ballroom-size spas, and seven-deck-high atriums glowing with neon. "In the late 1980s, cruise ships started mirroring resorts," says Landry, executive director of Landry & Kling Corporate Cruise Specialists in Coral Gables, Fla. "We've come a long way from the days of narrow corridors and low ceilings to palatial, high spaces with lots of glass and waterfalls. It's a whole new feel."

For cruise-ship operators, it's a very expensive feel. The colossal new liners, at $400 million or so apiece, are changing passengers' expectations about what a cruise should be. At the same time, they are dramatically adding to industry capacity when the outlook for market growth is uncertain.

"BIG MACHINES." The result: The big, well-capitalized cruise lines that can afford to build megaliners are likely to elbow aside—or acquire—their poorer cousins. "Carnival, Royal Caribbean, and P&O [London-based Peninsular & Oriental Steam Navigation Co., parent of Princess Cruises] won't lose money. They're like big machines," says financial consultant Kenneth Trippe, president of Cruise Brokers Inc. in Coral Gables. "It's the smaller ones, the lines with the weakest finances, that feel the squeeze." Indeed, Carnival Corp., the biggest operator, has been able to acquire the smaller Holland America Line and Windstar Cruises, as well as pieces of Epirotiki Cruise Line and Seabourn Cruise Line.

Cruise armadas are in a kind of arms race. Each new ship tries to outdo the others with attention-getting features, such as the 18-hole miniature golf course on Royal Caribbean Cruises Ltd.'s Legend of the Seas, coming in May. In 1996, Carnival Cruise Lines' Carnival Destiny will be the biggest cruise ship ever built at 100,000 gross registered tons, a dozen decks, and a capacity of 3,350 passengers. A year later, Princess Cruises will surpass it with the 104,000-ton Grand Princess, offering three show lounges, a wedding chapel, a virtual-reality theater, and a wine-and-caviar bar.

Such glorious excess alarms executives such as John Olsen, chairman of midsize Cunard Line Ltd., wh ships include the Queen Elizab II. "For the first time in a dec supply and demand are tilting of balance and not in our fav Olsen warned colleagues at a cent Miami conference. From through 1998, an additional 48 berths will pour into the cur floating inventory of 105,00 North America. While an known number of smaller, ol ships will be forced out of b ness in 1997 by new internati safety regulations on matters s as sprinklers and lighting, Cr Lines International Assn. e mates the annual net increase berths at a hefty 7.5%.

The great unknown is passen growth. After averaging 9% a since 1980, it slowed to 2.2% 1994. Cruise Lines International Ch man Albert C. Wollock blames bad p from a series of mishaps, including outbreak of Legionnaire's disease ab a ship in his Celebrity Cruises fleet.

CASH COWS. Last year's downt doesn't faze market leader Carni Robert H. Dickinson, president of Carnival Cruise Lines unit, jets aro the country preaching market ex sion to travel agents. One of his tras: "Only 7% of the American pu has cruised before. Another 100 mil to 150 million have the time and money to take a cruise. This is an e mous untapped market." He adds: " is not a time for our industry to pa

Seventy percent of the new tonn in the next four years is going to in try leaders Carnival, Royal Caribb and Princess. As they expand, the guys can more easily defray the cos national ads, reservations, legal affa and administration. High-volu lines can negotiate better pr for everything from beef to b to bananas. And big ships o more cash-generating bars, b tiques, and casinos.

While Carnival and Royal C ibbean have seen their marg slowly shrink, the real squeez on the smaller lines. Ship bro Trippe says at least four N American lines, consisting o dozen ships, are seeking buy or actively seeking outside equ This is one rising tide that w lift all boats.

By Anne Kal
in Coral Gables, I

TURMOIL AT SALOMON

Huge losses and a talent drain have it reeling

It was another day in the remarkable decline of Wall Street's premier trading house. At a grim managing directors' meeting on the morning of Apr. 18, Salomon Brothers Inc. reshuffled its top management and created a new operating committee and management board. The firm was also forced to amend a controversial compensation system that had led to the departure of some of its most talented traders and investment bankers. That same day, some six managing directors left the firm, bringing the total since December to 15, including three members of Salomon's executive committee, Richard J. Barrett, Martin L. Leibowitz, and Shigeru Myojin. These developments followed reports of horrendous trading losses, multimillion-dollar accounting snafus, and a potential credit-rating downgrade. The firm conceded that its 1994 results were "awful."

Sure, other Wall Street firms have done poorly lately, thanks to weak markets and sharply lower trading and underwriting activity. These conditions followed three fat years, when unusually lush profits papered over deeper problems. Now, the entire securities industry is gripped by a severe shakeout because of overcapacity.

Yet nowhere is the turmoil worse than at Solly. Former employees, current employees, and Salomon watchers say the firm is going through a crisis as serious as the one that followed the government bond scandal in August, 1991—bleak days when Salomon admitted submitting false bids in U.S. Treasury securities auctions. The latest upheaval isn't life-threatening. But one recent defector says: "This is the second time in this decade we had to experience this wrenching change. People have that same sick feeling every day" reading about the problems in the papers. Salomon denies there's a crisis but says the company is undergoing a difficult and stressful transition.

Just what is ailing Salomon? The most visible symptom is the firm's huge losses. Even during the Treasury bond scandal and the two years that follow
Salomon remained quite profitable, earning $550 million
1992 and $827 million in 1993. But its return on equity lagg
behind the rest of the Street, and in 1994, it lost $399 milli
mostly from trading (chart, page 147). First-quarter resu
will be out on Apr. 25, and analysts are bearish. Judging
its underwriting rankings in the first quarter of 19
Salomon's investment-banking status is slipping. In debt a
equity underwritings, it fell from fifth place to seventh, co
pared with the same period last year.

By many accounts, though, the underlying problem is m
agement. Salomon's point man is Chief Executive Deryck
Maughan, 47, who runs Salomon Brothers, the big brok
dealer arm of Salomon Inc. The other chief player is War

What's Ailing Salomon

- Weak leadership by CEO Deryck Maughan
- Below-par financial results, including $399 million deficit in 1994 from trading losses
- Lack of a clear vision for Salomon's future
- Controversial pay plan that benefits shareholders but is causing continuing exodus of best employees
- $15 billion of Salomon debt under review by Moody's for possible ratings downgrade
- Uncertainty over Buffett's stake—if Salomon stock doesn't rebound by October, he might start cashing in preferred shares
- Market-share decline in underwriting rankings

BUSINESS WEEK

BUFFETT'S TEAM

Maughan has no trading experience, and Denham has never worked on Wall Street

uffett, the legendary investor and Salomon director who s over 20% of the firm's voting rights and has been ly involved in many of its major decisions, including the pensation plan.

was Buffett who chose Maughan to replace longtime mon boss John H. Gutfreund, who resigned in the wake he Treasury bond affair in 1991. That was a curious ce. Although Salomon is a trading firm, Maughan has no ing experience. And Buffett selected Robert E. Den- , 49, Buffett's attorney for 17 years and a man with no Street experience at all, to be Maughan's nominal boss as l of parent Salomon Inc. Denham has only a minor role in to-day decision-making at Salomon Brothers. Buffett de- d to comment for this story.

GING TONGUES. Within Salomon, there is a widespread ng that Maughan isn't up to the task of running the firm, rding to many interviews by BUSINESS WEEK. "Deryck has n a phenomenally successful franchise and turned it into a iocrity in a remarkably short time," says one ex-Salomon ran. Like most of the former employees interviewed by NESS WEEK, this individual left of his own volition, retains ng, positive feelings toward the firm, and is upset about way it's being run. Many current Salomon execs ex- sed similar feelings during interviews. Nearly all of the le who talked to BUSINESS WEEK declined to be quoted. firm says it totally supports Maughan.

ertainly, Salomon Brothers still has superb franchises. It is a leading buyer and seller of bonds for customers and has a strong Tokyo operation. Some observers think Salomon will regain its former eminence. "I think the firm is going to whip itself into shape," says Michael Flanagan, an analyst with Lipper Analytical Securities Corp. and a lonely Salomon bull. "This will result in some short-term pain. Long-term, I see tremendous potential and earnings power in Salomon's franchise and balance sheet."

But the prevailing view is that Solly is losing its edge and that Maughan is in over his head, partly because of his lack of trading and risk-management experience. Maughan, who spent 10 years as a British Treasury bureaucrat and four years at Goldman, Sachs & Co. in London, rose at Solly as a sales manager and an administrator. From 1986 to 1991, he ran Salomon's Tokyo office. Its success won him a promotion to co-head of investment banking in 1991.

Yet judging from the 1994 losses, Maughan has proven a poor risk manager, which involves overseeing a $172 billion balance sheet with complicated trading positions. In August, 1994, Maughan stepped down as chairman of the risk-management committee, a possible sign he wasn't doing well.

Maughan, say former Salomon employees, also erred when he decided not to rehire John W. Meriwether, a popular and hugely profitable trader and risk manager. Meriwether left Salomon shortly after the Treasury bond episode but in 1992 sought to rejoin Salomon. But Maughan strongly discouraged Meriwether from returning, say three sources with knowledge of the situation, because Maughan felt threatened by Meriwether's power at the firm.

In doing so, Maughan ultimately cost Solly about a dozen of its top traders—colleagues of Meriwether's who left to join his new firm. Indeed, some believe Salomon's top traders in Japan and London—Shigeru Myojin and Stephen J. D. Posford, both of whom are leaving—may end up working with Meriwether, a close friend of both men. Meriwether declined to comment. Solly says Meriwether couldn't have come back without running the firm and that it has no regrets about his departure.

Another sign of poor management has been Maughan's clumsy handling of the new compensation plan introduced last October. Its purpose is laudable: to ban excessively generous bonuses and link compensation directly to the firm's performance—a goal dear to Buffett. In the past, Salomon had been guilty of overpaying employees: Its return on equity has lagged (chart) because its compensation and benefit costs are rising faster than net revenues, says analyst Flanagan.

But the plan's implementation has been poor. Its many inequities and inconsistencies pit employee against employee. And in 1995, it may leave some star employees making, say, $400,000 when they could make perhaps $2 million at another broker. Ironically, the plan could end up hurting shareholders. "Any person who is any good is thinking of leaving," says New York headhunter Alan Johnson. "It's a disaster."

Maughan acknowledged in last year's annual report that the pay plan would cause a "radical shift in our culture" and could hurt earnings in the short run because "we shall lose a number of our most productive professionals." Yet he said he believed that, longer-term, it would create a firm that is built around shareholder value.

On Apr. 17, Maughan had to backpedal on the plan, making it more "flexible" so that it could reward "outstanding individual performance." This was a necessary move to respond to widespread discontent. But it may be too little, too late.

Maughan also presided over two embarrassing accounting mistakes. Last November, Salomon announced it had an accounting problem with "unreconciled balances" that would be "insignificant." Then, in early February, Salomon announced that it would take a $140 million aftertax charge for sloppy bookkeeping for trades as far back as 1988. Denham said the firm's bookkeeping problems were definitely "resolved." But on Feb. 27, Salomon sheepishly said it would have to take an additional fourth-quarter 1994 aftertax charge of $35 million for an unreconciled balance from a 1988 derivatives trade. Denham said that the firm has implemented better financial and control procedures.

Many current and former employees also question whether Maughan has the people skills to manage a place such as Salomon. To many, he seems better suited to a large blue-chip corporation, with his focus on process and organization charts, than Wall Street's most rough-and-tumble trading firm, where managing talented people with big egos and difficult personali comes with the territory.

Many Salomon employees portray Maughan as a man isolates himself in his office, who seldom walks around t nerve center—the huge equity- and debt-trading floors- the investment-banking floors. That is in distinct cont with Gutfreund, who was a highly visible presence in trading rooms (page 152). The firm takes issue with this. I sists that Maughan walks the trading floors two or th times a week and that he maintains an open-door po But the press of clients, regulators, and other visitors, as as visits to foreign branches, prevents him from circula more, the firm says.

"COMING UNGLUED." Finally, despite Salomon's vulnera strategic position in the global investment-banking r there is a sense among many insiders that Maughan lac clear vision for Salomon's future. "The things of the are coming unglued. There's a recognition that Salomon substantially has to change, yet a transition to what is clear," says one recent departee. The firm says its vision i be a first-class global investment bank, including sales trading for clients, combined with a first-class propriet trading capability.

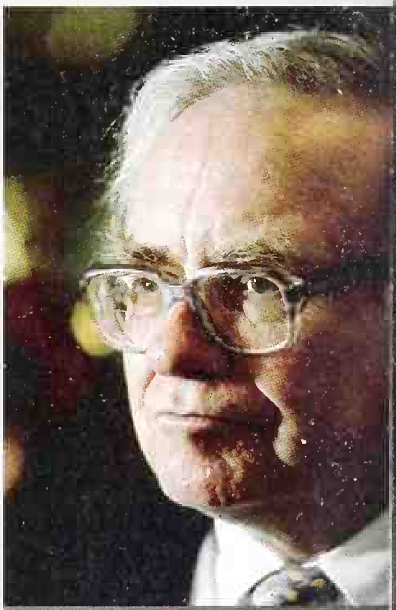
In essence, Maughan has dismantled the old ma Salomon culture without yet putting anything in its place. though it had many excesses, the old culture fostere sense of pride and innovation, of being part of the best t ing firm in the world. Employees are not leaving just beca of the pay plan. Many don't feel they are part of a firm

THE SAGE OF OMAHA IS LOOKING A LITTLE VULNERABLE

Warren E. Buffett seems willing to fess up to his errors. In Berkshire Hathaway Inc.'s 1994 annual report, he blames sloppy analysis, hubris, and the lure of owning a senior security for his ill-starred move into USAir Inc. preferred stock six years ago. But what about his stake in Salomon Inc.?

No mea culpa has been issued yet, despite Salomon's current misfortunes. If Salomon bounces back, Buffett's $1 billion-plus investment in common and preferred stock could be a big success. If Salomon's performance remains bleak, however, Buffett could be more vulnerable to serious losses than many observers realize. Neither Buffett nor a Berkshire spokesman would comment.

CONSOLATION PRIZE. At the moment, Buffett's stake is underwater. Between November, 1993, and December, 1994, Berkshire Hathaway acquired 6.63 million shares of Salomon common stock for $324 million. As of Apr. 19, the position was worth $227 million, a paper loss of $97 million. Berkshire's 700,000 preferred shares,



BUFFETT: *His Solly stake is unde*

purchased for $700 million in 1 recently lost ground as well. A end 1994, the company valued shares at a $35 million profit, d from a $175 million profit carri books a year earlier. The aggre

riving to be the best, knows where it oing, or appreciates their various con- utions. “You have traders making of millions who are unhappy, when he old days, they would be grateful an opportunity to work at Salomon thers,” says another defector. Em- ees no longer feel positive, and en you lose that, you are managing cenaries,” he says.

he weight of troubles seems to be bly weighing Maughan down. He s haggard and overwhelmed, accord- to those who have seen him recently. l the firm seems to be confirming ghan’s shortcomings. It is searching a chief administrative officer to reduce Maughan’s burden verseeing the financial, operations, technology, and regional inistrators. Salomon says that it was Maughan’s idea to a new executive.

he role of Maughan’s boss at Salomon Inc., Denham, is to make strategic as well as compliance decisions but to e the operating decisions to Maughan. Thus, Denham ld be in on a decision, say, to exit equity trading in Eu- , but was not involved in Maughan’s recent move to set up w operating committee. A mild-mannered Californian and e friend of Buffett’s, Denham started out thinking the nt-company CEO job could be part-time but quickly real- it was a full-time assignment. He remains an enigma to Salomon employees and has stayed in the background except for restructuring Salomon’s Philbro Energy division.

Exacerbating Salomon’s identity crisis is the complicated role of Buffett. While Buffett rescued Salomon during the bond scandal by taking over as CEO for nine months, his ongoing role as a still powerful, behind-the-scenes activist shareholder gets mixed reviews. Salomon shareholders are thrilled that he has such a big stake, but many employees wonder why Buffett chose Maughan and still supports him.

For all of Maughan’s weaknesses, Buffett is expected to stand by him. The Apr. 17 reorganization is viewed internally as a reaffirmation of Buffett’s and Denham’s support of Maughan. Buffett is known to be extremely loyal and has too much personally invested in Maughan and Denham to withdraw his backing. “Warren thinks both of them are terrific,” says Jack Byrne, chairman of Fund American Enterprises in Norwich, Vt.

Yet some shareholders worry that Buffett might scale back his stake in Salomon. His biggest positive influence has been to bolster Salomon’s ailing stock. The shares, which currently trade around 34, flirted with highs of 52 in 1994 and would undoubtedly be much lower without the halo effect of Buffett’s ownership. In October, though, he must start re-

s for Berkshire’s investment on: $62 million.

’S THUMB. Buffett’s next move e a significant impact on Salo- s going to be like the Roman thumbs up or thumbs down,” Bruce Berkowitz, a portfolio at Smith Barney Investment who holds stock in both Salo- Berkshire. If Salomon stock is $38 or more at the end of Buffett will almost certainly tock. That would be very bull- for the firm, sending the mes- the Omaha investor is hang- ere. And that’s the outcome that some Berkshire holders fully anticipate, especially those who are convinced that Salomon stock is poised for recovery: “It’s a wonderful buy. We’re accumulating it,” says Jack Byrne, chairman of Fund American Enterprises Inc. in Norwich, Vt. Dwayne O. Andreas, a Salomon director and a close associate of Buffett’s, acquired 100,000 shares at $33.68 in mid-March for a beneficial trust.

MOMENT OF TRUTH

The big question at Salomon: Will Buffett convert his preferred shares into common or cash?

But if the stock languishes in the mid-30s or below, especially for several years, the outlook for Salomon might be ominous. Buffett would be under pressure to convert the preferred stock to cash. That would deplete Salomon’s capital, further depress Salomon’s stock (including Buffett’s own common holdings), and send what might be seen as a very different message about his feelings toward Salomon. Buffett’s 1994 annual letter to shareholders is silent on the subject.

Buffett, though, is known for taking the long view. He has held on to his Salomon stake even though the stock has been on a veritable roller-coaster ride for the past decade. Berkshire bought its preferred stake just weeks before the 1987 market crash halved the investment-banking company’s common stock, from roughly $33 a share to less than $17. By 1991, Salomon stock had battled its way back to the mid-30s, but then news of the company’s U.S. Treasury bid violations sent shares plunging again.

After that nasty surprise, Buffett became deeply involved in the firm—so deeply that some observers suggest he might accept Salomon stock in exchange for his preferred stock, even if it is selling below $38 a share and would compound his short-term paper loss. Buffett preaches the value of hanging on to subpar businesses as long as they generate cash and field a solid management team. Yet Buffett is not known for giving away money, and he must act in the best interest of Berkshire shareholders.

Berkshire’s Salomon investment looks a lot better than his USAir stake, which the company wrote down to 25¢ on the dollar last year. But there’s no question that Buffett’s Wall Street adventure has further sullied the Sage of Omaha’s golden touch.

deeming a $140 million chunk of his $700 million in preferred shares for cash or stock. If the stock is trading for less than 38, he would have an incentive to take cash. That would depress the stock further, costing Solly a nice chunk of capital (page 146).

Curiously, Solly's descending fortunes and Buffett's ascending influence both stem from a muggy August day in 1991, when Salomon's Treasury bond bid-rigging scandal broke. Tarnished, Gutfreund and President Thomas W. Strauss resigned. So did Meriwether, despite Buffett's support. Meriwether later was suspended from the securities industry for three months because of his role in the Treasury bond episode and fined $50,000.

In less than 24 hours, Buffett drafted Maughan out of a group of Salomon executives to run Salomon Brothers. The decision was "the most important hire of my life," Buffett recently told a group of business school students. The superinvestor said he was looking for someone with the right character to run the firm: "Essentially, I was very lucky, because I found that individual, a fellow named Deryck Maughan." Buffett installed Denham as CEO of Salomon Inc. to oversee Salomon Brothers and Phibro.

"SALOMON NORTH": *Top traders followed Meriwether*

By December, 1992, Meriwether was ready to return to the firm, where he would have rejoined a dozen traders who had remained intensely loyal to him. But in a move that upset Meriwether's followers, Maughan offered him a job that would have made him a distant No. 2, with fewer responsibilities than he had when he left after the scandal. Meriwether rejected the offer.

What followed was the first wave of a dramatic talent drain. Furious at Maughan, Eric Rosenfeld, Lawrence Hilibrand, Merton Scholes, and Richard Leahy in 1993 joined Meriwether in Greenwich, Conn., at "Salomon North," as his firm, Long-Term Capital Management, is known. Cumulatively, the former Salomon employees who joined Meriwether generated the bulk of Salomon's profits. By 1995, even more top Salomon traders had signed on, including foreign-exchange trader Hans Hufshmid.

BIG BONUSES. Maughan's other big mistake has been to make a muddle of the firm's compensation plan, long a source of strife. The problem: how to fairly reward proprietary traders who rack up huge profits? The firm not only had generous pay arrangements with the proprietary traders but also extended generous deals to many of Solly's other business units.

By 1994, the system became too much for shareholders to bear. Despite the fact that 1994 was Salomon's worst year in history, it paid some phenomenal bonuses. Indeed, Solly paid more in compensation and benefits, $1.5 billion, than the $1.4 billion it earned in net revenues, says Lipper's Flanagan. The crowning blow was when a few traders in the proprietary bond-arbitrage group got pay packages worth an incredible $35 million each, even though the proprietary-trading group lost $49 million last year. In 1994, Posford, head of London proprietary trading, made about $25 million, even though Lon proprietary trading lost $400 million. Posford and the firm clined comment.

In response, Salomon announced a new compensation tem last October to link pay directly to performance. The sharply segregates the firm into two parts: the propriet trading business, which is allocated $2 billion of the firm' billion in equity; and the customer-driven businesses, w have the other $2 billion behind them. The latter is a p nership of 125 managing directors, including investm bankers, research analysts, and traders who execute tra for customers.

TWO-TIER SYSTEM. One problem with the new pay pla that it treats the 6,800 employees in the customer-dr businesses shabbily compared with the 100 propriet traders. First, if 6,800 people have $2 billion to use, they likely make far less than 100 ple using $2 billion. Thus, managing directors in the p nership, even in a good year, earn a only small fractio what Salomon's propriet traders can earn. Further, n lowance is made for the fact there is far less risk in the tomer businesses than in pr etary trading.

As for the customer-dr businesses, employees are based on the total results o the customer businesses. Th employees receive a minim salary of $400,000, $600,000 $800,000. If the firm earns a return in 1995 or less, they only the minimum. Whatever firm earns over this hurdle, goes to employees and 60% to the firm.

The trouble is, even if a r aging director in, say, European investment banking do terrific job, he has little chance of influencing the total, thus his own pay. Some employees figure their efforts w trickle down to them.

There are more inconsistencies. The plan even viol Buffett's own philosophy, as articulated in his Berks Hathaway Inc. annual report. In a section on compensa he writes: "In setting compensation, we like to hold out promise of large carrots, but make sure their deliver tied directly to results in the area that a manager contr instead of firm-wide results. This inconsistency hasn't caped employees' notice: These pages are posted on the of the partners' gym.

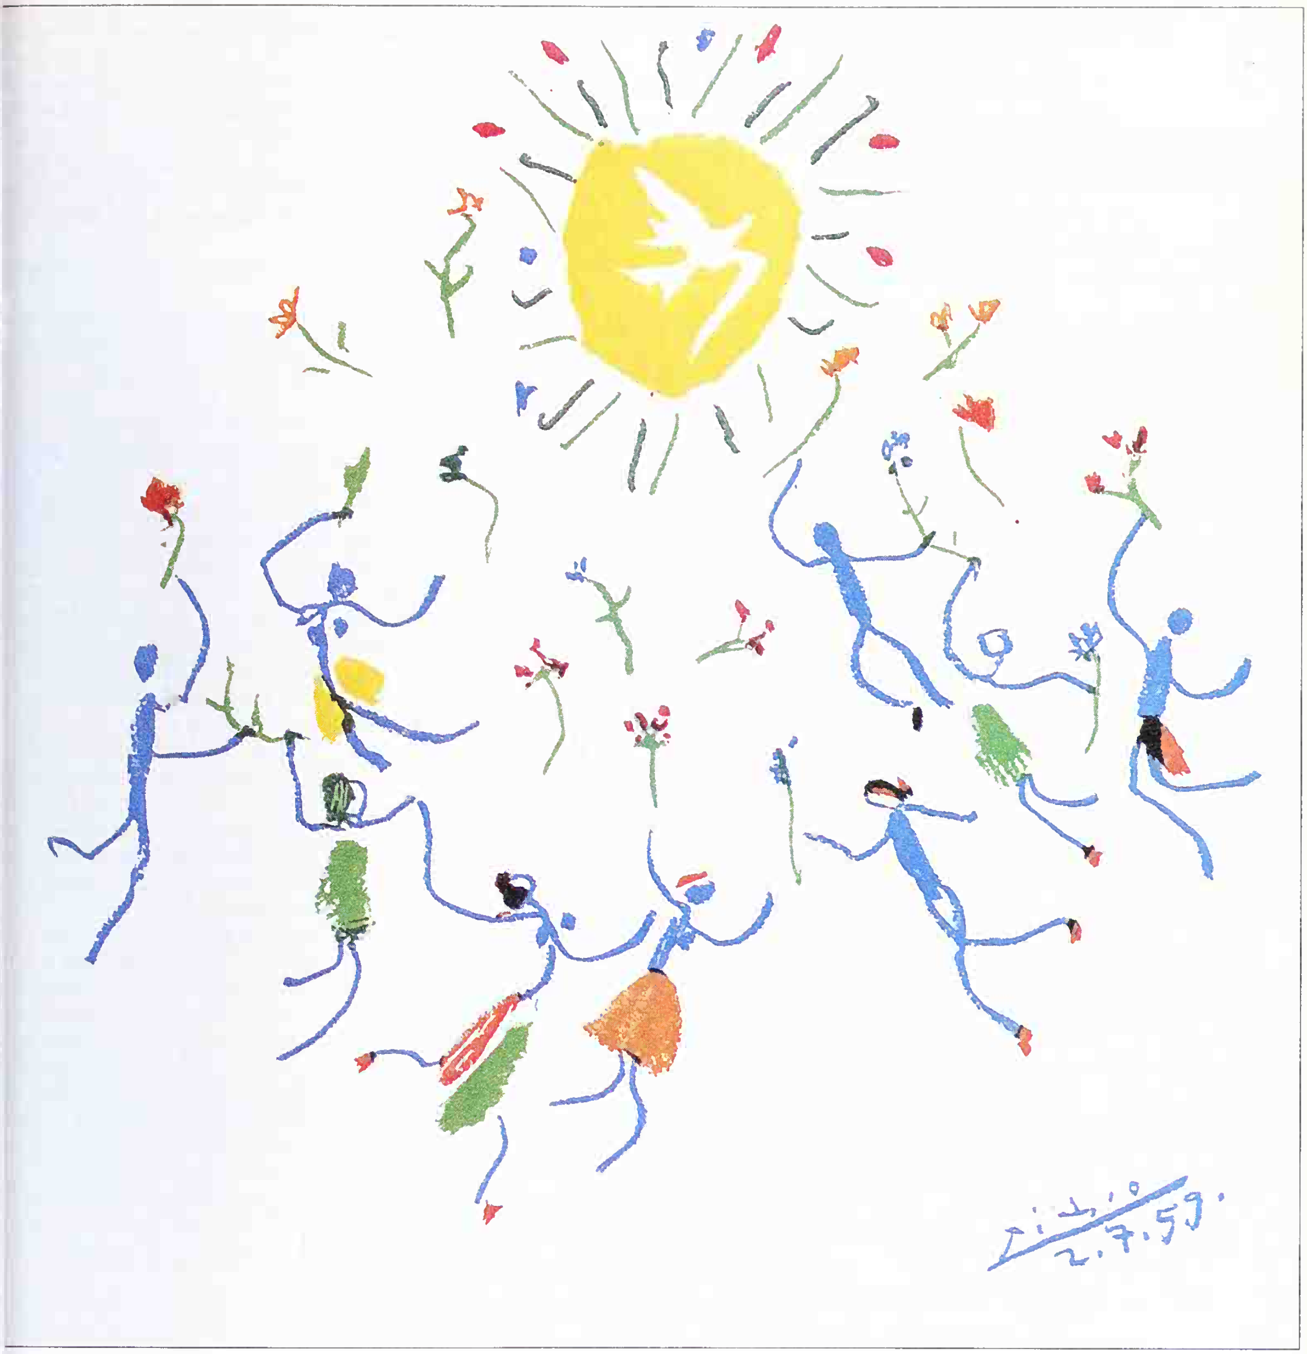
The Apr. 18 modification generated such a hue and cry Maughan set up a $20 million fund to "recognize outstan individual performance even if the client-driven business whole does not meet its targeted retu An additional $25 million will be spen new hires.

A FIX THAT ISN'T

The new pay plan, pitting worker against worker, is considered a disaster

It's unlikely the new pay plan will the defections. If all managing directo the customer businesses earn just t minimums, the firm will spend a tot $80 million. That's down from $220 milli 1994. What Maughan has done is add million to be divided among the gr "That won't go very far," says one managing director.

If Maughan can't get Salomon bac



DO YOU KNOW IN WHAT COUNTRY PEOPLE CALCULATE EVEN WHILE DANCING?

A reproduction of "La Sardana de l'Amistat" (The Sardana of Friendship) by Pablo Picasso. The Sardana is the traditional dance of Catalonia. © Pablo Picasso, V.E.G.A.P., Barcelona, 1994.

track, he will face tough and somewhat unpalatable strategic choices on Salomon's direction. One possibility may be to shrink and end up looking like Bear, Stearns & Co., a smaller trading house that is a niche player in investment banking. Salomon would give up its ambitions of being a global, top-tier powerhouse. A more radical plan would be to turn the clock back to the 1970s, when Salomon was strictly a fixed-income trader, with little emphasis on equity, research, and investment banking. Finally, Salomon could try to compete with the Merrill Lynch & Cos the world by merging or being acquired by a domestic foreign commercial bank, an idea being discussed by employe This could improve Salomon's credit rating and its competit position, but it would mean surrendering its proud heritag

The most favorable option may now be out of reach: Salomon of the 1980s that was close to joining Wall Stre top tier of Merrill Lynch, Morgan Stanley, and Goldn Sachs. For better or worse, the Salomon of the 1990s face much more modest future.

By Leah Nathans Spiro in New Y

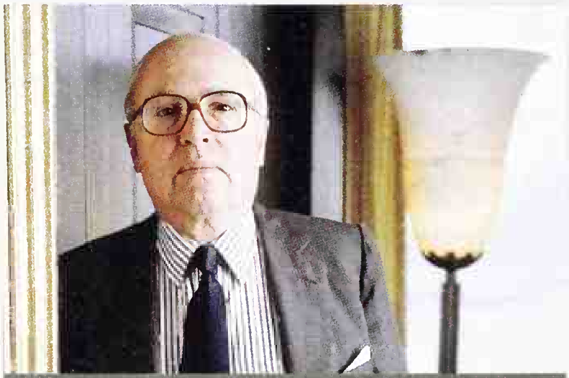
THE LION IN WINTER

No question, John H. Gutfreund was a flawed manager. As chief executive of Salomon Inc. from 1983 to August, 1991, he made some big mistakes. Perhaps the worst was failing to inform the New York Federal Reserve Bank in 1991 when the firm found it had submitted a false bid in a Treasury note auction. Although he was never charged with wrongdoing, Gutfreund resigned from Salomon and agreed to pay a $100,000 civil penalty. Another major error was cutting a special pay deal with supertrader John W. Meriwether, which badly undermined the firm's compensation system—a problem that endures today. Nor was Gutfreund well-liked: A gruff man, he suffered fools badly and had no use for the press.

THE SMELL OF FEAR. Yet after 38 years at Salomon, Gutfreund left an out-sized legacy. He built Salomon Brothers Inc. from a small, parochial bond house into one of the preeminent capital-raising firms in the world. He told new recruits to come in every morning "ready to bite the ass off a bear."

He had vision and was passionate about the securities business. He was able to manage big egos. He was a trader who could gauge losses by the expression on a trader's face. "John could smell fear at 100 paces," says former Salomon currency trader Bill Lipschutz in an interview in the book *The New Market Wizards*. Gutfreund was liked by investment bankers because even as CEO, he was always ready to go out on client calls. "Under John's leadership, much of the value of Salomon was created," says Richard Grand-Jean, a former Salomon Brothers managing director.

Today, Gutfreund, 65, is a long way from being "The King of Wall Street," as BUSINESS WEEK dubbed him in 1985. He works out of a small but well-appointed midtown Manhattan office and still dresses in proper bankers' pinstripes, answering his own phone after hours and fetching his own coffee. He keeps busy advising and investing in small companies with capitalizations of $50 million or so. "I'm old enough and disinterested enough that I'm not going to tell you you're the most beautiful girl in the world if you're not," he says. He serves as a board member of the New York Public Library and Montefiore Medical Center and as a fund-raiser for Oberlin College. On Apr. 22, he was to leave for Copenhagen for a meeting of the Trilateral Commission.



GUTFREUND: *Still fretting about Salomon's fate*

Yet Gutfreund has been unable to put the past behind him. On Apr. 18, he filed suit against Time Inc. for a factual error in *Fortune*. The magazine said that he "was barred from the securities business for life." In fact, he can't run a securities firm without special approval from the Securities & Exchange Commission. "I didn't do anything illegal and wasn't charged with doing anything illegal," he says. *Fortune* acknowledged the error.

Gutfreund is also fighting with Salomon over $27 million in benefits, stock options, and legal fees that he believes the firm owes him. He lost in an arbitration hearing and is appealing. More ominous is a $300 million lawsuit, filed by attorney Melvy I. Weiss on behalf of some Salomon shareholders, that alleges fraud and breach of fiduciary duty by Gutfreund and three other former Salomon executives in the Treasury bid affair. Gutfreund's legal bills total $8 million, and he has learned to live on less. "I'm not poverty-stricken," he says, "but I'm delighted to be doing business and making a few dollars."

"GREAT PRIDE." Gutfreund doesn't like to dwell on Salomon's current turmoil. But he is still emotionally involved with the firm. Following a luncheon speech at the Metropolitan Club in New York recently, several Salomon traders whom he hadn't talked to in four years came up and embraced him. "I'm not exactly the kind of person who people come up to and kiss," he says.

These days, Gutfreund professes to be worried about Salomon. "I sti take great pride in what we built," he says. "I am in pain when I see good people move on." He believes Salomon is in danger of losing its spirit. "The special quality of Salomon is not something that the management of today has thought about perpetuating or improving," he says. Of course, it was Gutfreund's own mistakes that contributed heavily to eroding that special quality. But given Salomon's current woes, his original contributions look a little more significant these days.

IN CATALONIA, OF COURSE.

n Catalonia, a country within Spain, we ot have abundant natural resources, we do rely on 6 million people who, for rations, have proven their enterprising t in commerce, industry, tourism, ness ...making of us one of the motors urope.

That is why in Catalonia we have me famous for calculating even while lance. This can be observed in the town city squares on any holiday when people of all ages join hands, and form a circle to dance the sardanas, our traditional dance, counting each step so as to end the dance all together with exact precision.

Come and see it one day, as 16 million tourists do every year. You will enjoy our traditions, our culture, our climate, and you will see for yourself how we Catalonians count even while we dance. The perfect balance in a people who progress economically and where European, North American and Japanese companies are already investing heavily.

Now you know in what country people calculate even while dancing.

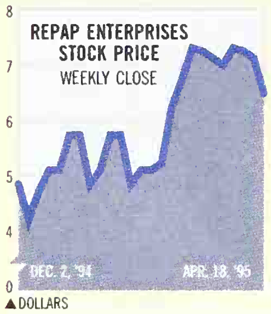
REPAP: NOT JUST A PAPER TIGER

Mention paper on the Street, and International Paper, Weyerhaeuser, and Champion International spring to mind. But some smart-money pros, including George Soros, are buying into Repap Enterprises (RPAPF).

Rep-what? It's North America's third-largest maker of coated paper, with a capacity of 1 million tons. No. 1 Champion International's volume is 1.3 million tons, and Consolidated Papers' is 1.1 million. Demand for coated paper is on the rise this year after a long slump. Why are Soros and other savvy pros snapping up Repap? Two reasons: a turnaround and takeover talk.

RIVAL EYES ON ITS MILLS



EARNINGS PER SHARE
1996 Est. **$1.70**
1995 Est. **85¢**
1994 **–55¢**
1993 **–$1.78**
1992 **–$2.18**

DATA: BLOOMBERG FINANCIAL MARKETS, GENESIS MERCHANT GROUP

Montreal-based Repap, in the red for about five years, made money at last during the fourth quarter of 1994. The betting is that earnings will be strong for all of 1995 and even more robust in 1996. Analyst Gary Craft of Genesis Merchant Group Securities in San Francisco expects Repap to earn 85¢ a share this year and $1.70 next.

Speculation is rife that a major paper producer wants Repap as a way to get in on the coming run-up in the coated-paper market. Buying Repap would be much cheaper than building new mills, says Will Weinstein, Genesis' senior partner. He thinks a Repap buyout "would be logical for any of the paper biggies, particularly the likes of Champion." But, he adds: "I frankly don't know which one will make a run for Repap."

Prices of coated paper—used mainly for magazines, catalogs, inserts, mailers, and annual reports—have firmed this year because of increasing demand. Craft expects Repap's turnaround will mean a higher price-earnings ratio for the stock, even without a takeover.

In spite of Repap's world-class operations and high-quality products, Craft says, it gets low marks from the Street. Based on its price of 6½ a share and Craft's 1996 earnings estimate of $1.70 a share, Repap's p-e is low—3.9. Consolidated Papers, on the other hand, has a p-e of 9. Craft thinks Repap shares are worth 12, based on its fundamentals alone.

IS KERKORIAN'S BID 'A BIG HOAX'?

What do takeover warriors of the 1980s such as Carl Icahn, Henry Kravis, Ron Perelman, the Bass Brothers, and Mike Milken think of the hostile Kerkorian-Iacocca attack on Chrysler (C)? They won't talk for attribution, and BUSINESS WEEK wasn't able to interview all of them. But the ones who spoke don't think a takeover will materialize. One of these pros privately described the Kerkorian caper this way: "The evidence clearly points to one thing—Kerkorian wants greenmail money, not Chrysler." So what's their advice? Short the stock. Icahn, for one, has taken big short positions in Chrysler.

"Believe me," says one veteran of several leveraged-buyout deals, "there won't be a takeover." In the end, both sides will agree to a buyback, he says—probably at a price below 55. "I've been there. I know when somebody seriously wants to acquire a company. This case tells me in so many ways that Kerkorian wants out," says another central character of many '80s takeover battles. "What Kerkorian is telling [Chrysler Chairman] Bob Eaton is that he [Kerkorian] will be a pain in the butt unless he's paid off. He has nothing to lose, and it's a smart move—for Kerkorian."

One sign that Kerkorian isn't serious about Chrysler: He didn't spend a dime lining up financing before he made his move. "Banks won't lend you money unless there is a clear way to a successful deal," says this pro.

"It's a catch-22, because a bank won't put up any money unless it's sure of success. But the courts won't throw out a poison pill unless the financing is there," he explains. He thinks this is why Kerkorian didn't put up any money for a bank to line up the financing. "He knew there wouldn't a deal—so why risk, say, $100 mill to get a financing guarantee? The of is a big hoax," he says.

THESE OPERATORS HIT THE JACKPOT

Who's running the multimillion-dol casinos owned by Native Ame can groups? One outfit is Capital Ga ing International (GDFI), the natio biggest manager of Indian gambl contracts. It has deals with eight tri that operate in Arizona, Califor New York, Oregon, and Washingt Capital's success has attracted so very conservative investors, mainly delity Investments, which has take nearly 15% stake.

As a result, its stock, which had l guished between 2½ and 4 since cember, has risen to nearly 6. "W its experienced management, solid-c operations, and ability to expand," C ital should be one of the more in guing gaming plays, says analyst M Manson of Donaldson, Lufkin & J rette Securities.

Soon, Capital will build a casino Rhode Island for the Narragans tribe, the first New England rival Foxwoods in Connecticut, wh monopolizes the local market. Cap has also just opened two riverboat sinos in New Orleans. They are p of a $208 million joint venture w Hemmeter Enterprises.

"The revenues from the riverboats and Indian casinos have exceeded analysts' expectations—and our own," says Capital Gaming Chairman Jack Davis, who spent 30 years as president of Resorts International. He was also president of Trump Taj Mahal in Atlantic City. Capital Gaming President Ed Tracy, who was CEO of Trump casino when Davis was ch man, expects blockbuster earnings revenues in 1996 and 1997, when our projects will be operating blast." One insider sees earnings of a share next year and $1 in 1997.

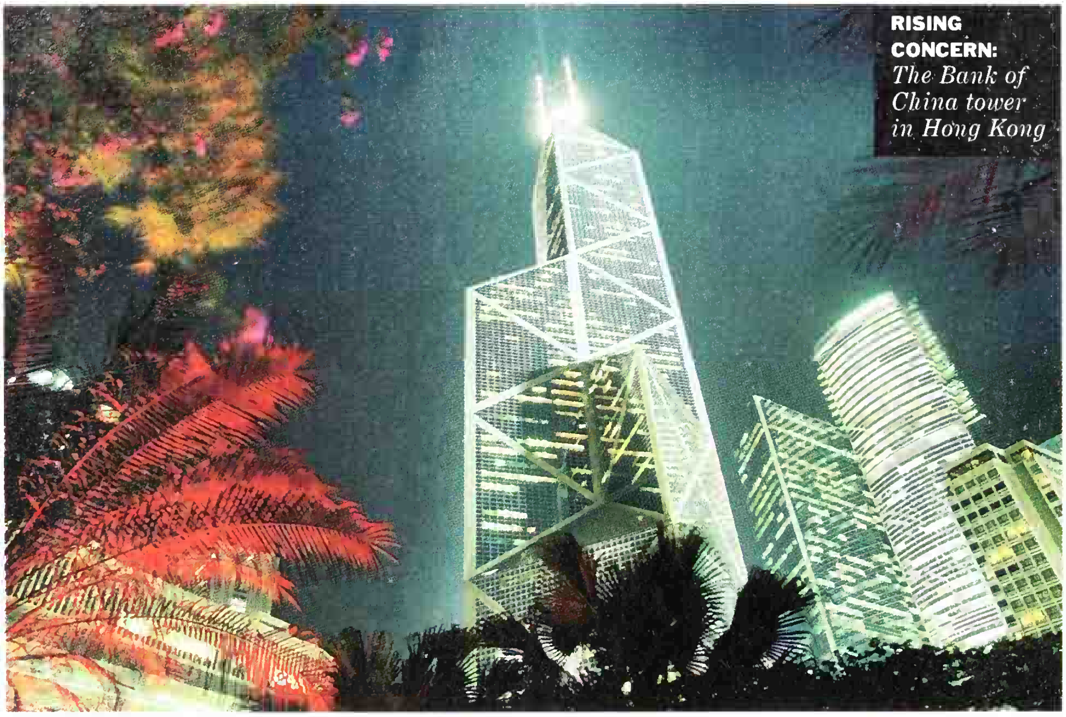
ASIA'S SUPERCITIES

Hong Kong is still No. 1–but rivals are nipping at its heels



RISING CONCERN: *The Bank of China tower in Hong Kong*

Peter D. Everington is ready to bail out of Hong Kong. As managing director of Regent Pacific Group Ltd., he's fed up with the island's outrageous property prices—and confusing politics. "Perhaps the more important consideration for us is the large degree of uncertainty over the runup to 1997," he says. So he may move the 25-person office, which handles $3 billion in funds, to Kuala Lumpur, where he can rent a five-room house with a garden and pool—for one-quarter the price of his 2,800-square-foot Hong Kong apartment.

Two years before Beijing's takeover, uncertainty is clouding the mood in prosperous Hong Kong. Exorbitant real estate prices and worries over political instability are forcing global corporations to assess whether they want to be in Hong Kong after 1997. Long the preeminent financial and business center in the region, Hong Kong faces intensifying attacks from Asia's emerging supercities. Shanghai, Singapore, Kuala Lumpur, Taipei, and Bangkok are bent on luring multinationals. They also want to grab a share of Hong Kong's wealth by establishing their own modern financial markets.

HONG KONG

ADVANTAGES: Gateway to China. Excellent infrastructure. Creative hub of Asia

DISADVANTAGES: High real estate prices. Uncertain political future. Brain drain

FOREIGN CORPORATE PRESENCE: Siemens, AT&T, Philip Morris, Hewlett-Packard, Sanwa Bank, Northern Telecom, CNN

BUSTLING MARKETS: *Traders at the Singapore stock exchange*

brokering. Moreover, Hong Kong is a key product-development center for goods such as cellular phones, audio appliances, and electronic toys assembled in China. And of all the cities in the region, Hong Kong ranks as the most creative, with everything from kung fu films to "Canto-pop" hits produced and distributed there.

PILING UP. Yet Hong Kong faces difficult times. Soaring prices for prime office rentals have forced some companies to look for less expensive cities. Feuding between Britain and China has left the city in limbo. Beijing, dissatisfied with Governor Chris Patten's election reforms, says it will throw out the existing legislature in 1997. The two sides are at loggerheads over the makeup of a supreme court, threatening Hong Kong's rule of law, an essential ingredient in ensuring business confidence.

Other would-be Asian financial capitals sense opportunity in Hong Kong's troubles. Government leaders of Singapore, for instance, sell their city-state as a bastion of political stability and efficiency. Singapore has made a name for itself as a high-tech manufacturing center, with advanced research and development and production facilities. The nation of 2.7 million has long been the gateway to Southeast Asia. Now, it's pressing to pass Hong Kong as the financial and communications hub of Asia.

Singapore's successes are piling up. It has the fourth-largest foreign exchange market, a large futures market, and its banks are becoming powerful players in loan syndication. In a bid to attract money managers, Singapore has announced plans to allow foreign fund managers to manage a portion of the country's huge Central Provident Fund, the nation's mandatory savings plan.

But Hong Kong advocates counter that Singapore has a long way to go. The government's controls over its domestic media are a major problem, along with pressure felt by securities analysts to avoid negative reports. "As long as there are restrictions on the free flow of information, they can't expect to b major funds-management and stock-b kering center," says William H. Ov holt, managing director of Bankers Tr Co. in Hong Kong.

Nowhere is the rivalry between H Kong and Singapore more intense t in communications. News organizati such as *The New York Times* and *Today* have chosen Hong Kong, open news bureaus there recently. Singap has attracted entertainment groups s as HBO, ESPN, and Walt Disney, wh are investing substantial sums for stu os and production facilities.

"PAINLESS OPERATION." Much of credit goes to Singapore's Economic velopment Board (EDB). Its aggress bureaucrats offer one-stop shopping foreign investors interested in the c state. THE *wisdom* OF 147 YEARS.

THE *imagination* OF A FIVE YEAR OLD.

Most insurance companies wouldn't care much for that description. Quite to the contrary, we actually like it.

We're UNUM. We've been in the insurance business since before the Gold Rush. Back then, we were just a young company with an optimistic eye on the future and an interest in helping people. Today, we're much more.

We're the worldwide leader in long term disability insurance, twice the size of our nearest competitor. And we've grown into a whole family of companies that can provide seamless coverage for a wide range of life's risks.

Youthful wisdom and old-fashioned common sense have served us well for the past 147 years. Here's to another 147.

Here's to a long life.

UNUM
We see farther.

and cars. In fact, high costs in Hong Kong and Singapore provide others with an opening to become manufacturing centers.

Kuala Lumpur "has a distinct advantage over Singapore" when it comes to costs, says John F. McDonnell, chairman of McDonnell Douglas Corp., which recently chose Malaysia's capital for its regional headquarters. Labor costs are half those in Singapore, and rents are one-third of the city-state's. Malaysia also wants to enter the financial capital sweepstakes. Its entry is Labuan, a small island off the coast of eastern Malaysia. Labuan, an "international offshore financial center," has the lowest tax rates in the country and looser rules on foreign exchange. It has about 400 offshore companies and 40 foreign banks.

TRAFFIC JAMS. Malaysia might be taking on more than it can handle. Its bureaucracy is cumbersome. Expatriates can wait up to 18 months to get a work permit—and the government has tough limits on the number of expatriates it will allow in. Unlike Hong Kong and Singapore, it doesn't afford expatriates favorable tax treatm Pollution and traffic gestion are worsening

Another city known its traffic jams, Bang is angling to make it Asia's auto-assembly ter. Bangkok bene greatly from the prese of such major Japan auto makers as Toy Nissan, Honda, and zu, which have been the area since the mid-1980s. That g Thailand a selection of parts suppl that have been brought up to w standards by the Japanese. "The su er base cultivated by the Japanese is credible," says Bill Kennedy, regi manager for Chrysler Corp., whic favoring Thailand for the role of Southeast Asia hub.

While Bangkok concentrates on auto industry, Taipei is targeting tech. Companies in and around the wanese capital have made the is the world's leading producer of in scanners, computer mice, and moni It's quickly becoming a large semi ductor source as well. The governm is building a $300 million software-de

ent park in Taipei and has targeted ɛey industries, including aerospace semiconductors, for incentives, govnent funding, and other backing.

ike their counterparts in Singapore, vanese officials also dream of takon Hong Kong in finance. Taiwan announced plans to build a "Wall et" of Asia, replete with New York- twin towers, in Taipei. But compa- are doubtful. The main reason is van's slow pace of deregulation. For- banks, for example, are limited tly to trade finance and hampered eams of red tape.

erhaps no city is more eager to take Iong Kong than its old rival, Shang- It has experienced three consecutive s of 14% growth as billions in for- investment have flowed in, especial- the new Pudong district. In every- from bicycles to autos, Shanghai is center of manufacturing for China. city's four-year-old stock market is ia's largest. City leaders want more. aim to become the international financial business center in the ern Pacific," says Hu Yanzhao, chief omist at the Shanghai Municipal ning Commission.

nder current policies, Shanghai is ɛely to reach that goal. Chinese ers, fearful of losing control of the omy, have resisted opening their financial markets. For instance, Beijing authorities, spooked by the market's fall last summer, put the brakes on new listings at the Shanghai exchange.

Further compounding Shanghai's headaches is the inability of China's banking sector to modernize. Strapped with huge debt from nonperforming loans to state enterprises, China's specialized banks have been unable to remake themselves into commercial banks. "The delay of financial reforms will delay the establishment of Shanghai as an international finance center," says Guan Jinsheng, vice-chairman and CEO of Shanghai International Securities Co., the brokerage firm recently cited in a major bond-trading scandal.

Even so, Shanghai leaders don't worry about losing out to Hong Kong. They say the two can play complementary roles, with Shanghai the domestic financial hub and Hong Kong the international center. "China needs several Hong Kongs and Shanghais," says Hu. "For 1 billion people, I'd say we need about 12 Hong Kongs or Shanghais."

Even with the high rents and political uncertainties, Hong Kong remains the preferred location for Western corporations looking to coordinate China business. Frank Martin, president of the American Chamber of Commerce in Hong Kong, says membership is at a five-year high, with 52 members joining in December alone. "Hong Kong is the closest to a perfect Asian center," says Mark Michelson, director of Warren Williams International, a public-affairs consultant in the territory.

But Hong Kong's advantages of location and personal connections with China's elite will only take it so far. China is not the only player, as India, Indonesia, and others rev their engines. The shock of adapting to the new world of Chinese sovereignty is likely to change Hong Kong and the way it operates. In the face of such uncertainty, Singapore, Taipei, and the other would-be supercities see opportunities aplenty.

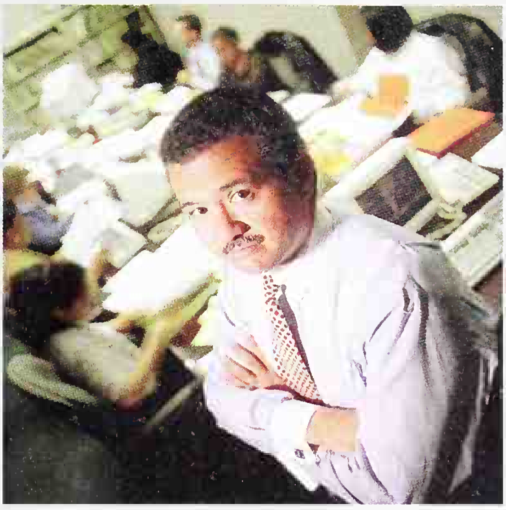
THE EEOC: TOO SWAMPED TO SHOOT STRAIGHT

or Donald L. Monin, the Equal Employment Opportunity Commission has been) help at all. The 55-year-old echanical engineer filed an age scrimination complaint with e agency in February, 1993, af- r he was laid off by McDonnell ouglas Corp. After 29 years, onin had risen to his unit's top ısition—only to be replaced by o employees at least 20 years unger.

The EEOC dismissed his charge st fall without ever interview- g him or his witnesses. And al- ough he has since persuaded e agency to reopen the inquiry, onin is still angry that it took e company's explanation for the yoff at face value. "They're not ly not doing their job," he fumes, ney're working against me." The OC and McDonnell Douglas de- ned comment.

GGER BURDEN. Monin learned the rd way what many others already ow about Uncle Sam's bias police: ey can't shoot straight. The agen- , which was set up in 1964 to en- rce employment discrimination ws, has seen its staff shrink while caseload has soared. Today, it's ing a backlog of almost 100,000 mplaints, more than double the 90 figure (table). "The agency has st all its clout," says Stephen E. llent, a Washington lawyer who presents employers.

Already overwhelmed, the EEOC ll be swamped if Congress out- ws affirmative action programs. t Presidential hopefuls Senators b Dole (R-Kan.) and Phil Gramm -Tex.) want to scrap programs to ing women and minorities into the rkplace. In their place, they uld have the belea- ered agency shoulder e entire government rden of combating ployment discrimina- n. But no one is in a rry to come up with ney to fix the EEOC. ld it all up, and it's ar: Banking on the OC to battle discrimination on the job won't work.



NEW CHAIR: *Casellas must boost efficiency*

KATHERINE LAMBERT

Things are so bad at the agency that many workers are choosing to file private lawsuits rather than go through the EEOC's administrative process, which can take as long as four years. In legal circles, some attorneys are so contemptuous that they regard it as "malpractice to file an EEOC charge," says Lloyd C. Loomis, a senior counsel at oil company Arco in Los Angeles. But that doesn't mean the agency, in theory, can't serve a vital function. For the vast majority of workers, "the EEOC is their only hope," says Los Angeles plaintiffs' attorney Nathan Goldberg.

SNAIL-LIKE PACE. Trouble is, the EEOC has never really had a chance to do its job right. Chronically underfunded, the agency's woes have grown more acute over the past decade as Republican Administrations squeezed its budget while lawmakers kept passing more antibias laws. Now, on top of the 1964 law barring discrimination based on race, ethnicity, national origin, religion, and gender, it polices bans against age discrimination, sexual harassment, and bias against the disabled. "The EEOC has been the product of one tinkering after another," says Ronald Cooper, a Washington employment lawyer.

Another problem: The agency must conduct a full investigation of every complaint. When Supreme Court Justice Clarence Thomas was EEOC chairman, he reversed an earlier policy that emphasized quick resolutions but left many charges underinvestigated. Thomas' decree, though, has slowed complaint processing to a crawl. And because of the swelling case load, investigators are still forced to rush through examinations. Full investigations are "a fiction when you have 100,000 cases," says EEOC Chairman Gilbert F. Casellas. "You just can't do everything."

Casellas, a corporate lawyer from Philadelphia who took over last October, is doing away with the Thomas model. He's pushing to make the agency as efficient as possible with the resources it has. He is readying a new prioritization system that would help weed out weak cases. And he'll likely seek to speed up cases through voluntary mediation. Casellas is on the right track, but he concedes that these fixes are "not magic bullets."

Even in its crippled form, the EEOC does wield influence over the workplace. The very presence of a federal watchdog helps check employers' behavior. If GOP leaders are serious about using it as the front line against discrimination, they'll have to put more dollars and muscle into the weakened agency so it can finally do its job. If not, they'll be sending the signal that fighting bias isn't worth much.

Yang writes about legal issues from Washington.

FORD WINDSTAR
The Treeces found the door layout wanting

EDITED BY AMY DUNKIN

THE GREAT FAMILY VAN DERBY

CAR BUYING

The first week in April is usually early to start the picnic season in Michigan. But when four adults and nine kids bundled up on a recent Saturday to dine alfresco in Independence Oaks Park north of Detroit, we had more on our minds than turkey sandwiches and potato salad. The journey was as important as the destination: We were putting the top three new minivan models—the Dodge Grand Caravan, Ford Windstar, and Honda Odyssey—to the test.

Because each is slightly different in styling and features, choosing the "best" minivan is largely a matter of personal taste. To gauge their appeal, BUSINESS WEEK arranged for three families to take the vans on a half-day outing. Parents, all minivan veterans, would take turns driving. In general, our group was unanimous in its praise for two things: pretzels and four doors. Unlike traditional three-door minivans, the Dodge and the Honda have rear doors on both sides, a convenience everyone could appreciate. More about that later.

WARM WIPERS. The Dodge Grand Caravan SE we tested was an all-new version of the Chrysler models that launched the minivan segment way back in 1983, while the Windstar and Odyssey were introduced last year. The "Grand" in Grand Caravan identifies its extended 200-inch overall length, the largest Chrysler makes. The Windstar is about the same size and, like the Dodge, has a V-6. The four-cylinder Odyssey is noticeably smaller at 187 inches long. It's also shorter: 65 inches vs. 68 for the other two. The Odyssey doesn't offer a V-6.

Our Dodge was loaded with every feature imaginable, at a sticker price of $21,890. The rear sliding door on the driver's side is a $450 option. A $230 feature we liked was a defroster made up of three lines of wire near the base of the front windshield to free the wipers should they freeze up.

Our Odyssey LX came with four standard carlike swing-open doors. This model, priced at $24,020, also has captain's seats in the middle row. They keep the kids apart but reduce the seating to six instead of the usual seven. Our weekend W

the picnic, the kids taste a soft drink, put wn, and try another. vise, we kept trying out ninivans—and disagree- n our tastes. Andrew the Dodge best overall: anything, it was too smooth. I kept finding my speed creeping up.” For Kathryn, the Windstar had the best acceleration and most sensitive brakes, while the Grand Caravan felt “the heaviest.”

Marianne was comfortable in the Honda and Dodge, less so in the Ford, which to her felt “just a little plastic.” She enjoyed driving the Odyssey the most but added, “I’d never buy it,” since the others offered the extra seat and more space in the back. Behind the rear seat, the Odyssey has a storage well, but Kathryn dismissed it as “narrow and small.”

I agree. In theory, the Odyssey offers extra space, because the rear seat folds down flat into the floor. In practice, that only works with four passengers or fewer. Opting for the standard middle bench seat for three, instead of the two captain’s seats, only compounds the problem. The bench makes for a two-three-two seating arrangement. To get to the rear, you fold the back of the middle seat forward, then tilt the entire seat up. Sound complicated? It is—so kids just climb over the half-folded seat in their rush to get out. On an earlier test drive of the seven-passenger Odyssey, with the three-person middle seat, I found the rear seat almost unusable.

CLOSE CALL. In testing controls and switches, I disliked the cramped buttons on the Caravan’s cruise control. Andrew faulted the small radio controls on the Honda. Both he and Marianne noticed less acceleration in the Odyssey than in the V-6s, although I thought the Honda had sufficient power. Otherwise, said Andrew, “I was struck by how basically similar all three are. They’re all smooth-riding, all similar in size, and all have the same feel on the road.”

HONDA ODYSSEY

Captain’s seats limit family feuds by keeping combatants apart

None of our group had complaints about road manners. In their ride and handling, all three vans were relatively car-like, given their substantial size. The fact that none of them emerged as the undisputed winner is a sign of how close the competition is these days. The key differences seem to be number of doors, engines, and seating arrangements, followed by the option lists.

Finally, interior noise on these three has been reduced considerably compared to prior minivans. This can be a big help when the driver and someone in the rear seat are trying to hold a conversation. On the other hand, it can be an unfortunate improvement when road-weary children launch into their umpteenth verse of *This is the song that never ends.*

GIRDING FOR THE SHOWROOM SHOWDOWN

CAR BUYING

Your old clunker of an automobile has finally succumbed, so you're about to take the plunge and buy a new set of wheels. But it's been five years since you've entered the new-car market, and the idea of dueling against some master salesman—yes, still typically a male—is rather intimidating.

Rest easy. Nowadays, you can march into a showroom armed with gobs of information, much of which wasn't readily available the last time you plunked down money on a car. Before talking turkey, though, Jack Gilles, author of *The Car Book* (HarperCollins, $12), advises that customers consider at least three different cars in the same price range and vehicle class. "The biggest mistake we make is falling in love with a particular car and therefore losing the psychological ability to walk away from a bad deal," he says.

NO HURRY. Next, Gilles believes prospective buyers should take each car for a long test drive. Go on the highway, park it in your garage, put things in the trunk, and get an overall feel. By taking a longer trip, you also reduce the chances that a salesman will come along for the ride and pressure you.

Once you're happy with the car, you can get down to haggling. Your chief objective is to find out what the dealer paid, and then use that as a reference point to make an offer. Dealer cost is usually expressed as the invoice price—a figure widely available in books, at credit unions, and in pricing summary reports. These include reports from AAA (800 597-5050, $12 plus handling for the first vehicle, $6 for each additional), Consumer Reports (800 594-9245, $12 for the first, then $10), AutoIntelligence (800 445-6111, $14, then $10), and Car/Puter (800 221-4001, $23 for the first, then $16, and $9).

But the invoice price rarely reflects a dealer's actual cost, because of incentives such as factory-to-dealer cash payments that are made from time to time on certain models. There is also usually a holdback, a concealed profit—often 3% on domestic cars—that is kept by the manufacturer until the car is sold.

The biweekly *CarDeals* newsletter published by the Center for the Study of Services in Washington, D. C. (202 347-7283, $4.50 per issue) gives information on current rebates and incentives offered on new models. You can also order *CarDeals* or separate price reports from the Car Price Network fax-back service at 800 227-3295.

SLUMPS HELP. Whenever possible, buyers should research the business and automotive press to help determine how well a car is selling. Knowing the market can help you bargain from a position of strength. "If you want to buy a Caravan, walking in there knowing sales are down 22% [through March] this year is really big information," says W. James Bragg, author of *In the Driver's Seat* ($12, Random House). "They need me a lot more than I need them." Bragg's Fighting Chance car reports (800 288-1134, $22.95 for the first vehicle, $7 for each additional) include buying tips, *CarDeals*, and the latest inventory data and holdbacks.

ACURA 3.2TL

Its V-6 gives it punch, its soft-sprung suspension gives it padding

LUXURY THAT WON'T BANKRUPT YOU

CAR BUYING

As the market for true luxury cars stagnates, auto makers are focusing on the growing midrange of near-luxury cars that sell for $25,000 to $35,000. Two impressive all-new models arrive this month. Infiniti's I30 sedan is a dressed-to-the-nines version of Nissan's Maxima, bridging the gap between the $22,875 Infiniti G20 and the sleek $38,550 J30. Acura's new TL series has no counterpart in parent Honda's lineup. Instead, it replaces the Acura Vigor, positioned between the sporty $15,700 Integra and the $36,100 Legend.

While no head-turners these—both hew to the conservative Japanese rounded-off look—there are some nice touches. For the I30, Nissan designers smoothed the Maxima's front and rear and added a formal grille that evokes the Q45, Infiniti's flagship. The similarities don't end there: An aluminum V-6 provides the same quick acceleration, and precise steering and an agile suspension keep the driver firmly in touch with the road. I found Infiniti's touring version, the I30t, with its stiffer suspension and shocks, a bit jittery on some surfaces, particularly concrete. The car will start at just under $29,000 when it hits showrooms at the end of the month, and the fully equipped I30t will top out just shy of $34,000.

With its new TL cars, Acura is emphasizing the brand rather than individual models by dropping names in favor of alphanumerics—the Integra and Legend will also be rebadged when they are replaced. The 2.5TL, with an in-line five-cylinder engine, starts at $27,900 and is available now. A V-6 version, the 3.2TL, will range from $32,950 to $35,500 when it arrives in July. The two Acuras, with softer suspensions and too much power-assist in the steering at lower speeds, don't relay as sporty a feel as the Infiniti, but the well-mannered pair are better at isolating occupants from the road. Their cabins are freer of extraneous sounds, such as wind noise, though the smaller engine tends to roar when pushed.

But for this market, it's the interiors that really matter, the countless features that pamper. These cars have generous headroom and rear-seat legroom, intuitive instrument panels, and enough of a sense of luxury to distinguish them from down-market kin.

While both the Infiniti and the Acuras offer the requisite wood trim—though still simulated at these prices—the Infiniti holds the edge in the details. Its woodgrain ashtray and storage compartments, for example, glide open at the touch of a finger, compared with Acura's conventional spring-loaded plastic lid. I found Acura's dash-mounted clock and hazard-light cluster particularly jarring to the senses, especially the cheap plastic door over the clock controls. Some I30 versions feature HomeLink, three tiny buttons on the driver's visor that can be programmed to open garage and estate doors, turn on the house lights, or do other tasks that use a radio-frequency transmitter.

RED VELVET. By and large, the Japanese still haven't figured out what to offer the increasingly prevalent nonsmoking American driver. Acura ashtrays, which sit just to the right of the cigarette lighter, come with a removable red-velvet liner stamped "coin holder" and "no smoking" in gold. Infiniti leaves the ashtray intact but makes the lighter an option. Instead receptacle, covered wi plug that says "12V DC, comes an outlet for such tronic gizmos as port phones and radar detec Both should learn from General Motors and M models whose ashtrays vert to cup holders they're not needed.

Speaking of cup hol both companies thought recess them in the center sole between the passen rather than resorting t usual contraptions that out from the dash—rend radio and temperature trols inaccessible. The A are designed to accomm a variety of sizes, whil Infiniti's should be more called can holders.

Despite styling that toward the ho-hum, ther lot of value here. Thes both well-bred, well built cles, and even the base are jam-packed with l cues and amenities at p not that far above more stream sedans. They can raise the ante for carm who aspire to the mid-l class. *Larry Arms*

RESORTS®

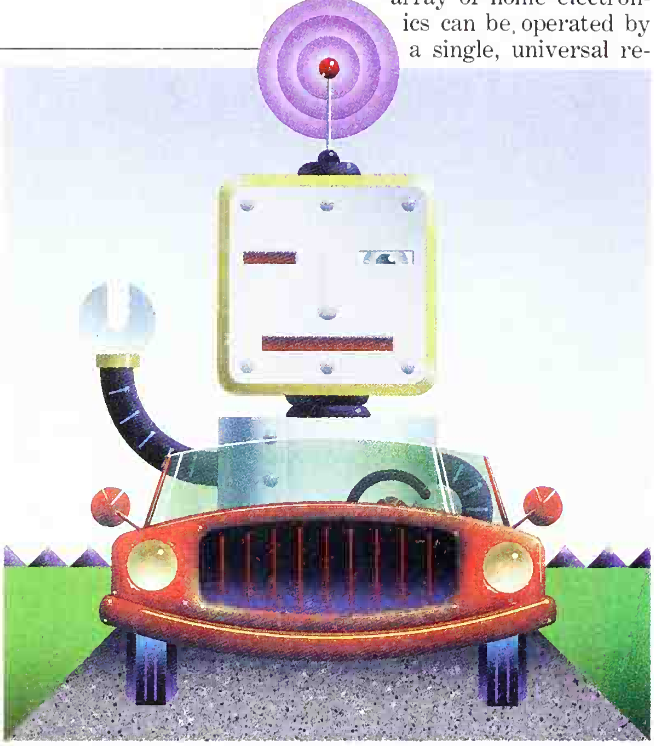
THE SMART CARS AHEAD

When it comes to dreaming up features and gadgets to tickle the fancy of auto buyers, no idea is too high-tech—or low-tech—for carmakers. And the latest crop of what Detroit likes to call "surprise-and-delight features" runs the gamut.

In the ingenious-but-simple category, there's the ping-pong ball in the gas tank of the 1995 Chevrolet Lumina. This simple device stops pesky gasoline splash-back when you're filling your tank. When you're done pumping gas, the ball bobs up to seal the opening. Chrysler had the inspiration to add a narrow heating band to the front windshield of its new 1996 minivans. That's to keep the wipers from freezing to the glass in a winter storm—just when you need them most.

At the other end of the spectrum are satellite-linked navigation systems with mechanical voices that can direct you to unfamiliar destinations. The Guidestar navigator made by Rockwell International appears on some 1995 Oldsmobile Eighty-Eight sedans as a $2,000 option in California and several other states. Volvo's Dynaguide Info System adds the latest traffic reports. Dynaguide goes on sale in Europe later this year, but won't be available in the U.S. until federal regulations on telecommunications are set, Volvo says.

PAL IN TEXAS. Or how about the cellular phone that dials 911 or roadside assistance for you in an emergency, then uses satellite information to tell rescuers your location? Lincoln's Remote Emergency Satellite Cellular Unit (RESCU) will be available on the 1996 Continental luxury sedan for an as-yet undisclosed price. Pressing one of two emergency buttons marked by either an ambulance or a tow truck icon will alert a response center (that happens to be in Texas) to notify the nearest police, fire, or medical unit, or summon a tow truck anywhere in the U.S. that has cellular service. Meanwhile, the response center's staff will stay in touch with the motorist until help arrives. The system can also notify a previously designated list of family or friends. Thanks to technology from TRW, a similar "Mayday" system that automatically alerts emergency crews when the car's air bags deploy or its crash sensors are triggered will one day be available.



Other auto gizmos are aimed at easing the irritations of everyday life. Your array of home electronics can be operated by a single, universal remote. Why not do the same from your car? The HomeLink transmitter, which operates three electronic devices—the garage door opener would be an obvious candidate—comes standard in the driver's visor of the Mitsubishi Galant LS sedan, and is featured on some versions of the new Infiniti I30 luxury sedan. Most Infinitis also come with a standard keyless entry fob that not only lets you open your car doors by remote control but, if pushed and held, will also roll down the windows—handy in warm climates.

CAR BUYING

Engineers also want to make it easier to get into and out of cars. Johnson Controls has taken it upon itself to design a "drop bolster" th
tomatically lowers the
edge closest to the door
that door is opened. The
pany hopes the feature
yet available, will appe
older buyers and wom
tight skirts.

BACK RUBS, TOO. Head
are supposed to protec

Your mate says: "Trust me, left at the light." Now, you can get a second opinion

CAR BUYING

W COMES
IE SECONDHAND LEASE

vas bound to hap- : The auto leasing m has begun to l over on to used- lots. With it 2 million and three-year-old ve- s coming off lease this some auto makers are king up leasing pro- is to help unload them. ake the cars more allur- they're offering extend- arranties and roadside tance. Some have even ed subsidizing leases to en monthly payments.

course, buying is still heapest option over the haul. Leasing a 1992 s LS400 for three years, purchasing it over the two, costs roughly $700 than simply taking out -year loan. Most people, while, don't even pur- the leased car, and they ıp owning nothing. So if drive cars until they fall , you're better off buy- Likewise, if you drive than average, steer Most leases charge pre- ns of 10¢ or 15¢ for mile over 15,000 ır.

ON RELIEF. Still, ng may have big al for some. It lets lrive a fancier car, the payments are lly lower. It's also ctive to those who pony up the typi-)% used-car down- ient—or who l rather spend the y elsewhere. 's even truer now some carmakers efurbishing used and offering ex- ed warranties that c those of new els. Such steps re- some of the risk nechanical problems. Best of all, if the car turns into a repair headache, you can walk away at the end of the lease.

So far, pricey brands such as Jaguar and Lexus have pushed hardest into used-car leasing, but more prosaic marques such as Ford are test-marketing programs to help move the metal, too. As the number of used cars coming off lease continues to grow, expect a spate of attractive promotions.

Tread carefully, though. For starters, leasing a used car or truck can be nearly as expensive as choosing a new one. A typical 1992 Mercedes 300E goes for about $600 a month on a four-year lease—the same price as leasing a new 1995 E320. That's because Mercedes figures the '92 will depreciate by about the same dollar amount over four years as the new version. Obviously, in such instances, you may as well drive the new one. Leases for late-model luxury cars often are close to new-car deals, so often your best bet is cars at least four years old.

That said, there are still good deals to be had. In particular, luxury-car makers, who must unload a flood of cars coming off their first lease this year, are worth checking out. You can lease a 1992 Lexus LS400 for three years for $600 a month, vs. $850 a month for the new, redesigned '95. Be sure the car is a "certified pre-owned" Lexus. That designates a car that has been refurbished, has passed a rigorous inspection, and is backed by a factory warranty for an additional two years, or up to six years and 70,000 miles. And you can receive service at any Lexus dealer.

Used vs. New

	USED 1992 TOYOTA CAMRY	NEW 1995 CAMRY
STICKER	$14,000	$20,000
TERM	36 months	36 months
DOWNPAYMENT	none	none
MONTHLY PAYMENTS	$220	$299
TOTAL PAYMENTS	$7,920	$10,764

DATA: WORLD OMNI FINANCIAL CORP.

Carmakers have various names for their programs. At Mercedes, it's called Encore Lease, and at Jaguar, Select Edition. Sometimes such tags designate a special deal. Mercedes offers interest rates as much as 2.5 points lower on Encore leases than on others. A 48-month Encore lease for a 1990 300SEL runs about $545 a month with no downpayment, $50 less than a non-Encore lease, says Garth Blumenthal, general manager of Fletcher Jones Motorcars in Newport Beach, Calif.

AEROSTAR WARS. For now, good lease deals are tougher to find on more mainstream wheels. Watch the ads. You could get lucky if supplies of a vehicle balloon. Last year, Ford tested a used-car leasing program with rates as much as three points below the 8% average. The result: Folks could lease a two-year-old Aerostar minivan for $260 a month over two years, vs. $325 a month to buy one over four. Leasing some Japanese models, such as a Toyota Camry, can make sense because their low depreciation rates help cut payments.

Before you sign on the dotted line, check behind the monthly payment to be sure you're getting a fair shake. Compare the car's price, or "capitalized cost" in lease-speak, with an independent source such as the National Automobile Dealers Assn.'s *Official Used Car Guide*, available at banks and many libraries. Then, find out the "residual value," or the estimated value of the car at the end of the lease you're being offered and compare that with the *Automotive Lease Guide* (813 791-4955, $12.50 an issue). If the salesperson refuses to give you that info, you're probably being overcharged. If the math adds up, though, slide behind the wheel and take your used dreamboat for a shakedown cruise. *David Woodruff*

THE WEEK AHEAD

DYMENT COSTS

ay, Apr. 25, 8:30 a.m. ▶ Labor costs rkers in private industry probably sed by 0.7% in the first quarter, the small gain as in the fourth quarter of If so, the cost of total wages and ts would have risen just 2.9% in the nded in the first quarter, the slowest in compensation in almost eight Increases in both wages and benefits wing.

UMER CONFIDENCE

ay, Apr. 25, 10 a.m. ▶ The Confer-3oard's index of consumer confidence slipped to 100 in April, from a read-101 in March. That's the median forecast of economists surveyed by MMS International, a division of McGraw-Hill Inc. Consumers have become increasingly worried about the economy's performance six months down the road. The expectations index has fallen for three consecutive months. The assessment of present business conditions has continued to rise, bolstered by healthy job markets.

GROSS DOMESTIC PRODUCT

Friday, Apr. 28, 8:30 a.m. ▶ The MMS median forecast projects that the real gross domestic product grew at a 2.7% annual rate in the first quarter. That's about half of the 5.1% pace in the fourth quarter. Consumer spending and residential construction slowed, but inventory accumulation continued to barrel along. A big wild card will be foreign trade, which could subtract substantially from real GDP growth. Inflation last quarter, as measured by the GDP price deflator, probably rose 2.7% at an annual rate, not much different from the fourth quarter.

DURABLE GOODS ORDERS

Friday, Apr. 28, 8:30 a.m. ▶ New orders taken by durable goods manufacturers probably dropped by 0.5% in March, after falling 0.8% in February. That would be the first back-to-back decline in the data in two years. Weakening demand for consumer durable goods is dampening overall factory orders.

This Week, Online

Business Week presents live conferences with editors and newsmakers. It's your opportunity to ask questions about features from the magazine.

BusinessWeek ONLINE

Sunday

Investing in the world of a weaker dollar and stronger yen: Steven H. Nagourney, chief global strategist of Lehman Brothers Inc., and BW Senior Writer William Glasgall, who specializes in covering the international money markets, will offer their prescriptions—and answer your questions. **Apr. 23 9 p.m. EDT in the Globe**

Wednesday

Reengineering guru Michael Hammer is back, as co-author of *The Reengineering Revolution*, due in bookstores Apr. 28. In another of BW Online's Interview With the Author series, he will discuss the new book with BW Senior Writer John Byrne—and you. **Apr. 26 8 p.m. EDT in the Coliseum**

Transcripts of all conferences are available for downloading from the BW Online area on AOL soon after each event.

For a free trial diskette including 10 free hours on AOL, call 1-800-641-4848 and mention Business Week.

A GREEDY GRAB FOR CHRYSLER

Say what you will about the corporate raiders of the '80s, they scared the daylights out of complacent chief executives. In their drive for a quick buck, the greenmailers, the leveraged buyout crowd, and the takeover artists forced companies to shake off years of bureaucratic lethargy, cut expensive layers of management, and dispose of marginal operations. Although they wildly overpaid for some assets (witness RJR Nabisco) and even trashed a few companies (witness Revco and Fruehauf), the raiders collectively constituted a market force for positive change. The current surge in productivity results in large part from their short-term, shareholder-driven behavior. So you might think Kirk Kerkorian's $55-a-share bid for Chrysler Corp. is in the finest tradition of doing well by doing good.

Not this time. Chrysler in 1995 is already the most efficient of the Big Three. It makes $2,100 operating profit on each car produced, compared to $877 for Ford Motor Co. and $734 for General Motors Corp. It has one of the fastest product-development cycles in the world. Its cab-forward design is pathbreaking. Its Neon is the first American small car to impress the Japanese. Its minivans lead a market it practically invented. Its Jeeps revitalized the entire sport-utility market. Sure, the company has a serious quality problem that is hurting sales. But Chrysler recognizes the problem and is moving quickly to remedy it.

In short, Chrysler has done virtually everything right in rebuilding itself. That is precisely why it has $7.3 billion in cash—money Kerkorian, as a 10% minority shareholder, says is his. Hard as we try to think of changes Kerkorian ar sidekick, Lee A. Iacocca, might make to improve the p ability of Chrysler, we come up empty. His bid is sim quick grab for the fruits of success from an efficient, co itive company, not a move to squeeze ready cash out bloated corporate behemoth.

The Council of Institutional Investors agrees. In the this trade group of big pension funds, led by the Calif State Teachers Retirement System, was in the forefro banging heads in boardrooms to dump recalcitrant CEOs downsize corporations. This time around the pension fund lining up behind Chrysler Chairman Robert J. Eaton. argue that Kerkorian's unfinanced bid will, if successful rifice Chrysler's long-term viability for short-term gain

We totally agree. Seven billion dollars is a lot of mone Chrysler has a lot to do. It must spend heavily today t prove quality. It must be able to invest in product dev ment during the next recession. That takes capital, lots

The great danger in the $20.5 billion Kerkorian bid is it can trigger a speculative financial froth that does s damage to the real economy. Many other competitive c nies in cyclical industries are sitting on piles of cash right Nearly all of them made that money the hard way, by ing productivity, not prices. Revving up already overh bank lending and reversing the healthy tide of cutting can only hurt the economy. The '90s are simply not the Corporate America does not need the lash of the "gre good" guys. This time around, greed is just greed.

LOCAL GOVERNMENT'S DECEPTIVE CHARM

Nothing is more central to the current effort to reform government than the concept of devolution. Devolving federal functions down to the state and local level has great appeal. Any suburbanite who has voted on a school district budget knows the impact of linking the level of taxes to the quality of government services. The charm of devolution is that it promises to localize practically all government services and give people the chance to directly fund them—or not.

The only problem with this romantic notion of power to the people is that we also know how awful local government can be. The only thing worse than the U.S. Postal Service is the local motor vehicles department. Here are some facts: From 1970 to 1992, the number of civilian federal employees grew not one bit and even fell sharply as a percentage of the population. The number of state employees, however, soared from 2.8 million to 4.6 million, and the number of local public workers jumped to 11.1 million. That's a grand total of 15.7 million. Today, one out of eight people working in this country works for the government, the vast majority at the state and local level.

In themselves, these numbers show there is no effic magic in devolution. In fact, state and local governm have often proved to be more easily seduced by special te ests than the federal government. State government notoriously open to persuasion. Look at the savings and crisis. States deregulated S&Ls, and when the smoke cle state-chartered S&Ls were responsible for most of the lost. S&L officials were well known around state capita their campaign contributions to legislators. We know the eral regulators were asleep. State regulators were com

The sad truth is that local government is often the government. There are too many overlapping jurisdi with taxing power. In one locality in New York's N County, people pay taxes to 17 government agencies.

The good news is that a few municipalities are char New York City, believe it or not, can get a person in an of one of its satellite motor vehicle offices in 15 mi Devolution makes sense because it brings government to the people. But until state and local governments rei themselves, let's not confuse devolution with efficiency.

You wouldn't think being airborne would be a celebratory kind of thing for Ray. Not after spending a few tough seconds descending through the air between his roof and the ground.

is Ray Harrison,

It hurt plenty, not to mention scaring the daylights out of his wife, Nada. And of course, it was expensive putting Ray back together again.

celebrating.

But he's left it way behind. All of it, bills included. Nada has AFLAC coverage through her job. It kicked in on unexpected expenses (like hauling Ray over the peninsula by helicopter). In plain language, AFLAC helped stop the money from flowing out of their pockets through holes in their health coverage. In the end, Ray has made a painless landing.

Here, you see Ray as he is today. Healthy, happy, and over it. Hallelujah!

AFLAC is *#1 in Payroll Marketing,* with nearly 100,000 payroll accounts in the U.S. For information on this simple, cost-effective way to strengthen your employee health plan, please call toll-free: 1-800-99-AFLAC (1-800-992-3522).

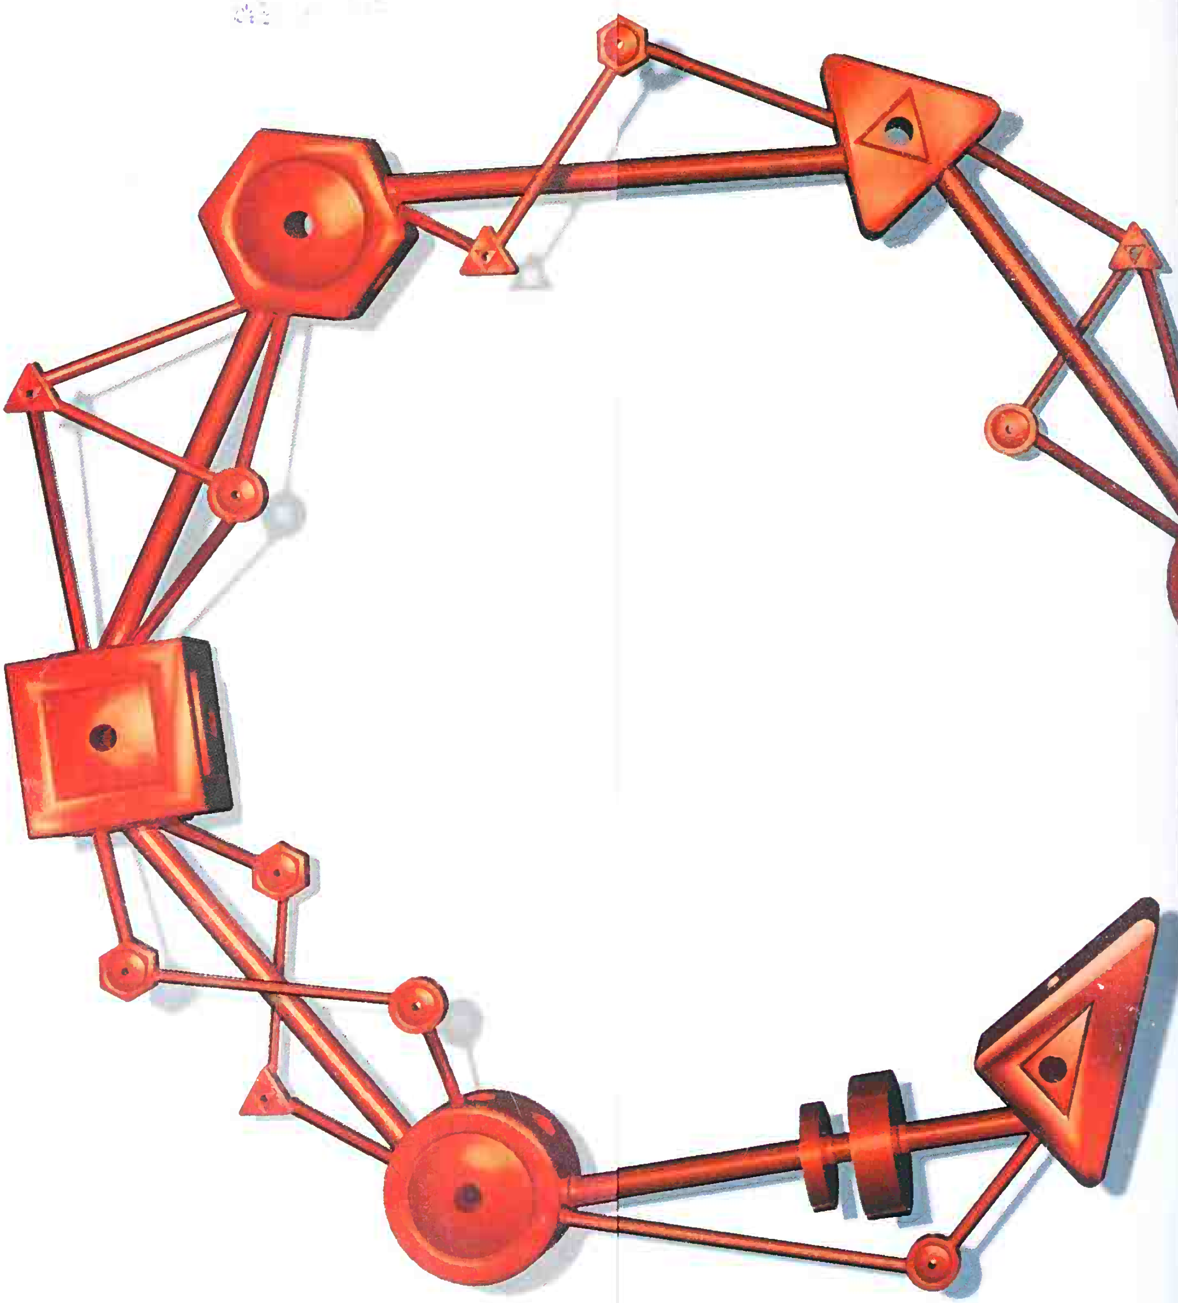
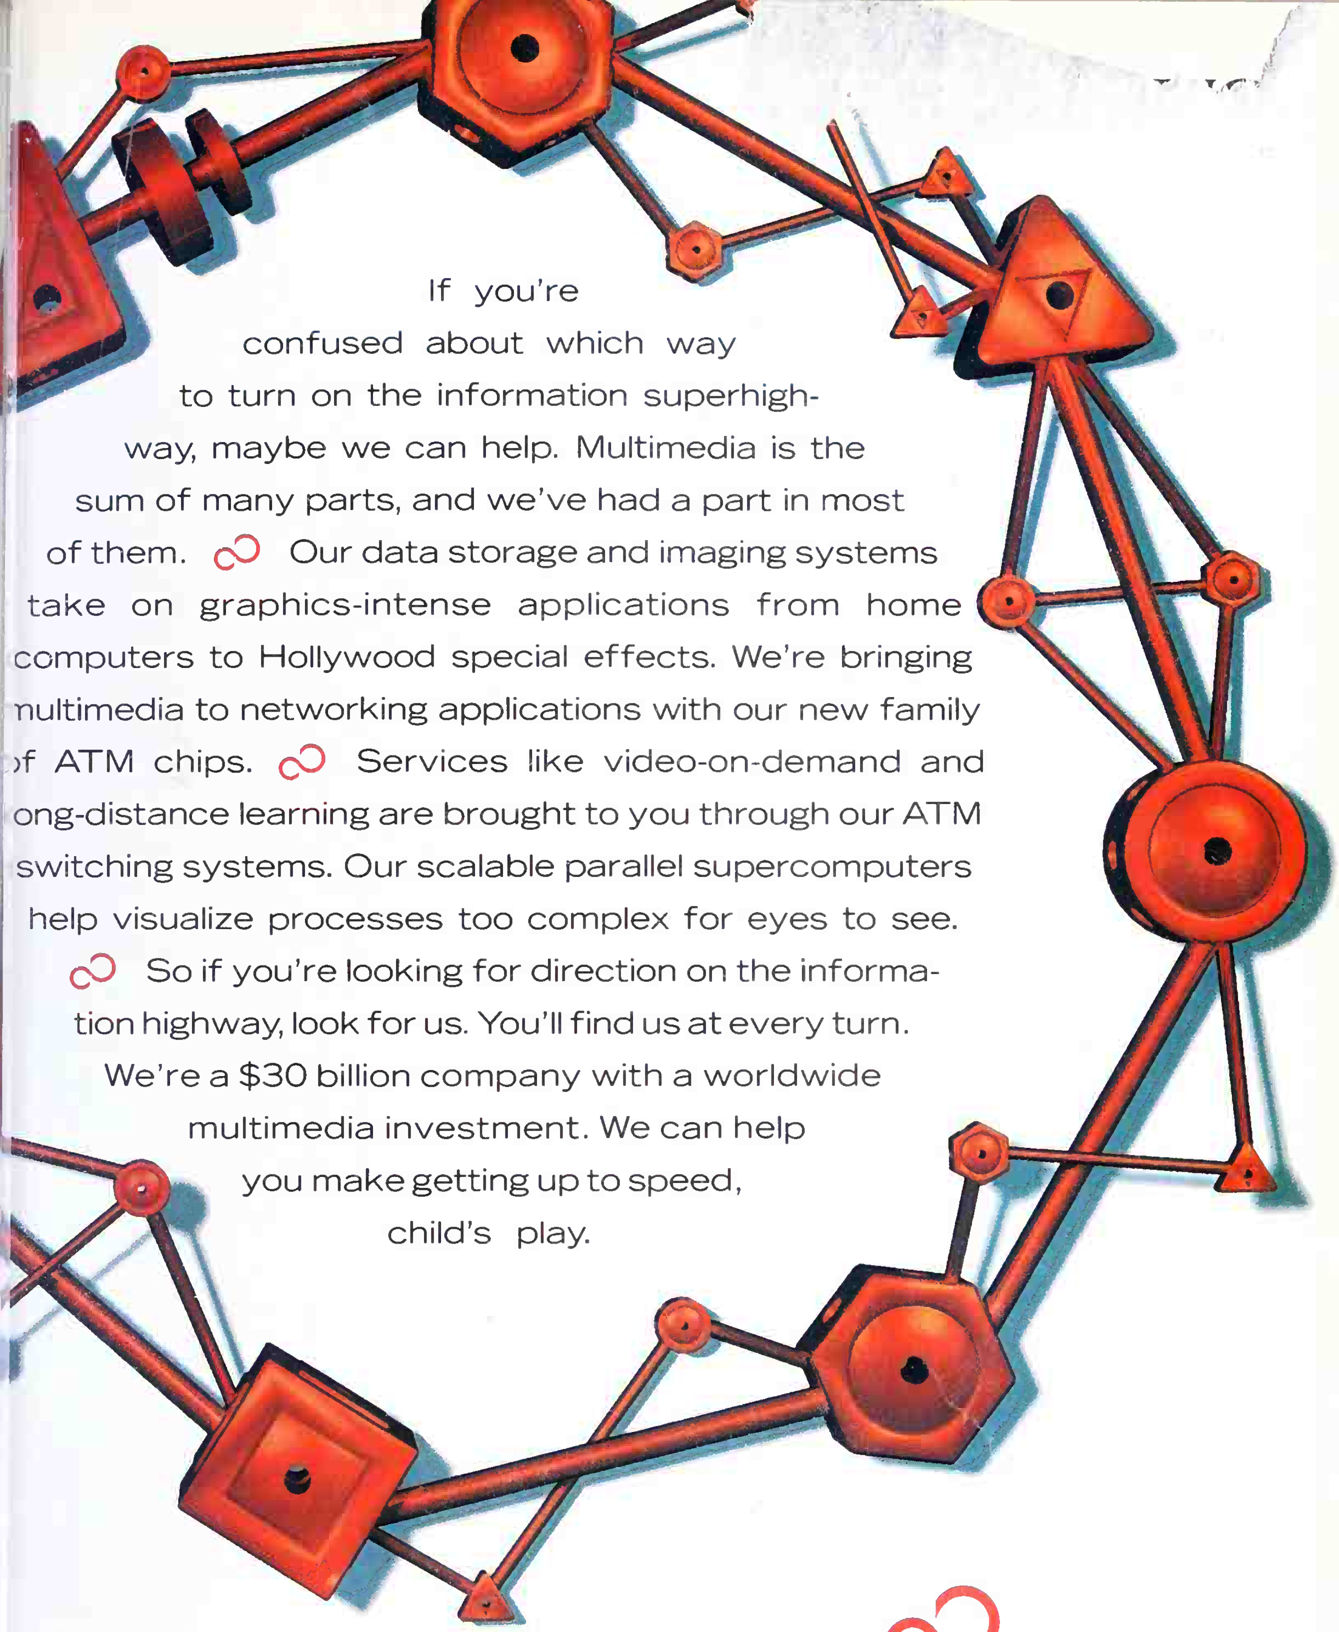
HOW TO MAKE
MULTIMEDIA CONNECTIONS
CHILD'S PLAY.





If you're confused about which way to turn on the information superhighway, maybe we can help. Multimedia is the sum of many parts, and we've had a part in most of them. ∞ Our data storage and imaging systems take on graphics-intense applications from home computers to Hollywood special effects. We're bringing multimedia to networking applications with our new family of ATM chips. ∞ Services like video-on-demand and ong-distance learning are brought to you through our ATM switching systems. Our scalable parallel supercomputers help visualize processes too complex for eyes to see. ∞ So if you're looking for direction on the information highway, look for us. You'll find us at every turn. We're a $30 billion company with a worldwide multimedia investment. We can help you make getting up to speed, child's play.

PRIME SEATS ARE STILL AVAILABL FOR THE SPORTING EVENT OF THE YEAR.

*Based on MSRP comparison of base Taurus vs. the leading sellers in its class.
**3 years/36,000 miles. See dealer for details.

INTRODUCING THE NEW FORD TAURUS SE

It's the Taurus with a decidedly sporty edge. Taurus SE's cast aluminum wheels, new clear lens headlamps and available spoiler make a serious statement of style. Inside, the SE has a long list of driver-friendly touches. Even air conditioning comes standard. And, of course, Taurus SE also gives you the added safety of standard dual air bags to supplement safety belts for the front passenger as well as the driver, and available anti-lock brakes.

But the SE's news doesn't end there. There's a refined powertrain that delivers an especially smooth performance from the computer-controlled V-6 engine. And when it comes to value, Taurus performs equally as well, as a better value than its leading competition.*

FORD'S ROADSIDE ASSISTANCE:**

Help is only a toll-free call away if you should have a flat tire, get locked out or simply run out of gas.

The new Taurus SE. Sit back, relax and enjoy the sporting event of the season.

WHEELER-DEALERS

NEW THAMES TEAM: REICHMANN AND TISCH?

REICHMANN: *He wants the Wharf*

PAUL REICHMANN IS ANGLING to get back into the beloved London office complex he lost to lenders in 1992—maybe with the financial help of CBS Chairman Laurence Tisch, well-placed real estate people tell BUSINESS WEEK. The Toronto property investor showed Tisch around the massive Canary Wharf project in mid-April.

Reichmann needs a deep-pockets partner to bankroll him. He tried a similar approach in Mexico, where he enlisted George Soros, but property deals there took a dive. Now, Tisch, long rumored to be peddling his controlling stake in CBS, may be seeking fresh opportunities.

The investment might make sense. Reason: London's battered office market is recovering, and currently profitable Canary Wharf's occupancy has almost doubled since 1992—it's 75% and climbing. Property experts speculate that Reichmann may want two undeveloped lots. Canary Wharf's banks will not confirm whether he has made an offer. Tisch won't comment, and Reichmann didn't respond to calls. Sir Peter Levene, who heads Canary Wharf, cautions "not to read too much" into the Reichmann-Tisch inspection visit. *Paula Dwyer*

WAL-MART: *Admonished to listen up*

PROXY WARS

IGNORING INVESTORS COURTS TROUBLE

WAL-MART HAS BEEN ZAPPED for snubbing an investors' proxy resolution. The Second Circuit Court of Appeals is making the giant retailer pay nearly $55,000 in legal costs spent by institutional investors who failed to get the resolution included in the 1992 proxy. Several organizations—including a union and three religious groups—wanted Wal-Mart to report on its affirmative-action and other equal-employment policies.

Now, $55,000 isn't much for a company with billions in annual sales. The plaintiffs are satisfied they made their point. Says their lawyer, Cornish Hitchcock: "The cost of ignoring shareholders just went up."

Other retailers, such as J. C. Penney, honored the investors' request and even urged a yes vote. It passed, and Penney issued an employment-practices report. Wal-Mart, which deemed the issue an internal matter, included the resolution in 1993 and 1994—after the investors sued. (The proposal lost.) Wal-Mart says the chain already has answered many of the plaintiffs' questions in a report to its shareholders. *Linda Himelstein*

TALK SHOW "We never intended, and still don't intend, this transaction to be hostile. You turned it into a hostile transaction."

SOLD: *Ted and the clan's Palm Beach retreat*

UNREAL ESTATE

THE KENNEDYS GIVE UP A BEACHHEAD

THE KENNEDYS HAVE FINALLY unloaded their Palm Beach estate, a rundown old place that languished on the market for a year and a half. The buyer is financier John Castle, former CEO of Donaldson, Lufkin & Jenrette. Castle says he will spend a full year renovating the 73-year-old beachfront mansion.

Part of the problem in selling the estate: The Kennedys were asking almost double the going rate for a comparable property, apparently because of its Camelot aura. Castle is evidently paying less than the asking price, but the final number is undisclosed. Castle, head of the New York buyout firm Castle Harlan, says he negotiated for months with family retain Senator Edward Kennedy Mass.), the current patria wasn't involved in the tal

One last deal-break snag was cleared away A 19 when the town backed its plan to dub the hom historic landmark—wh would have severely hinde any overhauls. Facing lit tion from the Kennedys, town settled for Cast agreement merely to k the house intact. Today, historic value is a tarnis coin. It's best known where William Kenn Smith was accused of rap 1991 (later acquitted), no JFK's glamorous winter W House. *Peter Valdes-Dap*

THE LIST BIBLIOPHILIA

Where are the best places to open a bookstore? In major metro areas, it's San Jose, Calif. Those Silicon Valley types read books as well as computer screens. New York, the nation's literary capital, and Boston, with its intellectual ambience, are No. 2 and No. 3. If you're looking for the highest-volume business, go to a small university town. Seven such places do a bigger pe bookstore business than Sa Jose. The leader is Bryan-College Station (home to Texas A&M), with sales of $2.1 million per store. So forget the dumb-Aggie joke

RONALD: *Most sales are abroad*

YANKEE TRADERS

ALL THE WORLD'S A McSTAGE

NOTHING IS MORE AMERICAN than McDonald's, right? Well, think again. Last year, recently released financial reports show, the chain's operating revenues from foreign sales passed 50% of the total. Analysts' prediction for decade's end: 60%.

Mickey D's gets more sales from overseas than any other U.S. fast-food chain, though Pizza Hut and KFC have also pushed abroad. The Golden Arches can be found in 79 nations. Having all but saturated America, the company is opening two foreign stores for every new U.S. outlet. After all, the appeal of this bite of American culture is strong: When McDonald's opened in Kuwait City last year, the line of cars at its drive-through window stretched seven miles.

While standardization built the company, McDonald's has wisely taken a flexible approach abroad. In places where local markets are tough for Americans to read, it works with joint-venture partners (the Far East) or licenses its name without putting up equity capital (the Mideast). While the menus look mostly the same all over, the company bows to local customs. Outlets set to open in India next year will likely sell veggie burgers instead of beef. Even in the hamburger biz, some cows are sacred. *Greg Burns*

WILD BLUE YONDER

A CASH CARGO FOR DELTA PILOTS?

PLAN: *Jobs for fliers*

BATTERED BY layoffs, Delta's pilots have devised a plan to restore jobs by expanding the ailing carrier's small (6% of revenue) air-freight business. Although of late no love has been lost between the pilots and Delta Air Lines, Delta's recent actions indicate that such an expansion might fly.

The Air Line Pilots Assn. proposes that Delta take seven L-1011 jets planned for phaseout, convert them into cargo jets, and fly between Anchorage and Pacific Rim cities—creating jobs for 200 pilots. Many could be drawn from the 505 pilots furloughed by Delta. The airline, which promises no more layoffs, is in tense talks with ALPA over management plans to cut costs $340 million more.

Delta says it will study the union's freight proposal. However, CEO Ronald Allen recently said he intends to get more heavily into cargo—leaving details unclear. The pilots are ready when you are, Ron. *David Greising*

You walk from office to office making lists. Lists of serial numbers you had to reach behind a desk to get. Lists of who has what hard drive, and which monitor is sitting where.

At Compaq,® we've effectively removed this chore from your job description. Because the new Compaq Deskpro® is smartly engineered to stand up and be counted from the other end of the network. (Which could be your own desk.)

Keeping Track Of An Entire Network Of Computers Is A Tedious, Thankless Job. Precisely Why It Should Be Handled By A Computer.

We call it Intelligent Manageability. Features that let Deskpro take care of itself—warning you of certain potential problems before they turn into desperate ones. So you're no longer stuck playing catch-up—arriving only to clean up after the data's been lost.

At first, it might seem odd that the extra staff you hire comes in the form of a computer.

But then again, what else would you expect from a computer company?

Introducing the new Compaq Deskpro

As with all Compaq PCs, Deskpro is covered by our free 3-year limited warranty. For more information on our full line of Compaq desktop PCs, call us at 1-800-345-1518 or reach us on the Web at www.compaq.com. In Canad

Readers Report

THE VALUE OF IMMIGRANTS

In reviewing Peter Brimelow's book *Alien Nation*, Christopher Farrell must have had blinders on. He refuses to see what is happening to this country through its ultraliberal immigration policies ("Take back your tired, your poor," Books, Apr. 17).

To continually refer to previous immigration from Europe as the reason we should not try to control this flood of Third World immigrants is ludicrous. When immigration was at its peak in the early 1900s, there was no welfare, and those coming here wanted to become English-speaking American citizens and part of our culture. This is not the case today. Mr. Farrell should not make light of this critically important problem.

C. W. Johns
San Jose, Calif.

Brimelow must have been living in seclusion since he migrated from Britain. If he had mingled with nonwhites, he would have found out that most recent immigrants are family-oriented, hard-working, and respectful of people around them. Many bring their life savings to America.

My wife and I strive to keep our children in a private school even though it's a financial burden. Why? Because quality of education and seeking to encourage good values for our children are foremost in our minds.

I hope Brimelow realizes how much harder it is for us to prove ourselves than it is for a person of his color and communication skills.

S. Vergel de Dios
La Mirada, Calif.

America does not need fewer immigrants; it needs to continue as the nation of asylum for those fleeing persecution and for those merely seeking a better life.

Every American family has at one time had the status of immigrant or refugee and probably was just as feared and loathed by a segment of the population that shared Brimelow's opini
Such fears are wrong and unproduct
to growth.

ees is a remarkable growth scenario

In fact, the last census figures, fr
1987, showed that small manufactur
businesses accounted for only 7.5% of
tal exports, or 12% of manufactu
goods exported by manufacturers.

Either number represents a big
ference from the DRI/McGraw-Hill e
mate of 45.5% a decade ago and ma
it unlikely that small businesses will
count for 50.8% of exports in 1995,
the story would have us believe.

Leslie St

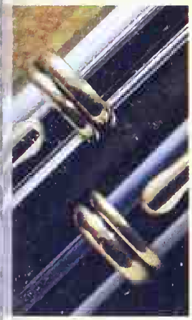
The Cross Townsend Collection originally debuted in Europe.

Europeans have always appreciated fine writing. So it comes as no surprise that the new Cross Townsend Collection was first seen in he cafés of Paris. In the board ooms of Geneva. Over tea in an nglish barrister's office. In fact, Cross Townsend writing instruments were originally designed for the discriminating European market. Each offers a unique combination of Art Deco tyling and advanced writing echnology. Each is based on a Cross design first seen in the 1930s. The collection offers a choice of four writing instrument models: fountain pens, rolling ball pens, ball-point pens, and 0.5mm pencils. All are hand-crafted for precise operation and available in a selection of luxurious finishes. With their unquestioned lifetime mechanical guarantee, Cross Townsend writing instruments are certain to be treasured for generations. From $55 to $275.



Exquisite design ccents classic Cross styling

Even in the caring, sharing '90s, you can still use a little personal space.

After all the time you've spent raising your sensitivity to the needs of others, you could probably use some time for yourself. Fortunately, the all new Monte Carlo is here. It's a very personal space, designed for a very personal fit. It's a place where the only relationship that matters is the one between your driving instincts and a car engineered to follow them unerringly. Where you can relax undisturbed in the comfort of an ergonomically designed driver's seat, within an impeccably designed cabin. Of course, you could decide to share all this with someone special. But that's completely up to you.

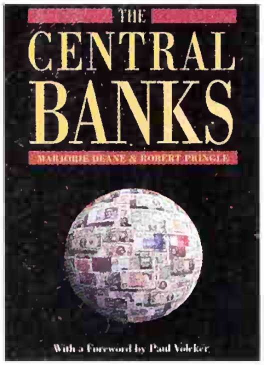
WILL THE '90s SWAMP CENTRAL BANKERS?

For central bankers, the past year or so has been a hair-curler. First, the U.S. Treasury-bond market crashed. Months later, the Mexican economy imploded. Then the dollar, the lira, and several other currencies collapsed to record lows against the mighty Japanese yen, German mark, and Swiss franc. But that's not the half of it. A tidal wave of global borrowing and a massive deregulation of financial markets sent trillions of dollars washing in and out of economies from Argentina to Thailand to Sweden, causing currencies to gyrate wildly and making mincemeat of everyone's growth forecasts. In this crazy environment, financial volatility became so commonplace that even the collapse of Baring Securities Ltd. in a spectacular $1 billion derivatives scandal failed to slow the markets for more than a few days.

That none of this has brought the world economy to its knees is a tribute to the resilience of markets nowadays. It's also a testimonial to the powers and crisis-management skills of the world's central bankers. Unelected, often uneasy in the spotlight, and frequently reviled by politicians and public alike, these men and women are nonetheless the power behind the global economy. True, traders have the resources and skills to thwart central bankers' wishes in the short run. But over the long haul, there can be no growth without credit—and central bankers are the ones that come up with credit day after day.

The wild and woolly '90s, however, present central bankers with challenges that are many times greater than those they have faced during 50 years of fairly steady expansion. There's the roughly $20 trillion worth of high-tech derivatives on the books of global banks and corporations, for example. A warp-speed foreign exchange market is trading $1 trillion a day, much of it largely unrelated to the mundane business of financing world trade, and, in the U.S., a $2 trillion mutual-fund industry is rapidly changing the definition of banking. Finally, a financial system in one country alone—Japan—is carrying at least $1 trillion in unbooked losses, left over from the "bubble economy" of the '80s. Heaven knows what will pop up next.



THE
CENTRAL
BANKS
MARJORIE DEANE & ROBERT PRINGLE
With a Foreword by Paul Volcker

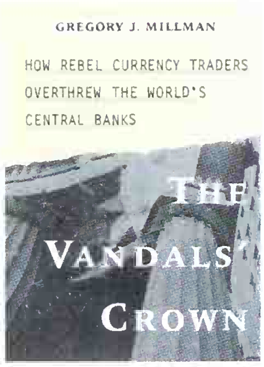
Whether central banks are up to the task of managing these burdens is the primary theme of three new volumes that approach their subject from very different angles. *The Confidence Game* explores how central bankers, through trial and error, have learned to be crisis managers. *The Central Banks* is a comprehensive treatment of the history and art of monetary control. And *The Vandals' Crown* emphasizes the role of the trader.

All three books provide straightforward accounts of the age-old battle between governments seeking to debase their currencies for quick growth and bankers fighting to maintain sound money. But *Confidence Game* stands out as the most readable of the trio. Starting with a gripping, 91-page account of the efforts by Federal Reserve Chairman Alan Greenspan and former New York Fed President E. Gerald Corrigan to contain the damage of the 1987 global stock-market crash, freelance financial writer Steven Solomon has writt page-turner that at times reads m like a thriller than a treatise on m tary affairs.

Pay close attention to Solomon's b by-blow account of Paul A. Volc daring, seat-of-the-pants experi with "practical monetarism" in 1979 stopped runaway inflation and a cr ing dollar. By resolutely targeting ey growth and sticking to his guns, as U.S. interest rates soared an economy sank, Volcker set an exa of independence that other central b ers are still trying to follow.

In keeping with the thriller m even the significance of Solomon's remains a mystery for more than pages. That's a long way to travel f answer, but the mystery is worth u eling. It seems that, down deep in hearts, central bankers have to ha bit of the classic con man within t To illustrate the point, Solomon rec the tale of how the world's money had to scramble when the 1974 coll of Frankfurt's Herstatt Bank ne sparked a panic on Wall Street threatened to shut down much of global financial system.

Dumbfounded, the central ban converged on Basel, the Swiss hom their unofficial club—the Bank for I national Settlements—and cobble gether an enigmatic statement that hoped would restore order. Their t declaration indicated merely that ce banks would supply cash to the E bond market "if and when necess



GREGORY J. MILLMAN

CROWN

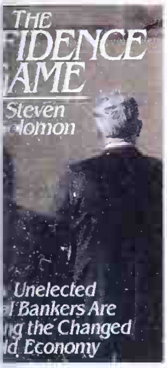
Truth be told, notes S mon, the bankers ha idea what they migh able to come up wit push came to shove. just saying they migh willing to act immedi calmed traders worldv It was "'a real central- confidence trick,'" Sol quotes a satisfied Ban England official saying

With Volcker leading way, central bankers forts to maintain the markets' c dence in their powers have intens over the years. One way to gain faith is to make sure a central ba independent of politicians' contro are the Fed and Germany's Bun bank. This quest for autonomy

AMONG THE BIG CHALLENGES: $1 TRILLION A DAY
WASHING AROUND FOREIGN EXCHANGE MARKET

me that Marjorie Deane, former cen- l-bank watcher at *The Economist,* Robert Pringle, former editor-in- ef of Britain's *The Banker* magazine, lore in detail as they trace the roots entral banking back to 17th century land.

'heir dry prose and intense detail, vever, become overwhelming at times. Few readers, I suspect, will spend much time on Deane and Pringle's dissertation on the fledgling central bank of Estonia and those of other former Soviet states. And while *Central Banks* serves as a useful text for students of monetary affairs, it gives rt shrift to the one force already ding central bankers' authority: the m in trading.



Iy appetite whetted for more on this ject, I turned eagerly to freelancer gory J. Millman's *Vandals' Crown* title refers to the ancient barbarians laid waste to Western Europe). lman sees today's highly paid traders rocket scientists as modern-day van- s, bringing monetary chaos wherever y tread.

Millman writes with a light touch and s his volume with such familiar sto- as the ascent of Philadelphia's man- urrency traders and the triumph of orge Soros over the European Mone- y System. But he saves the best for : the little-known tale of how one ue New York currency trader nearly ceeded in hiding $70 million in losses n his employer, Holland's ABN Amro ık.

'hat disturbing episode points out huge risks that may be lurking in global economy as barriers to trade l finance fall and trading explodes. all their moves toward indepen- ice and victories over inflation, the rld's central bankers are still strug- ng to get a handle on the increasing- scary force of the market. In the new netary order, acknowledge Deane and ngle, "the cost to the financial system a major meltdown]... gets ever larg- as different markets are linked." Per- ps the central bankers were just ky when they saved the day after Herstatt collapse 21 years ago. ether they can continue to con the rkets—or whether the markets break central banks—will be the story of t century finance.

NATIONAL CENTER *for* FAMILY LITERACY

To 12 million adults this is an ad about a dog.
Actually, it's an ad about literacy.

One in five American adults cannot read well enough to understand this ad.

That's why the National Center for Family Literacy is currently behind literacy programs for families in over 1,000 communities across America. But there is much more we need to do.

We urge you to write the National Center for Family Literacy, Waterfront Plaza, Suite 200-B, 325 West Main Street, Louisville, Kentucky 40202-4251, for information on how to support family literacy. Or call (502) 584-1133 ext. 33.

If we, as a nation, can achieve full literacy, then we can achieve anything.

WE ARE GRATEFUL TO THIS PUBLICATION FOR SUPPORT IN PRINTING THIS AD.

Computer Systems

BY STEPHEN H. WILDSTROM

TIPS ON TAPPING IN FROM AFAR

Personal computers make it possible for you to work wherever you are—at home, in a hotel room, even on an airplane. But no matter how carefully you plan, there always seems to be some crucial bit of data that you've forgotten to take with you and that you can get only by connecting to your office machine or network. This is where remote-access programs, a fast-evolving area of software, can be lifesavers.

Remote-access software comes in three flavors—and to make things more confusing, two and sometimes all three of the pieces are combined into single products. Remote file transfer lets you send files to and fetch files from another computer over a phone line. Typical programs for Windows or the Macintosh show the files on the local and remote computers in separate windows and allow you to initiate a transfer by dragging the file from one window to the other.

SPECIAL HARDWARE. Remote-control programs let you use a distant machine as though you were sitting at its keyboard and looking at its screen. Of course, working over phone lines means it will always take a few seconds for the screen to refresh itself, though faster modems and better software technologies are making the delays tolerable. You can hook into your company's network with remote-control software by using it to log your office machine onto the network, but for security reasons, this is not a good idea.

Remote-node software, on the other hand, allows your home computer or laptop to function as though it were connected directly to the office local-area network. The only real difference is that you are linked by a modem, probably with a maximum speed of 28,800 bits per second, rather than a network with speeds of up to 10 million bits per second. But a remote node, unlike the other types of remote access, generally requires special hardware on the network and will only be usable if a network administrator has set it up for you.

If remote network access has been set up for you, you'll have to use the software your administrator has chosen. But if, like most users, you want do-it-yourself file transfer and remote control, you have lots of software choices. My current favorite is Traveling Software's $99 LapLink for Windows, which combines sophisticated technology with simple setup and an interface that makes it easy to switch between remote-control and file-transfer modes. ReachOut from Stac Electronics is somewhat more difficult to use because it requires running a program before you start Windows. However, an upcoming version, expected to cost around $100, eliminates the problem and adds a number of new features. Symantec Corp.'s $129 PCAnywhere is also a popular choice. In the Mac world, probably the most widely used package is Farallon's $139 Timbuktu.

HEADACHES. Anyone setting up remote access of any sort should be aware of security issues. As soon as your computer can take calls from the outside world, it is at risk. You may find your ability to set up a corporate computer for remote access is limited by company security policies. Microsoft Corp. had planned to give all Windows 95 users the ability to set up dial-in access to office networks but removed the feature after corporate network managers complained about security headaches.

Fortunately, off-the-shelf remote-access packages incorporate a range of security features. At a minimum, you should tell the program to accept calls only from specified users—probably just yourself—and to require a password for all access. If you will always be calling from the same location, perhaps from home, you can set up the software so that it automatically calls you back at a predetermined phone number.

Once it's possible for you to reach your computer, there's a chance someone else can, too. But if you take reasonable precautions, the advantages of remote access far outweigh the risks.

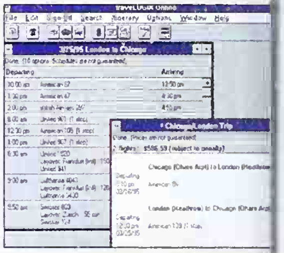
ONLINE SERVICES

TRAVELER'S AID

Upheaval in the airline business has made a good travel agent hard to find. But the clunkiness of online alternatives, such as American Airlines' Eaasy Sabre, is discou aging. If you're looking for a better way to book travel, cor sider traveLOGIX online from traveLOGIX (800 815-6449). F



$15 per month plus 15¢ per minute after two hours, you get an easy-to-use Windows interface that lets you build travel itinerary and check fares. You can then forward the itinerary to your travel agent, or you can book the tickets through traveLOGIX. Up grades scheduled for release this summer will add the ability to book hotel rooms and rental cars.

WEB SIGHTINGS

AN ONLINE SEARCHLIGHT

Thousands of new Internet us ers flooding onto the World Wide Web through commercia online services may soon get some help in the daunting task of finding material. In th first deal of its sort, Carnegie Mellon University has license its Lycos Catalog of Web resources to Microsoft Corp. fo use on the forthcoming Micro soft Network. Current Web us ers can check out the catalog at http://lycos.cs.cmu.edu, though heavy demand sometimes overwhelms the system's ability to handle search requests.

A World of Networks

Economic Viewpoint

BY RUDI DORNBUSCH

WHY IS JAPAN SHOOTING ITSELF IN THE FOOT?

INSTABILITY: The rising yen is crippling Japan Inc. Unless Tokyo policymakers face the crisis, companies may flee, and the economy could atrophy

A decade ago, Japan seemed all-powerful—and all set to play a dominant role in world trade and finance. Today, the yen is as almighty as the dollar was at the peak of its overvaluation in 1985, but its strength is illusory. The truth is that overly hard currencies cut first into profits and then into jobs, financial stability, and social cohesion.

The U.S. went down this road in the '80s. It has taken a decade to repair the damage from high real interest rates, bad balance sheets, overvaluation, and premature and excessive deindustrialization. Japan, for its part, has had deep pockets: Losses were covered in home markets by shareholders and bankers who did not ask questions. Now, after many years of financial distress and no growth, the pockets are empty, and a serious battle is under way. Japanese companies know what to do—flee offshore and away from the strong yen, leaving behind broken lifetime contracts, broken banks, and broken public finance.

While the yen is going through the roof, Japan's economy is going through the floor. Companies are on the treadmill of currency appreciation and cost-cutting, banks are in trouble, and the government stands by wringing its hands. Japan is in a deadly spiral of overvaluation that is entirely self-inflicted: It madly pushes out goods and sucks in money. The Japanese save famously, but with profitability depressed, they invest little, and hence flood the world with goods. But as asset-holders, the Japanese insist on hard yen in their balance sheets and earnings flows, dumping surplus dollars around the world. The result, perversely, is a yen so hard that they can't afford to live on it.

TIRED MODEL. In the past, there was Japan Inc.—a tight partnership of government and business that assured stability and growth. The goods and asset markets were kept repressed so companies could enjoy cheap finance from forced savings and high domestic prices to support battles for foreign market share. A rising yen was the rule—but never so fast that productivity growth couldn't pay for the strengthening of the currency. Today, the model is wearing thin: Companies want to survive, and that means going offshore. Financial markets cannot cover up de facto bankruptcy forever, and that means credit is getting rationed. Government is straddling the fence between international commitments and the domestic conspiracy to keep markets sh tered. In policy and politics, the country faring no better: Old-timers are running Ministry of International Trade & Indust the Bank of Japan, and the Ministry of nance as if nothing had happened. But w one-party rule shattered, politics is turn into a free-for-all.

For once, U.S. policies are not the reas for the strong yen. In comparison with Jap and Germany, the U.S. looks far sound than it did in 1985, at the dollar's peaks. T budget deficit is smaller than Germany's Japan's, and the inflation rate has been m erate for a decade. True, budget-cutting wo be desirable, and it would be a good idea have a more concrete commitment from Federal Reserve to moderate inflation, even that would not make much difference the yen.

TREADMILL. Hot money funds might magn the problem, but don't blame them—this i problem of Japan Inc. malfunctioning. O the past few years, Japanese monetary pol has been consistently supertight. True, inter rates were low, but prices were falling, that meant real interest rates were high, es cially considering the strained balance she and the absence of growth. Fiscal policy v also misaligned: There was stimulus, but was always too little, too late. The righteo ness of wrongheaded policymakers is remi cent of the U.S. in 1928-32, when insistence balanced budgets and tight monetary cont precipitated the Great Depression. Japan ne prosperity policies, not more deflation.

Japan must also deal with its perenn trade problem. Until Japan offers an hon program of market opening instead of empty promises of the past decade, finan markets will view Japan's trade surplus yen shortage as reasons to push up the y even more.

So far, the problem has mostly been one Japan and for yen debtors. The trouble m not stay there, though: Increasing fragil in Japan could cause worldwide instabil Until Tokyo grasps its own interests, the r of us can do little to help Japan along.

To get off the treadmill, Japan must ab don the insularity of its trade and finance come to grips with the incompetence of policymakers. On the present course, the ec omy will hollow out at a rapid pace, and a ciety reared on consensus will become divid

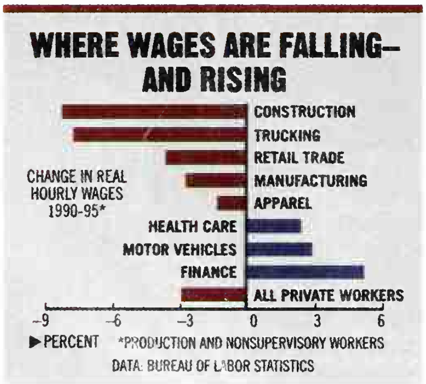
HELP WANTED FOR LESS PAY

Hard hats and truckers are scarce

In congressional testimony last summer, Federal Reserve Chairman Alan Greenspan cited shortages of construction workers and truck drivers as a sign of impending wage inflation. Since then, the lack has gotten worse. Trucking companies are complaining, while builders in go-go cities such as Houston and Phoenix report a lack of carpenters and electricians. "We have people crying for workers," says Daniel J. Bennet of the Associated Builders & Contractors.

With talk of shortages, pay for hard hats and truckers should be going up, right? Wrong. In fact, real wages (adjusted for inflation) are falling faster than in almost any other industry. In the past year, average pay in construction has dropped 0.6%, while the decline in truckers' pay was twice that. Meanwhile, wages for all private-sector production workers fell by by 0.2%. Over the past five years, the decline in relative wages is even greater (chart).

WHERE WAGES ARE FALLING—AND RISING



*PRODUCTION AND NONSUPERVISORY WORKERS

DATA: BUREAU OF LABOR STATISTICS

Falling wages may help create shortages—by making construction and trucking less appealing. These jobs have always involved hazards and irregular hours. Now they've lost their wage advantage as well. "Young people ask: 'Why am I going to do all that for little or no extra pay or benefits?'" says John Heffner, executive director of training for Associated General Contractors, an industry group. With trucking "wages dropping like a stone, it has become a last-ditch occupation," says Michael Belzer of Cornell University.

What's driving wages down in these jobs? Intense competition, deregulation, and the decline of collective bargaining—things that are not about to change. Despite the cries of inflation pessimists, these labor shortages are evidence of the strength of the disinflationary forces in the U.S. economy.

ACADEMIA GOES ONLINE

It aims to sell scholarly papers

More than two decades ago, economists developed portfolio theory and spawned a revolution. Now, three finance economists, Eugene F. Fama of the University of Chicago, Michael C. Jensen of Harvard business school, and M. Wayne Marr of Clemson University, have formed a company to transform how academic information is distributed.

Social Science Electronic Publishing Inc. publishes an economics "journal" on the Internet, which it hopes will widen the market for academic work—and make money in the process.

SSEP maintains a list of subscribers who receive abstracts of academic papers by E-mail. Then, the subscribers—investment bankers, treasurers, and consultants—can use E-mail to request a copy of the paper. Says Mark N. Broadie, professor at Columbia business school, who got hundreds of inquiries after his papers were disseminated by SSEP: "It's amazing the amount of interest out there that was untapped. And not just in the U.S. People in Australia, Europe, and elsewhere can now get access to information this way."

SSEP is about to launch a product on accounting and maybe later all the social sciences. As more and more papers are distributed over the Internet, some journals may abandon print, as the papers get wider distribution. And that may be good news. "We are changing the academic landscape. People used to publish to get tenure. Now there will be less junk because they will be writing for public consumption. People have to focus on good topics," says Marr.

THE TEMP BOOM IS HERE TO STAY

Low joblessness doesn't faze it

Even with 5.5% unemployment and a recovering labor market, many companies depend heavily on temporary help. Temp outfits have added more than 1 million workers over the p three years, and their employment rising at 17% annually. They are me ing the strong demand for temps telecommunications, computers, hea manufacturing, and banking.

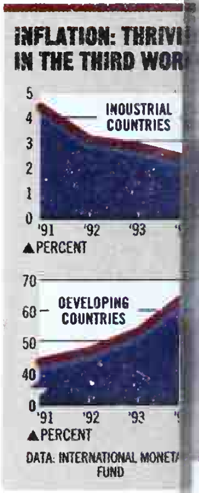
The strength and longevity of t temporary-help boom has surprised ev Mitchell S. Fromstein, CEO at Manpo er Inc., one of the world's largest te agencies. Fromstein says busines such as his may have become an in gral part of the hiring process. "Com nies don't want to make a hiring m take," says Fromstein, so instead advertising permanent positions, they choosing their full-time workers out the temporary pool.

INFLATION'S UNEVEN SPREAD

Developing lands take bigger hit

Inflation may be dormant in the U. but it still poses a threat in other tions. Global consumer prices rose a blistering 23.3% pace last year, acco ing to the International Monetary Fu But this masks a striking divergen Disinflation is taking deep root in the dustrial nations, but prices are ris sharply in much of the developing wo (chart). For instance, from 1991 throu 1994, consumer price inflation fell from 4.2% a year to 2.6% in the U.S., and from 5.6% to 0.2% in Canada. Meanwhile, among those regions reporting complete 1994 data, inflation rates in both Latin America and Africa doubled during the past four years.

INFLATION: THRIVI IN THE THIRD WOR



DATA: INTERNATIONAL MONETA FUND

This dichotomy is a testimony to the power of monetary policy. Money growth is low the industrial world, as central ba use constraint to dampen inflation. central banks in fast-growing develop countries are more worried about fi ing fast growth or propping up ca poor state-run companies. Governme in some stagnant Third World nati are running the printing presses to off bureaucrats.

An Idea Without A Customer Goes Nowhere Fast.

At Advanced Micro Devices, we champion ideas that make a difference to our customers. Ideas we transform into microchips that make personal computer and communications systems perform better. As a result, AMD is Number 1 or 2 in the world in every market where we compete–microprocessors, communications circuits, flash memories and programmable logic. Which is not to say we've crossed the finish line. The truth is, we win when our customers win. That's why our 12,000 people worldwide are racing into the future with a singular vision:

If it's a good idea. If it makes a difference. Run with it.

AMD

Run with it.

The New Thinking in Automobiles

JAMES C. COOPER & KATHLEEN MADIGAN

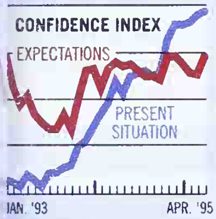
VHY INFLATION ISN'T SPROUTING N MR. GREENSPAN'S NEIGHBORHOOD

U.S. ECONOMY Economic growth keeps rolling along despite the Federal serve's efforts to restrain it. Labor markets are at ir tightest in five years. And consumer confidence is ıping. Right about now, signs of rising prices should popping up like dandelions on a spring lawn.

nstead, the inflationary landscape remains a well-ded vista. Hardly a weed is in sight, and price pres-es should stay tame for the rest of the year. What ports this sanguine outlook? Certainly, the Fed's en hikes in short-term interest rates play a big t. Call them monetary preemergent—a strike against ation before it could take root.

More important, labor costs are growing at the slowest pace on record, while rising orders for durable goods show that businesses are still investing in more productive machinery. This commitment to productivity combined with small gains in compensation will hold down the growth in unit labor costs—the major determinant of inflation.

CONSUMERS SING A BRIGHTER TUNE



INDEX: 1985=100

DATA: CONFERENCE BOARD

'ed Chairman Alan Greenspan has emphasized the ed to remain vigilant against even the slightest hint price pressures this year. To that end, one of the cen-l bank's greatest concerns will be any pickup in nsumer demand. Consumers are clearly feeling more imistic (chart). But reports on April retail sales n't show an overwhelming urge to splurge.

This shopping ennui is important to Fed policy. As g as demand grows only modestly, price pressures nnot build up any momentum.

UE, INFLATION FEARS remain. One reason is her commodity prices. Prices for raw materials in-ased rapidly in 1994. But since January, they have tened out. Higher input costs have not been passed ough into the prices of finished goods.

One area worth watching is oil—still an inflation e spot in the U.S. Crude-oil prices neared $21 per rel in mid-April on news of a pipeline closing in North Sea and low gasoline inventories in the U.S. t the repairs to the pipeline were completed sooner n expected, and American refineries have boosted duction. So oil prices are back to near $20, pulling soline and heating-oil prices down with them.

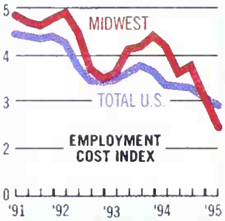
Higher materials costs alone will not boost the inflation rate by very much, though. Nor will the weaker dollar. The most important element in the inflation outlook is the cost of labor. That's because compensation is a far greater expense for businesses than is the cost of raw materials. And unless an economy is growing fast enough to bid up wages, price hikes for input materials generally do not stick.

THAT SAID, the recent data on employment costs underscore the view that any rise in inflation this year will be modest. The cost of wages and benefits for all private-sector workers rose 0.6% in the first quarter. For the year ended last quarter, compensation was up 2.9%, the lowest growth rate in 16 years of data.

Benefits have led the slowdown. These costs edged up just 0.1% for the quarter and have risen only 2.9% for the year. Wages actually grew a bit faster, rising 0.8% in the first quarter. The Labor Dept. said that slower growth in health-care costs, state unemployment insurance, workmen's compensation, and employer contributions to retirement funds have contributed to the moderate increase in benefits.

Labor bills in the Midwest region are growing at the slowest rate in the nation. Wages and benefits there rose 2.4% over the past year—the lowest pace ever for the Midwest. The region's paltry increase pulled down the growth in labor costs for the entire U.S. (chart). The growth rates for the three other regions are still at least a bit above their lows, hit back in 1986.

WHERE LABOR COSTS ARE HARDLY GROWING



▲PERCENT CHANGE FROM A YEAR AGO

DATA: LABOR DEPT., BUSINESS WEEK

The Midwest phenomenon says more about the erosion of unions than about the tightness of labor markets. In fact, jobless rates in the Midwest states averaged less than 5% last quarter—well below the national rate. But while unions still have a big presence in the manufacturing belt, their clout is rusting.

That's evident in the first-quarter report on collective bargaining settlements. The Labor Dept. said that union contracts settled in the first quarter call for annual pay raises of only 1.9% over the life of the contracts. These agreements replace settlements that won more generous pay raises of 3%.

Puny pay gains among union members make it hard to see how any upward push on wages will gel among workers generally. That's especially true if the economy

ERIC HOFFMANN/BW

slows. The Fed is betting that the economy will grow below its potential, creating slack in the labor markets. That will chill any wage pressures.

CRUCIAL TO THE FED'S BET will be consumers. In April, they felt pretty chipper. The Conference Board's index of consumer confidence jumped to 105.5 from 100.2 in March. It was the highest reading in five years. Households are upbeat about the current state of the economy. The present situation index rose from 115.3 to 117 in April, also a five-year high.

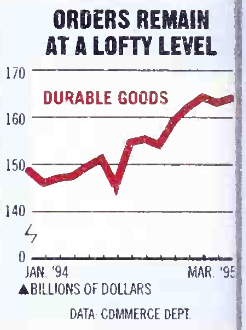
Consumers are particularly optimistic about job prospects. The Board said that 23.4% of respondents think jobs are plentiful. That's better than the 21.1% at the end of 1994, and it's just below the 23.7% who feel jobs are hard to get. What's more, changes in the present situation index are a good indicator of changes in employment. So nonfarm payrolls should show another gain when the April data are released on May 5.

Consumers remain uncertain about the future, though. The expectations index jumped in April, to 97.7 from 90.1 in March, but the index is no higher than it was a year ago or at the start of the expansion.

Higher spirits are not lifting store receipts. Retail sales for the first three weeks of April were weaker than in March, according to two trackers of weekly sales data, the Mitsubishi Bank-Wertheim Schroder index and the *Johnson Redbook Report*. Households have less extra cash because higher short-term rates lifting the cost of existing adjustable-rate debt such credit-card balances and mortgages.

Despite slack retail demand, the factory sector mains vibrant (chart). New orders for durable go rose 0.6% in March, after a 0.7% drop in February.

The biggest gains were in electrical equipment a industrial machinery. These are the same goods d tined for commercial use and exports. Orders for c sumer durables have been falling recently.



DATA: COMMERCE DEPT.

What this means is that companies remain committed to expanding capacity and improving efficiency, even as the cyclical gains in productivity fall away. Smaller increases in factory output have eased capacity constraints in industry. High operating rates are usually a sign of production bottlenecks and shortages of supplies that lead to price hikes.

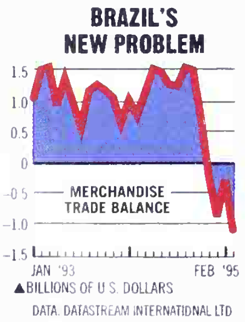
So far, though, the economy has eluded the wee creep of rising prices. The slow pace of wages h clearly helped to plow under inflation. And for the r of 1995, Greenspan and his cohorts stand ready w their spades and pesticides, intent on keeping inflat out of the well-manicured economic outlook.

BRAZIL

THE RUTS IN THE ROAD TO REFORM

Just when newly inaugurated President Fernando Enrique Cardoso appeared to have Brazilian inflation on the ropes, his plan to kill it so strengthened consumer demand and the country's currency that it caused another problem: a gaping trade deficit.

The plan indexes prices and wages to a new U.S. dollar-anchored currency—the real—whose value is backed by the central bank's foreign exchange reserves. Brazil cut inflation from 45% per month in 1994 to 0.8% in January.



DATA: DATASTREAM INTERNATIONAL LTD

However, increased consumer spending has pushed the trade balance into deficit (chart). And remedies such as a devaluation of the real and a Mar. 29 hike in import tariffs to 70% on cars and 108 other durable goods are pushing prices higher. Inflation has quickened to 2.5% per month in April, just as the minimum wage is set to jump 43% in May. Analysts have lifted their inflation forecasts to 30% for all of 1995, while cutting this year's growth projections to about 4%, after 5.7% in 1994.

Some companies are going back to the old way of linking prices to the cost of living, which could kill the real plan. Moreover, because the Mexican crisis has caused investors to shun countries with big trade and government deficits, Brazil has had to use a chunk of its reserves to defend the real.

To cut back demand and save the real, the central bank tightened monetary policy on Apr. 24, and the government is making plans to put forth other anticonsumption measures. President Cardoso himself flew to New Yor on Apr. 17 to reassure Wall Stree that he can reform the Constitution, overhaul the tax system, cut government spending, and privatize state-run companies.

For now, analysts are optimistic, but they warn that reform will come slowly. Cardoso does not yet have a legislative liaison to deal with the new Congress. Furthermore, more than 60% of the public debt is owed by local governments and state-run companies. With the real plan at risk, however, the need for structural reform has taken on a heightened sense of urgency.

HEALTH CARE

SUDDEN ILLNESS

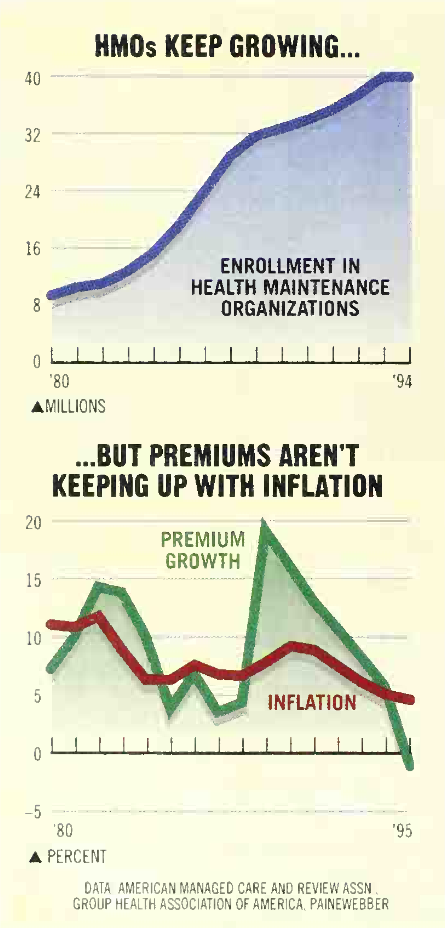
Managed care faces a harsh new reality

William W. McGuire isn't pleased. Just two weeks ago, the chief executive officer of United HealthCare Corp. was basking in praise from investors impressed with the Minnetonka (Minn.) health-maintenance organization's growing membership rolls, strong earnings, and $1.8 billion in cash. Then, out of the blue came a couple of gloomy forecasts from his HMO rivals. In one day, United's stock price plunged 9%, to 39¼. "There's always an event that causes an overreaction in the market," McGuire laments. "Someone always yells, 'The sky is falling! The sky is falling!' "

Well, perhaps it is. The days of unbridled growth in managed health care are coming to an end. Fueled by steady double-digit increases in medical costs, and then by the Clinton Administration's push for health reform, HMOs and their managed-care brethren enjoyed nearly a decade of heady expansion and robust profits. But with costs stabilizing and markets beginning to mature, competition suddenly has reached a boiling point. Profit margins likely will drop industrywide. Says Alan R. Hoops, CEO of PacifiCare Health Systems Inc., an HMO in Cypress, Calif.: "The high double-digit growth simply can't continue."

COLLAPSE. That became crystal clear on Apr. 24, when U.S. Healthcare Inc. reported disappointing first-quarter gains. The cause: price cuts to woo more members and higher-than-expected costs. The outfit's net profits rose just 5.8%, to $94.6 million, even while its sales jumped 16.5%, to $833.8 million. "The competition has stepped up a notch," says David F. Simon, senior vice-president of U.S. Healthcare. "Growth is important and can't be neglected just to satisfy profitability."

U.S. Healthcare, an industry bellwether, saw its stock collapse by nearly a third in the space of a week. Shares of such rivals as Humana, Oxford Health Plans, PacifiCare, and FHP International suffered similar pummelings. Helping to drag down HMO shares was word from HMO United Wisconsin Services Inc. on Apr. 19 of an expected 50% to 55% decline in first-quarter earnings. "I don't think this is unique to a couple of companies," says Kimberly Purvis, a health-care analyst with Donaldson, Lufkin & Jenrette Securities Corp. "It's an industry trend."



DATA: AMERICAN MANAGED CARE AND REVIEW ASSN., GROUP HEALTH ASSOCIATION OF AMERICA, PAINEWEBBER

HMOs are now battling each other rather tha stodgy fee-for-service plans

HMOs are being forced to confront sobering reality that their business getting crowded. Rather than compet against stodgy fee-for-service pla HMOs today are slugging it out agai each other and other forms of manag care in increasingly saturated marke While enrollment in managed-care pl is rising, so are the costs of secur and keeping new customers. The shot: "Every plan won't be a long-te survivor," says Alan Peres, manager

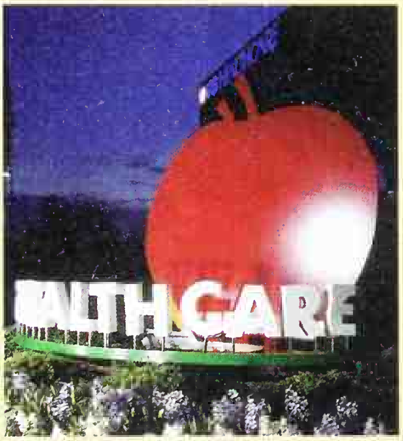
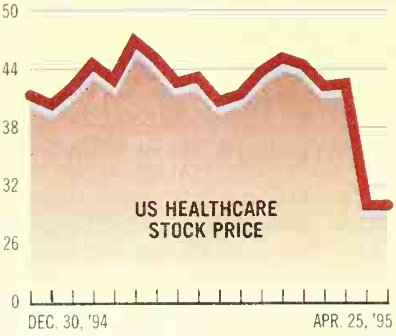
al Corp. engineered a $1.1 billion
ger with TakeCare Inc.

orporate America's infatuation with
aged care is hardly ebbing. Accord-
to the Group Health Assn., nearly
million people are enrolled in HMOs in the U.S., with 6 million more expected by yearend. Although 66% of employees at companies of 10 or more workers are enrolled in some form of managed care, many geographical markets remain untapped, especially in the Northeast and Southeast. "There's still plenty of capacity," says David Wilson, managing director of Apex Management Group, a managed-care consultant and actuarial firm.

But a confluence of unexpected forces is pressuring profit margins. For one, many HMOs appear to have misjudged their costs this year. DLJ analyst Purvis says most HMO managers set 1995 premiums assuming a modest medical inflation rate of 0% to 2%. But in the first quarter alone, doctor charges in the U.S. are up 2.8%, compared with 3.9% for all of 1994. Similarly, overall hospital costs for HMOs are up 1.5% for the first quarter, compared with 4% throughout 1994. In addition, analysts speculate that as managed care plans expand, they are being forced to take on less healthy patients. Some plans also may be raising compensation to attract the physicians they need to accommodate new enrollees.



WALL STREET'S HEALTH-CARE WORRIES



DATA: BLOOMBERG FINANCIAL MARKETS

Stiff competition in saturated markets, moreover, is giving corporate purchasers clout to bargain prices down. Last year in California, the largest managed-care market, employers' average HMO premiums rose just 2%. One big buyer, the California Public Employees' Retirement System, saved $80 million this year by demanding a 5.2% premium rollback from Kaiser Foundation Health & Hospitals Group and other managed-care providers. "For years, the HMO business was really shooting fish in a barrel," says Uwe Reinhardt, a Princeton University economist. "For the first time, [HMOs] are actually facing a tough buyers' market."

In search of growth, managed-care companies are scrambling to win customers in the enormous, virtually untapped Medicare and Medicaid markets. Of the 70 million people covered under Medicaid and Medicare, fewer than 10 million are enrolled in managed care, estimates John S. Penshorn, a senior research analyst with Piper Jaffray Inc.

Here, the industry may get a boost from Washington. Republicans, scrambling to balance the budget, hope to get major savings from the $267 billion spent on Medicare and Medicaid. A draft budget by Senate Budget Committee Chairman Pete V. Domenici (R-N.M.) proposes encouraging Medicare recipients to sign up for managed-care programs. The GOP ultimately wants to replace Medicare with a voucher system that would allow seniors to buy whatever form of coverage they like.

ELDER COSTS. The risk is that HMOs may find the cost of elder care higher than anticipated. "If the premiums don't cover the costs of providing care for the elderly, no insurer is going to want to play ball," says Alan Hillman, director of the Center for Health Policy at the University of Pennsylvania. Indeed, Physician Corp. of America reported disappointing earnings in late March, citing higher than expected costs associated with its Medicare business.

Some investors continue to be bullish on the HMO industry. Steve Enos, a portfolio manager for Wells Fargo & Co., figures HMO enrollment will grow to 50% of the U.S. population over the next decade, with well-managed HMOs enjoying growth of 20% for years. "I see this as a great opportunity to buy HMO stocks," Enos says. But the skies certainly do look ominous. For every HMO growth stock in the years ahead, there likely will be plenty of casualties.

By Ron Stodghill II in Chicago and Eric Schine in Los Angeles, with Joseph Weber in Philadelphia, and bureau reports

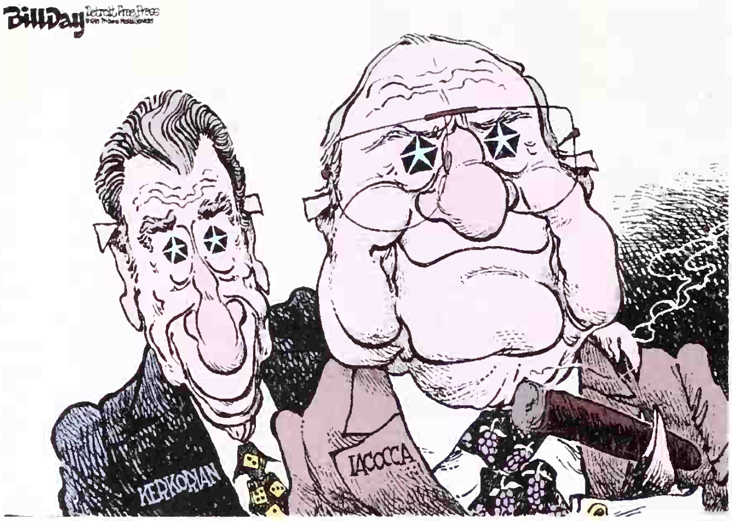
COMMENTARY

By David Woodruff

YOU GOTTA KNOW WHEN TO FOLD 'EM, KIRK

Ever since billionaire Kirk Kerkorian snapped up a big pile of Chrysler Corp. stock in 1990, Wall Streeters have wondered: How will the big-time gambler cash out? That question looms larger than ever, now that his audacious $20.5 billion buyout gambit seems more like a pipe dream every day.

Chrysler's board on Apr. 24 roundly rebuffed the bid. The company's directors "do not have any interest in gambling with Chrysler's future," Chairman Robert J. Eaton wrote to Kerkorian and partner Lee A. Iacocca. In his angry reply the next day, Kerkorian complained that "key decisions regarding the future of Chrysler are being made by a group of people who own less than 1% of the stock," and demanded a shareholder vote on the $55-per-share offer.



Chrysler has left the door open for a stock buyback. Finding a white knight to take Kerkorian's stake would be trickier

But the Kerkorian forces admit they still have no financing lined up. Without that, a vote—let alone a hostile bid—seems futile. Chrysler's shares, which had jumped to nearly $49 on the news of the bid, dropped to under $42 on Apr. 26 because of fears that the offer is under water.

GREENMAIL RAGE. So now what? Think compromise. A good one already may have come up in discussions between the two sides. A source close to the situation contends that before Kerkorian and Iacocca launched their bid on Apr. 12, Chrysler offered to help find buyers for the duo's shares. Alex Yemenidjian, an executive with Kerkorian's Tracinda Corp. investment company, denies that such an offer by Chrysler was ever made.

Whatever the truth may be, the two sides now may be ready—and would be well-advised—to reconsider the idea. Chrysler's brass is disgusted with the meddling by Kerkorian and Iacocca, and would love nothing better than to be rid of them for good. And unlike most folks, Kerkorian can't just call up his broker and say, "sell." If he dumped his 36 million shares now, Chrysler's stock would tank badly. Barring an unlikely offer from another bidder, Kerkorian may be stuck. "They will do something together," predicts analyst Maryann Keller of Furman Selz Inc.

Greenmail won't fly, of course. Other big shareholders, such as Ted Shasta, vice-president of Loomis, Sayles & Co., which controls 1% of the company's stock, say they would be livid if Kerkorian got a higher-than-market rate for his shares. In addition, a 1987 law slapped an onerous 50% federal excise tax on greenmail earnings. But a deal that paid Kerkorian the market rate might fly with other shareholders, says Lehman Brothers Inc. analyst Joseph Phillippi.

One possible scenario: Chrysler could agree to buy back a chunk of Kerkorian's shares as part of an ongoing share-repurchase program. The company's board left the door open to such an arrangement, saying in a statement after its Apr. 24 meeting that Chrysler might use some extra cash to supplement an ongoing $1 billion stock buyback. Analysts say Chrysler's roughly $2 billion in free cash flow this year would allow it to buy far more stock and maintain the $7.5 billion cash cushion Eaton says it needs.

Such a buyback program would keep Chrysler's share price from skidding much lower, say analysts. Kerkorian's remaining shares then could be sold to the public in a Chrysler-sponsored secondary stock offering, complete with a road show by top executives and help from the company's investment bankers.

Another option: Chrysler could help locate a friendly buyer for Kerkorian's 10% stake. The company would need to find an investor with a longer view than Kerkorian or with strategic reasons to hook up with Chrysler. That might be a tough job, though. For an investment of about $1.5 billion, a white knight such as a foreign carmaker would gain little say in Chrysler's management.

Kerkorian clearly thinks the company is worth more than its current going rate. Still, he paid only an average of $19.37 per share for his stock. So at $42 per share, he would pocket more than $800 million in profit, before taxes. Of course, Kerkorian still would prefer to be trumped by a higher offer. But with his bid showing signs of faltering, he might be wise to settle for a Chrysler-aided, face-saving buyout.

Woodruff covers the auto industry.

LORDS OF MONEY: *Little common interest in solving one another's woes*

AP/WIDE WORLD

OBAL ECONOMICS

ROM ALL-FOR-ONE D FREE-FOR-ALL

' as it might, the G-7 can't pull together to fix the buck

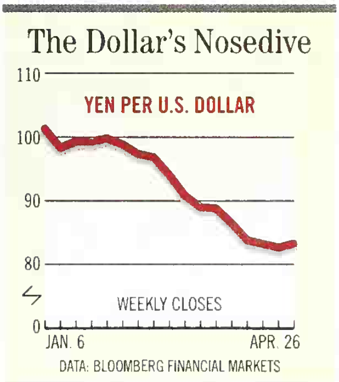
or G-7 aficionados, it seemed like old times: Finance ministers and central bankers from the Group of en industrial nations huddling in a is atmosphere. Japanese and Ger- officials sniping at the Americans, ısing the Treasury of neglecting the ar. And a communiqué—the first in e than a year—warning traders that G-7 would cooperate closely to "re- se" the dollar's decline and return urrency values "justified by underly- economic conditions."

'et try as they might, the G-7 lead- couldn't recreate at their Apr. 25 ting the glory days of the world's t exclusive economic club. In the)s, the "lords of money" shared ng incentives, rich opportunities, and market clout to drive the dollar 'n. But when Treasury Secretary ert E. Rubin convened his counter- s at Washington's Blair House, del- tes representing the world's major ıomies had little common interest in ing one another's currency problems.

DERS' TEST. The result: None of the gest players—the U.S., Japan, and many—pledged to change budget or rest-rate policies to support the dol- Currency traders are likely to test finance ministers' mettle with a new ult on the greenback, which has al- ly fallen 18% against the yen and against the mark this year. In re- nse, the G-7 is more likely to inter- e by buying dollars. But that won't duce the "orderly reversal" the ıp seeks in exchange rates.

ubin trumpeted the communiqué as ignificant" declaration that "the major currencies are out of sync with fundamentals." And Japanese officials, desperate to prove that they're trying to stem the super yen's ravages on the domestic economy, inflated the communiqué even further: Finance Minister Masayoshi Takemura described it as "of dramatic significance . . . unprecedented." He went so far as to compare the pact to the Plaza Accord, which coordinated the dollar's slide a decade ago. "Our determination to reverse [the yen's rise] is impressive."

Trouble is, few analysts believe that impressive action is forthcoming—or necessary. In the mid-1980s, the strong dollar caused the U.S. trade deficit to soar, triggering congressional calls for protectionism that threatened the world trading system. But despite global support for a cheaper dollar, no one country could rein in the buck without damaging its economy. So the G-7 synchronized budget and monetary policies.



The Dollar's Nosedive

DATA: BLOOMBERG FINANCIAL MARKETS

Today, the U.S., Japan, and Germany face homegrown problems that require individual, not collective, solutions. "The steps that are in those countries' individual interests are also the right things to do globally," says Stanford University economist Paul R. Krugman.

Japan could benefit from lower interest rates, more government spending, and increased imports (page 52). Germany, recovering slowly from recession, needs lower rates and labor-market reform to reduce unemployment. The U.S., despite progress against the federal budget deficit, still needs to cut more red ink to ease a savings shortfall that once again is driving up the trade deficit. "For all three countries, the solutions are domestic—there's not much their G-7 partners can do to help," says John P. Lipsky, chief economist at Salomon Brothers Inc.

MUCH TO LOSE. Each country faces political and bureaucratic barriers to reform. So leaders turn to finger-pointing. Bonn and Tokyo called on Washington to raise interest rates. But with the U.S. economy already slowing, Federal Reserve Chairman Alan Greenspan sees danger in doing so. He has the backing of the bond market, which figures that a weak dollar won't boost inflation. President Clinton rebuffed Germany and Japan, saying on Apr. 24 that "we aren't going to do ourselves any good to spark a recession here at home by raising interest rates."

The tensions papered over in Washington won't ease soon. Japan and the U.S. face months of economic uncertainty. By midsummer, says Kemper Financial Services Inc. economist David D. Hale, both countries may decide they need to adjust interest rates further—the Fed raising them if the economy surges again, the Bank of Japan cutting. And the dollar will be under pressure until investors see whether the GOP-controlled Congress will pay for promised tax cuts with spending restraint. G-7 or no G-7, "orderly" currency rates will have to wait until such fundamental issues sort themselves out.

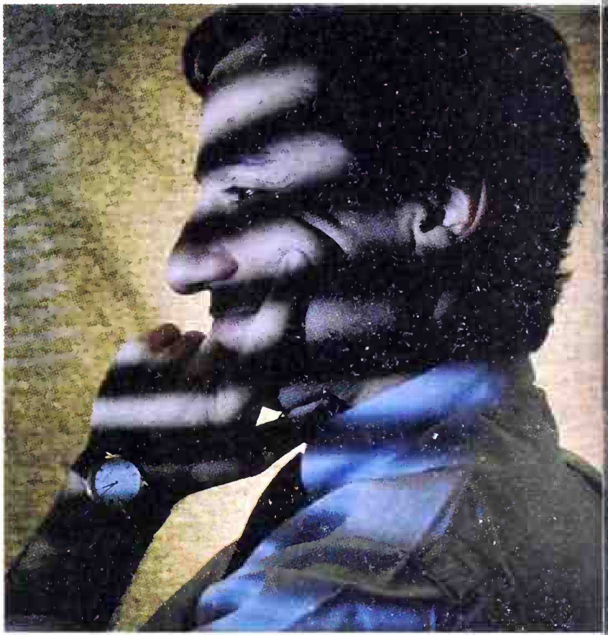
STRATEGIES

CAN JIM MANZI GET OUT OF THIS LOTUS POSITION?

Profits are falling, shareholders are itchy



CEO MANZI

A bungled price cut hurt his push into communications programs. Investors could press for a sale of all or part of the company

It was the ace in the hole. After ceding leadership of the personal-computer software industry to Microsoft Corp., then giving up the top spot in the spreadsheet market its 1-2-3 once dominated, Lotus Development Corp. at least had Notes. A technical marvel years ahead of any serious competition, the "groupware" communications software promised to spark a revival for Lotus and its chairman, Jim P. Manzi.

In mid-April, though, came compelling evidence that Manzi's software ship once again has lost direction: Lotus announced a staggering first-quarter loss of $18 million on an 18% revenue decline. Most troubling was a steep revenue falloff for Notes, which had doubled its take in the previous year.

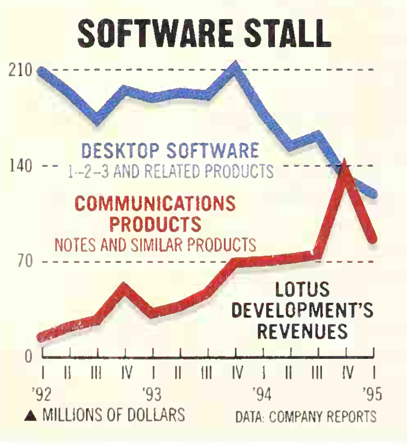
The results confounded Lotus management. "We were well below plan," says Chief Financial Officer Edwin J. Gillis, acknowledging that each of the company's four divisions posted operating losses. A surprised Wall Street took Manzi to task for a misfired strategy. "Lotus top management is not executing on the opportunity as well as they should be," says Paul Johnson, an analyst at Robertson Stephens & Co. Manzi, traveling in Japan, couldn't be reached for comment. Says his spokesman: "The only appropriate response to our detractors is to meet our financial objectives. That's what we're focused on and what we're intent on achieving."

POOR EXECUTION. The first-quarter debacle heightens the likelihood, rumored for months, that Lotus investors soon may press for a sale at all or part of the company. At 34, Lotus' stock is trading above its recent lows—a function, in part, of takeover speculation. But it remains less than half the 80 it reached a year ago and, at 1.5 times trailing revenues, is priced well below the 4.5 industry multiple. Analysts say Lotus might fetch $50 a share, or $2.4 billion, in a buyout.

Manzi may not be completely averse to the idea of a sale. Software industry sources say that earlier this year, he discussed a possible deal with Oracle Corp. Chairman Lawrence J. Ellison. But Manzi wanted $85 a share—a steep price that Ellison, interested only in the Notes business, was unwilling to pay, they say. Analysts say other potential buyers include IBM and AT&T, which have several development projects tied to Notes. Lotus, Oracle, and the other companies declined to comment on any possible deal.

The question: Just how good a business is Notes? Manzi long has argued that Lotus could thrive by creating a powerful franchise in communications software—funded partly by the steady cash flow being generated by older Lotus applications such as spreadsheets. He promised to build Notes' installed base to 20 million customers by 1997 from 1.4 million today, exploiting Microsoft's weakness in communications.

The strategy sounds good, but the execution has been lacking. On Jan. 23, at a meeting with big customers, Lotus announced that within six weeks, it would ship a new version of Notes—priced at 50% less than the current product. Anticipating the potential cost savings, customers simply stopped ordering, Lotus says. The result: Notes revenues tumbled 40% from the previous quar



▲ MILLIONS OF DOLLARS

DATA: COMPANY REPORTS

Was it a fluke? Not everyone thi so. "It raises the question again of j how big the market really is for Not says Goldman, Sachs & Co. anal Richard G. Sherlund. Others w amazed that Lotus could cut prices a lose sales at the same time—even wh demand from many big customers pears to remain strong.

"QUIET PERIOD." There are reasons to concerned that Notes' growth may rebound the way Lotus expects dur the second quarter. "We're likely to a quiet period" in Notes sales while c tomers wait for a competitive prod from Microsoft, called Exchange, s David Marshak, a consultant with S bold Group. Other experts say so customers also may delay buying No until Lotus releases a new version la this year.

Meanwhile, Lotus' desktop appli tions, such as 1-2-3 and the word-p cessing program AmiPro, are in troul First-quarter revenues for that bu ness fell 35%. That's less than the 5 many on Wall Street expected but st tling for a company that once control 70% of the spreadsheet market.

Lotus Senior Vice-President Robert Weiler says WordPro, an enhanced a repackaged version of AmiPro introdu on Apr. 24, will help stop the decline sales of desktop software. But analy

investors doubt the new program have much of an impact; they think us should sell the applications busi; before it loses too much value, using proceeds to support Notes.

otus executives say Manzi is adat about pursuing his two-tiered tegy—as soon as he stops the flow ed ink. In announcing the first-quarresults, he ordered each of the company's four units to become profitable by yearend, dictating $50 million in spending cuts that will come in part from thinning his executive ranks. Indeed, Manzi indicated in an internal memo that he would fire as many as 15 top executives.

Even with such cuts, Wall Street thinks Lotus will be lucky to make a profit this year, as the applications business continues to decline and spending remains high on Notes development. Will Notes someday pay off, or was Lotus' first quarter a sign of deeper problems? Goldman's Sherlund says investors wanting to find out had better have "thick skin." Thick skin and, perhaps, deep pockets.

$50 MILLION SHORTFALL? D PROBLEM!

Graziano, Apple's financial whiz, has things under control

CFO GRAZIANO: *"I knew Apple had some real challenges ahead of it"*

or 18 months, Apple Computer Inc. has been on a mission to up earnings and conle skeptics it's still a e to be reckoned with. l on Apr. 20, quarterly its jumped fourfold over year-ago period. Still, was far short of excations: $73 million on s of $2.7 billion, vs. eet predictions of $114 ion. And the stock? ly, given the bad news, imped three points in days, to just over $39. Vhat gives? Credit the anation—or the explainnamely Joseph A. Graz, Apple's chief financial er. He says much of the rter's shortfall can be lained by losses in fori currency hedging—nly resulting from the ar's big drop in late ch. The result: interest other expenses constid a $50 million loss, vs. 7 million loss in the e quarter a year ago.

FE PLACE." Graziano s the decline a "paper" rtfall on forward and on currency contracts run beyond the quar- If the dollar stays level ises, he says, the loss d be partially reversed as the conts expire. "We're in a safe place ," he says.

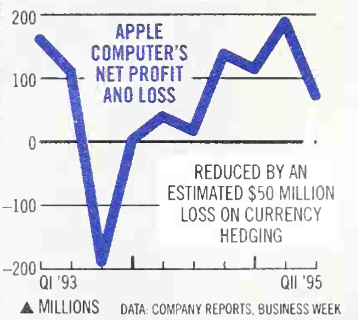
Vall Street seems to agree. Analysts that Compaq Computer Corp.'s ging program suffered a $23 million in the quarter, too. Michael Murphy, or of *California Technology Stock er*, figures if the hedges unwind in its favor, Apple could gain back some $13 million this quarter and another $17 million in the following two quarters. Apple's shipments also were up 20%—a bellwether of better health. Analysts generally laud Graziano for conservative fiscal management.

He does have moments of flashiness, though. In 1989, he earned the moniker "The Million Dollar Man" after Apple ponied up a $1.5 million bonus to lure him away from Sun Microsystems Inc., where he had been CFO for two years. He had already done a stint as Apple's CFO from 1981 through 1985, when he quit to spend time with his brother Anthony, who was dying of cancer.

Graziano returned at a crucial time. Apple's fat 51% gross profit margin was about to get hit by commodity pricing of PCs. And Microsoft Corp. would soon unleash the first versions of Windows, narrowing Apple's lead in the ease of use of its computers. Says Graziano: "I knew Apple had some real challenges ahead of it—well, maybe not to the magnitude that occurred."

Graziano has been key in steering Apple forward. Daniel Eilers, an Apple senior vice-president, says he was "instrumental" to the negotiations with IBM that led to the birth of the speedy new PowerPC chip. Plus, he has slashed costs: Operating expenses are down to 19.9% of sales, vs. levels of about 36% when he returned. Says Robert Saltmarsh, a former Apple vice-president who now is CFO of Radius Inc., a maker of Macintosh gear: "He has had a lot to do with making Apple a more competitive company."

Pinching pennies comes naturally to Graziano, 51. He grew up in Boston, the son of working-class parents of modest means. He did everything from delivering potatoes to hauling meat to pay his way through Massachusetts' Merrimack College, where he graduated in 1965 with an accounting degree.



Today, his lifestyle is less austere. He races vintage sports cars, and has a collection that includes two Lotuses, a Lola, five Ferraris, a Mercedes, a BMW, a Suburban, and a pickup. "He certainly brightens up the parking lot," says Eilers. And if his hedging strategy works out, it could yet brighten Apple's profits a bit. Otherwise, there will be more explaining to do.

THE SPIRIT OF ST. LOUIS, BROUGHT TO YOU BY FORD

The Smithsonian's fund-raising methods are raising eyebrows

These are anxious days for those dependent on government largesse, even a national treasure like the Smithsonian Institution. With federal budget cuts as inevitable as the muggy Washington summer, the venerable group of museums is quietly holding out a tin cup to Corporate America.

The cup isn't coming back empty: Companies as diverse as Orkin, the bug-control outfit, Marvel Entertainment, publisher of Spiderman comic books, and Ford are anteing up big bucks to underwrite everything from an insect zoo to a birthday party for the Smithsonian. And more such arrangements are in the works.

CASHING IN. This isn't just old-fashioned corporate philanthropy, either. The Smithsonian has added a new twist to its sponsorships: The possibility that participating companies can turn a profit on their good will. Times Mirror, for example, made a $750,000 direct investment in a new multimedia exhibit called Ocean Planet. As a tie-in, the premiere issue of its *Pop Sci for Kids* focuses on the exhibit. It also hopes to cash in by selling an exhibition catalog ($39.95), souvenir magazine ($5.95), and CD-ROM game cartridge ($39.95). The company gets the profits from producing the items; the Smithsonian gets a markup and a 5% royalty, plus a 50% royalty on T-shirts and other souvenirs.

Times Mirror isn't the only company trying to leverage its Ocean Planet sponsorship. Ford Motor Co. figures the exhibit will attract environmentally conscious people—the sort who like to drive Explorer sport-utility vehicles. To be sure attendees get the point, Ford, which invested $5 million in Ocean Planet, parked a shiny new Explorer at the show's door. "The Smithsonian has to make sure it isn't too commercial," says Ford ad manager Randy C. Stewart.
"But I had to make it commer

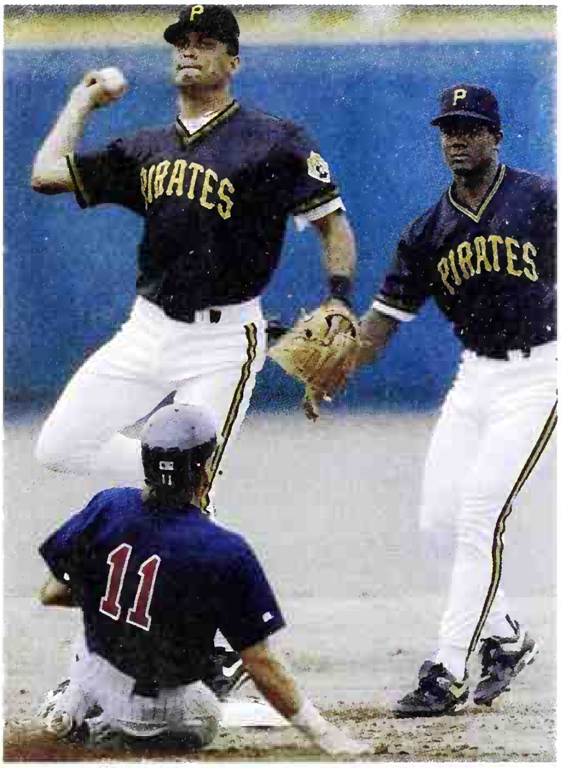
HEWLETT® PACKARD

BASEBALL

THE PIRATES' FATE? TAKE A LOOK AT THE STEEL MILLS

The money-losing franchise could be moving south



Back when clubby hometown boys ran Pittsburgh's local banks and metals industries, many were blind to global trends and got pummeled in world markets. The result was a meltdown of jobs in the '70s and '80s. Now more cosmopolitan types run the likes of Alcoa, Mellon, and Westinghouse. They understand numbers, trends, and world markets. But some of them don't much care if their local ball club, the Pittsburgh Pirates, leaves town.

As the Pirates opened their season on Apr. 26, a full-blown spat over the team's future was splitting the city's corporate chieftains and its government. At issue is whether the money-losing Pirates should be shuttered and shipped south, as inefficient mill operations were a decade ago. The alternatives: for the current owners to pour more money into the 112-year-old franchise or find a buyer who will keep it on the banks of the Allegheny.

LOW VOLTAGE. The current crisis goes back to 1985, when the city and a consortium of Pittsburgh-based companies bought the Pirates for $25 million. It was a magnanimous gesture at a time of great pain in the area. The U.S. Steel unit of USX Corp. was shutting down mammoth mills. Westinghouse Electric was downsizing, Gulf Oil had itself on the block, Alcoa and Mellon Bank were axing headquarters jobs. But even as they laid off fans, these companies, in addition to PPG Industries, PNC Corp., Carnegie Mellon University, and three private investors, kept the team going.

Trouble is, the companies viewed running the Pirates as a duty, not an opportunity. The owners were slow to respond to changes in baseball, from negotiating costly stadium lease deals to free agency. The team's stars—among them Barry Bonds and Bobby Bonilla—have long since jumped to richer markets. The recent strike added to the owners' woes by failing to bring, at least for now, the salary cap, revenue sharing, and other relief small-market owners wanted. The Pirates, division winners three years ago, now are a low-budget, low-voltage assortment of rookies and journeymen.

Having lost some $60 million so far, the team's corporate backers want out. But the city and the companies can't agree on a buyer. Sources close to city government say the problem grows from a flap between Pittsburgh's mayor, Tom Murphy, and the chairman of the Pirates, former PPG Industries Chairman Vincent A. Sarni. Murphy wants the owners to sell the club to John J. Rigas, chairman of cable operator Adelphia Communications Corp. in Coudersport, Pa. Rigas, 70, has offered $85 million, enough to pay back the consortium its initial investment plus debt—though barely half the going rate for expansion franchises elsewhere. A passionate Pirate fan, he promises to keep the club in Pittsburgh. "He's made the best offer," says Mayor Murphy.

Enough with grand civic gestures: The corporate owners are ready to walk

But Sarni and the other owners are soliciting offers from far-flung ent preneurs who want to move the c south. For one, Orlando property veloper Norton Herrick has said would pay $125 million for the team

The Orlando Pirates? "Ten years a says City Councilman Daniel S. Col "it would have been unthinkable for owners to consider moving the Pira from Pittsburgh." Not all owners wo support an out-of-town now: PNC Bank Chairm Thomas H. O'Brien vows bank will do "whatever takes" to keep the team Pittsburgh. He has allies Carnegie Mellon Univers and Mellon Bank.

FALSE MOVES? But USX PPG are open to outside b ders, say sources close to gotiations. This may be ruse to stall a sale in ho that the Pirates will fe more in '96. But there see to be a strong antipathy tween Sarni and Murp says one observer, w thinks the best thing for Pirates would be for Sa to get the top job at W Grace & Co., a post he's ing considered for, and lea the baseball negotiatio Murphy insists his relati with Sarni are "cordial." S ni did not return phone ca

Originally, it seemed owners were flirting w other buyers mainly to pr Rigas to sweeten his of But with the strike's e the value of small-mark teams such as the Pira plummeted. Following t strike, Rigas threatened lower his offer, but he end up leaving it intact. Now, says Murp the owners not only must negotiate sale price but divvy up losses this ye that are expected to hit $20 million.

Eventually, Murphy hopes to buil new stadium in a rejuvenated dow town, leaving the 25-year-old Three R ers, an Astroturfed doughnut surrou ed by parking lots, to the NFL's Steele His models are the successful new par in Baltimore and Cleveland, two sma market teams that are now profitab But unless he can coax one more ci gesture from Pittsburgh's corpora elite, the Pirates, like so many oth Rust Belt natives, may well be she ding their industrial-black outfits for t pastel tones of the Sunbelt.

BUSINESS SCHOOLS

MBA MADNESS IS BACK

B-school applications hit levels unseen since the '80s

It was crunch time. On Apr. 10, a parade of overnight delivery trucks carted 700-odd last-minute applications to the MBA admissions office at the University of Pennsylvania's Wharton School. "We see FedEx here every day during the admissions season," says Samuel Lundquist, director of MBA admissions. "But on our deadline, we got three different FedEx deliveries alone."

It has been a great year for B-schools—and for the overnight delivery folks who serve them. Applications to BUSINESS WEEK's Top 20 business schools jumped a remarkable 19% this year, creating what likely will become the most competitive admissions year since the roaring '80s. The B-schools at Stanford, Massachusetts Institute of Technology, and Columbia all reported record numbers of applications. Wharton also hit an all-time high—6,137 people were vying for 750 seats.

Admissions officers welcome the surge, but say they are slightly mystified about why it's happening. Some speculate that with job placement for grads of major schools booming, potential students are more willing to leave stable jobs in pursuit of the golden passport. Consulting firms are hiring more MBAs than ever before, and mainstream companies have revived on-campus recruiting efforts. Some deans also believe business schools are picking up would-be law students discouraged by career prospects in the legal field. Indeed, law school applications are down 8.2% from 1994, according to the Law School Admissions Council.

STANFORD: *Only 1 out of every 16 applicants is likely to get accepted*

COMFORTING WORDS. More than anything, though, the startling numbers appear to reflect a stratification among B-schools. Overall, the number of people taking the Graduate Management Admission Test (GMAT) dropped 6% this year. Applications BUSINESS WEEK's second-tier schoo moreover, were just 11%—still i pressive, but w below higher-rank rivals. The applic tion rush at the t 20 could indicate flight to perceiv quality. "I se that our applica are saying: 'If I going to go for it, then I'm going to to the best school I can get into,'" s Ethan Hanabury, associate dean for missions at Columbia Business Scho

Whatever the explanation, many t schools are finding themselves forced turn away candidates they would ha admitted in past years. Stanford, whi historically has turned down 10 of eve 11 applicants, expects to reject 15 every 16 this year. To soothe the dis pointed, Stanford Dean A. Micha Spence expects to spend more time th usual on the phone comforting can dates who didn't get in. Try again ne year, he might well advise, after t FedEx boom is over.

By Lori Bongiorno in New Yo

PERU

THE POT IS BOILING IN PERU

Its booming economy has Wall Street excited. Too excited?

If Peru should ever revise its coat of arms, Wall Street has a suggestion: Replace the vicuña in the upper-left-hand corner with a bull. Even after the Peruvian stock market's rebound from a severe drop sparked by turmoil in Mexico and hostilities with Ecuador, fund managers and analysts say the Peruvian stock market is the place to be. "At 15%, it's my fund's largest weighting," says Joyce Cornell, portfolio manager for Scudder, Stevens & Clark Inc.'s Global Emerging Markets Fund, an offshore fund for institutional investors.

Cornell's enthusiasm for Peru stems from its booming economy. In 1994, real gross domestic product grew by about 12%, and inflation fell from 39% to 15%. "You'll see real profit growth of 50%, and the market is trading at 15 times earnings," says Cornell. "That combination is a steal in any country." The reelection of President Alberto Fujimori is another plus, creating more political stability. Cornell expects 10% GDP growth in 1995 and inflation of about 10%. Other analysts peg GDP growth closer to 5% and inflation at 15%.

STURDY. Of course, investors once rhapsodized about Mexico, too. Observe Peru's share of problems: continued, though reduced, terrorism; tensions with Ecuador; and a growing trade deficit. But the catalyst for Mexico's meltdown—a balance-of-payments crisis—shouldn't shake Peru. "Peru has some foreign exchange stability, with its reserves continually increasing," says Stefano Natella, director of Latin American research at CS First Boston.

Natella says Peru's main restriction is a thin market. Some 200 stocks are on the exchange, and the top 15 to 20 stocks make up about 90% of its $10 billion-plus market capitalization. But Peru has some sizable companies that Cornell and others describe as blue chips.

Investors ready to take the plunge might consider Minsur, a low-cost tin mi Southern Peru Copper, and Banco Credito, says Miguel Palomino, gene manager of Smith New Court's Pe office. A popular pick: Cerveceria Ba us & Johnston. It has about 85% of t beer market in Peru.

Right now, only one Peruvian Am ican Depositary Receipt is available the New York Stock Exchange—Ban Wiese. For price quotes on any oth Peruvian stock, investors are depende on the quotes obtained by brokers fr market makers in the stocks. But number of mutual funds have positio in Peru. As of Mar. 31, the Merr Lynch Latin America Fund had 4.2 in Peru, up from 3.7 in the previous quart and the Scudder Lat America Fund and t Montgomery Emergi Markets Fund both h about 2% holdings. A ter the crisis in Me co, taking such sm steps into Peru may a more comforta pace for investors.

THE INTERNET

LAUGHER CURVE

Did you hear the one about the stand-up economist?

Practitioners of the dismal science are not generally known for humor.

Enter laughing Pasi Kuoppamäki, a mild-mannered Helsinki economist whose specialty is delving into the effects of global warming on Finland's industries. Not a lot of chuckles, right? But Kuoppamäki, 25, is earning a reputation in cyberspace as the king of economics comedy—admittedly not a title for which there is intense competition. He hasn't made it to the Letterman show yet, but his *Jokes about Economists and Economics* page, available on the Internet's World Wide Web, is rapidly gaining a worldwide following.

Kuoppamäki launched his project last fall, shortly after signing on to the Web for the first time and watching the lawyer jokes go by. That prompted him to carve out a niche for economists. (Based at the Research Institute of the Finnish Economy, its Web address is http://www.etla.fi/pkm/joke.html.) To make its point perfectly clear, the page is topped by a picture of Adam Smith. Even the original free-marketer, says Kuoppamäki "would enjoy these jokes."

BRIGHT BULB. Every week, the page is read by some 1,000 people, who are drawn to a collection of 60 or so entries ranging from shaggy PhD stories to Henny Youngman-esque one-liners. Sample: "If an economist and an IRS agent were both drowning and you could save only one of them, would you go to lunch or read the paper?" Many of Kuoppamäki's best offerings, however, are variants on the familiar lightbulb theme: "How many Chicago School economists does it take to change a lightbulb? None. If the bulb needed changing, the market would have already done it."

Most of Kuoppamäki's material comes from contributors who send in their stuff by E-mail to the address listed at the bottom of his page (pkm@etla.fi). Other gags come from economist friends and from Kuoppamäki himself, who sifts through the dozens of other compendiums of humor on the Internet. These include lawyer jokes, Pentium jokes, O.J. Simpson jokes, and several collections of the gross and tasteless.

But no one else appears to have singled out economists to pick on. "I really enjoyed it," chuckles Anthony Chan, chief economist at Banc One Investment Advisors Corp. "We're all humble enough to realize that because exogenous forces are constantly changing and we work with incomplete information, our forecasts are almost always going to be off the mark."

Kuoppamäki doesn't devote all of his online time to laughs, though. With Web-surfing now "one of my major hobbies," the economist also maintains several pages that seek to explain his studies of global warming. (He thinks that Finland's thriving forest-products industry is benefiting from climatic moderation.) With a click of the mouse, however, you can jump from these pages to others at Web sites around the world providing more information on global warming. Or you can simply switch back to putdowns of Kuoppamäki and his colleagues in the dismal science. Asks one entry: "Why did God create economists? Answer: In order to make weather forecasters look good."

BUY A COMPAQ NOTEBOOK AND GET A DESKTOP FREE.

Compaq LTE Elite 4/75CX
Compaq SmartStation

$700 VALUE

Just how do you get two PCs for the price of one? Buy a Compaq LTE Elite 4/50E, 4/50CX or 4/75CX by May 31st, and we'll give you a Compaq SmartStation with it—free.

And what's so smart about a Compaq SmartStation? It's loaded with unique features like "VCR-style" motorized docking, plug-and-play capabilities and integrated Ethernet support. And, when combined with our top of the line LTE Elite, it's like getting a network-ready, expandable desktop. What's even more remarkable is that it's free—still another reason why you will find this combination to be the perfect solution for your needs in the office.

There's nothing lost when you're on the road, either. Because the LTE Elite is our most powerful notebook. And with its built-in AC adapter, you won't find yourself lugging around any extra baggage.

Simply put, buying an LTE Elite right now and getting a free SmartStation is a great deal. And this terrific offer is only available from Compaq. So, if you want to find out where you can buy one great computer for the road and get another for the office free, you should call us now.

DATA: BLOOMBERG FINANCIAL MARKETS

KMART'S DIVIDEND DISCOUNT

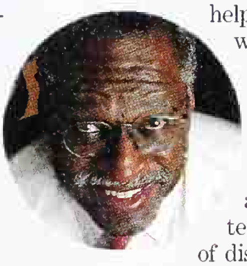
KMART, STRUGGLING WITH tightening margins and facing a first-quarter loss, chopped its dividend for the first time in three decades. The cut, to 12¢ a quarter, from 24¢, will produce annual savings of $220 million. That's the sort of move investors had wanted from former Chairman Joseph Antonini. Now, though, the cut may not be aggressive enough, say analysts. They want the retailer to quickly renovate older, frumpy stores. Donald Perkins, who replaced Antonini on Jan. 17, left open the possibility of another dividend cut if results don't improve. First-quarter earnings, due out on May 15, likely will suffer from an accounting change and from aggressive markdowns.

LABOW WINS A TELEDYNE SEAT

SHAREHOLDER RONALD LABOW won a partial victory at Teledyne's annual meeting on Apr. 26, garnering one seat on the company's board of seven directors. LaBow, whose WHX has offered $1.2 billion to buy Teledyne, told shareholders, "we continue to believe that a combination with WHX is in the best interests of the company," and promised to press for a merger as a director. Some investors speculate that WHX, saddled with an underfunded pension fund, is eyeing Teledyne for its $928 million pension surplus. "LaBow is interested in solving his own pension problems," says Jerome Scritsimier, principle of Cameron Properties, a small shareholder. Teledyne says WHX's current offer is a "nonstarter."

HEADLINER: HOWARD FULLER

A SCHOOL REFORMER DROPS OUT



He had become a leading campaigner for root-and-branch school reform, and had begun turning around a chronically underperforming urban district—efforts that landed him a prominent place in BUSINESS WEEK's Apr. 17 cover story on education. But on Apr. 18, Howard Fuller abruptly resigned as Milwaukee's school superintendent, angrily blaming "powerful forces of the status quo" for impeding further progress.

Fuller's departure brings to at least a half dozen the number of big cities without a superintendent, striking evidence of the challenges facing reform. Fuller won plaudits for implementing accountability measures and recruiting businesses to help redesign Milwaukee's curriculum. But unions chafed over proposals to close failing schools and start charter schools free of district control.

Most educators believe Milwaukee's reforms will continue. But the dustup suggests that such efforts need to be built on broader coalitions that include unions. As for Fuller, he says he prefers to stay in Milwaukee "to fight for families and kids."

FADAL ATTRACTION

FADAL ENGINEERING HAS BEEN a symbol of U.S. manufacturing's renaissance, blasting away foreign rivals to become a dominant maker of small verticle machining centers. Now, Fadal is selling out to Giddings & Lewis, the giant of the machine tool industry, for $180 million in cash. The sale could help cut estate and gift taxes for co-owners David and Larry DeCaussin, who want to retire, and will provide the company with capital to launch a new product line.

UPS DELIVERS A MESSAGE TO MEXICO

AS IF THE PESO CRISIS WEREN'T enough to keep Mexican officials up at night, here comes United Parcel Service. UPS is steamed that Mexico hasn't granted its subsidiary rights to operate the same-size vehicles as native competitors. It has convinced the U.S. Trade Representative to file a formal complaint against Mexico under the North American Free Trade Agreement. Filed on Apr. 25, the complaint is the first of its kind. Under NAFTA rules, the two sides have 30 days to try to resolve the dispute. After that, trade experts will adjudicate. UPS contends Mexico's actions threaten its $120 million investment in the country.

ET CETERA . . .

- Pratt & Whitney was charged with diverting U.S. aid to a secret Israeli fund.
- Vencor will buy far larger Hillhaven, a nursing home company, for $1.4 billion.
- Metropolitan Life and New England Mutual Life are weighing a possible merger.
- Baseball's Florida Marlins opened the season with a salute to fans. The fans booed.

LIKE A ROCK

ITED BY OWEN ULLMANN

N THE WAKE OF OKLAHOMA CITY, NE NATION—MORE INDIVISIBLE

all it a hopeful consequence of the horror in Oklahoma City. The explosion that killed and maimed hundreds in the Alfred P. Murrah Federal Building could actually ve a cooling effect on the white-hot rhetoric that has en- lfed U.S. political life. Indeed, the tragedy is shaping up as arity: an act of violence that draws people together.

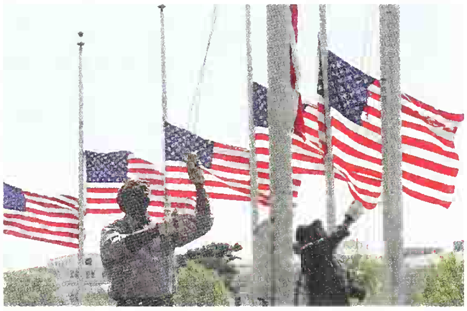
Not since the gulf war has an event instilled Americans th such a sense of communal identity. And any rush toward e political center provides President Clinton with an oppor- nity to reassert leadership over a more sober public dia- gue about the future. "The country wants something other an the hard Right and the discredited ft," says Al From, president of the ntrist Democratic Leadership Council. his bombing will reinforce that."

THE DEFENSIVE. That's a switch. nce last fall, congressional Republi- ns have been setting the agenda with otional anti-government appeals and sues that polarize voters—curbs in verty programs, challenges to affirma- ve action, calls for immigration con- ols, and an overhaul of welfare.

Now, the bombing has thrown right- ng radio talk-show hosts and their nservative allies in Congress on the defensive. House eaker Newt Gingrich (R-Ga.) was stunned by suggestions at the GOP's government-bashing may have fanned the mes of extremists like those who are believed to have at- cked the federal building. And hard-edge GOP Presidential pirants such as Representative Robert K. Dornan of Califor- a and Senator Phil Gramm of Texas may feel pressure to ne down their strident attacks on government. "The core of e electorate has decided this isn't the way the nation ould go," says former Democratic Presidential contender ul E. Tsongas.

That shift is working to Clinton's advantage. Though the President has been a polarizing figure himself, his recent deft performance as national healer has boosted his popularity. For the first time in 11 months, Clinton's approval ratings have topped 50%—reaching 52%, according to an Apr. 21-23 USA Today/CNN poll. "Clinton has been touching on the moral high notes in a powerful way," explains Rutgers University political scientist Benjamin R. Barber. "He's acting as executive pastor to the American flock in a time of crisis."

Another possible beneficiary: GOP moderates, who now can cool the government-is-the-problem rhetoric of the party's populist and religious right wings. Figures one Clintonite: "Some of the most conservative Republican members of the House, especially the freshmen class, could be marginalized, opening up space for GOP moderates calling for civility and lowered voices."



HALF MAST *at the Washington Monument*

AFP PHO

Still, many Republicans believe public revulsion with anti-government terrorism won't alter voters' broad support for lower taxes, less spending, and fewer federal regulations. "It may change the tone of the political debate, but not the substance," says Republican strategist William Kristol. "The Republicans will bend over backward to be civil, but aside from a repeal of the assault-weapon ban, I don't see any backing off."

Perhaps. But U.S. acts of terrorism, rare as they are, can shake up political dynamics. Bombings by student radicals helped galvanize the electorate behind Richard M. Nixon's 1972 reelection landslide. And recent violence at abortion clinics has dampened moves to ban abortion. So while it's a liberal fantasy to think that the tragedy in Oklahoma City will stop the Republican juggernaut, for the moment at least, the grisly bombing has succeeded in doing something that neither Clinton nor the GOP has done—tone down the rhetoric.

By Susan B. Garland and Douglas Harbrecht

CAPITAL WRAPUP

ODE IN CONFLICT

►A bipartisan bill creating a code of conduct for U.S. companies in China s emerging as tougher than expected. t would bar plant visits by China's military and block political indoctrination on premises. Businesses that don't comply would lose financial guarantees from the Overseas Private Investment Corp. Representative Tom Lantos (D-Calif.), a human-rights activist, and powerful House Rules Committee Chairman Gerald B. Solomon (R-N.Y.) are behind the bill.

SENIOR DOLE

►Democrats who think Bob Dole is too old to be elected President better think again. EPIC-MRA and Mitchell Communications, independent Michigan-based pollsters, pitted President Clinton against the Senate Republican Leader in a 1996 preference contest. The 1,000 respondents nationwide favored Dole by 50%-44% in the Apr. 19-23 poll. Then the registered voters were told that Dole is 71 and would be older than Ronald Reagan was when elected President. Dole still won, 49%-45%. Seven out of 10 said his age didn't matter.

FOR YOUR EYES BARELY

►Senate Banking Committee Chairman Alfonse D'Amato (R-N.Y.) slammed Treasury for stonewalling a request last winter for internal documents on the handling of the Mexican peso crisis. But Treasury claims it couldn't comply quickly: None of D'Amato's committee staffers had security clearances. A few weeks later the staffers got clearances—and hundreds of pages of sensitive material.

THAT SINKING FEELING IN JAPAN

A painful wave of deflation is restructuring the economy

With Japanese real estate prices falling, Toru Takano recently snagged a great bargain: For $330,000—a third of what it would have cost during the booming 1980s—Takano, 33, and his wife, Kaori, 30, bought a three-room house in the Tokyo suburb of Tokorozawa, a 60-minute commute from his job as a salesman at a maker of electronic parts. But is Takano celebrating his good fortune? Anything but.

As the yen spirals and competition from cheaper offshore manufacturers intensifies, Takano's company is being forced to slash prices to keep from losing sales altogether, and he sees no relief in sight. "I don't think the economy is going to get much better," he says.

Takano isn't the only one fretting. Just eight months ago, the Tokyo stock market was rebounding, and it appeared that Japan had emerged from its longest slump since the end of World War II. Then came the Kobe earthquake, followed by the financial shock of the runaway yen (chart, page 54). Now, hopes for an economic upswing appear to be running out despite $546 billion in emergency government spending since 1992.

It's not just land and stocks that are falling. From machine tools to beer, goods prices across the economy are declining. Profits are plummeting. Even the cost of a golf-club membership is

How Deflation Affects Japan

IT LOWERS PRICES FOR CONSUMERS . . .

- ▶NEC has slashed prices on its PC-9800 series by up to 26%, to defend its 50% share of the personal-computer market against U.S. rivals such as Compaq, Apple, and Dell.
- ▶Chain stores are selling furniture imported from American retailers—and downsized for Japanese households—at a big discount over domestic brands.
- ▶Beer distributors stoc Kirin beer produced in Hong Kong and other countries. The reexport beer costs about $46 a vs. $61 for most Japane brews.

y down. Joining the exclusive Koga- Country Club runs about 100 million n ($1.2 million)—less than a quarter much as in 1989, the height of the ble economy.

The key question now is whether verful bureaucrats at the Ministry of nance and the Bank of Japan really nt to pump more money into the nomy to halt deflation. To be sure, reaucrats bear some of the blame for n shock, or *endaka*, by balking at shing through wide-ranging programs deregulate and open the Japanese nomy. But given this reluctance, as ll as their distaste for spending huge v amounts on pump-priming, it may that a strong yen and declining prices will be the bureaucrats' only choice to trigger the kind of radical corporate restructuring Japan needs.

Deflation is forcing Japanese manufacturing and the inefficient distribution system to streamline, a goal most bureaucrats endorse even though it could exacerbate unemployment. Deflation will make homes more affordable and capital spending cheaper. It will also help bring domestic prices more in line with those in other countries—an important plus as the current price gap becomes a potent political issue. Perhaps this explains why decision-makers don't seem rattled by the Darwinian shakeout in corporate Japan that deflation is causing. "The strong yen is certainly strong medicine," says economist William Sterling of Merrill Lynch & Co. But after the excesses of the 1980s, he adds, perhaps "what Japan really needs is a good crisis" to shock it back onto the path of long-term, stable growth.

In a system that was always rigged to favor producers over consumers, Japanese industrial giants were rarely threatened by such shocks. They would simply deploy cash garnered from high prices at home to keep prices low and expand their reach abroad. That's one big reason the cost of living in Japan is roughly twice that of the U.S.

But now that high domestic prices and profits are waning, companies are driving down costs by consolidating at home, fleeing offshore, and shrinking bloated product lines. As a result of these brutal pressures, private economists believe Japan will be lucky to see the gross domestic product grow even a half of a percentage point in 1995—the nation's fourth straight year of stagnation.

DICEY OUTLOOK. After GDP actually shrank at a 3.4% annual rate in the fiscal fourth quarter that ended Mar. 31, even the Bank of Japan, which earlier had been sanguine about the economic outlook, was forced to suggest that the recovery looked dicey. That came as bad news to Ministry of Finance officials, who need more revenues to pay for stimulus programs and to finance the needs of a graying populace. It's also worrying Asian allies that are currently thriving on rising sales to Japan.

Indeed, fears are rising that Japan's appetite for foreign goods will diminish just as the U.S. economy is beginning to cool and Europe's recovery reaches its peak (page 35). That could spell tougher times for the global economy. World growth is already expected to slow to 2.4% next year, after reaching 2.7% in 1995, estimates Deutsche Bank Research. But a steep Japanese slump could worsen the global slowdown.

Economist Jennifer Feldkamp Decker of DRI/McGraw-Hill thinks that in the absence of bold action to deregulate the economy, open the country to more imports, cut its $127 billion trade surplus, and revitalize growth, Japan could face an even higher yen and more stagnation. In that case, she estimates the economy could expand as little as 1.3% annually for the next five years. Adds one high-ranking Western official: "The last thing the world needs is one of the major economies looking like it's going into deflation."

Yet deflation is what's happening. There's even a special term for it: *kakaku hakai*, or "price destruction." You

APPLE, ANYONE?

With imported PCs cheap at Tokyo's electronics bazaar, U.S. computer makers have captured some 30% of Japan's $9 billion market

WATCH THE BIRDIE

any retailers are ng color TVs, VCRs, stereos for 10% to below their "sug- ed manufacturer's e"—and swallowing difference.

▶ The rampaging yen and falling land prices are forcing companies to sell off land holdings at bargain prices to shore up their earnings and balance sheets.

▶ Falling share prices are forcing Japanese brokerages and banks to take big write-offs on their portfolios, crimping their ability to pay off bad debts.

STOP
できない!!(STOP)ザ円高阻止行動
OF THE ¥EN
円高阻止で勤労者の雇用と生活を守ろう!!
日本労働組合総連合会

SEEING RED

Organized labor in Japan is fuming over the yen's continued ascent, which has led to job losses and company relocations

certainly see that in computers. Once unchallenged at home, the Japanese industry's clout is being undercut by cheap imports. In Tokyo's sprawling electronics bazaar at Akihabara, Compaq and Apple PCs can be had for 20% to 40% less than comparable Japanese brands. And with U.S. rivals grabbing 30% of Japan's $9 billion market last year, NEC Corp. was forced to slash prices by 20% on one line of PCs.

It's much the same story for more mundane consumer items. Sumitomo Corp. is importing living- and dining-room sets from such U.S. companies as Thomasville Furniture and Hickory Hill Furniture and selling them through Japan's biggest furniture retailer, Otsuka Kagu. This year, Sumitomo expects to import $18 million worth, 20% more than in 1994. On top of that, the company is bringing in $60 million worth of cut-rate sports equipment, glassware, and leather goods. And some independent distributors have started buying Kirin beer made in Hong Kong and shipping it back to Japan. The imported stuff undercuts domestically brewed Kirin by one-third.

Deflation has acquired such momentum that Salomon Brothers Inc. economist Robert A. Feldman expects consumer prices will fall 0.5% annually over the next two years. That would be something Japan hasn't seen since the years following World War II. In fact, price destruction represents "a structural change that will continue through the end of the century," says Sanwa Research Institute economist Keisuke Iwasaki. Although lower prices are good for consumers, such a lengthy drop in prices could spawn a vicious cycle of lower domestic consumer spending, a higher yen, and even greater pressure on prices, profits, and the battered financial system, Western economists warn.

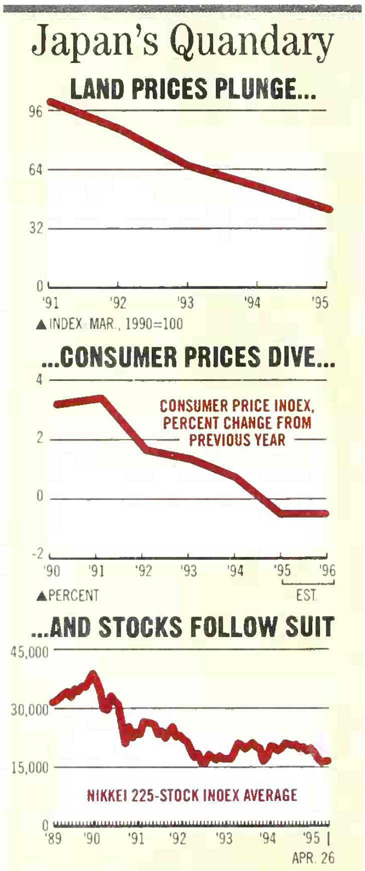
UNCONCERNED. Despite such gloomy forecasts, the coalition government of Prime Minister Tomiichi Murayama has so far mounted a relatively modest response. On Apr. 14, the government unveiled its latest emergency spending package. Urging companies to buy back stock to support share prices and giving special attention to helping smaller companies hit by *endaka*, the plan may come up with $12 billion in aid.

Most economists have scorned the proposal as inadequate. And while market watchers say that some Bank of Japan researchers fear deflation will spin out of control, hammer down land prices even further, and wreak havoc with ailing banks, the prevailing view is still that deflation is not yet a big concern. That's one reason why the central bank waited months before cutting its discount rate by 75 basis points, to 1%, on the day Murayama announced his economic program. Some critics believe this cautious policy is only heightening deflationary pressures. To keep interest rates from falling below its target, for example, the bank has been siphoning massive amounts of liquidity from the Japanese banking system. With money growth barely budging, real long-term interest rates now may be a punishingly high 5%—significantly above those in the U.S.

The Bank of Japan seems blithely unconcerned about what its strategy is doing to financial markets. For example, the slumping Nikkei stock average—off 56% from its 1989 peak—is pummeling banks' and insurers' portfolios. On Apr. 24 alone, 11 Japanese commercial banks disclosed they face $7.4 billion in write-offs because the value of their stock holdings has fallen below what's stated on their books. With commercial property prices down more than 50% since 1991, Japanese companies last year sold an astounding 23.7 million square feet of property to raise cash. The amount of land sold was up 19.3% fro 1993, according to real estate da service Tokyo Shoko Researc The sales netted only $7.7 billic down 9.7% from the year befor

While financiers are selling a sets, manufacturers are hunke ing down for survival. Take Maz Motor Corp., which derives 60 of its sales from exports. Stu by the strong yen and langu U.S. car and minivan sales, it nounced on Apr. 26 that it wou slash output at its Japanese plar by 22% this quarter and take ne steps to reduce costs. Even m sweeping reductions are hitti metals producers. Mitsubishi Mat rials Corp., hard hit by cheap zinc in ports, plans to close a smelter in Aki Prefecture that has been losing $1.2 m lion a year. Sumitomo Metal Industri Ltd., meanwhile, is accelerating job cu at several steel plants to save $700 m lion a year. Both companies will assi idled workers to other companies.

TAKING THE PLUNGE. Such actions are clear sign that the Japanese are allo ing change to creep into their syste How far and how fast it will go is t key question. Critics argue that Jap must undertake sweeping and imme ate steps to open its trading syste deregulate systematically—or face deep crisis. But so far, the governme is resisting sudden moves and seems be acceding to t power of yen-bred d flation to gradually r shape Japan.



DATA: NIHON FUDOSAN KENKYUSHO, BLOOMBERG FINANCIAL MARKETS, SALOMON BROTHERS INC

In the absence wide-ranging macroe onomic-policy moves huge deregulati schemes, regulato will rely on Japane corporations and fina cial institutions to fo tify themselves again deflation and yen sho as quickly as they ca For now, Japan is d ciding to put up wi yen strength. Whi that leaves the cou try staring at the lik lihood of a continu high yen, falling pri es, and even recessio it's a risk policymake seem willing to tak If that means slow growth for the rest the world, so be it.

RUNOFF: *Jospin led the first round, but Chirac will probably beat him*

FRANCE

CAN ANYONE FIX THIS COUNTRY?

The next President must overhaul France's "mixed" system

As an aimless teenager, Lionel Basset was shunted into a French metalworking school. He found it monumentally boring and dropped out at age 17. Now 21, he has worked just a few weeks at odd jobs since then. Most days, Basset hangs out in cafes with unemployed friends or roams the streets of Saint-Denis, a grimy Paris suburb. He is angry. "I was very badly guided in school," he says, leaning against a graffiti-covered wall. "Nobody in France cares about the young."

On Apr. 23, Basset voted in the first round of France's presidential elections. His candidate: Socialist Lionel Jospin—"the only one who might change things," he says. Jospin stunned pollsters by coming in first among nine candidates, ahead of the favored Gaullist conservative, Jacques Chirac. Yet four conservative candidates jointly won 60% of the vote. So barring an upset—always possible in this surprising campaign—second-place Chirac should win a May 7 runoff to succeed Socialist President François Mitterrand.

Chirac—or Jospin—will be taking the reins at a critical moment for France and for Europe. After 14 years under Mitterrand, France has lost its way. It is tormented by political and business scandals. State deficits have soared. The French can't decide what shape they want for a united Europe. Worst of all, the economy, despite some impressive strengths, cannot create enough jobs. Unemployment of 12.3%—an alarming 25% for those under age 25—is a time bomb. It seems the old economic and political ideologies from both left and right no longer have the answers.

Many economists and business leaders know what France needs: a drastic overhaul of inflexible labor laws, an end to government control of large corporations, a vibrant private pension syste and a taming of a free-spending sta sector that, in the words of economi Christian Saint-Etienne, has become "monster, a national catastrophe." Yet France's new leader can't implement ra ical measures, his seven-year term m mark a dramatic decline in the pro country's economic status and in its i fluence in the world.

> **NEW ERA?** Inflexible labor laws, state-run companies, a cushy pension system—all should go, and soon

SHORTER WORKWEEK? Investors fe that Chirac and Jospin are proposin remedies that could sink France furth into a financial hole. To encourage hirin Chirac proposes a cut in employers' one ous payroll taxes. Most think this is good idea. But it would cost the go ernment badly needed revenue, ar Chirac has not proposed any spendin cuts to compensate. Jospin, a tradition Socialist, envisions a massive publi works program and a two-hour cut the workweek, to 37 hours, that he say would create 400,000 jobs.

Either approach may lead to highe deficits and a weaker franc. That wou be a huge setback after eight years hard-won monetary stability that hav lowered inflation to under 2%. France deficit still reached 5.6% of gross dome tic product last year, far above the 3 limit required for European monetar union by decade's end. A French failur to qualify for monetary union could kill single European currency and be a majc reversal for tighter European union.

Such concerns led traders to hamme down the franc in late April. In respons Chirac vowed allegiance to *le franc fort*—

Fidelity Stock Funds.

No Matter What Your Goals Are, We Have a Fund That Can Help You Reach for Them.

Despite Market Ups and Downs, Stocks Have Provided Consistent Long Term Growth.

If you have long-term financial goals, it can make sense to have some of your money invested in stocks. Historically, the greatest returns have been realized by investors who have invested in the stock market.[1] The potential for higher returns in the stock market is related to its higher risk.

From Conservative To More Aggressive, Two Impressive Performers.

Here are two stock funds that Fidelity offers to capitalize on the long-term potential of the market.[2] Past performance is no guarantee of future results, and you may have a gain or loss when you sell your shares.

Fidelity Value Fund pursues capital appreciation by investing in unrecognized or undervalued companies. This fund concentrates its investments in companies that may be asset-rich or whose securities management believes are underpriced in the current market.

Average Annual Total Returns*	
Fidelity Value Fund	
1 year	7.63%
5 year	12.02%
10 year	13.61%

Fidelity Blue Chip Growth Fund is an aggressive stock fund that pursues investments in some of today's most successful "blue chip" companies, which may be well-positioned for future growth. The fund invests in securities of U.S. and foreign issuers.

Average Annual Total Returns*	
Fidelity Blue Chip Growth Fund	
1 year	6.55%
5 year	17.68%
Life of Fund	18.35%

Expertise You Can Rely On.

Our research capabilities and investment expertise allow our managers to search for opportunities that other fund companies may lack the time or resources to find. In fact, we have more than 200 researchers and analysts who follow more than 6,000 companies a year.

Call Today.

With one phone call, you can receive the information you need to invest in a Fidelity stock fund. You can begin investing with $2500, or $500 for an IRA. Call for details.

Now reach Fidelity via the Internet:

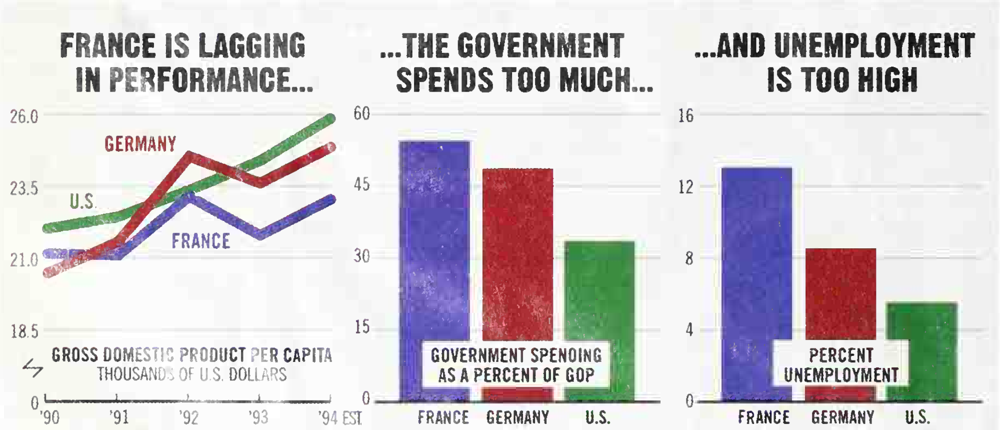
Risk relationship can change at any time. *Total returns for the period ending 12/31/94 are historical and include change in share price, reinvestment of dividends and capital gains, and Blue Chip's 3% sales charge. Share price and return will vary. Life of fund figure for Blue Chip Growth Fund is from December 31, 1987. Fidelity Distributors Corporation.

a strong franc. Yet there are doubters. A weaker franc is inevitable, says Steven H. Nagourney, chief global strategist for Lehman Brothers Inc. "If the new President doesn't devalue," he says, "the market will do it for him."

While worrying about the markets' reaction, the new President faces the prospect of social unrest if he makes major cuts in pension and health-care benefits. Likewise, France's homeless and long-term unemployed—dubbed *les exclus*—could become an explosive force. Like Lionel Basset, many are young and live in working-class ghettos, and they may soon vent their rage.

JOBLESS: *"Nobody...cares about the young," says Basset*

FOOLISH STAKES. Plenty of French industrialists blame excessive state regulation for locking the unemployed out of the job market. "There are too many rules in France," complains Peugeot Chairman Jacques Calvet in his small, sober office near the Arc de Triomphe. Take tiremaker Michelin. It's trying to boost output of truck tires, but it's stymied by a ban on running French factories more than five days a week. After a long effort, Michelin has won government permission to operate an automated plant nonstop—for one year. But its four conventional factories must close on weekends, to protect workers' leisure.



DATA: CREDIT LYONNAIS, ORGANIZATION FOR ECONOMIC COOPERATION & DEVELOPMENT, DRI/McGRAW-HILL, BW EST.

The intrusive state power that hobbles Michelin and other companies is wielded not just by politicians but by a corps of elite bureaucrats who run many top companies. This tradition saddles industry with inexperienced managers, yet mercifully for France, this elitist system may be cracking. The biggest fissure came from the recent $27 billion bailout of state-owned Crédit Lyonnais. Europe's biggest bank almost collapsed after taking foolish stakes in French companies at government behest and making risky loans that smacked of political favoritism. André Lévy-Lang, management board chairman of Compagnie Financière de Paribas says this debacle has knocked the technocrats off their pedestal: "These errors have won us 10 years in changing mind-sets."

True, but other state practices remain deeply entrenched. The government has poured billions in state funds into such sinkholes as computer maker Groupe Bull and Air France, with nothing to show for the effort but companies that still need wrenching restructuring. Former Prime Minister Raymond Barre says the French penchant for postponing the inevitable reminds him of a famous countess waiting at the Revolutionary guillotine. She implored her executioner: "Please, *monsieur*, just one more minute."

Yet beneath its problems, the world's fourth-largest economy has a lot going for it. It has Europe's lowest inflation, good productivity, a positive trade balance after 15 years in the red, and lower labor costs than German Mercedes-Benz recent picked France over Germa for its newest car factory. believe very much in Fren productivity and reliability says Mercedes' CEO, Helm Werner.

Those strengths flow fro a massive industrial restru turing in the 1980s, when t French rightly feared th competition in Europe's sing market could destroy the Companies automated fact ries, and the government a lowed big layoffs for the fir time. Renault's biggest pla now makes the same numb of cars with 8,302 employees as it to 22,700 workers to build 20 years ago.

HIRING AND FIRING. Yet there's a fragi side to this success. France's forte commodity products—aluminum, stee cement, glass—rather than high valu added items. French weakness in hig tech is another worry. It flows part from a shortage of entrepreneurs, a therefore of midsize companies along th lines of Germany's *Mittelstand*. Criti fault cerebral French education f putting Proust above profit. Anoth cause is the lack of private pension fund which in the U.S. have pr vided billions in equity capit for established companies a startups.

The biggest French failin however, is unemploymen Deregulating the process hiring and firing could wonders to create jobs. "Th difficulty eliminating jo makes you hesitate to hire says Peugeot's Calvet. A com pany that wants to reduce i workforce usually needs go ernment permission and mu give around 18 months' se erance pay. Water bottl Perrier tried to cut 600 jo recently to boost efficiency. Bureaucra said *non*.

France made an important decision the 1980s: to open its economic borde to Europe and the world. So far, howe er, the French can't quite accept th ramifications of that move. France's ne leader must finish the overhaul of h country's outdated economic approac With luck, the disillusioned youths at th gates of Paris will allow him time to that.

IS IT TIME FOR CLINTON TO GET TOUGH WITH YELTSIN?

On Moscow's Poklonnaya Gora (Victory Hill), workers have labored feverishly for weeks, planting flowers and erecting reviewing stands for the May 9 festivities commemorating the 50th anniversary of Germany's defeat. Late-model tanks will clank by, as Russian troops march past President Clinton and other dignitaries representing the World War II allies.

Clinton should hardly be in a celebratory mood, though. His embrace of embattled Russian President Boris Yeltsin isn't working quite the way the Americans want it to. The relationship hatched during the feel-good era following the Soviet collapse is in trouble: Many liberals in Yeltsin's foreign-policy inner circle have been replaced. So Russia is becoming more aggressive at home and abroad, leading to a growing list of U.S.-Russian disputes.

AFTER THE FALL

Mass graves of those killed during Russia's bloody suppression of breakaway Chechnya

Indeed, the martial nature of the celebration will remind onlookers of Russia's belligerence, especially its suppression of the breakaway republic of Chechnya. An estimated 24,000 people have been killed there—making it far bloodier than either the 1956 crackdown on Hungary or the 1968 Czech invasion. Witnesses and human-rights activists say Interior Ministry troops used drugs to make themselves fiercer before attacking the Chechen village of Samashki in mid-April. They are accused of machine-gunning about 250 villagers, including women and children. The military denies the atrocity charges. It's unclear whether a new ceasefire will take hold.

NO ON NATO. Chechnya is only one cause for concern. Although the Russians have allowed the destruction of many nuclear and conventional weapons, treaties that were so warmly hailed when the cold war ended are coming undone. For instance, Defense Minister Pavel S. Grachev says Russia is no longer bound by the 1990 Conventional Forces in Europe treaty that limits troop deployment. He wants to shift forces to hot spots such as Tajikistan, on the Ukrainian border, as well as Chechnya and Georgia. Moscow's opposition to NATO entry for countries such as Poland and the Czech Republic has become more strident.

What's more, taking a chapter out of hard-liner Vladimir V. Zhirinovsky's book, the Yeltsin government is talking about military intervention wherever it sees abuses against ethnic Russians in former Soviet republics. That's certain to stir up tension in regions such as the Baltics and Crimea, where a Russian majority wants to secede from Ukrai

The Clinton Administration has stepped up its criticism Yeltsin's tough moves but isn't considering punitive measur A senior official says the Russians haven't crossed a li that would make Clinton want to jeopardize relations. Was ington continues to believe it's better to maintain the relati ship—in hopes that economic reform will stay on cours Russia's economy is, in fact, improving and showing signs responding to such Western prescriptions as greater moneta discipline and privatization. The Americans hope they will able over time to affect Russian behavior in other sectors well. "We simply can't dis gage. The stakes are t high," says the official.

Even the Chechen fias in this view, harbors seeds hope. "The outpouring of cr icism and very strong revu sion to it internally and ou side haven't solved t Chechnya problem but m point people to the fact th that is not an acceptab way" to resolve troubleso issues, says a senior Sta Dept. official.

But the Russians' extre measures in Chechnya a the scale on which tough tions are threatened els where lead many Russ watchers to conclude that Washington's strategy of patient gagement is about to undergo its most severe test. Clint will probably get nowhere even on such core issues as Ru sia's proposed $1 billion sale of nuclear reactors to Iran.

The Russians also seem to have convinced themselv that they are entitled to Western financial aid without a pol ical price. "Russia will never ever bow to arbitrary politic pressure—not even to please the U.S.," says Russian Forei Minister Andrei V. Kozyrev. Critics say Clinton may have e couraged such thinking by excusing Russian excesses and ing too accommodating on key issues. "Too often, they a what the Russians would accept rather than what the U. really needs to do," says Dimitri K. Simes, president of t Nixon Center for Peace & Freedom in Washington.

Simes points out that Russia is much weaker than t old Soviet Union and that its need for Western aid and i vestment should give the U.S. "tremendous leverage." T May summit ought to provide an opportunity to start usi that clout, he says. But getting the right message acro won't be easy. If Clinton is too tough, he'll look as if he's spo ing the celebration. If he takes a Mr. Nice Guy approac however, he'll seem to be endorsing the Kremlin's tough ne tack. And that has the whiff of appeasement.

By Peter Galuszka in Moscow and Amy Borrus Washington

AW FIRMS

SILICON VALLEY'S OTHER POWER ELITE

Wilson Sonsini's coziness with the cream of high tech is its strength–and a sore point

WILSON SONSINI GOOD

BOLD EAGLES: *Sonsini's partners forge business links other firms tend to shy away from*

JAMIE TANAKA

When Apple Computer Inc. went public back in 1980, they were there. When Novell Inc. merged with WordPerfect orp., they were at the bargaining ta-e. And when the Justice Dept. and icrosoft Corp. battled on Apr. 24 to ave their controversial antitrust deal surrected, they were at the center of e storm. The lawyers at Wilson, Son-ni, Goodrich & Rosati have been so illful at riding the wave of the most namic U.S. industry that they are as ot as their cutting-edge clientele. "If ilson Sonsini was a stock, I'd invest in ," says Paul Lippe, legal counsel at ftware designer Synopsys Inc.

That a law firm could inspire such nthusiasm shows that Wilson Sonsini as little in common with the legal Es-ablishment. Mirroring the entrepreneu-al, risk-taking persona of its clients, he Palo Alto (Calif.) firm plays by its wn rules. Its partners sit on the boards f such clients as Autodesk Inc. and attice Semiconductor Corp., flouting he current tide against such conduct. They dole out the kind of financial advice usually expected of bankers or venture capitalists. The firm invests in startups it takes public, maintaining a current portfolio of some 500 client companies, including LSI Logic Corp. and Synopsys. Going another step, Wilson Sonsini does what would be unthinkable in most legal circles: It represents promising upstarts for free until they can pay legal bills. The gamble has paid off handsomely with such success stories as Sun Microsystems Inc.

The result is a 275-lawyer firm intricately tied to the fortunes of its clients as well as its community. It's also one of the most profitable firms in the country, with $100 million in annual revenues. "We're really part of the fabric of Silicon Valley," says 54-year-old Larry W. Sonsini, the firm's driving force. No kidding. Of the 150 largest public companies in Silicon Valley, Wilson Sonsini lists at least 36% of them as significant clients. Since 1990, the firm has taken more than twice as many high-tech companies public as its nearest competitor, according to Securities Data Co.

What's more, Wilson Sonsini represents at least 20 semiconductor companies and the top three independent disk-drive makers. Its vast representation of venture capitalists and underwriters makes for an incomparable business network. "The firm has an ability to access people all over the place at the drop of a hat," says A. Grant Heidrich III, a general partner at Mayfield Fund, a venture-capital firm. Founder Sonsini recognizes that his firm's intricate web could raise eyebrows. "There is an incestuousness in the Valley," he says. "I can see where it would look strange to the outside world."

JUDGE AND JURY. Particularly strange, because lawyers elsewhere, fearful of liability claims, have largely cut off the kinds of ties cultivated by Wilson Sonsini and a handful of other Silicon Valley firms. Clients are cracking down on affil-

> **“** There is an incestuousness in the Valley. I can see where it woul look strange to the outside world **”**
>
> — LARRY W. SONSINI, Founder

iations with lawyers that shareholders say raise such ethical issues as lack of independence. “Increasingly, firms are realizing [such alliances are] risky business,” says Charles W. Wolfram, an ethics professor at Cornell Law School. “The potential for conflict is explosive.”

As Silicon Valley matures, Wilson Sonsini is beginning to pay a price for its devil-may-care approach. The firm has been hit with a malpractice claim, has been kicked off a case by an appellate court, and has had its ethics questioned by Microsoft in its antitrust brawl with the government—all because of alleged conflicts. “It appears to be Wilson Sonsini’s policy that it decides if there’s a conflict, not the client,” says James T. Given, corporate counsel for Cadence Design Systems Inc.

In a recent run-in, Cadence got Wilson Sonsini disqualified from a trade-secrets dispute brought against it by Synopsys. Software maker Cadence contended that since partner Gary L. Reback had once been Cadence’s counsel before joining Wilson Sonsini and was therefore privy to its sensitive information, neither he nor the firm should be allowed to represent Synopsys. A California appeals court agreed in late March. “It takes some guts to stand up to Wilson Sonsini,” says Given. “Their influence is ubiquitous.” Reback says the action is merely the litigation tactic of an adversary and that he had no inside information about Cadence.

That rare challenge to Silicon Valley’s business culture could be a sign of more to come. “There is pressure on us, and it has a chilling effect,” says partner Tor R. Braham. Adds partner Alan K. Austin: “We’re pretty damn careful. In this increasingly litigious world, we have to be.”

Critics say not careful enough. “The firm is so totally integrated in the overall ability to make an idea into a lot of money that it has, in many instances, crossed the line,” argues securities class-action plaintiff lawyer Melvyn I. Weiss. Without actually suing them, Weiss has blasted lawyers in several shareholder suits for owning client stock—a relationship he says gives them a personal stake in the performance of a stock offering. In a case against Quickturn Design Systems Inc., for instance, Wei
firm accuses Wilson Sonsini of helpin
inflate client Quickturn’s financial co
tion in order to attract investors. “T
lawyers who helped Quickturn pur
this scheme personally stood to gain
nancially,” the complaint states.

Wilson Sonsini calls such charges fr
olous. Indeed, managing partner Ma
A. Bertelsen says the firm minimi
any potential problems related to its
vestments by capping them at $25,
per company. And though the fund h
provided a stunning 3-to-1 average r
of return since it was created in 19
no individual can reap a windfall
cause the proceeds are split among t
firm’s lawyers. “What’s the incentive
risk anything for $5,000?” asks Bert
sen. “It’s just crazy.”

Still, alleged conflicts have begun
plague the firm in other ways. L
year, Wilson Sonsini paid an entrep
neur who charged it with a conflict
interest an undisclosed sum to set
his malpractice suit. Larry Sonsini, w
denies any wrongdoing, says the fi
settled to avoid a messy trial.

“POPPYCOCK.” Wilson Sonsini could
duck a messy fight with industry gia
Microsoft. The firm infuriated the so
ware maker by opposing its antitru
deal on behalf of three anonymous c
ents. In appealing a federal judge’s r
jection of the settlement, Microsoft to
the unusual step of railing against t
firm’s alleged conflicting relationshi
“The law firm... has never explain
how it can act as regular outside couns
for Novell Inc. while, at the same tim
directly attacking Microsoft’s plann
acquisition of Intuit Inc. in which Nov

ers from an array of clients for the firm to represent Wavefront Technologies Inc., which is currently being bought by another client, Silicon Graphics Inc. When Novell acquired WordPerfect in 1994, the firm not only had to get waivers, but Larry Sonsini, who was on the board of directors at both companies, resigned from WordPerfect.

Wilson Sonsini says it has turned away business even from the likes of Intel because of conflicts with existing clients. "Clients are often more relaxed about the conflict issue than the lawyers are," says Craig W. Johnson, an ex-Wilson Sonsini partner.

For now, most clients seem more than satisfied. The vast majority of those interviewed have faced thorny conflicts using Wilson Sonsini as counsel. Yet they gladly sign waivers in exchange for access to the firm's industry knowhow, legal skills, and connections. "They represent all the successful companies," says Seagate Technology Inc. Chairman and CEO Alan F. Shugart. "I don't worry about conflicts."

Synopsys, which does 30% of its business with Wilson Sonsini clients, says that if it didn't overlook potential conflicts, business would suffer. "If everybody took a black-letter view of the law with respect to conflicts, nothing would ever get done," says Synopsys' Lippe.

SUPPORT. Loyalty and trust runs so deep that companies abdicate control over routine matters to the firm. Recently, Wilson Sonsini interviewed candidates for general counsel of client Conner Peripherals Inc.—in essence helping to pick the person who will eventually supervise its legal work. And when Broderbund Software Inc. planned a merger with Sierra On-Line Inc., the companies jointly hired Sonsini, rather than investment bankers, to value the deal.

Even those who question the wisdom of such practices as lawyers sitting on clients' boards seem to drop their objections when it comes to Wilson Sonsini. "If there's an exception to the rule, I'd say it's Larry [Sonsini]," says Sanford R. Robertson, chairman of investment bank Robertson, Stephens & Co.

As long as clients offer such unwavering support, Wilson Sonsini has little incentive to back away from its chummy philosophy. Change will only come as companies grow and rely more heavily on global connections, or in the event of more lawsuits and financial penalties. Until then, Wilson Sonsini plans to stay in lockstep with its clientele. "I always want to be where my client is going," says Sonsini. And for the moment, that's full speed ahead into the next century.

BREAKFAST CEREALS

HAS GENERAL MILLS HAD ITS WHEATIES?

The luckless cereal maker insists it's crackling again

All he wanted to do was slay the dreaded Bogos. A year ago, Stephen W. Sanger, the No. 2 executive at General Mills Inc., tried to put an end to a breakfast-cereal marketing war. Sanger cut back on high-cost coupons and grocery-store promotions—especially the buy-one-get-one-free deals, known as Bogos, that run up sales volume at the expense of profits. At the same time, he lowered prices on many big brands so consumers and retailers would still find them competitive. Sanger confidently predicted that earnings would rise while volume and market share would hold steady.

A year later, Mills has learned that if getting caught in a price war can be dangerous, trying to end one can be even worse. Its market share, volume, and profits have all declined. That's partly the result of bad luck: A crisis involving cereal contaminated by a contractor undermined the new marketing plan in its crucial early stages last summer. But General Mills' woes are also self-inflicted. Its vaunted product-development program ran aground with a string of embarrassing flops. And one competitor poured on its own promotions just as Mills was shutting the spigot. Now, the Minneapolis-based maker of Cheerios and Wheaties is closing in on a second straight year of disappointing results. So is Sanger retreating? "Hell, no," he declares. "We took the medicine to get this category back on the right track. The last thing we want is a relapse."

Instead, he insists, watch for a rebound. On May 28, the end of the fiscal year, the 49-year-old Cincinnati native who got his early training at Procter & Gamble

The buzz: If Sanger doesn't solidify soggy earnings, General Mills may soon be a takeover target

On top of those woes came a new-product drought, which is particularly damaging in a business where 30% of sales typically comes from products less than five years old. For years, General Mills had led its peers, expanding its Cheerios franchise with the likes of Honey Nut, Apple Cinnamon, and Multi-Grain Cheerios. In fiscal 1994, the company thought it had an innovative hit in Fingos, a premium-priced cereal designed to be eaten dry, straight from the box. But consumers stayed away. Other new General Mills brands also failed to measure up.

Sanger wants to turn that around. In December, he named Jeffrey J. Rotsch, who had a string of new-product successes at the company's Betty Crocker unit, to head the cereal division—a job Sanger once held. Spending on TV advertising, already beefed up in the second half of fiscal 1994, will continue at higher levels as Sanger uses some of his savings from reduced promotions to build brands and support product introductions.

DISTRACTED. Watch for big savings in manufacturing and distribution as well. Buried in the news of its restaurant spin-off last month was $83 million in charges for shutting down obsolete production lines. That move will contribute $20 million to annual profits, and maybe more. "Everybody is dramatically underestimating the impact of the cost reductions," says analyst Michael J. Mauboussin of CS First Boston. General Mills also expanded a management program that increased productivity some 20% at plants where it was tried by allowing worker teams to set their own production schedules, hire new employees, and supervise plant operations. Paring promotions should yield efficiencies, too: Seasonal discounts encourage retailers to stock up, creating steep peaks and valleys in production.

While not every retailer likes the promotion cutbacks, they generally applaud the restaurant spin-off. General Mills executives have been too distracted, says Thomas S. Haggai, CEO of IGA Inc., a chain of 2,500 independent grocers: "That weakened our relationship with them in the cereal business."

The marketing battles have subsided over the past five months, and none of the major players was running the fell Bogos as of late April. Analysts doubt any of the players will risk their bottom lines with another round of costly giveaways in the near future. Even at Kraft, CEO Robert S. Morrison says, "Our interest is in building long-term equity of our brands, not in seeing who can win a giveaway contest." But it only takes one competitive move to break the truce. "That's the catch-22," says William Van Arnum, analyst at the Regents of the University of California, the company's No. 2 stockholder as of yearend 1994. Sanger has already taken some hits in ending the Bogos war. Now he needs to show some results before an acquirer eats General Mills for breakfast.

$3.2 BIL
Acer Opens 20 New Plants Across Europe
U.S.A. Sales Up 96 Percent

Uniload Helps Acer Deliver Fresh Technology Acer keeps popping up in the news. We're the computer giant with record 1994 revenues of $3.2 billion and climbing. And because we've been steadily meeting and surpassing projections for years now, we're suddenly a hot topic of discussion around the world. The big news is that every day, we deliver the newest, freshest PC technology to our customers around the world.

Today's PC market is so fast-paced that users are sometimes buying yesterday's technology today. That's old news. Acer's novel approach is a process called Uniload, which enables us to build fresh PCs daily at 30 manufacturing sites worldwide; close to market and close to you.

E KINGS

Two scientists are changing how DNA is mined–and drugs are discovered

SELTINE'S EMPHASIS COMMERCIALLY BLE GENES IS ASHING WITH ITER'S DESIRE TO RSUE BASIC SCIENCE

Lawrence Livermore National Laboratory's Gregory G. Lennon.

Five years ago, science's DNA sleuths—most of them academic researchers—had nabbed less than 5% of all genes. And it appeared t reading the rest would take many years. One man changed that: J. Craig Venter, an ex-surf bum and obscure National titutes of Health scientist, perfected a method to rapidly find l sequence genes.

Venter still seeks respect in the snobbish world of science. his innovations are transforming the pharmaceutical indus- Even skeptics such as Dennis Henner Genentech Inc. admit Venter's work making companies reevaluate all their hnology and drug discovery methods." e impact of this genetic information going to be enormous," adds Upjohn . Distinguished Scientist Jerry Sligh- n. "It may be the mainstay of drug npanies in the future." It is also turn- Venter and fellow scientist William Haseltine into potential Gene Kings. The two men have formed one of the oddest alliances in biotech: Venter, 48, heads the nonprofit The Institute for Genomic Research (TIGR) in Gaithersburg, Md. Haseltine, 50, is CEO of Human Genome Sciences Inc. (HGS) in nearby Rockville, Md., which has rights to commercialize TIGR's findings. Together, they have deciphered DNA sequences representing parts of a staggering 85% to 90% of all human genes. The functions of more than half of these remain unknown. Still, they say, their databases contain leads for scores of new drugs. To Haseltine, their discoveries rival that of Balboa, who crested a mountain range in Panama to see—and claim for Spain—a whole new world. "This isn't like oil—there's not more than one gene pool," Haseltine exults. "All people who come later can do is repeat what we've done."

Critics see that as classic hype from Haseltine, who is known as much for his hubris as for his scientific brilliance. But giant drugmakers and startups alike have anted up millions of dollars in a frenzied race to acquire and mine this genetic treasure trove. SmithKline Beecham was the first believer. It committed $125 million to HGS in May, 1993, for a 7% equity stake and first dibs on promising genes. Now, everyone wants to be king. Hoffmann-La Roche Inc. has invested $70 million in Millennium, a Cambridge (Mass.) startup. Upjohn and Pfizer Inc. have paid millions to look into the data banks of HGS's main rival, InCyte Pharmaceuticals in Palo Alto, Calif. And last September, Merck & Co. funded a major gene-sequencing operation at Washington University.

THE REAL GENETIC JACKPOT. Experts see Merck's approach as a direct attempt to undermine the Gene Kings. The drug Goliath will make all the gene-sequencing data public. To some, it's the biotech equivalent of a computer company giving away its new operating system—and making money on the applications. Merck executives figure that if everyone has the same information, the company's vaunted research and development department can win most of the races to market. "Making drugs from genes is like going from a dictionary to the works of Shakespeare," explains Merck's Alan R. Williamson, vice-president for research strategy worldwide.

Why is Merck making its gene-sequencing data public? It may be an effort to undermine the Gene Kings

The great debate, however, goes beyond HGS vs. Merck, or proprietary vs. "open" gene strategies. The real genetic jackpot may have nothing to do with the sheer number of genes identified and cataloged. That's why, rather than blindly sequencing tens of thousands of unknown pieces of DNA, outfits such as Millennium

PHOTOGRAPHS BY PETER SIBBALD

and Sequana Therapeutics are hunting for genes that cause diseases such as diabetes and obesity.

Even this more targeted approach, critics say, doesn't guarantee success. After all, the world is awash in DNA data, but brilliant new therapies are rare. "Identifying genes is only the beginning of a long, painful, and expensive process of drug development," explains Michael Steinmetz, vice-president for clinical R&D at Hoffman-LaRoche. In the end, says skeptic Stephen G. Pagliuca, managing director of Bain Capital Inc., a Boston consulting firm: "Investing in genomics is like going to Las Vegas."

Venter and Haseltine are unfazed. They've deployed powerful supercomputers to pin down functions of thousands of unknown genes and, with SmithKline, pull out those that could lead to products. HGS is also madly filing patents on everything from gene fragments that help diagnose cancer to proteins with possible therapeutic benefits. Even where HGS and SmithKline opt not to develop a product, the patents may allow them to reap royalties on others' drugs (page 76).

A GOLDEN RECORD. This aggressive patent stance has incensed rivals. "They want to be the gatekeeper of the genome," fumes one pharmaceutical executive. "They think they have everyone else over a barrel." It may also have incited Merck's radical actions. But Venter belittles the threat from the pharmaceutical giant. "They're just validating my approach," he says, "except they're a couple of years late." Even when the Merck project ends in 1996, says HGS's drug-development chief, Michael J. Antonaccio, HGS and TIGR will still have a far thicker "dictionary" of genes. Merck "may use its dictionary to come up with some very good poetry," he says, "but our potential is so much greater."

> "They want to be the gatekeeper of the genome," fumes one pharmaceutical executive. "They think they have everyone else over a barrel"

If HGS lives up to that potential, much of the credit will go to Venter. A champion backstroker in high school, "I was anti-intellectual to an extreme," he recalls. He shunned college to surf at Newport Beach, while working as a night clerk at Se Roebuck & Co. As the Vietnam War draft loomed, Ve enlisted in the Navy—with the understanding that he woul on the swim team.

When Venter was in boot camp, President Johnson esca ed the war and shut down military sports teams. Fortuna Venter recounts, he scored highest out of 30,000 on his mili intelligence test and got his choice of training. He picked pital corpsman because it wouldn't extend his three-year er ment. That left him patching up wounds in a Navy hospita Da Nang and in a Vietnamese village. "It was a lifetime of ucation packed into one year," he says.

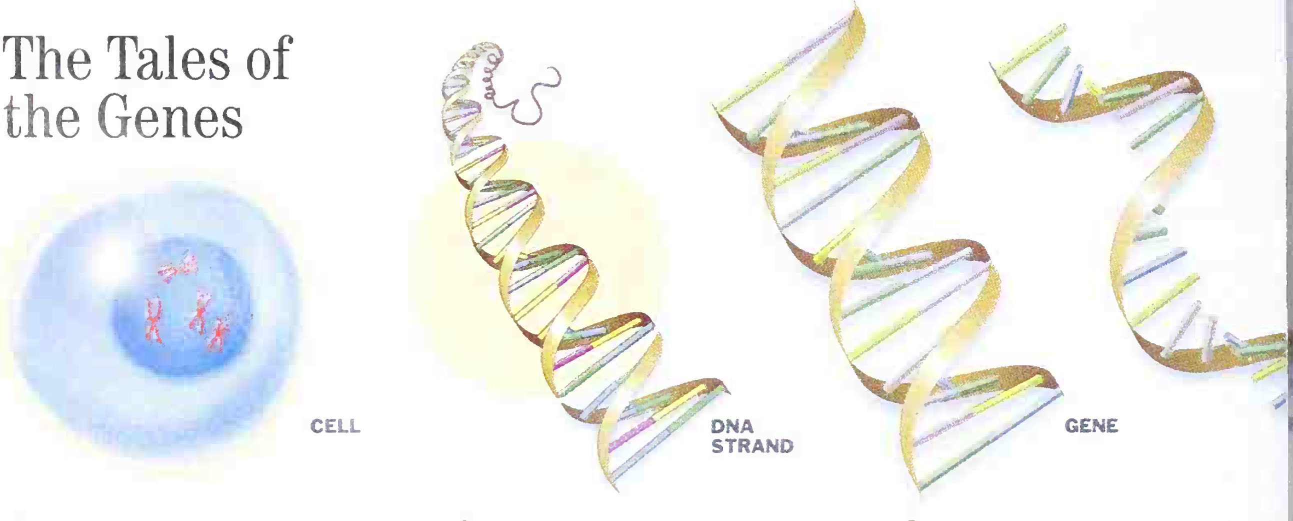
When he left the Navy, a now academically driven Ve raced through his undergraduate deg and his PhD in biochemistry in six ye He quickly snared a faculty positio the University of California at San D and, in 1984, was recruited by the NI

If Venter's background seems unu for a scientist, Haseltine is pure p gree. A Navy physicist's son, he grew steeped in science. His life has bee golden record of accomplishment: honors at the University of Californi Berkeley, training with Nobel laure James D. Watson and Walter Gilber prestigious post at Harvard Univer and discovery of several HIV genes.

With that, Haseltine leaped into limelight. A leading spokesman on A he lobbied Congress for more funding, warning the dise would spread to heterosexuals. Critics called him a publi hound. "I believe it's your responsibility to speak out if you a major health problem, even if that poses a risk to your career," he replies. He also ruthlessly exposed flaws in oth work while extolling his own. "His personality is a real liabil says friend and Harvard colleague Max Essex. Were his m ner more diplomatic, Essex adds, "he could be ruling world." Haseltine shrugs off the criticism. "Some people in pret enthusiasm as arrogance," he retorts.

But Haseltine also earned respect for his research and

The Tales of the Genes



1 Each human cell contains some 60,000 to 80,000 genes, which are made of DNA. But only 3% of all DNA is actually genes. The rest is regulatory elements and "junk." So reading the code of each DNA strand, or "sequencing" it, is difficult.

2 Craig Venter takes a shortcut. Cells know which parts of DNA are genes. They copy the genes into messenger-RNA (mRNA). So Venter grabs the mRNA and makes a DNA copy (cDNA), thus snaring only genes, not the junk.

3 Venter then takes thousands of such cDNA pieces, and uses automated machines to read parts of their genetic code. He and HGS now have sequenced parts of an estimated 85% to 90% of all human genes.

ILLUSTRATION BY LISA KNOUSE BRAIMAN/BW

ity to nurture talent in others. "He was a powerful mentor," s former student Alan D'Andrea, an associate professor at vard Medical School. "I was always glad I was on the e side of the table."

Vhile Haseltine thrived in high-profile science, it was Venter) took an obscure idea and transformed it into a critical akthrough. In 1986, he spotted a paper by geneticist Leroy Hood that suggested a method for doing DNA-sequencing n robots instead of manually. Having spent months doing it old-fashioned, tedious way, "I was one of the few people) got excited," Venter recalls. He scrounged $110,000 in ding to get one of the first sequencing machines from Ap- d Biosystems Inc., developed from Hood's ideas. And Ven- was the first scientist to get it to work, he says.

AST AS A VILLAIN. It was a time of growing excitement and troversy in biology as scientists were proposing the mam- h 15-year, $3 billion Human Genome Project. The idea was first map every part of the 23 pairs of human chromo- es, using known genes and other types of markers to place posts along the chromosomes. Next, scientists planned to se- nce all of the DNA in between the signposts. Venter's idea— g the new machine to plunge into the second part of the ome project by reading big chunks of the X chromosome— support from Watson, the co-discoverer of the structure of , who was heading the NIH's genome project. But review mittees repeatedly denied it funding because the technolo- was deemed too new.

hen Venter had a better idea. Although each human cell bors some 3 billion individual molecules of DNA, strung to- her like rungs of an immense ladder, only 3% of them are nd in actual genes. These instruct cells to make specific teins, which in turn, control how the body develops and ctions. The rest of the genome is so-called junk DNA, with gely unknown functions.

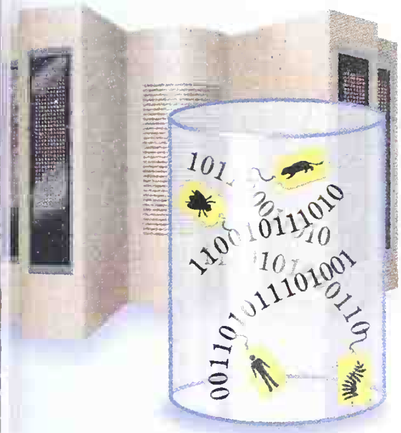
f he just read the code spelled out by every piece of DNA, ter figured, the presence of all that junk would make it rly impossible to find—or understand—the es themselves. But, as he says, "cells are rter than scientists." In order to create neces- y proteins, cells ignore the junk and copy the of important genes into a related molecule, messenger-RNA (mRNA), which tell the cells' protein what to make. "My insight—or my perception of the obvious—was recognizing that biology works pretty damn well," he says.

To pinpoint the genes, Venter planned to scoop up the easily spotted but fragile mRNA, then make sturdier DNA copies—cDNA—to feed into his sequencing machines. To speed things even more, he read just part of the DNA, since each interesting fragment could later be used to fish out the whole gene. The approach cut the cost of sequencing an unknown gene from an estimated $50,000 using older methods to roughly $20.

It wasn't a new idea, and the gene-hunting elite didn't buy it. They argued that nature was essentially uncooperative: Only a tiny fraction of the genes in a given group of cells are turned on. For example, muscle cells might be making only a couple of key muscle proteins, leaving everything else switched off. They figured the method would snare mRNA from 8% of the genes, at most—many of them uninteresting.

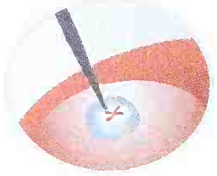
They were wrong. "Venter lucked out," says University of Wisconsin gene-sequencer Frederick R. Blattner. "Nature was not throwing us the terrible curveball that people feared." Other scientists were spending years to collar one gene; Venter was able to sequence bits of 100 human brain genes in months.

Then, all hell broke loose. Figuring the sequences had value that should be protected, the NIH filed patent applications on 315 gene fragments in June, 1991. It later withdrew all the applications, but not before Venter had been recast as a scientific villain. Part of the flood of criticism was aimed at the idea of patenting gene fragments, but much was a direct assault on Venter and his method. Watson charged at a July, 1991, Senate



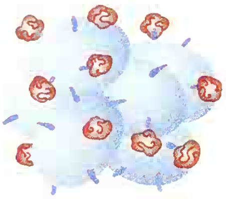
This treasure trove of genes may hold a cornucopia of potential products:

New gene sequences go into a giant database, where they can be npared with the known genes of rything from humans to rats and it flies. The method also reveals cial information about when and ere a particular gene is active.



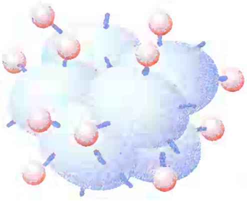
DIAGNOSTICS

Probes for spotting everything from pathogenic bacteria to the various stages of cancer. Left: A probe spots genes turned on only in a tumor.



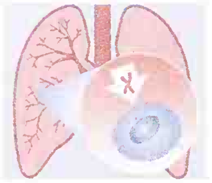
THERAPEUTIC PROTEINS

Newly discovered genes code for proteins that could act as drugs, boosting the immune system, say, or dulling the appetite. Left: Protein binds to cells in the brain's appetite center, turning off hunger.



SMARTER DRUGS

Many genes code for receptors on cells. Finding drugs that bind to these receptors offers potential therapies for everything from heart disease to Alzheimer's. Left: Drug attaches to a receptor, turning a pathway on or off.



GENE THERAPY

Newly discovered genes could be put into cells to help fight cancer, brain disorders, or other diseases. Regulatory DNA segments ensure that genes work properly. Left: Cystic fibrosis genes go into lung and pancreas cells.

While scientists sneered at his method, business took notice: By May, 1992, Venter had two $70 million offers

hearing that Venter's operation "could be run by monkeys." Other luminaries sniffed that Venter hadn't found anything major, such as the Huntington's disease gene, and that what he was doing was uninspired, unsporting, and a threat to the genome project. "I had three strikes against me," Venter recalls. "I had a radical idea, it worked, and I was an outsider."

Even now that cDNA has become mainstream, many scientists belittle Venter's contribution. "He gets credit for inventing this whole technology—that's blatant nonsense," says Hood. "He has never invented anything. The only thing he deserves credit for is scaling up the process." Retorts Venter: "What really pisses people off is once they see it works, they think: 'I could have done that.'"

Cover Story

But if scientists failed to applaud, the business world took notice. At a time when only a few human genes were known, "Craig offered an approach that might enable you to quickly discover most of the rest," says venture capitalist Wallace H. Steinberg, chairman of HealthCare Investment Corp., which founded TIGR and HGS. "It was not an opportunity that would ever come along again."

By May, 1992, Venter had two $70 million offers: one from Steinberg and one from Amgen. Steinberg was ready to commit only $20 million. But Venter wanted $70 million (later upped to $85 million) for a nonprofit outfit that would let him do the academic work he hoped would boost his standing in the scientific community. Given the tremendous value of the approach, Steinberg says, he had no choice but to ante up. At the same time, he founded HGS to commercialize TIGR's gene sequences and began looking for a CEO to run it.

Enter Haseltine. Even his numerous critics readily admit he is an exceptional scientist. "Bill has a smell for what's important in molecular biology," says NIH virologist Robert C. Gallo, codiscoverer of HIV. In fact, venture capitalist Steinberg had launched several Boston-area companies based on the Harvard virologist's ideas. But he couldn't induce Haseltine to leave the ivory tower until HGS came along. Haseltine took a leave from Harvard to move—with his socialite wife, Giorgio perfume creator Gale Hayman—to Washington.

Meanwhile, Steinberg began approaching drug companies, trying to sell Venter's gene data. Rhone-Poulenc Rorer was one company that
clined. "We couldn't handle all that data," explains one insi
SmithKline R&D chief George Poste, on the other hand, re
nized "a technology that was absolutely fundamental for our
ture competitiveness." Despite widespread skepticism in
drug industry, he persuaded his bosses to sign on. "It was a
gamble," says Stanford University biochemist Paul Berg.

ON-SWITCHES. The colossal question now is: how to go from
hundreds of thousands of gene fragments with unknown f
tions to products. As always, skeptics abound. The DNA cod
those fragments offers "no insights into anything," says H

Some scientists, though, see tantalizing clues in the
quences of the cDNA fragments. They have learned to disc
key features in snippets of genetic code. For example,
pattern, or motif, of individual DNA molecules usually result
a protein attached to a cell membrane, such as a receptor
outside signals. With an unknown gene, says Berg, "it's poss
to make a good guess at the function of the protein it encod
The guess may sometimes be wrong, so HGS fully sequen
scores of its genes, testing the proteins they make.

In addition, academic researchers have been making en
mous strides in probing the DNA of simple critters such
yeast and nematodes, whose genes usually have human co
terparts. When the machines at HGS spit out a new

Mapping the Genome Companies

Pharmaceutical giants and biotech startups are mining the treasures in the human genome. Some key players:

COMPANY	STRATEGY
HUMAN GENOME SCIENCES	Sequencing almost all human genes, then hopes to develop drugs and diagnostics, mostly with partners.
SMITHKLINE BEECHAM	Invested $125 million in HGS to use its sequences to create new products.
INCYTE PHARMACEUTICAL	Sequencing cDNA from many different tissues to find interesting genes. Is selling access to its data.
PFIZER	Paid InCyte $25 million for access to database.
UPJOHN	Signed $20 million deal with InCyte for gene data.
BRISTOL-MYERS SQUIBB	Invested in SEQ and Cadus to develop new sequencing technology and drug screens.
MILLENNIUM	Searching for specific genes that cause obesity, diabetes, asthma, atherosclerosis, and cancer.
HOFFMANN-LAROCHE	Signed $70 million deal with Millennium.
MERCK	Paid Washington University to sequence 200,000 gene fragments. Makes data public.
SEQUANA THERAPEUTICS	Searches family histories and HMO data for genes that cause hypertension, asthma, and obesity.
AMGEN	Sequencing genes to find new drug targets.
TAKEDA	Uses SmithKline and HGS data to develop drugs.

DATA: BUSINESS WEEK

s lifeblood: drug discovery. In the past, drugmakers tested
ısands of chemicals to find one that eased pain or lowered
ɔd pressure. More recently, they have begun to grasp the
erlying biology, finding enzymes and biochemical path-
/s that can be blocked or activated by drugs. But the
y typically has substitute pathways, so drugs often don't
ction as well as expected. With a database
DNA sequences, "you can start with the
set [of genes and pathways] and choose the
t one," says HGS Senior Vice-President for
) Craig A. Rosen.
DNA could help solve another major problem:
earth of novel drug targets. Experts be-
e a database of all human genes must be la-
with clues to previously unknown biochem-
pathways that could be manipulated to
ıt or prevent disease. The trick is finding
m. One clever method is comparing cells
n different organs, or from normal vs. diseased tissue.
en scientists at SmithKline studied stroke in animals, for ex-
ıle, they found more than 20 genes that switched on at the
et of the illness and more than 30 that switched off. Poste
ects the key to treating or preventing stroke lies hidden in
se 50-plus genes.
Similarly, scientists at HGS and TIGR have found that a whole
/ batch of genes turn on when normal prostate cells turn
cerous. HGS and SmithKline are now using the genes to
ke diagnostic tests for spotting signs of malignancy. More-
r, some of the genes could offer new strategies for halting
cer in its tracks. The finding, says Samuel Broder, recently
arted director of the National Cancer Institute, "is fabulous-
nteresting."
/enter is also pushing the frontiers of basic science. In late
y, he will announce the DNA code for the first two mi-
bes ever fully sequenced, offering crucial insights into the bi-
gy of these bacteria. It will also provide a better under-
nding of human biology and disease, since nature reused
st bacterial genes in complex mammals, including humans.
NIH had declined to fund this effort, claiming his cDNA
hod was no match for the task. But once again, Venter con-
nded popular wisdom. "No one else thought it could be
ne," says Nobel laureate and molecular geneticist Hamilton
Smith of Johns Hopkins.
PERILS OF PUBLISHING. Few now doubt that the cDNA ap-
ach is transforming science. But who will reap the commer-
benefits? Haseltine is determined to stay in the lead—even
requires a change in strategy. Originally, HGS planned to
/ primarily on DNA sequences produced by Venter at TIGR.
by 1993, Venter was turning more to basic science—and
faced growing competition from rivals such as InCyte,
ich were also using the cDNA approach to sequence thou-
ds of genes.
So Haseltine changed HGS's course to downplay TIGR's role.
duplicated Venter's sequencing and computer systems on a
nder scale and began churning out 750,000 pieces of DNA
e a day, while racing to find and patent the most important
v genes. He wants HGS to develop some drugs on its own,
p SmithKline make others, and license the rest.
The strategy is risky. For one thing, it has helped create a
ism between the two Gene Kings. Venter's unusual deal with
gave him the right to publish his findings quickly. In return,
got commercial rights to all the genes he discovered. At a
t to his academic standing, Venter initially bowed to pressure
m HGS to delay publishing and to focus only on human
nes. But now, he's making his data public, with major papers
ning out soon. The result is conflict. "Craig feels that HGS ba-
lly repeated what he did and stole the glory," says one com-
ny insider. "HGS sees Craig's desire to publish as undermin-
their commercial position. Now, they're handing over

The Long March to Unravel the Mystery of Genes

DNA PIONEERS CRICK (RIGHT) AND WATSON, LATER HEAD OF THE NIH'S GENOME EFFORT

1953 James Watson and Francis Crick discover DNA's structure.

1966 Scientists finish cracking the genetic code, showing that groups of three molecules in the strand of DNA provide the code for particular amino acids, the building block of proteins.

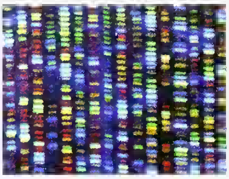
1973 Herbert Boyer and Stanley Cohen of Stanford University make the first clones of genes.

1975 Harvard University researchers isolate and clone the first mammalian gene, a component of hemoglobin in rabbits.

1977 First human gene cloned.

1989 Scientists find the cystic fibrosis gene, and go on to nab genes for scores of diseases.

1990 The Human Genome Project, a 15-year, $3 billion effort to map and sequence all human genes, officially kicks off.



A DIGITAL VIEW OF DNA-SEQUENCING

1990 Craig Venter scales up sequencing of genes, as opposed to "junk" DNA, which makes up 97% of genetic material.

1992 By early 1992, Venter has sequenced parts of several thousand genes. He leaves the National Institutes of Health to set up The Institute for Genomic Research (TIGR).

1994 Merck announces support of a massive sequencing effort at Washington University.

1995 TIGR and its partners have sequenced 85% to 90% of all human genes. Other databases also contain sequences for thousands of genes from bacteria to mice.

2002 Scientists expect all human DNA to be sequenced along with the genomes of a number of plants and animals.

DATA: BUSINESS WEEK

$8.5 million a year and not getting much in return."

Internal clashes, however, are the least of Haseltine's worries. HGS's plan puts the bold startup against a host of competitors, especially Merck. With sequences to more than 4,000 gene fragments now flowing each week from the Merck-funded operation at Washington University into public databases, "Merck has really broken the monopoly," says Baylor University gene-sequencer Richard A. Gibbs. What's more, other genome companies, such as Myriad Genetics, Sequana, Mercator, and Millennium, are trying a different tack. They see no point in HGS's approach of blindly sequencing thousands of unknown genes. Instead, they are studying families in which the incidence of diseases such as diabetes or cancer is unusually high. That way, they can snare the underlying genetic mechanisms, then develop drugs for those diseases. HGS may win the race to nail many genes, argues lennium CEO Mark J. Levin, but his own, more focused str gy will be a faster way of getting drugs to market.

Cover Story

And so, the race is on: the Gene Kings and their partn against the rest of a drug industry, which is straining to ca up. A few skeptics notwithstanding, "nearly everyone is into nomics," says Bear, Stearns & Co. analyst David T. Molo "Everyone is a believer." The first wave of products—new agnostics—may be on the market in a year or two, with po tially important drugs emerging by the end of the decade. then, it may be clear which strategy will carry the day— whether Haseltine and Venter have managed to stay on th thrones. Whatever the outcome, their position as pioneers i medical revolution is already secure.

By John Carey in Rockville, Md., with Joan O'C. Hamil in San Francisco, Julia Flynn in London, and Geoffrey Sn in Boston

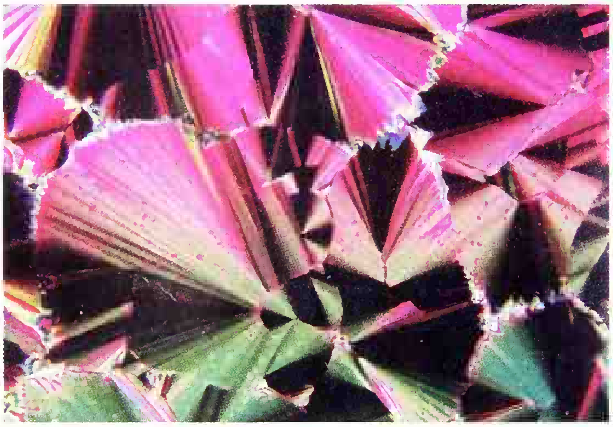
---

UNTANGLING THE LEGAL STRANDS OF DNA

Becoming a Gene King takes more than clever technology. Contenders must navigate the shifting shoals of patent law—a challenge, since no one knows exactly what will be patentable in the future.

Some precedents do exist. Several hundred genes—and their protein products—are currently patented for medical use. But that's a tiny fraction of all human genes. And the few blockbuster patents awarded—such as Genentech Inc.'s on human growth hormone and clotbuster TPA—have sparked fierce court battles.

The looming question: How much information will scientists and managers need to secure a patent? If they find a gene, read its complete code, and show how it works in the body, they can probably win exclusive rights to it—and to the protein it produces, which may have pharmaceutical value. Examples include Amgen Inc.'s two top-selling biotech drugs, Neupogen and Epogen, both of which fetch more than $500 million a year.



LIQUID CRYSTALLINE DNA: EVEN FASTER SEQUENCING IS ON THE HORIZON

ON INSTITUTE OF MOLECULAR BIOPHYS THE FLORIDA STATE UNIVERSITY

SHIFTING LANDSCAPE If genes get easy to sequence, courts may deem the data too "obvious" and deny patents for them

UNCHARTED TERRAIN. But what about drugs based on modifications of the protein? Or drugs aimed at particular parts of the biological pathways the genes control? These are still uncharted territories. And things get even murkier when companies decipher, or sequence, just part of a gene. Human Genome Sciences Inc. (HGS) has tens of thousands of "genes" in its database. But most, in fact, are fragments. Where HGS can demonstrate a useful function—say, as a diagnostic tool—the Patent & Trademark Office will probably grant protection. But each fragment will require individual testing and filing.

The changing landscape has led some to question the value of HGS's vast gene storehouse. When HGS began, "they clearly expected that the gene sequences themselves would have some proprietary value," says Viren Mehta, head of research at Mehta & Islay in New York. Now, he says, this looks like a long shot.

So HGS has shifted its focus from amassing sequences to developing and patenting diagnostics and drugs. "We aren't going to be able to protect 90% of human genes," admits HGS founder Wallace H. Steinberg.

Patent controversies can only get worse. As technology for finding and sequencing genes improves, public databases are being flooded with new gene sequences. Merck & Co.'s operation at Washington University alone is producing more than 4,000 a week. And even faster sequencing methods are on the horizon. Startup SEQ Ltd. in Princeton, N.J., boasts of an approach that will be a thousand times faster and a thousand times cheaper than today's technology.

It's also getting easier to snare full genes from fragments. So if the pieces happen to be in public databases, the Patent Office may consider them to be "prior art," making the full gene unpatentable. The same thing could happen if genes get too easy to find and sequence, says Washington patent lawyer Reid Adler: Courts may deem the information "obvious," and thus unprotectable.

With so much legal turmoil, "the potential is there for enormous patent battles," says Randal W. Scott, chief scientific officer at InCyte Pharmaceuticals Inc. Winning the Gene King throne, it seems, may depend as much on lawyers as it does on science.

Why a group called "The Raving Daves" could be the best thing that ever happened to your software.

The Raving Daves:
part-time band, full-time
PeopleSoft employees.

Sometimes in business, conventional wisdom just doesn't go far enough. New and original solutions are required that not only answer yesterday's questions, but anticipate tomorrow's needs.

Which is why at PeopleSoft we encourage our employees to pursue their outside interests. We think it makes them more creative. And they bring that creativity to the solutions we offer your business. Unlike some other companies that pull their answers out of a box.

In other words, for solutions that are innovative and original, it makes sense to call the people who think that way. PeopleSoft.

IS BELLSOUTH REALLY 'READY TO GET IT ON'?

Its phone turf under attack, the conservative giant begins girding for the interactive futu

If John L. Clendenin, chairman of Atlanta-based BellSouth Corp., ever had any doubts that rivals were invading his turf, they disappeared one day in mid-March. Calling home from a trip to Washington, Clendenin couldn't get through. So he tried his secretary, who told him that a fiber-optic cable in suburban Atlanta had been accidentally cut, blacking out BellSouth's service to the area around Clendenin's house. The culprit: MCI Communications Corp., which was installing new cable to better serve the lucrative region BellSouth now dominates. "It's ironic," admits Clendenin.

These days, cut phone lines are the least of Clendenin's worries. The longtime Bell executive sits atop the biggest—and most profitable—of the Baby Bells. But as telecommunications changes faster than Clendenin can say "Information Superhighway," potential short circuits abound. Competitors are angling for a big slice of BellSouth's juicy market. New wireless technologies could cut into BellSouth's dominance at home. And the company has been slow to jump into multimedia services, even as rivals such as Bell Atlantic Corp. and Pacific Telesis Group sprint into the interactive age.

BellSouth has long been one of the industry's most conservative players. Thanks to its cozy berth in the nation's fastest-growing region—as well as a heavily protected regulatory environment—BellSouth has stuck closely to its core of providing local phone and cellular services. So far, that strategy has paid off: BellSouth's revenues, up 6%, to $16.8 billion, in 1994, were the highest of all the Baby Bells'—as were operating profits. Cost-cutting helped them to nearly double last year, to $4.1 billion.

But the healthy numbers won't last if BellSouth doesn't adjust quickly to the dramatic changes sweeping the telecommunications, cable, and entertainment industries. Digital technology is rapidly expanding the services phone companies can offer, while deregulation threatens to knock down the regulatory walls that have protected BellSouth's vast turf from competitors. Other Baby Bells are grabbing headlines with more dramatic plans to capitalize on the new opportunities. The question now is whether Clendenin's cautious approach will save BellSouth from throwing money at expensive Information Age pipe dreams or simply cause it to miss the multimedia boat.

While BellSouth is beginning to build multimedia "broadband" networks, it isn't spending anywhere near the $16 billion Pacific Telesis plans to ante up 2002. Nor has it invested directly i cable operator, as SBC Communicati Inc. and U S West have done. A while BellSouth recently announce new $500 million programming vent with Walt Disney, Ameritech, and S the effort trails that of a rival Bell c sortium, which recently scored a c by hiring former CBS Inc. Broadcast President Howard Stringer.

OVERSEAS MARGINS. Certainly, some c tion is warranted. With technology cha ing rapidly—industry leader Bell Atla just put the brakes on its plans to of video services to phone customers—Cl denin argues that his go-slow appro will help BellSouth avoid costly erro "We prefer to think of ourselves as di plined, not conservative," says the form Strategic Air Command pilot. BellSou remained mostly aloof from the rec federal auction of "personal communi

tions services" licenses, for which rivals paid a total of $7.7 billion. Although Nynex, Bell Atlantic, and others count on PCS to create cheaper wireless networks that will compete with cellular, Clendenin believes billions will be lost on the unproven technology as the industry shakes out. "The big PCS winners are going to be like the dog that caught the bus," says Clendenin. "They'll wish they hadn't given chase."

Clendenin isn't sold on PCS: He says the auction winners will "wish they hadn't given chase"

Still, with its core business under attack, BellSouth is beginning to shed its conservatism. Clendenin has started investing more aggressively in new ventures, from $70 million allocated to build, in North Carolina, the first statewide Info Highway in the U.S. to its $125 million stake in the Disney partnership. And in wireless telephony, BellSouth has moved more rapidly overseas than any competitor, investing more than $900 million to join ventures in 16 countries in South America, Asia, the Middle East, and Europe. Clendenin prefers to place his bets on fast-growing telephone demand in emerging markets, where gross margins can hit 45%. "BellSouth is very particular and very cautious in deciding where to put its money," says David G. Lindsay, associate partner at Andersen Consulting. "But when they determine it's the right thing to do, they are very aggressive."

SLASHING JOBS. Nowhere is that clearer than in the approach BellSouth has taken in setting up an extensive high-speed data and video network in North Carolina. The North Carolina I-Way—which BellSouth built with partners GTE and Sprint—can carry the image of a cancer victim's brain from a rural hospital in Lumberton, N.C., to the office of cancer specialist Dr. Julian Rosenman at the University of North Carolina Hospital. Maria Domoto, a Japanese professor from the University of North Carolina at Charlotte, uses the network to teach Japanese to high school students simultaneously in three cities.

By providing such services first to state institutions and universities centered around North Carolina's Research Triangle, BellSouth claims it has generated strong revenues—and profits—from the start. It recently won a contract to move the technology into Kentucky and has plans to sell the network to other states as well. With the states as anchor tenants, BellSouth then hopes to offer the technology to commercial customers.

Even as it gains customers at the high end, however, BellSouth risks losing them at the low end as new rivals hit its home turf. Clendenin is slashing costs. Over the past two years he has trimmed 10,200 jobs and is expected to cut BellSouth's telephone workforce by an additional 15,000 positions, to 56,000, by 1998. Since late 1992, BellSouth has also shuttered 70% of its 288 operations centers as it consolidated inefficient field offices into more centralized service centers. The upshot: Operating costs, which had been growing rapidly, stayed steady last year. "The competitive game is coming," says F. Duane Ackerman, BellSouth's COO. "We're ready to get it on."

So, too, are the new competitors. Indeed, U S West has already begun its onslaught in Atlanta. After buying two local cable companies with nearly 500,000 customers last year, it's spending $300 million to upgrade its network to carry cable and multimedia offerings. If Georgia opens up phone competition this year, as expected, U S West could soon be competing for customers in BellSouth's hometown. "We expect to move quickly and aggressively," says Steven E. Andrews, president of Southern Multimedia, U S West's Georgia subsidiary. "I hate to lose. I'm planning to win." And long-distance rivals Sprint, AT&T, and MCI are also set to attack local phone markets. Along with newcomers—from cable operators to giant Microsoft Corp.—all want to compete with the Bells.

A TORTOISE SPEEDS UP

THE INFO HIGHWAY With partners GTE and Sprint, BellSouth has built the nation's first statewide Information Superhighway in North Carolina, allowing hospitals, universities, and other institutions to transmit video and data over cable. Launch of commercial services is planned.

ENTERTAINMENT After months of negotiations, BellSouth, Disney, and two other Baby Bells recently agreed to invest $500 million in a joint venture to produce interactive entertainment programs that will be distributed through their phone lines as well as cable systems.

MULTIMEDIA BellSouth is building the system to run a long-awaited trial of new interactive multimedia services in an Atlanta suburb. By fall, BellSouth plans to deliver movies on demand, video games, and shopping over its high-capacity telephone wires. Eventually, 30 cities may join in.

BellSouth will also have to scram
if it hopes to keep up in the multime
race. While multimedia trials, such

BUY 'EM OUT, THEN BUILD 'EM UP

LBO firms are consolidating even mom-and-pop outfits

Back in 1985, leveraged buyout firms were poring over spreadsheet databases looking for companies to buy and bust up. Now, many of those same firms, plus a whole new crop of others, are employing a strategy that's just as profitable and probably more productive: They're scouring the country for companies to buy out and build up.

Using a technique known variously as "platform investing" or "leveraged buildup," buyout concerns are jump-starting the consolidation of dozens of highly fragmented, inefficient, mom-and-pop industries. Sometimes, investors and entrepreneurs claim, they achieve returns that approach or exceed the 30%-plus levels earned by the LBO-breakup crowd in the 1980s.

COMMON THREAD. These mostly service-sector industries range from funeral homes, golf resorts, and health clubs to landfill sites, medical practices, and antenna towers. If there is a common thread, it is that these fields have traditionally lacked strong management and surplus capital. For the most part, they are industries where consolidation can yield big economies of scale that can be recouped by investors. Says Carl D. Thoma, co-founder of Golder, Thoma, Cressey, Rauner Inc. (GTCR), which pioneered these transactions: "It's one of the few niches t where you can ge above-average retu

While consolida of U.S. industry nothing new, sev recent forces appea be driving this wave of grassr combinations. Fir the scarcity of la undervalued pu companies where q gains can be real through LBOs breakups. Anothe the vast amount of vate equity capital lately has been marked by public p sion plans for nontr tional investme Equally important, the Informat Highway has not only created en industries that can benefit from cons dation but has also provided ways manage service businesses from cen locations.

MAGIC NUMBER. The transactions ty cally work this way: Investors bu small company—usually one with more than $15 million in revenues—t serves as a "platform" to which sma companies in the same industry can added. Because big investors don't u ally chase these companies, they can bought for less than five times cash fl compared with six times cash flow higher for more competitive deals. Wi each new acquisition, the compa wrings out more savings and boosts leverage from, say, 50% debt to as mu as 75% or more. And within a f years, backers hope, the company w expand to the magic $100 million revenue threshold where they can successfully take it public.

To be sure, the road to $1 million in revenues isn't alwa smooth. Investors have fou that consolidation simply does work in some industries. The dogs: dry cleaners, service s tions, and restaurants. Says S phen Galante, editor of *Priva Equity Analyst*, an industr newsletter: "Either the econ mies aren't there, or they do lend themselves to centraliz management."

Chicago's GTCR, which beg packaging small companies in t early 1980s, now has about $4 million invested in such ventur says Thoma. Its first and m prominent coup was Paging Ne

Gains from Bulking Up

INDUSTRY	KEY BENEFIT OF CONSOLIDATION
ANTENNA TOWERS	Frees up capital and management time for wireless communications operators
FUNERAL HOMES	Yields greater discounts on coffins, supplies, and equipment
HEALTH CLUBS	Spreads regional marketing and advertising costs over more facilities
LANDFILL SITES	Lets operators cope with the new environmental and regulatory demands
PHYSICIAN GROUP PRACTICES	Reduces overhead and costs of medical procedures

DATA: BUSINESS WEEK

k Inc. (PageNet), which began as a
ll acquisition in 1981 and now leads
pager industry. Others include
ne Succession Inc., a 135-unit funer-
ome chain; a retail-propane distrib-
; and the nation's second-biggest
ı-care outfit. Says Thoma: "You get
edible synergies by combining three
panies in the same market."

'hat's what's behind the plan by Mc-
vn De Leeuw & Co. to expand San
ncisco's 24-Hour Nautilus Fitness
ıters, a 34-unit chain in which it ac-
'ed a two-thirds stake late last year.
chain is now the dominant player
Northern California, but the firm
ıts to develop it into the nation's
2 gym in two years. (Bally's Health
Tennis Corp. is No. 1.) McCown De
uw is currently looking into heating
air-conditioning supply, and direct-
rketing.

(E HERDING CATS." While the move to
rge health-maintenance organizations
hospitals is well under way, the con-
dation of group physicians' practices
specialty companies has barely be-
ı. One force behind the creation of
ionwide physician companies is Welsh,
rson, Anderson & Stowe, a New York
ıture-capital and buyout firm that has
ested in six such companies. Two of
m—MedCath Inc., a cardiology-care
npany, and EmCare Holdings Inc., an
ergency-care-management concern—
nt public in December. Two others,
luding American Oncology Resources
., a collection of 10 group practices,
in registration.

Deals involving doctors are not al-
ıys easy to bring off. "Managing phy-
ians is like herding cats," says gener-
partner Russell L. Carson. But the
onomics are still powerful. Besides
hieving cost savings through increased
rchasing power, standardized proce-
ıres, and lower malpractice-insurance
emiums, these companies are in a bet-
r position than single group practices
compete for third-party-payer con-
acts, Carson says.

MedCath, which started in 1988 as a
obile heart-diagnostic firm, has more
cently focused on cutting costs by in-
grating cardiology practices with spe-
alty heart hospitals. Last year, says
ephen R. Puckett, chairman and pres-
ent, the company acquired its first
actice—of 45 doctors—and in Octo-
er, it expects to open its first hospital.
his strategy, he says, will cut labor
sts to 26% of revenue, compared with
5% at some general-care hospitals.

Build-up deals have their share of
ilures. Brentwood Associates, a 25-
ear-old buyout firm in Los Angeles,
aims successes in the cellular-communi-
ation and trade-magazine businesses.
ut general partner William M. Barnum Jr. admits that its Acme Holdings Inc., a troubled equipment-rental concern in the Sunbelt, has not fared so well. Battered by recent California recession, among other woes, he says, the company last year defaulted on its $78 million in junk bonds. One lesson, says Barnum: "Geographic diversification is something you should strive for."

As it becomes more popular, the build-up game could become as risky as the bust-up game of the 1980s. But because of its more agreeable impact on acquirees, building up is likely to be a lot more beneficial for dealmakers' images.

By Phillip L. Zweig in New York

AT THE FOOD CHAINS, IT'S ALL GULP AND SWALLOW

The hottest action in service industry deal-making these days is down at the supermarket. Such big-time investors as Kohlberg Kravis Roberts & Co., George Soros, and Leon Black have been riding a wild wave of acquisitions in recent months. Some of the buyouts are buildups, where the owners hope to cash in on the classic benefits of market concentration: economies of scale, knocking out smaller, weaker competitors, and carrying more clout with suppliers.

In recent weeks, KKR has agreed to pony up $1.2 billion for Bruno's Inc., a 254-store grocery chain in Birmingham, Ala. A few days later, KKR's Stop & Shop Co. unit said it would merge with Purity in North Billerica, Mass. And earlier this year, Los Angeles' Yucaipa Cos., with strong financial backing from Soros and Black, said it would buy Chicago's Dominick's Finer Foods Inc. for $750 million. Yucaipa is also doing buildups. Over the past eight years, it has acquired numerous small local chains and is consolidating them into a few big ones, mainly units of California's Ralphs Grocery Co., with which Yucaipa has recently merged in a $1.5 billion deal.

Why the sudden flurry of deals? It's mainly caused by market conditions: low multiples, low inflation in food prices, and new technologies. "The time has never been better," says Yucaipa Chairman Ronald W. Burkle. "With technology, there are a lot of things we can do now that would have been impossible a few years ago."

WAFER-THIN MARGINS. Like Wal-Mart Stores Inc. and Toys 'R' Us Inc. before, supermarket chains are turning to huge automated satellite distribution centers to drive down costs. At some megamarkets, such as Yucaipa's Food 4 Less chain, distribution centers have been done away with altogether in favor of automated racking systems at the stores. Big chains with strong cash flow are also investing in sophisticated information systems that handle everything from targeting advertising by studying consumer buying patterns to linking up with frequent-flier programs.

THE RIPEST, TASTIEST FRUITS

BIG AND JUICY: *Takeovers bring economies of scale*

ALAN LEVENSON

Burkle insists that more consolidation is on the way. One reason: Groceries make their money on wafer-thin margins—just 1% to 2%. So because there are economies of scale, larger chains fare better. "There's only room for very large or very small speciality chains," says James S. Schmitt, an analyst at Westcountry Financial. "Middle-sized companies are getting squeezed out."

As the big players keep rounding up more and more chains and keep streamlining, they can feel confident that their cash flow will steadily increase. "People have to eat," says KKR general partner Paul E. Raether. But for quite some time to come, the biggest bites will be taken by the dealmakers.

SHAREHOLDER REVOLTS

THE BEES IN SALLIE MAE'S BONNET

Irked investors press for change at the student-loan marketer

The Student Loan Marketing Assn.'s 1994 annual report opens with a simple but unwittingly prescient phrase: "Times change, and we change with them." The quotation refers to the Washington (D.C.) company's efforts to adapt to a Clinton Administration program for direct government loans to students—a frontal attack on the core business of the congressionally created but shareholder-owned company known as Sallie Mae. Recently, though, the report's language has taken on new meaning: Dissident shareholders are calling for a major overhaul of the two-decades-old company.

On Apr. 10, four investors, including two former Sallie Mae executives, announced they would run for seats on the company's 21-member board. And on Apr. 25, the dissidents, led by former Sallie Mae Chief Operating Officer Albert L. Lord, said they may add four more names to their slate before the annual meeting this month, a sign that they believe they have substantial investor support. They have good reason: Sallie's stock price has plummeted from $74.50 in 1993 to $39.75, while profits slumped 6% last year, to $403 million. "Times have changed, and this company hasn't changed at all," rails one major institutional investor, mocking Sallie's claim. "There is incredible investor dissatisfaction."

Shaking Up Sallie Mae

Dissident shareholders' ideas for restructuring

- **SLIM DOWN** the company's $54 billion balance sheet, partly by dumping low-yielding investments
- **SPIN OFF** the healthy loan-servicing operation
- **BUY BACK** more stock than the 3-5 million shares already planned
- **CUT OUT** some operating expenses, including fees to lobbyists and consultants

That's a big change from Sallie's salad days. The company's mission is to provide liquidity to the student-loan market by buying loans from banks that make them. Sallie and its shareholders profited handsomely in the 1980s and early 1990s, in part because an implicit government guarantee enables the company to borrow at very low rates. But the company's profitability—and hefty salaries for executives—eventually made it a target in Washington.

In 1993, the Clintonites pushed through Congress the direct lending plan, uring it would be simpler for stude and cheaper for taxpayers. Direct ernment student lending is expectec rise to 40% of the market in the 19 96 academic year from a mere 5% the current year. The Administrat also has slapped onerous new fees Sallie, hurting its margins further.

Lord thinks the company needs a jor strategic shift to regain its footi In some ways, he's a surprising in gent. He and Sallie Mae CEO Lawre A. Hough were friends as they worl their way up the ranks. They live t miles apart, and their families h spent Christmas Eves together.

"POTENTIAL RETRIBUTION." Lord left company in January, 1994, though, part because of differences with Hou That split reflects the issues Lord now raising. He is calling for Sallie sell some of the student loans on books. "We should have been securi ing loans two years ago," he declar He also would shrink the company's billion investment portfolio and consi spinning off its loan-servicing operati He thinks Sallie could then use the p ceeds to buy back even more sha than the company now plans, boost the stock price. Sanford C. Bernst & Co. analyst Jonathan Gray says su moves make sense. "All of these id should be looked at," he says.

Hough says he is looking for long term solutions. He sees Sallie's real s vation in removing all ties to the g ernment. He figures that as independent entity, the company co aggressively pursue new business. A he warns that federal policymakers, w would need to approve full privati tion, could view a spinoff of the serv ing operation as an attempt to circu vent their authority. "The reality is invites potential retribution," he say

Even so, Hough is showing a n feistiness. On Apr. 14, Sallie sued t Education Dept., arguing that a imposed in 1993 is illegal because doesn't apply to other holders of s dent loans.

Some of the dissidents are enco aged by Sallie's newfound chutzpah. B they don't think it's enough. The race on to prove who is best suited change Sallie's direction. Already, t stock has risen 10% since the boa slate was announced. Regardless which side emerges victorious, Sal Mae investors may be the real winne

HOLLYWOOD ADVENTURE OR DIEHARDS ONLY?

e payoff from Andy Vajna's Cinergi may not thrill investors

ndy Vajna has always loved a good adventure. The 50-year-old Hollywood producer still regales friends h stories of how, as a 12-year-old dur- Hungary's 1956 uprising, he crawled ough the snow to escape Soviet pers. Since 1981, Vajna's adventures e been played out on the big screen the likes of Sylvester Stallone, Arnold iwarzenegger, and Mel Gibson. Big rs. Big budgets. And if his former npany, perennially cash-strapped *mbo* producer Carolco Pictures Inc., is indication, big problems.

Now, Vajna, who in 1989 launched a v company, Cinergi Pictures Enter- ment Inc., is asking the public to 1 him in another adventure. In late ril, Cinergi's management team and tWest Securities Corp. are expected begin a road show to trumpet a 3 lion-share secondary offering to raise expected $30 million.

LLYWOOD DUSTBIN. Cinergi's profit formance hasn't been as big as Vaj- s stars and budgets, though. He had take $6 million in write-downs last ır for such flops as *Renaissance Man* 1 *The Color of Night*. In 1994, after 2 million in losses in the previous ee years, the company earned $2.9 lion on revenues of $109 million. Still, nergi's stock price has inched up past t on advance buzz about two mus- -bound flicks scheduled for this sum- r: Bruce Willis in the third *Die Hard* stallment, *Die Hard With A ngeance*, and *Judge Dredd*, a futuristic cop movie starring *Rambo* alum Sylvester Stallone. Cost: $160 million. Stallone and Willis will each get nearly $15 million. Vajna himself draws a $1 million annual salary, up to $250,000 annually in producer fees, and 3% of the films' revenues after paying back production and marketing costs.

CINERGI: ONE FOR FOUR

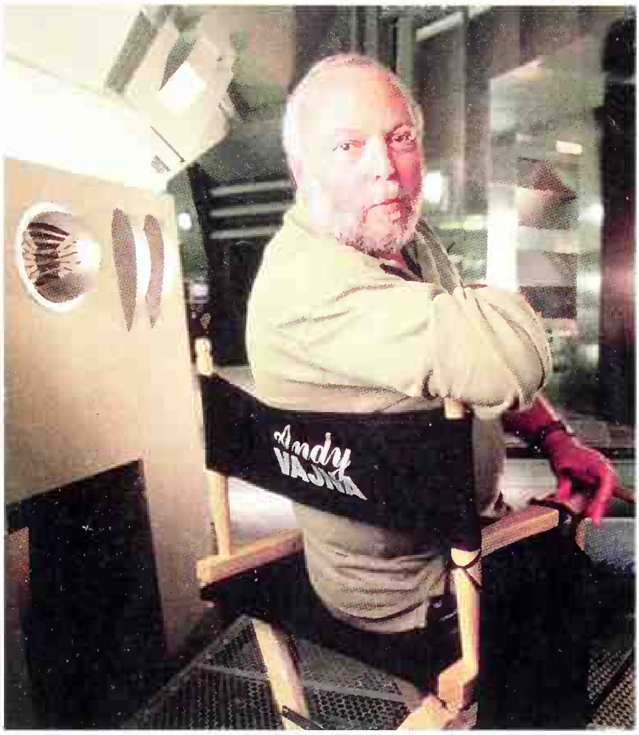
	YEAR	BUDGET	BOX OFFICE
		MILLIONS OF DOLLARS	
EDICINE MAN	1992	$40	$45
OMBSTONE	1993	28	56
ENAISSANCE MAN	1994	35	24
HE COLOR OF NIGHT	1994	35	20
UPCOMING			
IE HARD WITH VENGEANCE	May 19	$83	
UDGE DREDD	June 30	76	
HE SCARLET LETTER	Fall	45	

DATA: *THE HOLLYWOOD REPORTER*, BW EST

It's not clear how much money will be left to trickle down to investors. "They're probably going to be big films," says John Krier, president of box-office analyst Exhibitor Relations Co. "But they'd have to do nearly $200 million to recover their costs." With a summer already loaded with such heavy action flicks as *Batman Forever* and *Crimson Tide*, that's unlikely.

Cinergi executives, who declined to comment for this article, see things differently. Their risks, they contend in Securities & Exchange Commission filings, are minimal since most of the costs have already been advanced from U.S. and foreign distributors. Walt Disney Co. has agreed to put up nearly one-third of the costs for Cinergi's next 21 big-budget films in return for 15% of the take from the U.S. and Canada.

Yet the dustbin of Hollywood is littered with such independents as Dino DeLaurentiis, Weintraub Entertainment Group, Cannon Pictures—and Carolco, which Vajna left in 1989, a few years before a big debt-financed expansion pushed the company near the brink of bankruptcy. Reeling from the delay of its own big-budget film, the $75 million *Cutthroat Island*, Carolco said on Apr. 17 that it didn't have "sufficient cash resources" and was considering a Chapter 11 filing.



POST-*RAMBO*: *Vajna's stars are huge, but profits aren't*

MITCH JENKINS/KATZ/SABA

Vajna, who collected $70 million in cash and stock when he left Carolco, has insisted he won't repeat Carolco's mistakes. His executives have told investors they will keep overhead and debt under control. To show that Cinergi isn't Carolco II, the company's compensation committee made Vajna give back a lucrative fringe-benefit package that included a $1,000-a-month car allowance, use of a yacht during the Cannes Film Festival, and even a first-class ticket for his longtime girlfriend when she accompanies him on business trips.

FLYING MOTORCYCLE. In making movies, though, Vajna isn't exactly cutting corners. He ordered up an extra $3 million special-effects image of Stallone riding a flying motorcycle as he battles villains in *Judge Dredd*. Vajna agreed to pay Demi Moore $5 million to star in *The Scarlet Letter* later this year, bringing to $204 million the company's tab for its three big 1994 flicks. Unable to get foreign buyers to foot the entire bill, Cinergi anted up $28 million of its own funds. And Vajna agreed to finance director Oliver Stone's $43 million *Nixon* epic when its initial backer refused to go over $35 million. Bolstered with a $150 million line of credit arranged last summer with Chemical Bank, Vajna wants to increase from three to five the number of films he'll make each year.

Vajna's most hair-raising adventures in coming years, though, may be not on the silver screen but in Cinergi's balance sheet.

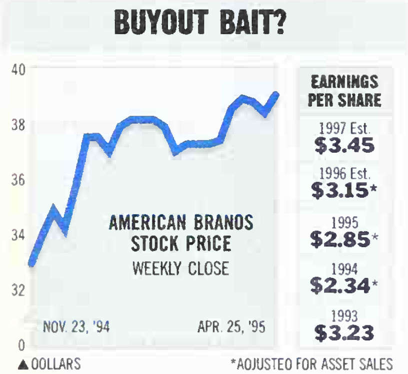
SELLING FRENZY AT AMERICAN BRANDS

When American Brands (AMB) first-quarter earnings, announced on Apr. 24, failed to meet the Street's consensus estimate, the stock headed up—instead of down. That was no fluke: Several savvy money pros insist that the stock has been on the rise for one particular reason: American Brands is buyout-bound, unless it continues selling off its assets. They figure the shares, currently trading at 39, are worth 55 to 60.



DATA: BLOOMBERG FINANCIAL MARKETS, GABELLI & CO.

One of the few remaining giant conglomerates, American Brands in December sold its American Tobacco Co. unit to Britain's BAT Industries for $1 billion. And in January, it sold its Franklin Life Insurance division to American General for $1.17 billion.

A conglomerate based overseas, says a New York takeover investor, is contemplating making a bid to buy American Brands, whose assets are valued by Gabelli & Co. analyst Bob Leininger at 58 a share. This prospective suitor usually buys asset-rich, under-managed companies and then sells off some of the assets. Another interested party is a group that specializes in leveraged buyouts. This group puts the value of the company at 60.

American Brands has yet to sell Gallaher, whose brands—including Benson & Hedges and Silk Cut cigarettes—control nearly 42% of Britain's tobacco market. This is the "division that American Brands will likely sell off next," says Leininger—unless an LBO intervenes.

American Brands three fastest-growing businesses—hardware and home-improvement products, golf and leisure items, and office equipment—currently account for about 33% of operating earnings, according to Leininger. American Brands is also a major player in the distilled-spirits business. This unit includes Jim Beam Brands, the second-largest producer of spirits in the U.S. The unit's products include Jim Beam, the largest-selling bourbon; Gilbey's gin and vodka; and Windsor Supreme whiskey.

American Brands "is an excellent target for an LBO," says Leininger, "because all five remaining divisions lead in their markets and are strong cash-flow generators." These divisions, in fact, don't benefit from any synergistic link among them, explains the analyst. So unless management does it, a buyer will likely come in and break up the company to realize the intrinsic value of the assets. American Brands declined comment.

READY TO SIZZLE IN THE KITCHEN

Investment mogul Avi Glazer is a silent stakeholder who has scored heady 30% to 60% annual returns by taking controlling stakes in companies he sees as undervalued. Some of the outfits whose shares he has bought and sold for tantalizing gains include Harley Davidson, Tonka, and Formica. So what's Glazer's latest catch? One stock he says promises to be a home run: Specialty Equipment (SPEQ), a big maker of commercial and institutional food-service equipment.

The company's Taylor unit is the largest U.S. maker of soft-ice-cream machines, which are used, for instance, at McDonald's restaurants—along with Taylor cooking grills. Taylor also makes "reach-in" glass-door refrigerators, used to display beverages in supermarkets and fast-food places.

Already, the shares have perked up—to 11¾ on Apr. 25, from 9 early in the year. Glazer has taken a 45% stake and describes the company as "one of the clearest cases of unrecognized value on the Street." What's its secret?

Specialty Equipment has posted paper losses for the past three years because of noncash write-downs resulting from the company's emergence from Chapter 11 bankruptcy three years ago. Without them, the company would have earned 59¢ a share in fiscal 1994 and 99¢ in fiscal 1995. In 1996, earnings are expected to increase to $1.25, according to one insider.

Glazer, who started buying when th stock was at 5, says the write-down will end in the current quarter. He expects the stock to hit 20 in a year.

HIGH-STEPPING SANDALS

For a while, the stock of Deckers Outdoor (DECK) took a shellacking o Wall Street because of fear that Nik and Reebok would run it out of business. That hasn't happened. Deckers sandals and shoes have been a real kicker: The stock rebounded from 11 in December to a high of 16¼ on Apr. 25.

One reason: More and more investors are starting to recognize that Deckers' flagship products—Teva sports sandals—have become the industry standard. "High functionality due to patented strapping has made this the sandal of choice for sports enthusiasts," explains Pete Castellanos, an analyst at Cruttenden.

For a long while, the stock was overlooked because Deckers was seen as a one-product outfit—with Teva garnering 80% of sales last year, says Allison Malkin of Evergreen Fund, which has accumulated a 3% stake. She thinks the market has yet to recognize Deckers' other product: Simple shoes, an athletic line that features an understated, casual style.

Indeed, Deckers sales and earnings have been on the rise. Kemper Securities analyst Kevin Dukesherer figures revenues will jump to $105 million this year, up from 1994's $85 million. And he sees the earnings climbing to $1.35 this year and to $1.65 in 1996, vs. last year's $1.09.

One New York money manager thinks that if Deckers sustains its fast growth, either Nike or Reebok may gobble it up as a quick way to step into sandals. In a buyout, he says, the stock is worth 30 a share. Deckers Chairman and President Doug Otto wouldn't say whether he has been approached by Nike or Reebok. Reebok declined comment. Nike didn't respond.

ESSAY

WHO SPEAKS FOR AMERICA?

The Right vs. the news Establishment

Wesley Pruden, the avowedly conservative editor-in-chief of the right-wing *Washington Times*, has spent a cold decade in the shadow of *The Washington Post*. So it should come as no surprise in these days of Republican ascendancy that Pruden takes special pleasure in needling his storied crosstown rival. "I get the feeling that since the election, the top editors at *The Washington Post* are wandering around like a duck hit on the head with a wooden spoon," Pruden says in his deep Arkansas drawl. "They're still trying to figure out what happened."

Post Executive Editor Leonard Downie Jr. responds that his head feels fine, thank you. "That's just silly," he says of Pruden's snipe, insisting that the *Post*'s Capitol Hill coverage has been thorough and aggressive since November. Still, during the first 100 days of the 104th Congress, it is widely acknowledged that Pruden's paper has often had better sources among the GOP than its competition. Circulation has jumped an estimated 9% over the past year and so has its prestige.

Downie is quick to point out that average daily circulation of 94,223 for the *Times* remains puny compared with the *Post*'s 840,232. And despite the *Post*'s lack of growth over the past year, there's little question which paper the great majority of Washingtonians turn to every morning. Yet Pruden's momentum demonstrates a key point about the business of delivering news these days: Many people—conservatives in particular—are convinced that traditional media are not meeting all their needs. And their discontent is seeding a new crop of information sources that have growing pull and power.

Indeed, there's plenty of evidence that TV networks and Establishment newspapers are quickly losing their elite status as the nation's favored opinion-makers. In a free market for information, Rush Limbaugh and Oliver North are competing effectively for time and influence against Establishment news outlets such as *The New York Times* and NBC News. While there's no doubt the old media remain extremely influential, Americans no longer rely on a beloved "Father Cronkite" to tell them what is news. "The gatekeepers have a lot less power than they used to," says Howard Kurtz who covers media for *The Washington Post*.

OUT OF TOUCH

> "Most reporters, when covering the rise of the religious right, can make no human connection with these people"
>
> — DAVID FRUM, Conservative journalist

This has become a vexing source of controversy—espec
ly in light of the tragedy in Oklahoma City. On the
hand, many of the new media are giving voice to ideas t
large swaths of people feel are neglected by traditional o
lets. Media such as talk shows and the Internet offer a tar
lizing populist ideal: a chance to participate in the news.
in the Wild West atmosphere of new media, where journalis
conventions often don't exist, responsible news analysis too
ten devolves into polemical ranting. For every conservat
gripe that the traditional media are too liberal there is a c
responding sense of unease that talk shows empower fri
groups and magnify their unchecked rage.

PANIC AND THREATS. This line of reasoning, of course, is
old as the soapbox. Did Abbie Hoffman's liberal rantings
spire the radical Weathermen in the 1960s? Does Ice
gangsta rap incite violence in urban youth today? The fugit
letter bomber who killed a timber lobbyist in California
pears from his writings to be a left-wing environmental
archist. Was he (or she) influenced by some green polemic
the spotted owl? There is no answer to any of these qu
tions. But the fact remains that the First Amendment p
vents even the government from tampering with the mar
forces that shape media. Panic and threats—the Preside
notwithstanding—do little. A popular backlash against
Gordon Liddy's instructions on how best to shoot a fede
agent would more likely sober much of the talk radio wo

The important thing to remember is that the new n
dia—from *The Washington Times* to the ubiquitous voice

ɔaugh—exist in response to consumer demand. Our infor-on sources mirror ourselves. Technology, from the growth e number of cable-TV channels to the satellite distribution yndicated radio shows to the proliferation of desktop-ished newsletters, has led to a boom in alternatives to the ıs quo. The interesting thing is that most of them share ıin characteristics: They are often interactive, they are un-iguous politically, and they pride themselves on being er." "The mainstream media tend to say, 'This is the the world is,'" posits Terry Eastland, editor of *Forbes ia Critic*. "To the extent that people have gotten tired of , they've become candidates to go somewhere else."

ı defense of the traditional media, most critics agree the big urban dailies and the networks remain the most essionally run, objective sources of news available. Despite ess griping to the contrary, there's little hard evidence they truly do exhibit a "liberal" bias in everyday politi-overage. During the turbulent first 100 days of the 104th gress, for instance, the independent Center for Media & lic Affairs found that the networks slammed House Speak-Newt Gingrich 61% of the time. President Clinton got ımered 62% of the time. Says the *Post*'s Kurtz: "While I k there is bias toward conflict and bad news, it is not ılogical. Everybody gets bashed."

Nevertheless, it's clear that Americans in increasing num-s feel misunderstood by the traditional media. And in ıe cases, the media do exhibit a bias toward what they erstand most, their status quo. In an increasingly di-se country without a monolithic set of values, blind spots an occupational hazard. Critics say demographics alone l to an inevitable disconnection between media and audience. The elite press corps, they point out, consists mostly of well-paid, highly educated urban professionals. They often have a secular, cosmopolitan outlook and tend to socialize with people like themselves. "If you ask a Washington journalist who his friends are, he'll say other journalists," says the Brookings Institution's Stephen Hess, who has studied the Capital press corps extensively.

Conservative critics contend this gives news coverage an urban, secular sensibility. On social issues such as gay rights or abortion, journalists sway to the left. On economic coverage, they stay at the center or swing slightly right, as befits their economic circumstances. This leads to occasional mistakes. In 1990, for example, *The Washington Post* failed to cover a huge pro-life march on the capital that got plenty of attention elsewhere. *Post* editor Downie's apology included the admission that not many *Post* staffers were pro-life. Few, he added, had spent much time with anybody who was.

FIGHTING BLINDNESS. David Frum, a former *Wall Street Journal* editorialist and the author of *Dead Right*, believes that most liberal bias in newsrooms stems from this lack of empathy for conservative points of view. "Most reporters, when covering the rise of the religious right, can make no human connection with these people," he says. "They see them as dangerous." Downie, for one, says he actively fights such blindness: He points proudly to a *Post* series last year that took a close look at the religious right and its concerns.

Covering a group like the religious right, however, is different from catering to the religious right. And the space in between is what gives editors headaches. Partly because it has a large audience interested in gay issues, *The New York Times* assigns a reporter to cover gay and lesbian topics. In March, the paper ran a story headlined "In Sickness and in Health: Building Loving Relationships When One Partner Has HIV." To many Americans—including religious conservatives—such stories would not only be uninteresting, they would be offensive. "If they want to run stories like that, that's their business," says Pruden. "But I know our readers, and they don't want those kinds of stories."

EQUAL TIME

"While I think there is bias toward conflict and bad news, it is not ideological. Everybody gets bashed"

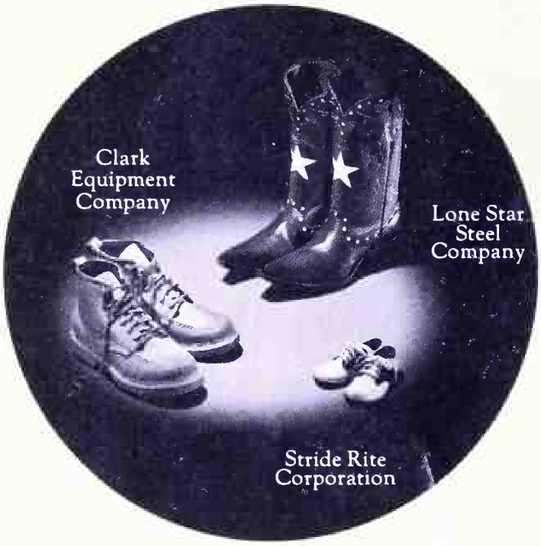
— HOWARD KURTZ,
Washington Post media critic

Increasingly, that's the point. Despite their best efforts, the traditional media can't please everybody all the time—and they shouldn't have to. It's easy to forget that already, more people around the country each day read *The Wall Street Journal* with its polemical right-wing editorial page than any other newspaper. The new media tend to satisfy consumer demand for information sources that confirm their own leanings. "We're on the edge of a new era in journalism," says critic Eastland. "It's more populist and more pointed."

As the *Post*'s Downie points out, many of the new outlets don't even pretend to aspire to the same paradigm of impartial news gathering that mainstream media cling to. Being different is precisely why they draw an audience. Pruden, for instance, makes no attempt to mask his conservatism. Like any editor, he says, he insists on balance within stories. But what gets played on the front page is likely to reflect right-wing thinking. "Our conservative outlook shows up in story selec-

DEFINED CONTRIBUTION/401(k) PLANS • INSTITUTIONAL MANAGEMENT • MUTUAL FUNDS

WHEN WE CREATE A 401(k) PLAN for Our Clients, WE *always* PUT OURSELVES IN THEIR *Shoes.*



EVERY COMPANY HAS ITS OWN UNIQUE CULTURE.
The most successful 401(k) plan is one created by people who understand that. So at Putnam, we work hard to learn the individual needs of every client. And we take pride in having the knowledge and sensitivity to provide a plan that fits them. We believe a 401(k) plan is a matter of empathy, not just economics. And with more and more major companies using Putnam as their 401(k) provider, apparently it's an approach that gets our foot in a lot of doors.

RESEARCH

CALL IT THE SUPERNET

vBNS links supercomputers to tackle monster problems

The coolest new place in cyberspace is so cool, it's not even on the Internet. It doesn't have chat rooms or car ads or sexy graphics files or a user-friendly interface or nodes in every major and minor city. What it does have is blazing speed—connections at up to 155 megabits per second, or more than 10,000 times the speed of that 14.4-kilobit modem you just bought for your home computer.

It's called vBNS, for very-high-speed Backbone Network Service, and it's run by MCI Communications Corp. for the National Science Foundation (NSF).

vBNS blasts data at speeds that make the Net look like the Erie Canal. But only five of the top U.S. computing centers can communicate at that rate

vBNS, which made its public debut on Apr. 24, is a peek into the future of scientific computing. It's not connected to the Internet because browsers aren't welcome. vBNS is strictly for "Grand Challenge" problems that only networks of supercomputers can hope to crack—problems such as predicting global climate change and designing better drugs. vBNS has been quietly getting up to speed for several weeks. It connects five of the most important concentrations of supercomputing power in the U.S. (map, page 94), with lower-speed links for other "meritorious" users via sites in Chicago, New York, San Francisco, and Washington.

MCI Chairman Bert C. Roberts Jr. says winning the contract to operate vBNS helps burnish the high-tech credentials of MCI, which will pump an unspecified amount of its own money into the network in addition to the $50 million over five years it's getting from the NSF. "Those of us who do science have been bored to death by the Internet and its speeds for about two years," says Richard T. Liebhaber, who is scheduled to retire at the end of May from his job as MCI's chief strategy and technology officer. "Our mind-set now is on full-motion visualization of things," Liebhaber says. "For that, you need a gazillion MIPS of processing power."

Because of a production error, most readers did not receive the full text of this story in last week's edition.

Indeed, by networking together two or more top-flight supercomputers, vBNS makes possible some of the largest computations ever attempted. Sure, any single supercomputer could do a big computation alone, but it might be out of date by the time it was completed—as in a forecast today of yesterday's weather. vBNS also promotes collaboration by transmitting ultrahigh-fidelity video images so researchers in different cities can watch a virtual experiment as it unfolds inside a computer. All in all, it has researchers ecstatic: "In problem after scientific problem, it turns out that you're groping in the dark until you get the insights and pictures that you can only get from contemporary computers," says Malvin H. Kalos, director of the Cornell Theory Center, a collection of high-powered iron at Cornell University.

DOUBLE TEAM. One of the first calculations attempted using vBNS illustrated its potential. In mid-April, researchers in San Diego and Pittsburgh yoked together two similar Cray Research Inc. supercomputers—one at each site—to calculate global weather patterns. One computer used software from Princeton University to calculate temperatures and current speeds in the ocean, while the other tended to the atmosphere using software from the University of California at Los Angeles. Every 10 seconds the Crays swapped results and used the data for new calculations. Massaging the two programs so two remote computers could use them together took years of "hand-tuning," says San Diego staff scientist Bilal Chinoy. Eventually, he says, the remote computers will be of different types, so each can focus on the type of calculation it's best at.

The weather at your local airport, rather than over some ocean, is among the VBNS projects planned by the National Center for Atmospheric Research in Boulder, Colo. NCAR's Aviation Weather Development Laboratory hopes to use VBNS to aid aviation by improving the ability to predict killers such as wind shear and ice storms. That project, however, is endangered by expected cutbacks in funding by the Federal Aviation Administration, says William P. Mahoney, the aviation lab's manager.

In Urbana-Champaign, Ill., Erik Jakobsson is studying what he calls "a violent electrical microstorm" at the boundary between a human cell membrane and the objects around it. It can take 1,000 hours of calculations on a Cray supercomputer to create just one simulation of what is happening at the molecular level, according to Jakobsson, a senior research scientist at the National Center for Supercomputing Applications. Such research could help identify environmental hazards by figuring out which chemicals are most likely to be absorbed by human tissue. "Right now we're cooperating with other labs in the mode of sending E-mail," Jakobsson says. "What we're looking for now is the next step: a virtual laboratory where people could interact as though they were in the same place."

By the turn of the century, when the NSF contract ends, speeds on the VBNS should rise sixteenfold, to 2.4 gigabits per second. MCI scientists are hoping to achieve those rates without resorting to untested, experimental technology. In today's network, all the equipment is off-the-shelf. Data fly out of supercomputers and are assembled into Internet-style packets by routers made either by Cisco Systems Inc. or a startup called NetStar Inc. Almost instantly, the packets are further packaged into asynchronous-transfer-mode (ATM) cells by switches from Cisco's Lightstream unit. Then they hit MCI's network, passing through cities such as Denver, Houston, and Washingt
The cells whiz through optical-fiber tra
mission gear from Northern Telecom I

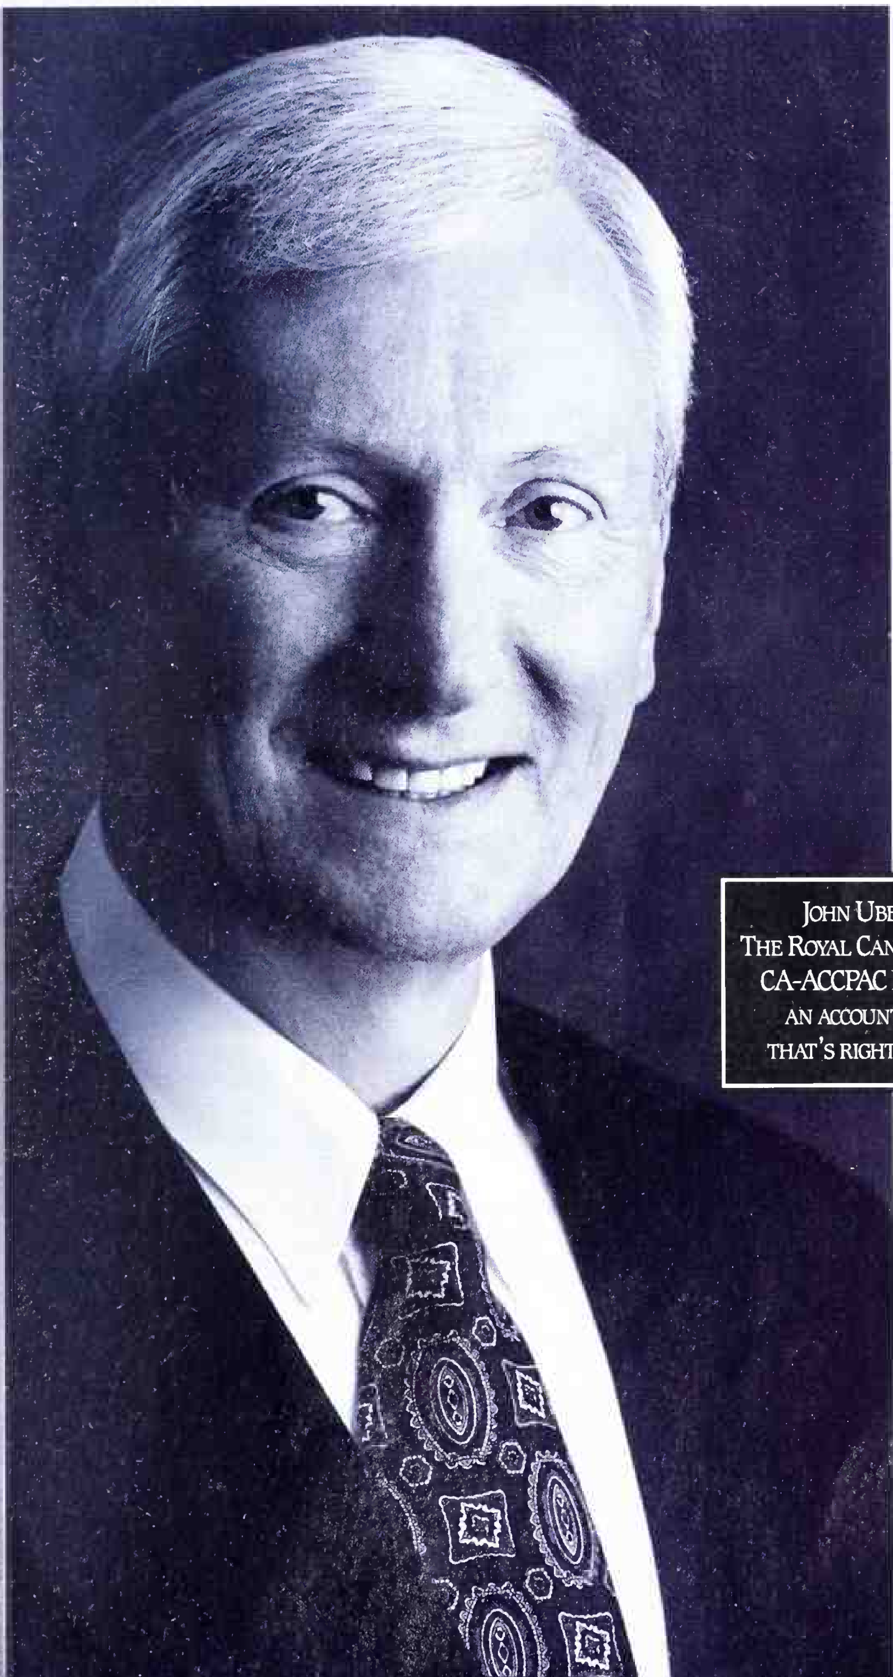
Software Minter.



JOHN UBERIG, CIO OF THE ROYAL CANADIAN MINT, USES CA-ACCPAC PLUS TO DELIVER AN ACCOUNTING SOLUTION THAT'S RIGHT ON THE MONEY.

Domestic and foreign circulation, numismatic and precious metal coins, tokens, medals and trade dollars. Gold refining and bullion production. The Royal Canadian Mint is in the business of making money.

And Computer Associates helps them save it with ACCPAC™ Plus. John Uberig, CIO of the Mint, reports "it costs far less than its mainframe predecessor and has a small fraction of the maintenance fees. We now have more efficient financial information processing at a reduced cost."

CA90s

CA's Computing Architecture For The 90s.

ACCPAC Plus helps the Mint be responsive and profitable. "ACCPAC Plus gives us the ability to access, report and analyze information in the system, with full multicurrency capability and rapid data entry. The powerful reporting in ACCPAC Plus allows access to the financial data in a more complete, understandable and timely fashion."

ACCPAC Plus also enables prompt invoicing and payment processing. All of which makes for efficient customer service and supplier relations. Yet another reason why the Mint has been a Computer Associates customer for years.

No wonder when Mr. Uberig was asked to comment on ACCPAC Plus, his reply was: "It's as good as gold."

Developments to Watch

EDITED BY PETER COY

A NEW SPIN ON DISPLAY SCREENS

THOSE TWIRLING GLITTER balls hanging over disco dance floors may soon have a high-tech counterpart. Advanced Laser Technologies Inc. in Moorpark, Calif., is developing a display for computers and televisions that uses laser beams bouncing off the 36 sides of a small, spinning polygon. A prototype of the Thinline display is monochrome and 4½ inches thick with VGA-quality resolution, but inventor and ALT shareholder Donald C. Conemac says it's possible to make a full-color version that's 1 inch thick, with lenses that narrow the laser spot to give resolution superior to anything achievable with liquid-crystal displays or cathode ray tubes. ALT hopes to use the core technology in other products, including a device that could compress video images 300 to 1.

Those are huge claims, but Advanced Laser's patented approach seems promising. The polygon's facets are tilted so that each one directs light to a different stripe on the screen. As the polygon spins, each part of the screen is lit up. A controller tells the laser when to fire, while electrical pulses delivered to a pair of crystals deflect the laser beams sideways and up and down. An executive at one large potential customer, who declined to be identified, says Advanced Laser has solved problems that stumped other companies that experimented with laser displays: "There's a lot that's not in the patent, I guarantee you," he says.

PLANTS THAT CLEAN A MESS OF MESSES

PLANTS THAT USUALLY DON'T GET MUCH RESPECT—LIKE cattails and ragweed—are coming into their own as low-cost pollution vacuums. Using vegetation to soak up toxic wastes was proposed in 1980 by Rufus Chaney, a U. S. Agriculture Dept. agronomist. But the idea caught on only in the past few years, says Douglas D. Randall, a University of Missouri biochemist and co-organizer of a conference in April that attracted 35 researchers from around the world.

Chevron Corp., for instance, is using cattails to soak up selenium discharged from its Point Richmond (Calif.) oil refinery (photo). Some of the selenium is expelled into the air in nontoxic quantities. Cattails containing selenium can be reaped and spread over soil that's deficient in the metal. That should cost a fraction of the hundreds of millions of dollars that would be required to dredge and bury or burn the sediments, according to University of California at Berkeley plant biologist Norman Terry.

In Ukraine, Ilya Raskin, a Rutgers University biochemist, is testing the Indian mustard plant to soak up radioactive wastes from soil near the Chernobyl nuclear power plant. And in Athens, Ga., Environmental Protection Agency researchers are studying how plants such as parrotfeather and stonewort can soak up and decompose TNT.

WILL SERENITY COME TO THE FACTORY FLOOR?

NEXT TIME YOU'RE FEELI deafened and defeated by noisy vacuum cleaner or frigerator, ponder the gor of Korean temple bells. Th huge, barrel-shaped wond vibrate much like the cyl drical metal casings on no machinery such as refrige tion and heat pump compr sors. By understanding h the bells produce their de sounds, Purdue University gineering professor Wern Soedel thinks he can redu mechanical racket.

To fathom the bells, S del created a simplified ma ematical model, described the June issue of the *Jo nal of Sound & Vibratio* His formulas suggest that bells' rhythmic resonan comes from the uneven dis bution of ornamental carvi on the bells' exterior. Jus slight deviation from ax symmetry creates the be ing effect that pleases the in a mountain retreat but cause hearing disorders the factory floor. By aidin more even distribution mass in machinery casin Soedel's formulas could duce the noise—and may resolve a modern koan: Wh causes the sound of one co pressor clanging....

THESE HEALTH NUTS REALLY DO LAST LONGER

UNIVERSITY OF FLORIDA researchers have bred a peanut that has a shelf life measured in years rather than months and may even lower cholesterol. That's good news for peanut vendors: The nut's reputation as a high-fat snack prompted Delta Air Lines Inc. in 1993 to add pretzels as a healthier alternative snack on its flights.

The new breed, SunOleic 95R, offers not less fat, but a better mix of kinds of fat. Some 80% of its fatty acids are monounsaturated, compared with 50% in a normal peanut. It's lower in polyunsaturated fats and doesn't go stale from exposure to oxygen, which accounts for its longer shelf life, according to its developers, Florida professors Daniel W. Gorbet and David A. Knauft.

Rachel Shi man, a biochem at the Univers of Florida, cond ted a study la year on 18 postmen pausal women. S found that those w were on a low- diet and ate Su Oleic 95R peanu had a 10% decline low-density lipoproteins, "bad" cholesterol. T women's LDL also resisted idation, which leads to art ial plaque.

YOU KNOW ALL ABOUT THE LAST DAY IN JOHN KENNEDY'S LIFE. BUT WHAT ABOUT THE 16,979 DAYS BEFORE IT?

May 29th, 1917. Rose Kennedy of Brookline, Massachusetts gives birth to her second son, John Fitzgerald Kennedy. July 23, 1935, JFK's acceptance letter from Harvard arrives in the mail. August 2, 1943, PT-109, with JFK on board as commander, is sunk by a Japanese destroyer. May 6, 1957, "Profiles in Courage", written by JFK, is awarded the Pulitzer Prize for biography. January 20, 1961, he becomes the youngest elected President of the United States.

At The New Museum at the John F. Kennedy Library, these are just a few of the many important days you'll learn about in the life of our 35th President. As you watch rare footage of a football game at Hyannis Port, stand in the middle of a mock TV studio, listen to real speeches and interviews, and study old photos, you'll hear yourself repeat over and over, "I didn't know that." The fact is, you'll come away just as many Americans did after meeting JFK for the first time: with a renewed passion and vigor for American politics. Why not call us at 617-929-4523 to learn more. Then plan to visit us. It will be a day you won't soon forget.

THE NEW MUSEUM AT THE JFK LIBRARY

Your sales manager says "Quit advertising and give me more people."

Go ahead. But remember, there's not a sales force on earth that can call on everyone.

In large or geographically dispersed markets, it's virtually impossible to locate, let alone call on, all prospects. Even within a single large company, it's tough to reach all potential buyers of your product. And with a sales call costing nearly $300 today, it's certainly not cost-efficient.

But advertising helps find would-be purchasers and gets them to identify themselves. A recent study by the Advertising Research Foundation and the American Business Press proves that advertising translates directly into sales leads. During a 12-month campaign, a product advertised at low levels received 3.25 inquiries per thousand. When advertised at high levels, inquiries reached 5.76 per thousand.

Advertising gets your company's message in front of new, interested prospects. Discontinue advertising and you lose all communication with them.

Don't be sold on such a dangerous act. For more information on how advertising reaches the prospects you need, write the American Association of Advertising Agencies, Dept. Z, 666 Third Ave., New York, NY 10017-4056.

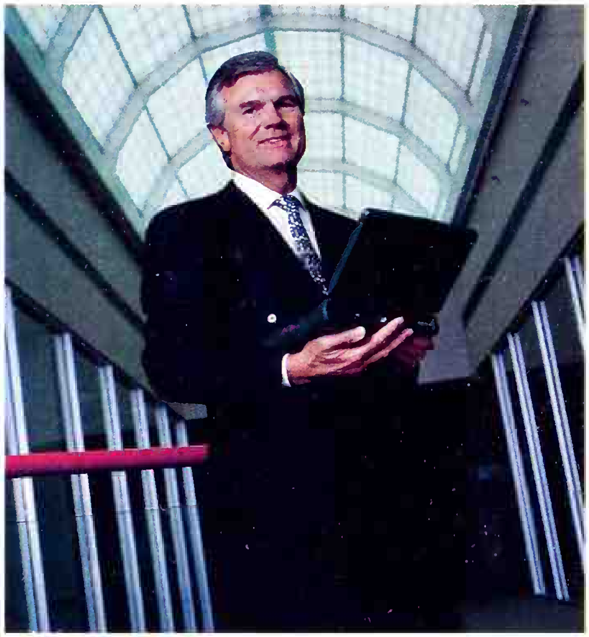
COMPUTERS

WHERE COMPAQ'S KINGDOM IS WEAK

In laptops and home PCs, the monarch doesn't rule

When Compaq CEO Eckhard Pfeiffer took over 3½ years ago, he had a bold but simple plan to put the troubled personal computer maker back on top: slash prices, expand distribution, and snap up market share. It worked better than anyone imagined. Compaq blew by rivals and, with $10.9 billion in revenues, is king of PC makers.

But all is not well around Compaq Computer Corp.'s Houston castle. The company is stronger than ever in its core business of selling desktop PCs and network servers to businesses, but it's underperforming in two critical markets—laptops and home PCs. Because it failed to get new models out, Compaq last year lost the top spot in laptops to Toshiba Corp. In the sizzling consumer market, Packard Bell Electronics Inc. overwhelmed Compaq—selling 787,000 home PCs in the fourth quarter vs. Compaq's 549,000, says CS First Boston analyst J. William Gurley. Unless Compaq performs better in these growth businesses, it may not achieve Pfeiffer's next goal: to reach $30 billion in sales by 2000 and eventually grab twice the market share of its nearest competitor.



NO PANIC: *Pfeiffer is betting on the power of Compaq's brand name*

DIANE MEREDITH; GRAPHIC BY ROB DOYLE/BW

BIG QUESTIONS. It's far from panic time. Compaq's first-quarter sales jumped 30%, to $2.96 billion, while the rest of the industry grew around 20%. But earnings for the quarter were flat, and Compaq stock trades at about 39, 13% off its 52-week high. The big concern is the short-term impact on earnings from a massive transition to new models across the company's product lines. There are also questions about how quickly Compaq can turn around the home-PC and laptop businesses.

So, Pfeiffer is hatching some new plans to get Compaq firing on all cylinders. There's a companywide reengineering effort that includes a new information system to speed up the process of turning signals from the market into new models and getting those models into production as soon as possible. In desktops and servers, it's business
usual: a barrage of new products lar
with advanced features. But in lapt
and consumer lines, Pfeiffer is takin
new tack. He's betting that in both n
kets, brand name, competitive pric
and consistent availability—rather t

vals are well ahead in the move to the faster chip. In laptops, Compaq execs concede that they won't come up with the models they need to retake the market lead until 1996. "I don't know if it's arrogance or someone is asleep at the switch," says Rodney Keller, a former Compaq marketing exec and now a Digital Equipment Corp. vice-president. "It's not that you always have to have the sharpest feature set, but you can only ride brand name for so long."

Compaq's response? "Not everything hinges on whiz-bang technology. You also have to have the product available," says laptop marketing manager Sharon Francia. "We don't want to be waiting around like last year," when shortages of screens and custom chips helped delay the LTE Elite laptop by six months.

As Compaq tries to get the most out of its highly regarded brand name, the company is also out to discredit Packard-Bell's. On Apr. 10, it brought a civil suit charging Packard Bell with reusing parts from returned PCs in new products. Not only did Packard Bell outline the practice in the prospectus for an aborted 1992 public offering, it says it hasn't gotten any complaints. "If there was any customer backlash, we would have heard about it—and we haven't heard a thing," says Alan C. Bush, president of Tandy Corp.'s Computer City superstores, a major Compaq and Packard Bell outlet. Says Packard Bell CEO Beny Alagem: "Compaq's trying to create doubts among our customers."

NO WORRIES? Compaq's biggest threat may not be from Packard Bell but from Intel, which has been instrumental in the home-PC leader's success. By designing prototype motherboards that incorporate its latest chips for PC makers, Intel allowed Packard Bell—as well as Dell and Gateway among others—to bring out new models quickly and cheaply. That's how these companies jumped into the Pentium business ahead of Compaq, which designs its own motherboards. Now, say industry sources, Intel has motherboard designs for multimedia PCs and network servers, too.

Pfeiffer says he's not worried. He compares the doubts now to those that clouded the company three years ago. Back then, few industry-watchers figured Compaq could really take on companies such as Dell Computer Corp. with new low-price products. "I kept meeting with the heads of major resellers, telling them, 'You have to be patient, we'll deliver,'" says Pfeiffer. Next stop: $30 billion.

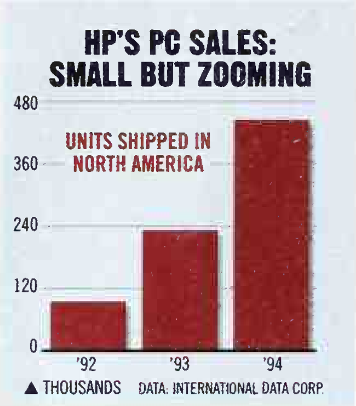
By Peter Burrows in Houston, with bureau reports

HEWLETT-PACKARD HEADS FOR THE HOME

As if Compaq Computer Corp. didn't have enough headaches, it now can count $25 billion Hewlett-Packard Co. among its rivals in the home PC market. The computer and scientific-instruments giant, which has already made a stunning comeback in office PCs, announced plans in mid-April to go after consumers, too.

HP's first consumer PCs, with prices ranging from $1,699 to $2,299, not only undercut Compaq's Presario offerings but very nearly match those made by consumer-PC leader Packard Bell Electronics Inc. The machines are available only in Circuit City stores now, but come summer, HP plans to roll out a whole new series of home PCs through virtually every major consumer-electronics chain. "I really want to get into the top three in retail as fast as we can," says Harry W. McKinney, general manager of the company's Home Products Div.

HP'S PC SALES: SMALL BUT ZOOMING



DATA: INTERNATIONAL DATA CORP.

Already, HP has become a PC force to be reckoned with. Riding the popularity of its laser and ink-jet printer lines, it sailed into computer stores last year. Thanks to four price cuts since August—the last two leading the industry for the first time—HP is growing faster than any other personal computer maker, nearly doubling worldwide sales last year, to 1.2 million units. In North America alone, HP has seen unit sales jump to nearly five times 1992 levels (chart). Selling chiefly to corporate customers, it has become the ninth-largest supplier in just two years. Says International Data Corp. analyst Bruce Stephen: "They're on a roll."

The push into the home-PC market should keep the momentum going. To appeal to consumers who are expected to buy 10 million PCs this year, HP will field machines that sport sleek profiles, bright colors, and fast set-up times—HP's motto is "Fun in Fifteen Minutes." But more than anything else, HP will be counting on its name "HP has a strong reputation for quality, reliability, and technology leadership," says Kenneth W. Beaver, Circuit City Stores Inc.'s national merchandising manager.

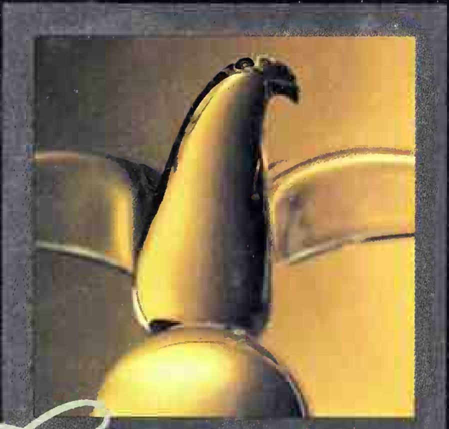
ROUGH MARKET. Brand name is one thing, but consumer marketing is quite another. Heavyweights such as IBM have spent billions of dollars to win over the consumer-electronics crowd. And even though HP has sold calculators to consumers for decades it has never been known for mounting stellar consumer marketing campaigns.

Still, HP has bee quietly working to prepare for the rough-and-tumble home-PC market. For one thing, it n longer has any religious feelings about in-house manufacturing. The company uses SCI Systems Inc. in Huntsville, Ala., to build basic "subsystems" to which H simply adds disk drives and other components. Moreover, HP is nearly finished with creating a "build-to-order" program that keeps inventory costs down and gives retailers the machines that they want, even on short notice.

HP has also managed the tricky process of pleasing dealers. Its direct-sales force lets resellers fulfill large corporate orders. And, so far, HP has avoided the typical retailing *faux pas*—leaving dealers with an excess of slow-selling products or, worse yet, a short supply of hot products. That should give retailers reason to provide HP prominent shel space. Indeed, Computer City President Alan C. Bush thinks a year from now, HP will join Compaq and Packard Bell as the top three home-PC sellers at retail. "The only question," Bush pointedly adds, "is what order they'll be in."

By Robert Hof in Palo Alto, Cali with Peter Burrows in Dallas

Congratulations to the Winners of
The Tenth Annual Business Week Awards
for Excellence in Corporate Advertising



The readers of Business Week have recognized twelve distinguished advertisers for creating the best remembered corporate campaigns of 1994.

The winners were determined based on 1994 advertising readership scores compiled for Business Week by Roper Starch Worldwide, Inc. Roper Starch is an independent research firm and the acknowledged readership measurement standard for the print industry.

Representative ads of the winning campaigns are shown on the following pages.

As Business Week celebrates the tenth anniversary of the awards program, it proudly recognizes these companies for excellence in corporate advertising.

Why settle for one good year?

Six glasses, a toast or two and even the most excellent year is history. Whether it came in a bottle or on a balance sheet.

Unless, that is, you have put into place an approach that can keep delivering vintage year after vintage year. An approach that yields rooted long-term capabilities, not just fleeting short-term results.

At Andersen Consulting, our goal is to give your enterprise the capacity to keep adapting and improving indefinitely. To accomplish this, we can help you create an optimal blending of all your organization's vital resources: strategy, technology, business processes and people.

Because when all of these components work together, you can be sipping success in the present while your future is ripening on the vine.

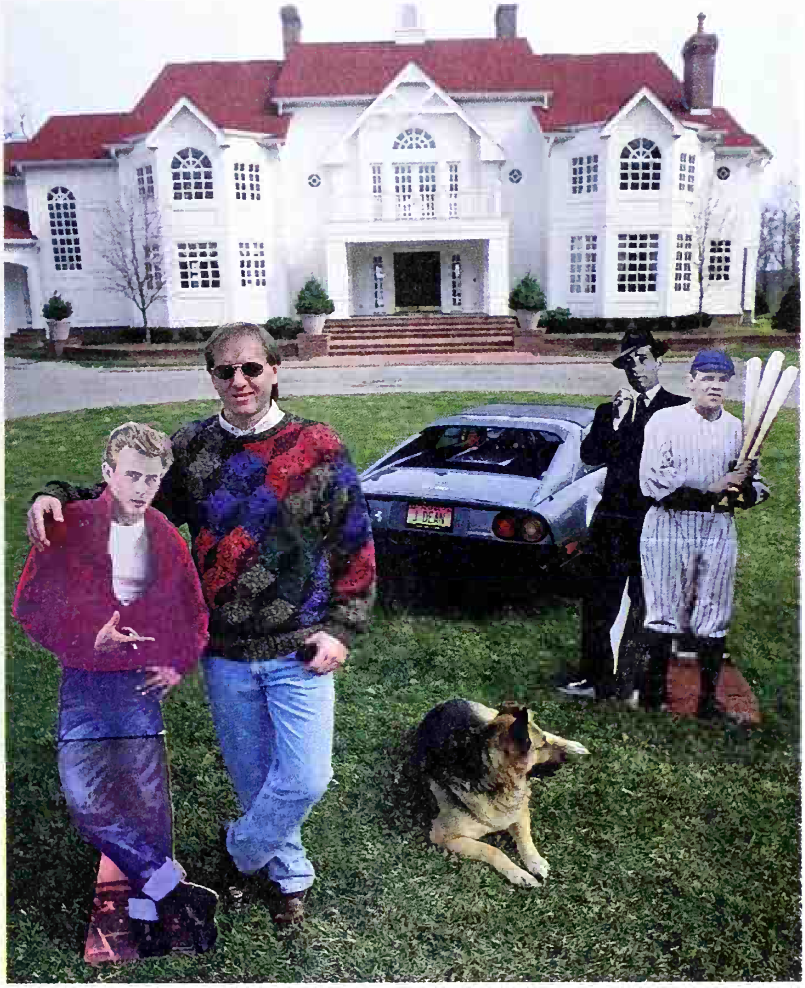
UARDIAN OF THE AMOUS AND THE DEAD

nt to put James Dean on a T-shirt? Better see Mark Roesler first

hey are indelible images of America: James Dean brooding. Babe swinging at the . Vince Lombardi ng a gap-toothed Fred Astaire and er Rogers dancing k-to-cheek.

sters and figurines hese and other rican legends are lly displayed in the es of Curtis Mannent Group. But in a warehouse he spoils of a war g waged over the same icons: James n knockoff dolls China, Spanishe clothes bearing Babe's name, mugs pictures of football t Jim Thorpe, Mal- X hats and trivia es. All were made out the consent of deceased celebrities' lies. "There was a when people were ing anything they ted using Elvis, es Dean, and Babe n to sell their prod-' says Curtis CEO k A. Roesler. "Not nore."



HOOSIER AT HOME: *Roesler is a whiz at nabbing licensing violators*

ROBERT HOWER/QUADRANT

ot if Roesler has anything to say it it. The 39-year-old head of Indiaolis-based Curtis has emerged as the *nt terrible* of a growing global niche ket—enforcing exclusive merchanng rights on the use of dead legs in ads and promotions. His 10--old firm earns almost $10 million a by prowling the world for poachers mericana. Roesler also represents n living celebrities as Sandra Dee, her Whitey Ford, and slugger Har- Killebrew—not to mention the Hollywood "Walk of Fame," the city of Beverly Hills, and Texas' famed auto graveyard, the Cadillac Ranch.

He is the first to tell you it's a rough enterprise that has meant waging ferocious legal battles from Hollywood to Seoul. "We've built our business on being very litigious," he says almost apologetically. And he has succeeded because he fights on legal terrain that he helped establish and knows better than anyone else. In the 1980s, Roesler forced a British company to stop using Astaire's image to market condoms with the slogan "Don't go anywhere without your top hat." In 1992, he duked it out with director Spike Lee before the release of *Malcolm X*. Roesler ultimately won control of the rights to the suddenly ubiquitous "X" on tee shirts and hats for Betty Shabazz, widow of the slain black leader.

VICTORY. But Roesler's business really took off after his 1992 bout with Warner Bros. Inc. Seeing the merchandising potential in its film immortals, Warner filed a $90 million suit against Curtis. The name and likeness of James Dean belonged to it, Warner claimed—not to the actor's family, which had hired Curtis in 1984.

Not only did the U.S. District Court in Los Angeles rule in Curtis' favor but after the firm countersued for malicious prosecution, Warner settled for about $2 million plus legal fees. The victory sent relatives of the famous flocking to Indiana and made Roesler's client list the envy of other trademark and copyright firms (table, page 113). "The word is out," says Humphrey Bogart's son, Stephen H. Bogart. "Mark will get you. He's good. He knows his stuff." Being based in Hoosier country doesn't hurt, Roesler observes: "People don't take you seriously when you're from Indiana, but they trust you."

Indeed, though he's a shark when pursuing licensing violators, up close

When you need help, one thing is certain. It starts with 900-555, the 900 exchange reserved exclusively for business. 900-555 numbers are the fastest way to get in touch with Novell, Lotus, Ricoh, A.M. Best Company and other leading companies for direct access to the business information and technical support you need, whenever and wherever you need it. At prices you can trust. That's 900-555. It's all business and it's only from AT&T. For companies using 900-555, check the list at the right. Or, for a more complete list, call 1 800 655-1366, Ext. 600.

AT&T. For the life of your business.℠

AT&T

er comes across as a soft-spoken, spun Midwesterner. "Mark is a sharp businessman, but he's also laid back. He's always willing to a deal," says Julia Ruth Stevens, 7-year-old daughter of the Bambi- ntil Stevens signed on with Roes- 1992, she never earned a cent her father's name. In 1995, the anniversary of Ruth's birth, his e will earn close to $1 million. er will circle the bases, too: He lly keeps 40% % of any reve- generated.

A CLIENT LIST TO DIE FOR

Some estates on whose behalf Roesler prowls the globe:

HOLLYWOOD Ingrid Bergman, Humphrey Bogart, James Cagney, James Dean, Marlene Dietrich, Greta Garbo, Edward G. Robinson, Orson Welles

MUSIC Buddy Holly, Liberace, Hank Williams Sr.

SPORTS Ty Cobb, Jack Dempsey, Lou Gehrig, Shoeless Joe Jackson, Vince Lombardi, Joe Louis, Satchel Paige, Babe Ruth, Jim Thorpe

HISTORICAL Amelia Earhart, Jack Kerouac, Will Rogers, Mark Twain, Frank Lloyd Wright, Malcolm X

POTATO. To re- Curtis Manage- s increasingly range, Roesler the process of ing its name to Worldwide. With work of 35,000 cts and a state- -art computer ng system, he's g an internation- kus, particularly ia, where intel- al property s aren't well de- d. In Malaysia Japan, he has tened action st apparel mak- r using Dean to eans and shoes ut paying royalties to Dean's cou- nd 90-year-old father.

South Korea, Roesler has pro- a mini-incident between American Korean trade officials by going after People. The company, founded by inent entertainer Joo Byung-Jin, Dean's name to sell men's and en's fancy underwear—and it 't pay royalties. The U.S. Trade esentative's office backs Roesler, nding that his claim is at the heart S. complaints about theft of intel- al property throughout Asia. Joo, ver, is defiant. He has filed a $1 n libel suit against Roesler in Ko- nd, according to Roesler, told U.S. ssy officials that he'll pay for the s "when Korea becomes a colony of United States." The battle has be- a hot potato for the Korean gov- ent, which first ruled against Roes- ut then pledged a review of its mark laws to make sure that for- rs' rights are protected.

rtis is even tangling with U.S. anies overseas. In Australia, it's ved in a tussle with McDonald's for alleged unauthorized use of Dean's image in a "MacTime Rocks On" campaign to sell burgers and fries. "In much of the world," Roesler notes, "James Dean is bigger than Elvis."

In a fitting geographical coincidence, Roesler grew up five miles down the road from Dean's hometown of Alexandria, Ind. The son of the local postmaster, he put himself through Indiana University Law School at Indianapolis by working as a roofer and never set foot out of the state till he was 21. In 1986, he married Amy SerVaas, the daughter of Beurt R. SerVaas, longtime publisher of the *Saturday Evening Post*. The company gave him the job of guarding the copyrights on 322 magazine covers painted by Norman Rockwell. At the same time, attorneys for Priscilla Presley hired him to set up the $100 million-a-year licensing rights for Elvis' estate, a task that took six years. It also put Roesler on the road to riches: He drives a Ferrari and lives in a palatial home on the outskirts of Indianapolis.

MURKY. Not everyone is enthusiastic about his work. While the concept of "rights of publicity" that heirs can claim has become well established in many state courts, just how far back such claims can go remains murky. Unlike trademarks, which expire after a set period, "rights of publicity" have no limit. Indianapolis consumer lawyer Steven R. Hofer contends that licensing firms such as Roesler's are using bullying tactics to extend privacy rights forever. "Elvis, James Dean, and Babe Ruth are part of our heritage," he says. "If entrepreneurs want to put legends on their products and they can't afford to pay for it, their First Amendment rights are being violated."

But Roesler has a major ally in the U.S. Trade Representative's office, which views his campaign as an extension of its global crusade against piracy of intellectual property rights. "As we fix up problems, guys like Roesler go in and police the marketplace," says one senior trade official. And well they should, he adds : "It's our stuff."

GOT THE URGE TO TAKE SOME PROFITS?

INVESTING

Does watching the stock market surge to a new record level week after week tempt you to call your broker and cash in on some of the highfliers in your portfolio? In February, the Dow Jones industrial average topped 4000 for the first time, and, despite red flags such as a falling dollar and weaker consumer spending, on Apr. 24 it closed at a record 4304. Market strategists believe this bull still has room to run. But if you own some of the companies that have led the rally, you're probably itching to get out while you're ahead.

In general, it's best to fight the urge to unload stocks that are performing well. If you sell too early, you not only miss out on future gains but also incur taxes. Even if Congress cuts the capital-gains rate virtually in half this year—as proposed—when you sell a winner, you inevitably have less money to reinvest in a new idea.

NO SENSE. The buy-and-hold strategy has proved the best time and again. Many experts expect a small downturn in the market this summer to "correct" some inflated prices, but they still advise staying the course. "When you add up the costs of commissions, the spread between the bid and the asked price, and taxes, then match that up against a mild 3% to 5% pullback in the market, it doesn't make sense to trade out and take short-term profits," figures Jack Fisher, president of Wilson/Bennett Capital Management in McLean, Va.

That said, there are plenty of good reasons to sell. Maybe you need to raise cash, and it's a question of deciding which stock has the least potential for gains. Or maybe a company's prospects have cooled. And in an optimistic market like today's, some stocks run up so far and so fast that a slide is inevitable.

The key to identifying candidates for selling is to leave aside the larger macroeconomic issues and consider just the company's fundamental strength. And don't focus only on those stocks that have already had a good run. "The sell side shouldn't be that price-driven," says Martin Whitman, manager of Third Avenue Value Fund. "Don't sell anything unless it's grossly overvalued."

The easiest measure for judging a stock's value is its price-earnings ratio. A stock's worth is based on its future earnings potential. If those earnings are small in relation to the price, the stock can be overvalued and its p-e high. To get an accurate reading, you have to compare a company's p-e not with the market average (now at 14.6 based on '95 estimates) but with its industry. For example, a hot tech stock may not be expensive at a p-e of 25, but International Flavors and Fragrances looks pretty pricey at 25

What's Ahead for Stocks

SECTOR	OUTLOOK
BASIC INDUSTRY-COMMODITY Oil, steel, paper	If the economy reaccelerates and inflation fears return, this sector should take off. Chemical and paper exports are rising.
CONSUMER CYCLICALS Autos, retail, lodging, restaurants	Many stocks are cheap and have good long-term prospects. Hotels should benefit from an increase in foreign tourism due to the weak dollar. But remember, this group is tied to the U.S. economy.
INTEREST-RATE SENSITIVE Utilities, banks, brokerages	These stocks began to plummet as soon as the Fed started raising rates. But rates are stabilizing, and some companies are good buys.
CONSUMER NONCYCLICALS Food, soft drinks, tobacco, drugs	Many are leading the market now. Multinationals are profiting from the falling dollar. Plus, U.S. consumers buy these products even if the economy slows. Share prices are lofty, however.
TECHNOLOGY Computers, electronics, semiconductors	Many tech companies are global players. Semiconductor and computer stocks have been booming, and the market could punish them severely if earnings fall short of expectations.

Knie, editor of *The Eq-*
Advisory, a newsletter
short-sellers, doubts IBM
repeat those earnings,
it has done about all
cost-cutting it can. "At
point, IBM has gotten
ahead of itself," he argues.

The entire technology sector has been so hot that some market strategists worry it is vulnerable to a quick chill. "It seems like there are very high expectations built in," says Marc Usem, an equity strategist at Salomon Brothers. Indeed, Microsoft, Intel, and Sun Microsystems have benefited from positive earnings surprises. But disappointing news could reverse the inflows of cash that have propelled share prices.

And don't forget to consider the dividend yield (the overall market's is a low 2.6%) and dividend-payout level (the ratio of dividends paid to earnings) when weeding a portfolio. If the ratio is high relative to the industry, that's a caution signal, since it means there is likely little room to raise the dividend.

Be sure to look at who is buying and selling the stock. If you have a small company that institutions are just starting to buy, it's a good sign. Another is if insiders are purchasing more shares. But don't be too harsh on a company where insiders are selling, advises Harold Levy, manager of First Eagle Fund of America. Since that's often a major part of their compensation, "you have to expect owners to peel off shares every now and then," he says.

Only after you've looked at fundamentals should you consider the impact of any economic news. Try to ignore scary headlines, unless they have a direct impact on the companies you own. Rising interest rates are generally a bad sign for stocks, since bonds may then become an attractive alternative for investors. But you shouldn't get out of the market on news of a rate hike, unless you are heavily into financial and utility stocks, which are interest-rate sensitive.

STEADY STAPLES. There is so much optimism in the market now because strategists believe interest rates will stay low as the economy slows gradually, coming to a so-called "soft landing" from its peak. This prospect has boosted prices of consumer-staple companies, because people buy food, drugs, and soft drinks whatever the economy does. Some consumer multinationals, such as McDonald's and Anheuser-Busch, have prospered because they can participate in worldwide expansion. But consumer cyclicals, such as autos, restaurants, and retailers, are tied to a slowing U.S. economy, and their shares are getting battered.

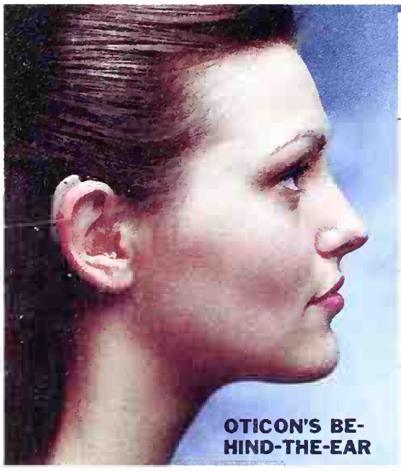
So if you are looking to prune your portfolio, it makes sense to sell defensive stocks that are at all-time highs and buy retreating cyclicals such as paper, autos, and steel. Some of these companies are so cheap that money managers are predicting a wave of foreign takeovers. "I am convinced that, given the very weak dollar, companies in strong-currency countries are going to buy up Corporate America with a vengeance," predicts Whitman.

Selling is easier if, at the time you bought a stock, you set a target price based on the company's fundamentals and economic sensitivity. Then, when it hits the target, reevaluate. "It's not a great idea to start kidding yourself [that] it can go higher," says Murphy. "If there are genuine new reasons to think it can, that's different." And if that's the case, you may actually find yourself buying more of a stock, just when you were thinking about selling. *Amey Stone*

HEALTH

HEARING AIDS GET SMART —AND BETTER-LOOKING

Decades of exposure to loud music, jackhammers, leaf blowers, and other kinds of racket have taken their toll on the hearing of many adults. Yet many who know they have a problem would rather be caught deaf than wear a hearing aid.



OTICON'S BEHIND-THE-EAR

Listen Up

TYPE OF HEARING AID	DESCRIPTION
BEHIND THE EAR (BTE)	Most visible; a case for components hooks behind ear; connects to earpiece via small tube; can be digitally programmed to regulate frequencies so listener can distinguish sounds better
IN THE EAR (ITE)	Sits in the hollow of the ear; needs more maintenance than a BTE aid but can be digitally programmed
IN THE CANAL (ITC)	Barely noticeable; requires frequent battery change and cleaning; cannot be digitally programmed so amplifies all sounds equally

DATA: BUSINESS WEEK

Perhaps they should reconsider. Today's hearing aids are not the unsightly, feedback-generating protuberances that Grandpa used to wear. Advances in technology have made these devices smaller, sleeker, and—thanks to digital programming—better at correcting the most common type of hearing loss, caused by nerve damage.

THIMBLE OR PEA. Hearing aids come in three varieties: behind the ear (BTE), in the ear (ITE), and in the canal (ITC). Those placed in the ear or ear canal are about the size of a thimble and pea respectively—much smaller than devices that house mechanical components in a curved case that hooks behind the ear and connects to an earpiece via a small plastic tube. "Aids today can go so far within the ear that they're virtually impossible to see," says Dr. Mark Ross, professor emeritus at the University of Connecticut and author of several articles on hearing-aid technology.

Aids that fit inside the ear or canal require more attention, however. Their tiny batteries expire as often as every week, and exposure to ear wax causes more frequent repairs. Also, the smallest aids don't have room for the circuitry necessary for customized options. Dr. Robert J. Ruben, chairman of the department of otolaryngology at Montefiore Medical Center in the Bronx, N.Y., notes that with increased hearing-aid size comes greater versatility. People willing to wear a slightly larger device gain "the capability to tune it exactly to their type of hearing loss and hear only what they want to hear."

Until recently, all hearing aids amplified sounds equally, regardless of frequency. Low-frequency sounds, which include background din at a cocktail party and popcorn-crunching at the movies, were always given the same emphasis as high-frequency sounds, such as conversation with friends at the party or between characters on the screen. The result was a lot of noise but few distinguishable sounds. Most hearing loss occurs in the softer, high-frequency range, and this compounds the problem. The wearer of a traditional hearing aid often hears everything but understands little in situations where there is a spectrum of sounds.

The advent of digitally programmed hearing aids about five years ago changed that. These devices use the same technology as computer microchips to customize amplification to hearing loss. Programmable BTE and ITE aids enable audiologists to turn up some frequencies while keeping others at normal input levels. The high-frequency sound of a confidential whisper can be heard even when there's a babel of background noise.

Several programmable hearing aids also have memories that store frequency-amplification configurations for different situations. By push-

THE WEEK AHEAD

ONAL INCOME

ay, May 1, 8:30 a.m. ▶ Incomes bly grew 0.4% in March, on top of a rise in February, says the median ist of economists polled by The w-Hill Companies' MMS International. mer spending likely rose 0.3%, after ary's 0.1% gain.

TRUCTION SPENDING

ay, May 1, 10 a.m. ▶ March outlays ilding projects probably fell 0.5%, me as in February.

SURVEY

ay, May 1, 10 a.m. ▶ The National iation of Purchasing Management's business index likely slipped to 50% in April from 51.4% in March.

NEW HOME SALES

Tuesday, May 2, 10 a.m. ▶ Sales of new houses probably rebounded to an annual rate of 560,000 in March, after plunging 14% in February, to a 551,000 pace.

LEADING INDICATORS

Wednesday, May 3, 8:30 a.m. ▶ The index of leading indicators likely fell 0.3% in March, on top of February's 0.2% dip.

FACTORY INVENTORY

Wednesday, May 3, 10 a.m. ▶ Manufacturers' inventories probably changed little in March, after a 0.8% jump in February. Last quarter's buildup in inventories is sure to lead to production and job cuts.

EMPLOYMENT

Friday, May 5, 8:30 a.m. ▶ The MMS economists expect that nonfarm payrolls rose by a modest 188,000 new jobs in April—less than the 203,000 increase in March. The unemployment rate in April probably remained at 5.5%.

INSTALLMENT CREDIT

Friday, May 5 ▶ Consumer debt likely grew by $6 billion in March. That's less than the $8.2 billion added in February and is another sign of slower consumer spending.

This Week, Online

Business Week presents live conferences with editors and newsmakers. It's your opportunity to ask questions about features from the magazine.

BusinessWeek ONLINE

Sunday

Genetic medicine: How big will the payoff be for patients—and industry? And how fast will the payoff come? Jumping off from the Cover Story ("The Gene Kings") in this issue, two seasoned BW science writers, Correspondents John Carey in Washington and Joan O'C. Hamilton in San Francisco, will be online.

RHETORIC AND VIOLENCE

Say what you will about the vast differences between the liberal '60s and the conservative '90s. The two decades have this much in common: Both were filled with vitriolic antigovernment rhetoric and both saw innocent people killed by bombs set off to protest perceived government tyranny. The actual violence came from the fringe, but the verbal violence was floridly expressed by established social and political figures and organizations. Left-wing fanatics blew up a lab at the University of Wisconsin, but the recipe for making bombs was printed in *The New York Review of Books*. Right-wing fanatics blew up the federal building in Oklahoma City, but the bomb formula was readily available on the Internet.

Language has power, and one message it has expressed lately is that the American government is somehow illegitimate, held hostage by evil elites hostile to the masses. There has been a second message as well: Truth lies in the simplicity of extremes, not in the complexity of the middle. Shouted on TV and radio, printed on E-mail and electronic bulletin boards, published in newspapers and magazines, even voiced in the halls of Congress, this language of alienation and anger has dominated public discourse. There's even a name for it on the airwaves—"sharp-elbow" shows, where guests nail their opponents by using explosive language to paint them as extremists. It is an interchange that admits no complexity of issue or compromise of policy.

It is, of course, absurd to hold public officials and pundits responsible for the lunatic actions of a few individuals.
cians who call for a smaller federal government do not c
a climate for violence. Nor do those who claim that many
suffer without a big government.

But it is the height of irresponsibility for leaders t
that the tone and content of their own public discourse
no role in shaping society. Demonizing opponents dev
them as human beings. Delegitimizing government e
its authority. Describing oneself as a "bomb thrower" n
one a metaphorical ally of those who do throw bombs.

It doesn't help when a Democratic congressman cal
Republican opponents "Nazis" because they want to re
welfare and reduce government spending. It doesn't
when the Republican Speaker of the House describe
Clinton Administration as "the enemy of normal Americ
And it doesn't help when Jesse Helms, the Repub
senator from North Carolina, tells the President that he
ter stay out of his state unless he brings a bodyguard to
tect him.

It is time for the verbal violence to stop, for the go
ment-is-bad rhetoric to end, and for the demonization of
ical opponents to cease. The diligent rescue workers in
homa City are, after all, government employees. The dil
officers who are tracking down the killers work for the
ernment. America lives in the middle, not in the extrem
is time for civility to be returned to our society.

A U.S.-EUROPE TRADE PACT? WHY NOT?

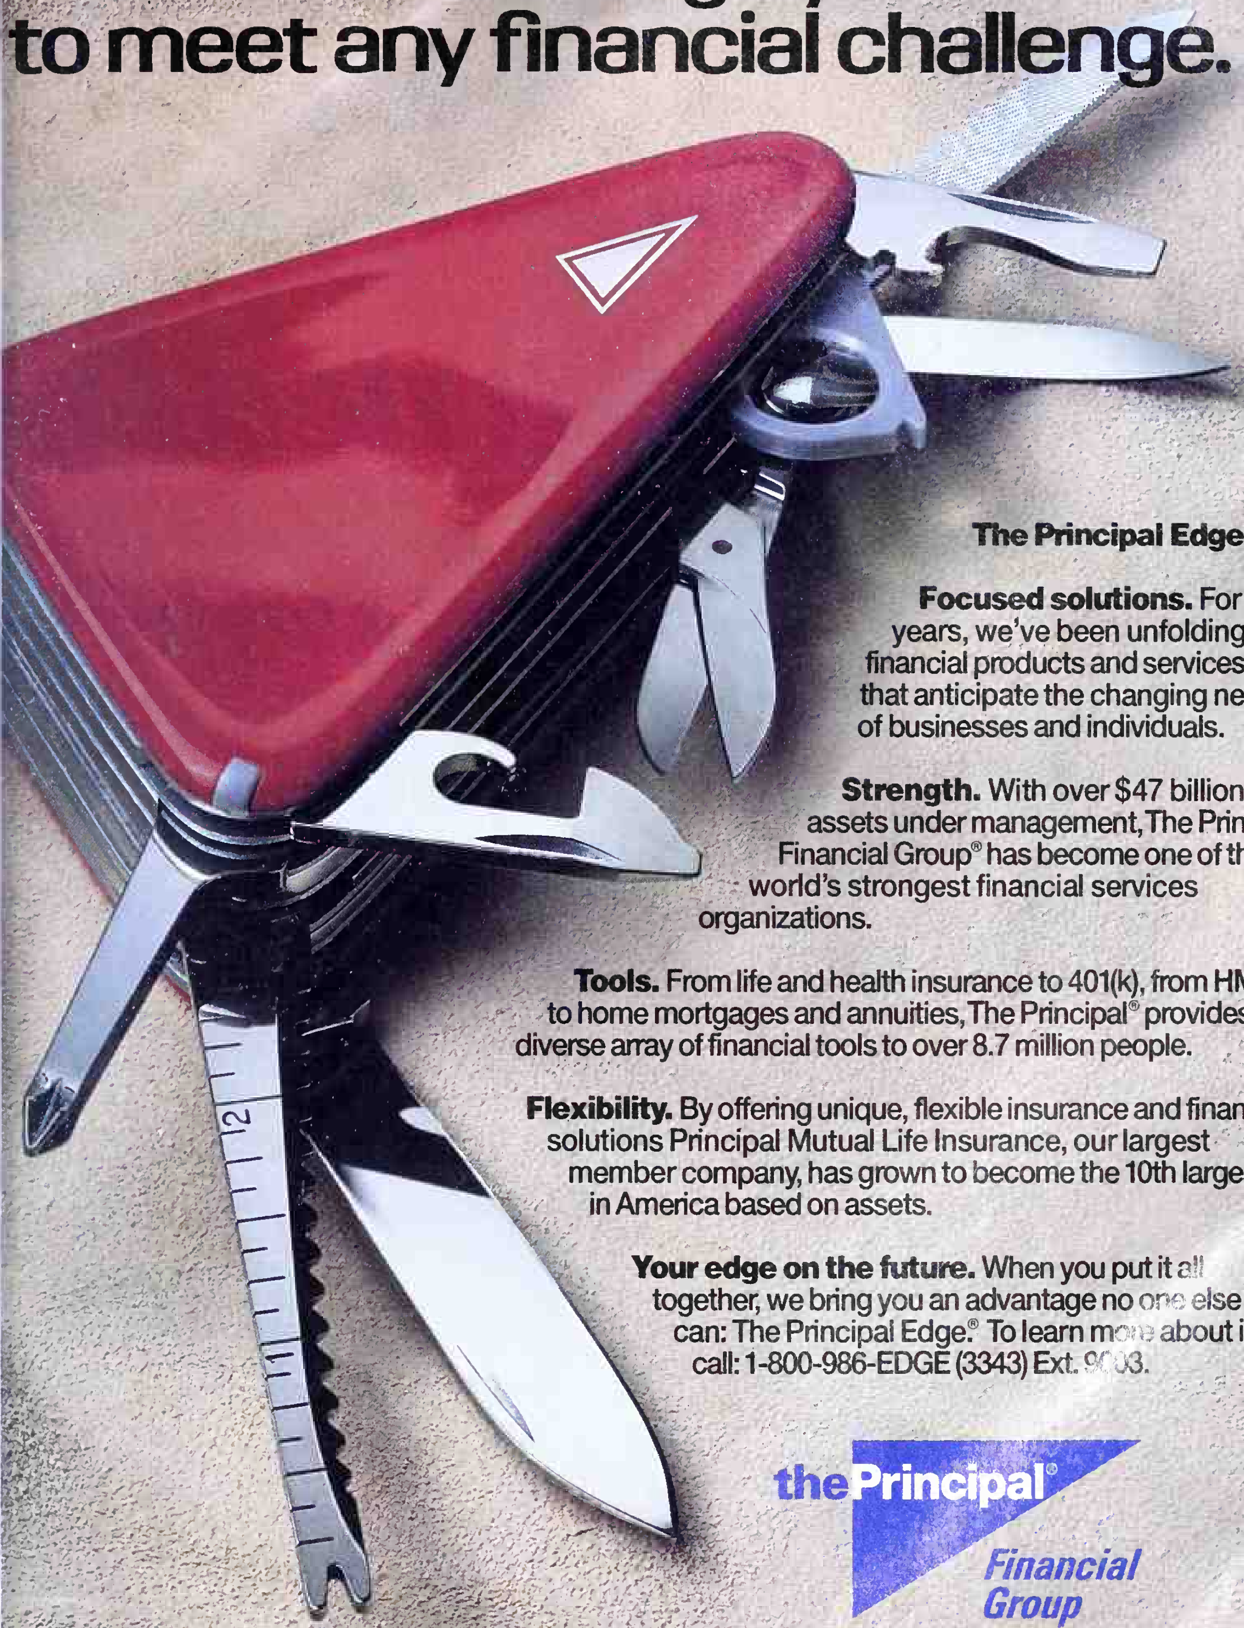
First there was NAFTA. Now there is TAFTA—the Transatlantic Free Trade Agreement. Trial balloons are going up on both sides of the Atlantic on a proposed European-American deal between like-minded, free-market, free-trade economies. It is a proposal that deserves serious, but cautious, attention.

The argument for TAFTA goes like this: The U.S. and Europe basically have similar, open, economic systems compared with the more closed, mercantilist capitalism of Asia. Unlike U.S.-Asian trade, the trade flowing across the Atlantic follows the ups and downs of currencies because markets are generally open. Movement of goods and capital are generally in balance over time, again unlike trade with Asia, where the U.S. deficit keeps growing no matter what. So why not formalize economic relations among countries where trade and investment are on a fairly level playing field?

No reason at all. For too long, U.S.-European relations have been defined mainly in terms of security needs. Now, economics is paramount. A long-standing romance with Asia may be blinding the U.S. to the realities of Asian commerce: limitations placed on foreign direct investment and unfair protectionist barriers to imports. The Japanese mercantilist economic model is popular from Korea to Malaysia. Most important, a grand Euro-American economic coalition of two
nents based on free and open markets may be the only
to pressure Asians to act according to the free-trade prin
from which they have benefited so much.

The danger would be if TAFTA becomes a country cl
trade. Just as Malaysia talks of building an Asian econ
bloc excluding the U.S., Australia, and New Zeala
"caucus without caucasians"—some TAFTA proponents see
tent on creating a "caucus with only caucasians." It is
bling that TAFTA's provenance includes free-trade revisi
such as Sir James Goldsmith, who argue that globaliz
hurts European and American living standards. Their sol
limit trade with low-wage countries and build a kind of t
atlantic economic fortress.

That would be a big mistake. However painful it may
times, global economic integration is driving U.S. gr
and productivity. Yet time may be running out for free t
Sadly, Japan's mercantile policies and Asia's wish to f
them is beginning to push U.S. and European policymake
think of free-market alternatives. Unless Asia starts to
away from mercantilism, the TAFTA idea, a second-best sol
right now, may soon become a first choice.



We have the edge you need to meet any financial challenge.

The Principal Edge.®

Focused solutions. For 115 years, we've been unfolding financial products and services that anticipate the changing needs of businesses and individuals.

Strength. With over $47 billion in assets under management, The Principal Financial Group® has become one of the world's strongest financial services organizations.

Tools. From life and health insurance to 401(k), from HMOs to home mortgages and annuities, The Principal® provides a diverse array of financial tools to over 8.7 million people.

Flexibility. By offering unique, flexible insurance and financial solutions Principal Mutual Life Insurance, our largest member company, has grown to become the 10th largest in America based on assets.

Your edge on the future. When you put it all together, we bring you an advantage no one else can: The Principal Edge.® To learn more about it call: 1-800-986-EDGE (3343) Ext. 9003.

WHEN AUSTRALIA needed *a new* telephone system, *we told* them to look elsewhere.

What? Are we mad? A multimillion dollar contract and we tell them to look elsewhere?

We did. And no, we're not mad.

We are, on the other hand, a little different from your everyday, run of the mill telecommunications company.

We're not a multinational, a corporation or (heaven forbid) a conglomerate. We're Federation. Far from charging about th world taking over all and sundry we pref to work alongside like-minded partners.

People with intimate local knowledg and local experience who can implement truly local solution.

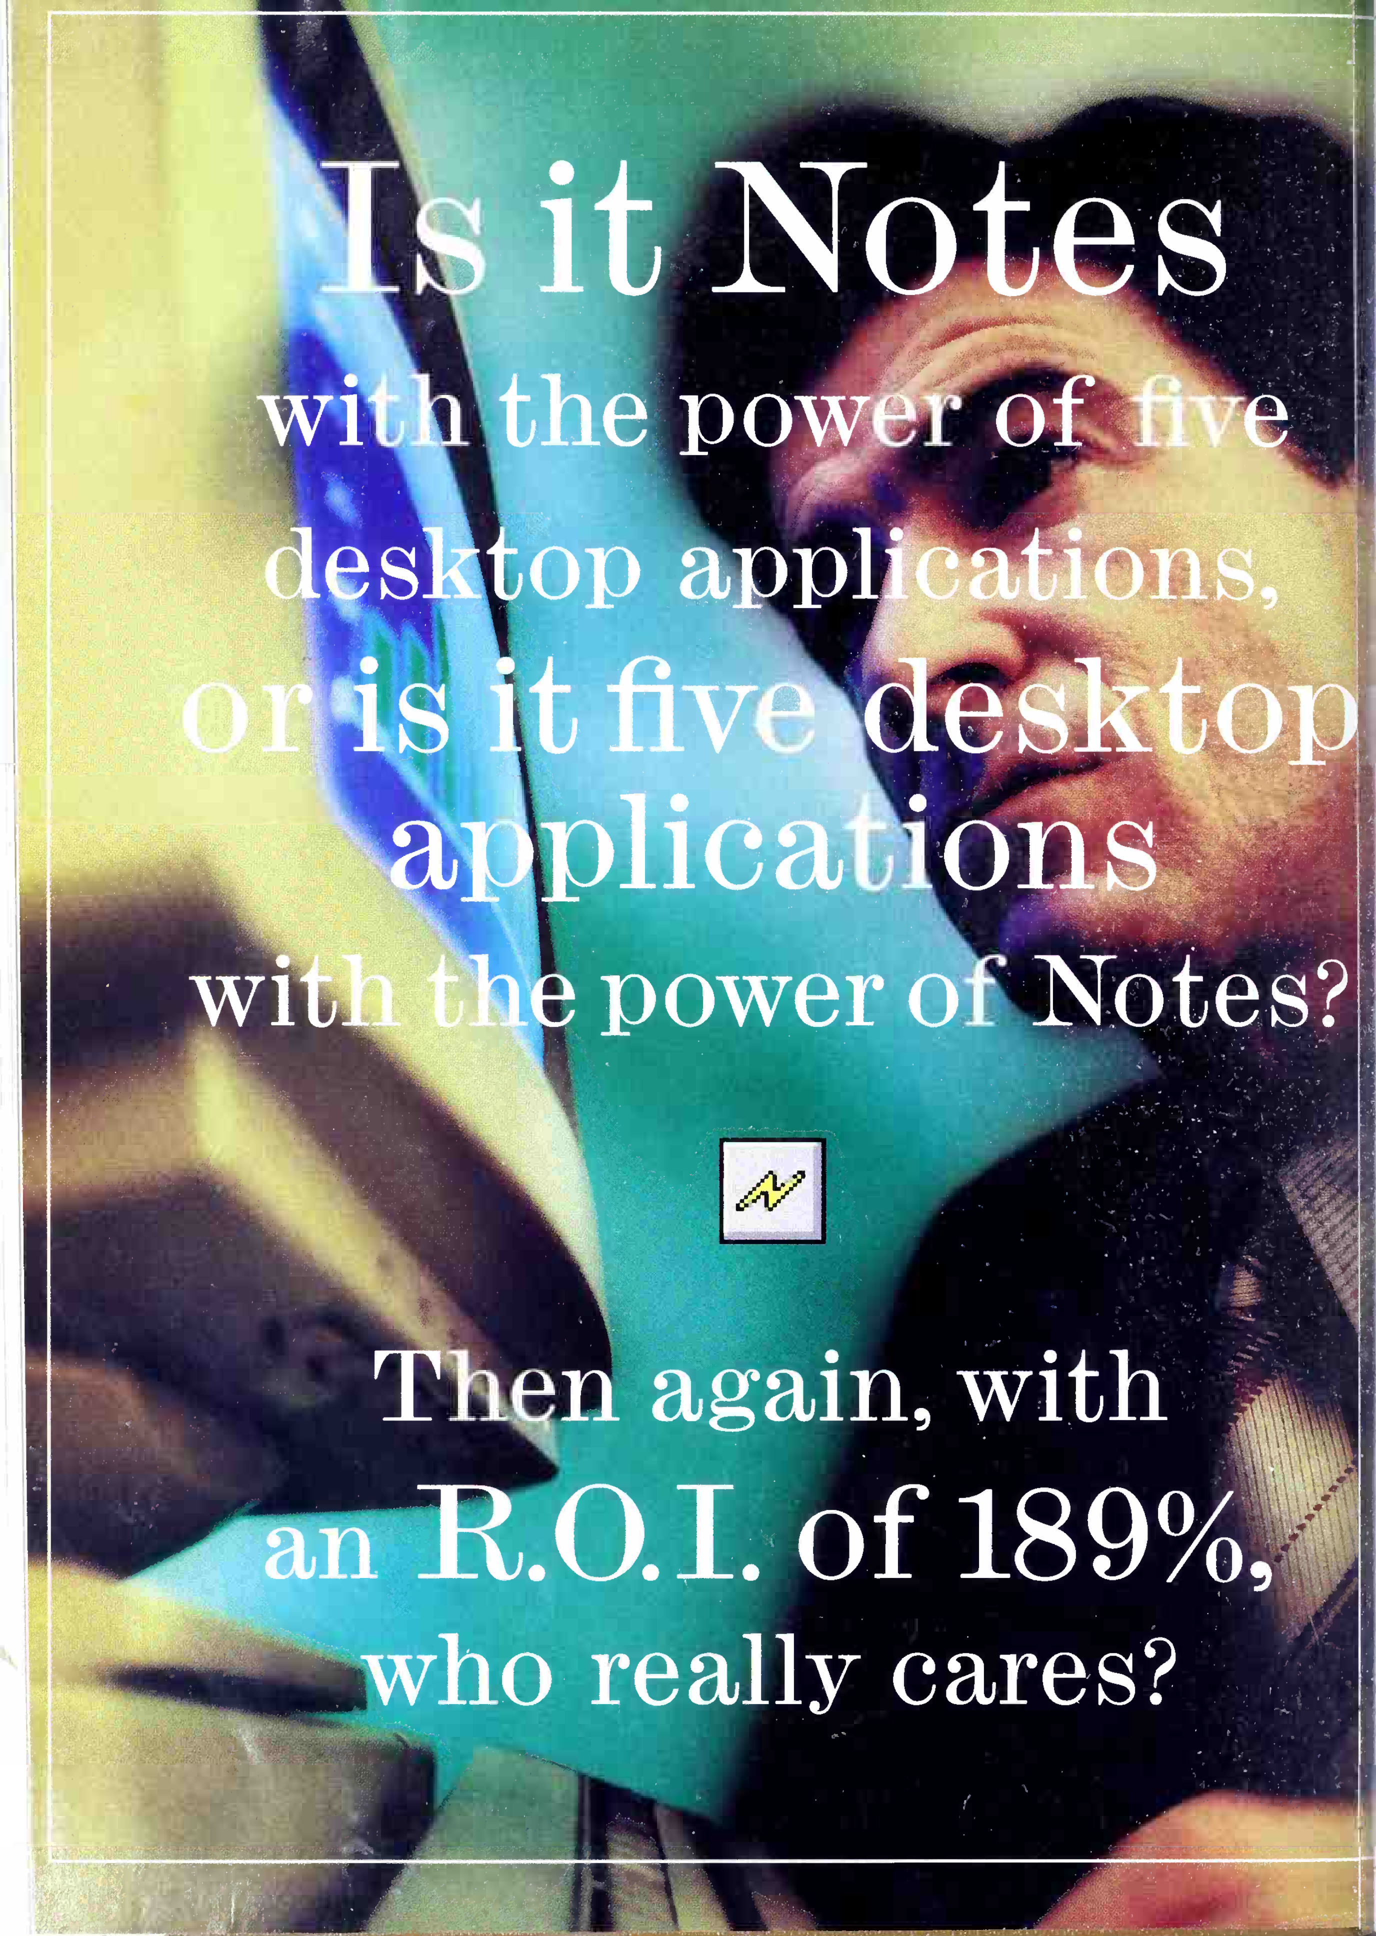
The PREMISE furniture system from Haworth.

Each is a proven, time-tested way to deliver power. However, only one is designed to keep sensitive electronic office equipment up and running long after the cows have come home.

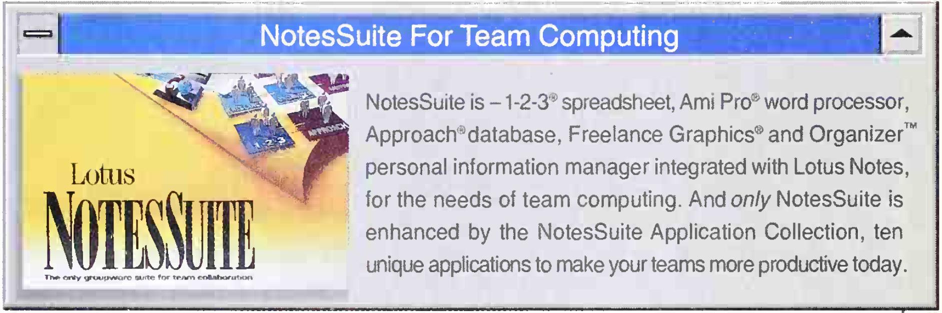
HAWORTH®
FURNITURE THAT WORKS®

For more information on PREMISE® and other Haworth furniture designed to support the modern electronic office, call 1.800.344.2600.



Is it Notes
with the power of five
desktop applications,
or is it five desktop
applications
with the power of Notes?
Then again, with
an R.O.I. of 189%,
who really cares?

The introduction of Lotus® NotesSuite™ promises to make life a whole lot easier for anyone who is considering productivity software for their business. NotesSuite is the logical combination of two proven technologies: the desktop productivity tools of Lotus SmartSuite® connected to the groupware standard, Lotus Notes.® In fact, Notes is already delivering an average R.O.I. of 189%[†] at companies like Burger King,® Compaq® and Timberland.®



NotesSuite For Team Computing

NotesSuite is – 1-2-3® spreadsheet, Ami Pro® word processor, Approach® database, Freelance Graphics® and Organizer™ personal information manager integrated with Lotus Notes, for the needs of team computing. And *only* NotesSuite is enhanced by the NotesSuite Application Collection, ten unique applications to make your teams more productive today.

When Notes And SmartSuite Come Together, A Powerful Synergy Occurs. Notes becomes the working environment; SmartSuite provides the working tools. NotesSuite provides a level of integration that makes it more powerful and more effective than any desktop suite before it, and in turn your company becomes more productive. And with the addition of the NotesSuite Application Collection, ten unique applications designed to enhance team productivity, the benefits of team computing increase dramatically.

With The Team Computing Benefits Of NotesSuite You Will Fully Realize The Potential Of Your People. Everyone, at every level, will be a contributor, a collaborator, a true colleague. Imagine, for example, being able to expedite the budget process by having all parties work on the same spreadsheet simultaneously. Or being able to create a database filled with new product information, sales presentations and customer profiles that can be accessed remotely and updated continuously by members of a sales team no matter where they happen to be. People and groups of people will feel empowered. Because for the first time, they are empowered.

While other software companies can only promise you a solution for your team collaboration needs, our solution is available today. To find out more about Lotus NotesSuite, get our FREE video "Team Computing: The Art and Science of Collaboration," by calling 1-800-TRADE-UP, EXT. A747,[*] or explore Lotus on the World Wide Web at www.lotus.com. Your company can be using Lotus NotesSuite for as little as $299.[††]

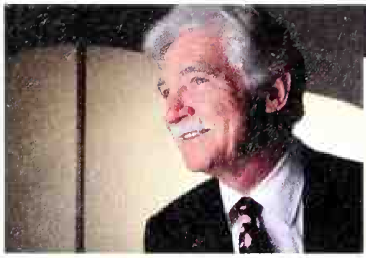
EXECUTIVE SWEETS

A TICKET TO RIDE—IN STYLE



JERRY SANDERS
Chairman & CEO
Advanced Micro Devices

$93,206
Car and driver in 1994

FOR LOTS OF TOP executives, commuting is a company-paid perk. These trips, usually chauffeur-driven, can be a hefty expense—especially for those living far from headquarters.

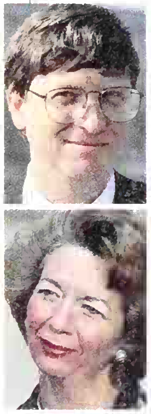
A couple of this year's proxies show how hefty. Jerry Sanders, Advanced Micro Devices' chief, got a $93,206 benefit last year for the driver and Mercedes that shuttles him the 50 miles between his San Francisco home and Silicon Valley. An AMD spokesman says Sanders can work en route.

The justification is similar for Merck Executive Vice-President Edward Scolnick ($58,955 in commuting benefits), ferried between the Philadelphia suburbs and the company labs in Rahway, N.J. Ditto for Chief Financial Officer Judy Lewent ($55,855), who goes from New York to Merck's headquarters in Whitehouse Station, N.J. Both use helicopters or cars.

Why did AMD and M bother to report the cos all? Because the expense ceed 25% of what the calls “other annual com sation,” which excludes s and bonus—the legal req ment for reporting. Johnson, head of execu pay consultant Johnson sociates, suspects many panies go over the 25% yet simply don't comply the rules. Indeed, a su of big-company proxie the Washington Docu Service found no other tions of commuting. At this perk is taxable. *Ric Brandt and Joseph We*

THE FEDS

A GRUDGE MATCH WITH MICROSOFT?



ROUND 2: *Gates and Bingaman*

THE JUSTICE DEPT. SEEMS understandably sensitive after a judge slammed its July antitrust settlement with Microsoft as too lenient. So is Justice now trying to scuttle Microsoft's $2 billion acquisition of Intuit to show that the feds aren't getting soft? Maybe so, if you look at the timing of how Justice handled the banks, who worry that their bids to launch online financial services would suffer as a result of the union.

Back in October, Microsoft Chairman Bill Gates proposed buying Intuit, whose Quicken program dominates the personal-finance software market. Yet Justice had questioned few bankers as it examined the deal. All that changed in mid-February, when U.S. District Judge Stanley Sporkin rejected the Justice-Microsoft pact. Soon after, Justice flooded the banking industry with subpoenas to get its views on the Intuit deal. On Apr. 27, antitrust chief Anne Bingaman sued to block the deal.

Deputy Assistant Attorney General Steven Sunshine says that there's no connection between Sporkin's blast and the Intuit action. Antitrust lawyer Jeffrey Jacobovitz, who has filed complaints about the Justice-Microsoft settlement, contends that Justice “had no alternative but to challenge the merger because of the negative publicity Justice had gotten.” *Catherine Yang*

THE LIST BOARDROOM MANNA

Chrysler may have fended off Kirk Kerkorian, but if it announces a new stock buyback plan, it won't be alone. With profits strong, companies have been on a buyback spree since 1992. The point is to boost the share price and please investors. At IBM, a buyback (along with soaring earnings) has helped boost the stock 28% since its January kickoff. The monster buyback of 1995 was DuPont's $8.8 billion for most of Seagram's 24% stake. Other investors benefited: DuPont's stock has surged 13%.

SHOW BIZ

A STOP ON THE DIAL FOR THE DISABLED

A 24-HOUR CHANNEL FOR disabled people has started operations across the U.S. Called Kaleidoscope, the San Antonio-based channel figures it can find an audience among the estimated 49 million Americans with some form of physical handicap. The Apr. 30 launch was an expansion of a three-hour-a-day service that began in 1990, the day President George Bush signed the Americans with Disabilities Act.

Now available to 15 million homes, Kaleidoscope already offers a wide program lineup. Former House Whip Tony Coelho, an epileptic, hosts a show focused on Washington issues related to the disabled. Vintage movies are captioned for the deaf. For blind persons, voice-overs describe the action. There's *Kim's World*, a talk show with a signing host, Kim Powers, who is deaf and blind. In the planning stage are sitcoms with handicapped actors and a shopping service featuring products for the disabled.

Some of the $80 million needed for the programming will come from fees that cable companies, required to screen public-interest programs, pay to carry the channel. Cash already comes from advertisers such as AT&T, Mattel, and J.C. Penney, which, for instance, pushes Velcro-fitted clothing. Plus, Kaleidoscope is negotiating with cable titan Tele-Communications Inc. to take an equity stake. *Ronald Grover*

KIM'S WORLD: *The host signs*

WORKING OVERSEAS

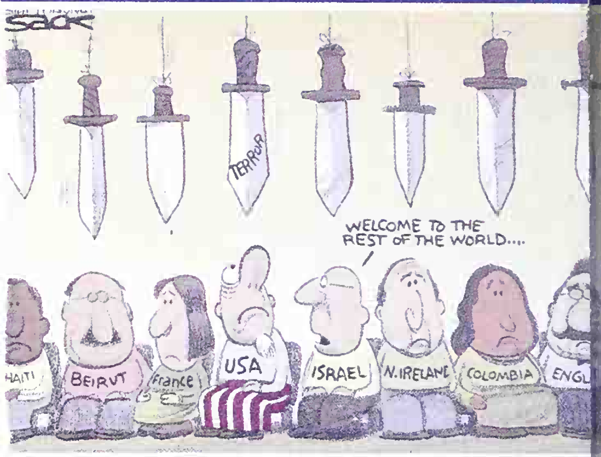
RULE NO. 1: DON'T DISS THE LOCALS

WHO SHOULD GET THAT PLUM foreign assignment? A lot of companies tap employees who are aces at technical matters or management. However, a new study finds other skills more important for an American to be successful overseas.

Horror stories abound, according to Prudential Relocation Intercultural Services, which did the study. There was the company that sent an evangelical Christian to Saudi Arabia. He offended locals by setting up a Bible group and got booted out of the country. A U.S. oil outfit transferred an executive to Peru, where he told jokes deriding the natives' industriousness and excluded them from his parties. His employees griped to the government, which canceled the company's oil concession.

Prudential Relocation, an arm of Prudential Insurance, asked 72 personnel managers working at multinationals to name the best trait for overseas success. Nearly 35% said cultural adaptability: patience, flexibility, and tolerance for others' beliefs. Only 22% of them listed technical and management skills. *Sandra Dallas*

DRAWN & QUARTERED



AFTERLIVES

THIS MOGUL SWEARS OFF MEDIA

NO MEDIA DEALS, PLEASE. That's the credo of Martin Davis, who is now in the buyout biz. Davis, ex-CEO of Paramount, thinks buying media and entertainment assets is just too expensive. He ought to know.

A year ago, Davis stepped down at Paramount after helping swing one of the most celebrated media deals of all time: his outfit's $10 billion purchase by Viacom. At six times cash flow, that was considered rich at the time, but it still was less pricey than the 15 times cash flow, or $5.7 billion, that Edgar Bronfman's Seagram is

Readers Report

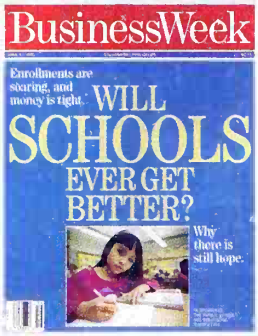
REFORM AND THE THREE Rs

The real problem with public education is bad management ("Will Schools ever get better?" Cover Story, Apr. 17). When people invest in stocks, mutual funds, and startups, what they are investing in is management. If public school districts were traded on the New York Stock Exchange, they would soon go broke.

The educational establishment simply does not have the stomach or the personality types to change. Current leadership wants the status quo.

If we put corporate types in as superintendents and principals and rotated all current teachers and managers to the private sector for a year once every five years, we would shortly have a far different look about our schools.

Edmund G. Gildersleeve
Oakland, Calif.



BusinessWeek
Enrollments are soaring, and money is tight.
WILL SCHOOLS EVER GET BETTER?
Why there is still hope.

I do not agree with the comment in your editorial that teachers have gained "a compensation package that is the envy of most working people: 10-week vacations and a gold-plated package of health and pension benefits that disappeared in the private sector long ago."

All the teachers I know have masters degrees or more and continually take refresher courses during "summer vacations." Furthermore, they spend their evenings grading papers, unlike professionals fortunate enough to observe office hours. For my money, teachers in public schools are worth twice what they get.

P. Douglas Fowler
Statesboro, Ga.

In my 23 years as a public-school teacher, I have seen a parade of ideas for improving schools. Whether they were good or not made little difference, because none of them addressed the structure of public educ

DAVID CARD'S SIDE OF THE MINIMUM-WAGE BROUHAHA

Paul Craig Roberts writes, in "A minimum-wage study with minimum credibility" (Economic Viewpoint, Apr. 24): "Michigan State University Professor David Neumark and Federal Reserve economist William Wascher acquired the actual payroll data from fast-food establishments in New Jersey and Pennsylvania. The payroll data show that fast-food employment did not increase in New Jersey after the minimum wage increase. [Instead, it declined 4.8% relative to the control group in neighboring Pennsylvania.]"

On the contrary, Neumark and Wascher did not acquire the payroll data. Rather, the data were acquired from a selected group of franchisees by the Employment Policy Institute (EPI), an organization funded by business contributions and opposed to minimum-wage increases. EPI then provided data to Neumark and Wascher.

The data set used in my study with Alan Krueger of the effect of the New Jersey minimum wage includes 410 restaurants from four fast-food chains: Burger King, KFC, Roy Rogers, and Wendy's. Our sample includes both company-owned and franchise outlets. The payroll data set used by Neumark and Wascher includes 71 restaurants in the Burger King and Wendy's chains, all owned by franchisees. Neumark and Wascher have not shown that results based on "the actual payroll data" differ from the results reported in our study. They have not even analyzed data for the same restaurants, or the same restaurant chains, or for stores operated by the same groups of owners.

David Card
Professor of Economics
Princeton University
Princeton, N.J.

Editor's Note: New Jersey's experience is hotly debated in the economic profession. The study by Card and Krueger was based on a telephone survey of outlets of four fast-food restaurant chains. It concluded that employment in New Jersey outlets rose after the state raised the minimum wage in 1992, while employment fell in neighboring Pennsylvania, where the minimum wage did not change. Neumark and Wascher, using payroll data from two chains, found that employment rose in New Jersey but rose even faster in Pennsylvania. Neumark says he verified by phone that the data provided by EPI were complete. He says his study, still collecting data, has compared results only with the similar portion of Card's restaurants.

CORRECTIONS & CLARIFICATIONS

"From the microbrewers who brought you Bud, Coors..." (Marketing, Apr. 24) erred in stating that Anheuser-Busch Cos. and Miller Brewing Co. have spent decades acquiring smaller rivals. Until their recent microbrewery deals, neither company had made significant acquisitions of rival brewers.

In Inside Wall Street (May 8), a graphic was misplaced and mislabeled. The chart tracking the stock of Teva should have accompanied the item on Specialty Equipment, whose path the graphic really reflects.

Roberts claims that the data used in the Card-Krueger study of minimum wages are obviously flawed and that the publication of this paper casts serious doubts on Card's competence as an economist as well as on the standards at *The American Economic Review*.

Roberts dramatically overstates the flaws. He notes that the data contain large variations hard to explain. In economics, data often look like this—and well-understood ways exist to assess the consequences of such variation for empirical results. One of us did a statistical re-analysis of the Card-Krueger data and found the basic findings unaffected by this variation. The study by Neumark and Wascher cited by Roberts performs a service by collecting additional data on this point. That their findings contradict Card's and Krueger's is evidence of healthy discourse on a difficult empirical problem—not, as Roberts asserts, evidence of incompetence.

Anyone who follows economics literature knows that Card is among the most careful and conscientious people doing empirical work in labor economics. Roberts' attempt to portray Card otherwise is a blatant effort to intimidate dissenting voices.

STARTING

A NEW BUSINESS

IS SIMPLY

A MATTER OF

KNOWING WHERE

TO TURN.

The uncertainties of starting a business could corner you. You need information, but don't know where to find it. Quickly and easily. How do you get special government financing? Or build a business plan? What about tax laws? Just to name a few...

But now there's help. Introducing AT&T Resources for New Business.℠ Only from AT&T.

One call gives you direct access to the people, information and answers that can help you navigate through the difficulties of starting a business.

Questions about technology, specific industries or the Internet? You can even get information by fax. 24 hours a day, 7 days a week. You can also receive hundreds of dollars of discounts on office equipment, computer software and more.

These benefits are made possible through AT&T's alliances with leading information, technology and office supply companies.

And best of all, these resources are now available through one easy source. The same source that provides you with reliable, high-quality long distance service: AT&T.

You can only get this from AT&T. So call 1 800 STARTER. And discover how we can help get your business started in the right direction.

It's not what you'd expect from a long distance company, but that's the point.

AT&T. For the life of your business.℠

A MOMENT ON THE EARTH
The Coming Age of Environmental Optimism
By Gregg Easterbrook
Viking • 745pp • $27.95

SHOULD THE GREENS TAKE A BREATHER?

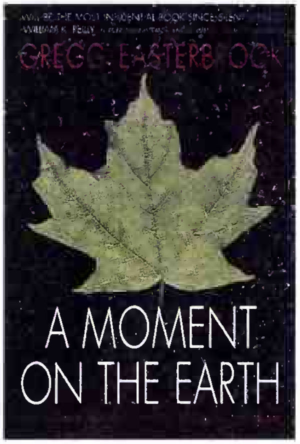
Chicken Little may be part of an endangered species. With the recent 25th anniversary of Earth Day came the release of a spate of books on the environment—including several suggesting that the apocalypse may not be coming after all. Perhaps the best of these revisionist efforts is Gregg Easterbrook's *A Moment on the Earth*, a refreshing, evenhanded appraisal of the state of the planet.

Once-damaged forests, the author reports, are rebounding, the number of bird species has not plummeted as predicted, and even smog has been dissipating in most U.S. cities. Yesterday's toxic-waste sites often teem with wildlife, he says, while "degradation of pristine rivers by new water pollution has essentially ended in the U.S." After expanding on several such cases, "ecorealist" Easterbrook sends a stern warning that green groups risk losing whatever political clout they still have in Washington by sounding the alarm long after it has been shown that the sky isn't falling. "Accurate understanding of the actual state of the environment will serve the Earth better than expressions of panic," he contends.

That's no doubt true. But demands for further investigation of environmental damage can be employed to delay needed regulation. Moreover, Easterbrook expends so much effort on a bullish evaluation of the environment that when he then calls for strict enforcement of existing laws to protect flora and fauna, you wonder what he's talking about.

Still, Easterbrook is right when he argues that man-made predations should be understood in a broader context. Inviting readers to take the long view, he insists that the harm done "to nature by nature" has been far greater than any damage done by humans. For example, he says estimates of cataclysmic asteroid and comet collisions with the earth show that the planet "has been battered a thousand times by hammer blows as strong as the one that wiped out the dinosaurs"—yet the earth survives.

In 23 painstakingly reported chapters on problems ranging from acid rain to water pollution, Easterbrook demonstrates his skills. Accounts of the behind-the-scenes politics of environmental battles, such as those over the Northern spotted owl and Superfund sites, help make a case that environmentalists have overplayed their hand.



Consider the hysteria over the demise of the nation's forests. In the mid-18th century, he reports, 35% of Connecticut, Massachusetts, and Vermont was wooded. Today, as a result of forest management, the figure is 59%. Easterbrook also revisits the dire predictions of Rachel Carson's 1962 environmental wake-up call, *Silent Spring*. Carson had forecast that as many as 40 bird species could meet extinction if the use of pesticides and other chemicals were not curbed. Of the 40, Easterbrook finds 19 with stable populations, 14 increasing in number, and 7 declining in population.

Some of that success is attributable to changes prompted by Carson's book. Yet Easterbrook faults environmentalists for downplaying the achievements of government rules. His portrait of the green movement reveals why it clings to a doomsday script. On a visit to California, for instance, he documents the existence of many more spotted owls than environmental groups admit. Later, environmentalists privately concede the exaggeration but justify their numbers on the grounds that "a valid goal, old-growth forest preservation, is ser

Easterbrook also has barbs for ronmentalists who care more plants and animals than humans. I th Third World, he notes, green gr agitate for forest and species prote but don't pay nearly as much atte to such problems as pollution-ca respiratory illnesses that kill millio children annually.

Many of these points are on ta But Easterbrook's vision of the f and his nostrums are marked by e sive optimism and exaggeration. H clares, for instance, that the We world is "on the verge of the gre ecological renewal that humankind known." And he calls for "people, chines, and nature" to work tog toward a "New Nature"—a v where advances in genetic engine could be used to stop human viole

Most troubling are Easterbrook' supported inferences. On global w ing, for example, he s that "reasoned disc leads to the concl that reforms are jus but also that end-of world rhetoric be dispensed with." following a lengthy di sion downplaying the ger of global warmi Easterbrook goes so f to assert that gra warming would act benefit worldwide ag ture—he then change rection and concl that "any reasonable icy that reduces the odds of cli change is more than worth the pr After such an argument, the re may be more likely to draw the o site conclusion.

Coming from a self-proclaimed " ical liberal," such analysis could pr windfall for conservatives determ to dismantle environmental progr If, however, the book is used as Ea brook intended—to improve protec by basing them not on emotional peals but on scientific investigati this book will help put the U.S. path toward more rational environ tal protection.

BY STEPHEN H. WILDSTROM

TONY PRINTERS FOR THE HOME

Not long ago, home printing meant lousy printing, whether it was for work, school, or play. Most printers for the home were noisy dot-matrix models that jammed frequently and turned out fuzzy print. You needed special paper that had ragged edges after you separated the sheets along the perforations and stripped off the little holes on the side.

What a difference a little technology makes. The latest crop of inexpensive ink-jet printers take advantage of precision designs and high-tech inks to let you print a business letter or a school report with quality that can rival an office laser printer. Better yet, virtually all of today's ink-jet printers produce vibrant color. You can add just a splash to brighten a letterhead or use the full palette for charts on plain paper and overhead-projector slides on plastic film.

Colorful Ink-jets

MAKER/MODEL	STREET PRICE
CANON COMPUTER SYSTEMS INC. **800 848-4123**	
BJC-70 *(shown)*	$359
BJC-600e	469
HEWLETT-PACKARD CO. **800 752-0900**	
DESKJET 660C	499

The power of home printing these days is demonstrated by a trio of new ink-jet printers. The BJC-600e from Canon Computer Systems Inc. is a typical high-quality entry. Although you can get a color printer for less than this model's $469 street price, you would have to settle for slower, and probably poorer quality, printing. The BJC-600e can turn out up to four pages per minute in black only, though the best-quality printing is slower. A full-color draft page takes about a minute. Paper handling, much improved from earlier ink-jets, lets the Canon unit hold up to 100 sheets of paper or 15 envelopes.

Cool features extend beyond the printer itself. One is software that helps you get more out of your machine. The BJC-600e comes with two programs, Color Advisor and Stationery Store. Color Advisor takes documents from popular Windows word processors, spreadsheets, and presentation graphics programs and suggests schemes to make effective use of color. The Stationery Store program provides templates to create such things as letterheads, brochures, and greeting cards. After making your card, your printer can outline a custom-designed envelope on regular paper. You then cut along the dotted lines and paste.

The BJC-600e is getting some serious competition from Hewlett-Packard Co.'s slightly more expensive DeskJet 660C. The DeskJet (available for the Mac as the DeskWriter 660C) lacks the Canon machine's software touches, but it compensates with splendid color printing. Compared with what I had regarded as the ink-jet color-quality champ, the Epson Stylus Color (BW—Sept. 26), the DeskJet is much faster, at least equal in color quality, and far superior in text printing. The best color requires special glossy paper and slows the printing to three minutes per page, but the near-photographic results are worth the wait.

TOPPLING ENVELOPES. If you want a printer that can work on your desk and on the road, consider the Canon BJC-70. It weighs only three pounds and is small enough to be stuffed into a suitcase, though the absence of battery power limits its portability a bit. The main trade-off for its compactness is in paper handling: It holds just 30 sheets. While Canon claims it can take five envelopes, I found it difficult to do more than one at a time because of the tendency for the envelopes to topple while waiting their turn. If your printing volume is fairly light, you'll probably be happy with the BJC-70 as your only printer.

While HP and Canon dominate the market for ink-jet printers, IBM spin-off Lexmark International is coming on strong. The company will shortly announce a new model that offers many of the features of the BJC-600e and the new DeskJet and is priced below its competitors. If you need a printer now, you're sure to find all the features you need at a reasonable cost. But if you can wait a while, you will probably end up saving some money. I'll take a look at the Lexmark as soon as I can.

Everything you know about
recycling,
recycled

*James Walizer, 6, son of Jim Walizer,
International Paper Recycling Supervisor.*

AT ARE THE ISSUES?

'ter everybody's finished ing this magazine, it will ably end up in a recycling 'rom there, it'll be recovered urned into new paper.

e say this with reasonable ance because America has great progress in recycling. recovering over 40% of the r we use, making the U.S. f the best recyclers in the l. Soon we expect to reach which is generally regarded near the practical limit se about half the paper we 't recoverable. For instance, of paper gets stored in the of books and documents, ome of it also gets contami- beyond recovery.

the issue now isn't whether ycle, but how best to use ered paper.

e thought: make all new r out of 100% recycled . Idealistic but not very ical. Why? First is the ons demand (over 88 mil- ons per year) for paper in untry. This demand can't t with recovered material no matter how good we get ycling.

condly, when paper is led, its fiber weakens, tely making it unusable.

stly, sometimes recovered isn't of high enough quality ke better grades of paper. recycled material must be ned with different amounts rgin" fiber (raw material d from harvested trees).

ere does all this leave us? ng a balance between the nd for paper products ing virgin fiber, and the best using recovered paper.

WHAT WE ARE DOING.

International Paper currently makes over 100 types of recycled paper products. With our Springhill Incentive and Hammermill Unity papers, we are also the first and only North American company to make 100% recycled business papers entirely from old newspapers and magazines.

We're also installing the world's largest, most efficient machines to make business and packaging papers containing recovered fiber. This, in turn, will further increase our total intake of recovered paper.

We meet the need for virgin fiber through a practice called "sustainable forestry," which includes planting 50 million SuperTree™ seedlings every year. SuperTrees, developed through a process of natural selection, produce 30% more wood per acre over a 25-year growing period. This ensures that we can harvest fewer acres and still satisfy the demand for high-quality paper.

WHAT IT MEANS TO YOU.

This year, through the combined efforts of people like you and companies like International Paper, more paper will go to recycling plants than to landfills. You can also rest assured that our forestlands will be around for posterity.

Finally, if you've read this far, it's obvious that you'd like to see more progress in recycling. To talk more, call Steve Van Voorhis, Manager of Recycling Programs, at 1-800-831-8354.

BY ROBERT KUTTNER

DUELING TAX PLANS: ONE ADDS UP, THE OTHER DOESN'T

VOODOO: Armey's idea of a flat tax looks simple, but his figures are wacky. The Domenici-Nunn plan to tax outlays merits serious consideration

House Majority Leader Richard K. Armey's proposal for a flat-rate income tax has gotten more publicity than it deserves. The Texas congressman advertises his plan as simplifying the system, reducing taxes, and stimulating savings, investment, and growth. Quite apart from whether this is a wise approach, Armey's numbers don't work. But there's a different plan, offering less hype and more careful analysis, that merits serious attention: the USA Tax unveiled last week by Senators Pete V. Domenici (R-N. M.) and Sam Nunn (D-Ga.). Superficially, the plans have similar goals, but their treatment of personal income could hardly be more different.

Armey proposes a flat 17% rate, with no deductions. It would leave moderate incomes untaxed, thanks to an immense personal exemption—$36,800 for a family of four. Thus, a family of median income (about $38,000) would pay almost no tax, and even a family with $50,000 income would pay less than 6%. So who would pay taxes? Armey projects that virtually every income group would pay less—which is, of course, too good to be true. The Treasury Dept. projects that, with a 17% flat rate, the plan would increase the deficit by at least $186 billion a year. To be revenue-neutral, Armey's plan would need a rate of 23% or 24%—meaning tax increases for all but the bottom and the top.

KEEP IT PROGRESSIVE. Beyond the dubious arithmetic, Armey's concept is flawed. It confuses tax simplicity and tax equity. The simple part of calculating taxes is multiplying the taxable income by the applicable rate. The hard part is calculating taxable income. Deciding which deductions are legitimate is complex, because life is complex. If we want to go ahead and discard all deductions—even mortgage interest, health care, charitable contributions, casualty losses—for the sake of simplicity, we can still keep graduated rates. A better approach would be to close the truly uneconomic tax preferences that still litter the tax code, and to lower rates while retaining progressivity.

In contrast to the Armey plan, Senators Domenici and Nunn's USA Tax—that stands for unlimited savings allowance—is extremely complex and retains graduated rates, with a top rate of 40%. USA Tax is a variation on an old idea—"progressive expenditure taxation." Domenici-Nunn would tax only spending. All income set aside as savings w be tax-exempt. Money withdrawn from ings and spent, however, would be taxe current consumption. The rationale is fold: It is fairer to tax people on what consume than on what they earn, and tax break on savings would sharply incr savings rates.

The Armey and Domenici-Nunn bills similar in one respect: Both would rep the current corporate income tax with tax on companies' gross profits, allowing ductions for purchases of inputs and per ting immediate write-offs of all capital in ments, thus doing away with deprecia schedules. Armey would allow deductio wages; Domenici-Nunn would not, but w allow a credit against payroll taxes. Alth no sponsor emphasizes it, both approache business are a form of value-added tax (

MORE RECORDS. Is the Domenici-Nunn good tax policy? It has two major def First, it is complex. Taxpayers would ne new set of records and tax schedules to port flows into and out of savings. VAT- business taxes are costly to administer especially complex in their treatment of i national business. Before embracing a we should debate its costs and benefits di ly and not back into it as a means of see to promote savings.

Second, like the Armey bill, the Dome Nunn plan is highly regressive in the hig come range, where most savings occur. household with $4 million income consume million, taxes are owed only on that consu tion. The nominal top rate in the USA plan is 40%, but the tax in this case woul $400,000—an effective rate of 10%. If taxe the very rich go down, taxes on others go up. The original advocates of this appr such as the British economist Nicholas Ka writing in the 1950s, proposed offsetting regressivity with modest net-wealth taxe steeper estate taxes. But this remedy is where in the Domenici-Nunn bill.

Still, Domenici-Nunn is a serious loo tax policy and not a political gimmick. the work of bipartisan moderates and serves a respectful debate on details. Do ici, now chairman of the Senate Budget mittee, places deficit reduction ahea supply-side fantasy and does not appear t cooking his numbers. That cannot be sa Majority Leader Armey.

OCESSOR

INTRODUCING THE FIRST NOTEBOOK TO MAXIMIZE THE PENTIUM'S FULL POTENTIAL.

When the rush was on to introduce otebook with a Pentium™ processor, as Instruments decided to do what ers thought couldn't be done.

We created a notebook that maximizes tium performance by integrating *PCI bus architecture in our Texas ruments TravelMate™ 5000.*

And for flexible connectivity, we igned a way to allow external access the PCI bus to the latest peripherals. It was a challenge we addressed for two ple reasons: to give users true desktop tium performance *for faster running ware and expansion capabilities* for long-term investment protection.

So now you have a notebook with *smoother full-motion video and enhanced 3-D graphics.* In addition, we designed the TravelMate 5000 to take advantage of the "plug and play" capabilities of Windows 95® when it becomes available.

But our engineers didn't stop there. *We added a second lithium ion battery* without sacrificing size, weight or eliminating a floppy drive.

The TI TravelMate 5000. For more information on what others thought you couldn't do with a notebook, simply call 1-800-TI-TEXAS (e-mail: 2ti@msg.ti.com).

75 MHz Pentium processor with PCI Bus

10.4" Active Matrix or 10.5" Dual Scan displays

2MB Video memory

8MB RAM, expandable to 32MB

*810 million bytes (=772MB) or 524 million bytes (=500MB) Hard Disk Drives**

Multimedia package: Built-in 16-bit sound, internal speaker and dual mode microphone

Two Lithium ion battery packs

Serial infrared port for wireless connectivity

All over the world, Microsoft® Office is helping drive businesses forward by making it easier for anyone to get their job done, no matter what that job might be.

By seamlessly bringing together top applications like Microsoft Excel, Word and PowerPoint,® to name a few, Office gives people the ability to find the best, most productive way to work.

For instance, our IntelliSense™ technology can walk even a novice user through formerly complex tasks, like creating a new chart or graph, with one of our Wizards—helpful step-by-step guides that actually complete the job for you.

No wonder Office is the world's best-selling family of business software. Use it alone or combine it with the networking and information management tools in Microsoft BackOffice to give everyone in your organization the power to contribute. The power to share information and ideas. The power to move your business forward.

See where it takes them. See where it takes us all.

For more information about Office call 1-800-881-9394, dept. ENT. ©1995 Microsoft Corporation. All rights reserved. Microsoft Office Professional, shown here, includes Microsoft Excel, Word, PowerPoint presentation graphics program, Microsoft Access and a workstation license for Microsoft Mail (server and software must be acquired separately). ARE TUITION HIKES TAKING A HIKE?

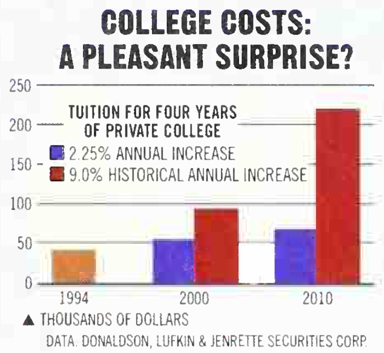
Why they may start leveling off

In matters financial, people often believe that past is prologue. College costs are a case in point. For more than a decade, tuition at private and public colleges around the country rose an average of 9% a year—well above both the inflation rate and the growth in household family incomes. At that rate, four years' tuition at a private college in 2010 on average would cost nearly $220,000—so frightening a sum to many parents that they figure they can't possibly sock away enough money to pay for their kids' college education.



COLLEGE COSTS: A PLEASANT SURPRISE?

▲ THOUSANDS OF DOLLARS
DATA: DONALDSON, LUFKIN & JENRETTE SECURITIES CORP.

But there's no basis for believing that costs will continue to grow so rapidly. Indeed, the scary scenarios of unaffordable college bills will prove dead wrong, argues Richard F. Hokenson, economist at Donaldson, Lufkin & Jenrette Securities Corp. Demographic shifts will pull the growth rate in annual tuition costs way down—close to 2.25% over the next 15 years or so, he says. The number of 18- and 19-year-olds in the population, contracted sharply from 1980 to 1993 and reached a low of 6.9 million in 1992. Colleges raised tuition to prop up revenues. Now, the demographics are reversing: The number of 18- and 19-year-olds is growing and should hit its next peak in 2010, when there will be 9.26 million of them—a 33% increase in the eligible college population.

Economies of scale will work to hold down tuition increases. As enrollments climb, so will tuition revenues—but per-person tuition rates will grow at a markedly slower pace. "The cost of adding an extra student to a classroom which already has five open seats is minimal compared to the extra revenue received from an additional full-time tuition," says Hokenson.

If Hokenson is right, the tuition bill for four years of college at a private institution will reach about $66,000 in the year 2010—welcome news at a time when a college education is crucial for future earning power.

THE VALUE OF FAMILY VALUES

They could bring fatter paychecks

It's difficult to achieve a balance between work and family, as millions of stressed-out Americans can attest. Alas, psychologists and sociologists have suggested that people who value family may pay a price in lower earnings. Now, a study argues the reverse—that individuals who believe it is important to have a good family life in fact earn higher wages than those who don't place the same value on family.

While earlier economic studies did show that wages are higher for married men than for single men, the reasons for this have not been clear. Using longitudinal data, Peter Cappelli and Clint Chadwick of the University of Pennsylvania's Wharton School and Jill M. Constantine of Williams College linked attitudes and earnings.

High school seniors who stated in 1972 that finding "the right person to marry" and having "a good family life" were very important to them 14 years later earned wages 4% to 7% higher than individuals who placed less value on marriage and family, the researchers found. (The study adjusted for other factors such as education levels and work experience that might produce an earnings differential.) The results were true for both men and women, although the number of children a woman had did have a negative effect on her earnings.

HOW JAPAN COULD TAME THE YEN

The Swiss may have some answers

The super-yen has Japanese industry reeling, and there are widespread fears that Japan may soon slide back into recession as manufacturers who are being priced out of export markets cut production. Lower inte rates and easier money would help. Japanese rates are so low—the ce bank rate is now 1%—that it someti seems as though they have nowh lower to go.

Actually, that's not quite true.

The Swiss battled a surging Sw franc in 1978 by pushing short inte rates down to 0% and imposing a charge on foreign investment flows, serve Nancy R. Lazar and Edwar Hyman of ISI Group. The surch made the effective rate negative for eigners. The Swiss also cranked up ey growth. The money supply is b expanded in Japan, say Lazar and man, but the pace of growth rem relatively slow. Interest rates, m while, are "still 1%."

MICROMANAGING FROM THE GRAVE

A gift with very long strings

The father of scientific manageme Frederick W. Taylor, fore changed the way people work by veloping a series of time and mot studies that laid the groundwork mass production. Taylor exercised pr sion and control in own life, too—and yond it. Today, 80 ye after his death, Tay is managing to ex control in a rather usual way.

TAYLOR: BIG BEQUEST

Taylor named alma mater, the S vens Institute of Te nology in Hobok N.J., in his will, following the death the last of his heirs, college received ab $10 million from the Taylor estate. T Stevens Institute last year began vesting the bequest in common stoc as Taylor had specified. He also laid an elaborate set of instructions for h the endowment should be managed: D idend income may be withdrawn in c tain increments during specified ti intervals, and there is a sliding sc stipulating how much dividend inco must be reinvested for 180 years.

The payoff, should the college s exist 180 years hence and assuming 5% annual real rate of return on t common stocks: an endowment of m than $8.6 billion.

WHO'S THE ONLY STAR WHO NEVER TAKES THE FIELD?

We've never scored a touchdown or slam dunked.
Never turned a double play or hit a perfect triple axel. Never even had a standing O.

But we've excelled at the world's great sporting events.

We've been to the Olympic Games – Barcelona in '92 and Lillehammer in '94.
And we'll be in Atlanta in 1996.

We wear the ARAMARK star. It is the symbol of the world's leading managed services company – a company you may have known before as ARA.

At ARAMARK, we provide many services ranging from child care to hospital nutrition.

These are serious, important jobs. But at the stadium, we're up in the stands with you.

We serve up food and fun for fans of all ages and all sports – for fans of hot dogs and pizza and sausage and ribs.

We even sell the souvenirs.

And we're the leader in the field, even though we've never been on it.

Call 1-800-ARAMARK for more information.

See you at the game.

AMES C. COOPER & KATHLEEN MADIGAN

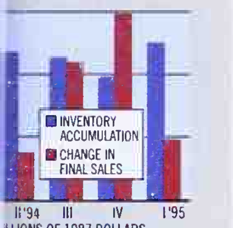
ON'T LET THE SIGNS F A SLOWDOWN FRIGHTEN YOU

U.S. ECONOMY Consider this equation: 2.8 + 3.1 = 6. The new math run k? Or addition using an old Pentium chip? No, the ky arithmetic seems to sum up correctly the eco- ic outlook right now.

e real gross domestic product grew at an annual of 2.8% in the first quarter, down from the 5.1% p of the fourth. The slowdown in final demand more dramatic. Final sales inched up 1.8%, less a third of the sales gain at the end of 1994. Fast- ventory accumulation accounted for the other one entage point of growth last quarter.

t the same time, inflation remained well behaved. GDP fixed-weight price deflator rose at a 3.1% annu- ace in the first quarter, tame enough to ease any in- on anxiety at the Federal Reserve.

NVENTORIES SURGE AS DEMAND SLOWS



LLIONS OF 1987 DOLLARS

A: COMMERCE DEPT., BUSINESS WEEK

That's the place where 2.8 plus 3.1 may well equal 6. At the Fed, 6% is the current Federal funds rate, the interbank lending rate used to control monetary policy. With demand slackening and inflation hardly noticeable, the need for further rate hikes diminishes. The chance that the funds rate will stay at 6% for the rest of the year increased greatly af- the GDP data were released on Apr. 28.

ther signs point to an ongoing slowdown. Consum- are losing interest in homes and cars. Purchasing agers say industrial activity is down a notch, and government's index of leading indicators fell 0.5% in ch, the second drop in a row.

aken together, the data suggest that growth this rter could end up below 1%. But don't despair just Capital spending and exports will pump economic wth back above 2% in the second half.

E APPARENT COLLAPSE in the economy this quar- comes from a correction in inventories. The $63 on gain in stockpiles last quarter was the largest in years. In fact, in three of the last four quarters, in- tory increases have outpaced final sales (chart).

ast quarter, businesses underestimated the pull- k from consumers whose real spending increased at a 1.4% annual rate compared with 5.1% in the th. In addition, the Mexico crisis likely meant com- ies did not ship many goods south.

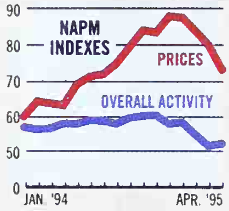
Vith the latest data confirming that softer demand is here to stay, businesses no longer need to stock goods so rapidly. If inventories now are rising at half their pace of the first quarter, the slowdown would subtract more than two percentage points from GDP growth. So if demand rises somewhere between 2% and 3%, real GDP will grow less than 1% this quarter.

THE INDUSTRIAL SECTOR is already adjusting to a softer economy. The National Association of Purchasing Management's index stood at 52% in April. That's only a bit better than March's figure, 51.4%, and both readings are perilously close to the 50% mark that indicates industry is just treading water.

The purchasers reported that output and orders improved. But they also said that delivery times were shorter in April than in recent months and that the index of prices paid fell for the fourth month (chart).

That means production bottlenecks and shortages of goods—usual precursors to higher consumer inflation—are not materializing. More capacity will be freed up this spring as manufacturers fill orders out of inventories instead of from new production. Already, carmakers have announced cuts in their second-quarter production schedules because of weak sales.

PURCHASERS COME IN FOR A SOFT LANDING



▲PERCENT REPORTING INCREASES

DATA: NATIONAL ASSOCIATION OF PURCHASING MANAGEMENT

In fact, a fall in motor-vehicle sales led the 4.7% drop in consumer outlays for durable goods last quarter. And the decline in car sales continued into April. Total retail sales will look better because of a late Easter and the delayed delivery of tax refunds held by the government as it checked for fraud. Will spending head south later on? That's unlikely because household incomes are still growing. Real disposable income advanced at an annual 4.4% rate last quarter, and in March it rose 0.4%.

Higher interest rates, however, have increased the monthly payments on old debts such as adjustable-rate mortgages and credit-card bills. Remember that 1994's holiday shopping spree was financed largely on credit. Those bigger bills are why spending will not rise at the same pace as incomes in 1995. But while slower hiring will limit pay gains, it will not be enough to cause a sharp falloff in consumer spending.

Housing, however, will suffer this year. New single-family home sales bounced back in March—thanks to a dip in mortgage rates—rising 3%, to an annual rate of

ERIC HOFFMANN/BW

577,000. But that followed a 12.5% plunge in February, and sales have been falling since last summer (chart).

Residential construction dropped 6.6% last quarter, but even so, builders ended the period with an overhang of unsold properties. The number of new houses for sale rose to 349,000 in March, a five-year high. Even if builders do not hammer another nail, their inventories of unsold houses could support 7.3 months of home buying at March's selling rate.

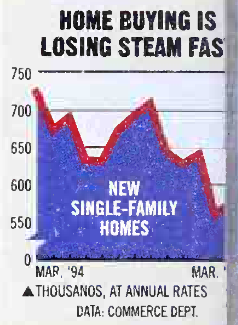
INSTEAD OF consumers propping up growth this year, the economy will have to rely on capital spending and exports. That's where the outlooks are most favorable.

Business investment on new plants and equipment surged at a 19.3% annual rate in the first quarter. Spending on equipment alone shot up by 20.8%. Companies are able to invest in machinery that will improve productivity and lower costs because profits are still growing at a robust clip (page 122).

One good twist in 1995: Businesses will spend more on buildings, reversing the prolonged downtrend in commercial real estate. Nonresidential construction grew 14.1% last quarter, and F. W. Dodge Div./McGraw-Hill Cos. reports that contracts for new commercial buildings rose 7% in March. Total contracts fell 3% because of weaker housing.

U. S. companies will keep adding to capacity even as domestic growth slows because their goods will be in demand overseas. Exports were flat last quarter, d
large part to the fall in shipments to Mexico. But
mand elsewhere will take up the slack. Foreign s
ments will do better in the second half, as growt
Europe and Latin America improves.

Imports, meanwhile, rose 5.9%, causing a deterioration in net exports. The first-quarter deficit widened to $119.7 billion, from $107.1 billion in the fourth quarter, subtracting one percentage point from GDP growth.



HOME BUYING IS LOSING STEAM FAS

▲THOUSANDS, AT ANNUAL RATES
DATA: COMMERCE DEPT.

Many of those imports ended up in warehouses, though. That means that the inventory correction now going on will hurt foreign producers almost as much as U. S. ma
facturers. Growth in imports could slow sharpl
coming months, improving the trade gap. A lower
icit will add to GDP growth—another reason no
worry if the second quarter looks awful.

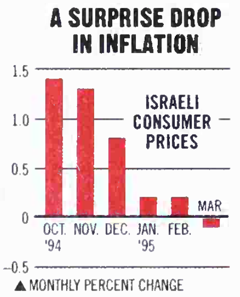
Indeed, the economy rarely slows or expands
straight path. As long as growth does not consiste
deviate from the 2.5% mark considered to be the F
target for noninflationary growth, the crazy curve
the economy won't alarm policymakers. And t
shouldn't scare you, either.

ISRAEL

FIGHTING INFLATION HAS HURT TRADE

After two years of battling rising inflation, the Bank of Israel seems to be winning. But the tight monetary policy has also caused a widening trade deficit and grumbles from manufacturers.

High interest rates, which peaked in February at 18.5%, have pulled inflation down from an onerous 14.5% yearly rate in 1994. In fact, consumer prices unexpectedly fell 0.1% in March (chart). Already, private economists are forecasting that inflation for 1995 will end up below the target of 8% to 11% set by the Bank of Israel and the Finance Ministry. So the central bank is starting to ease. The BOI has cut its discount rate by three percentage points in the past two months, with a 0.8 point cut on Apr. 24.



A SURPRISE DROP IN INFLATION

▲MONTHLY PERCENT CHANGE
DATA. BLOOMBERG FINANCIAL MARKETS

Because of public spending related to the peace process and immigration, monetary restraint has not slowed the economy much. Real gross domestic product grew 7% in 1994 and a projected 3% annual rate in the first quarter. Israel's economic performance index—also called the "S index"—rose 0.9% in February and another 0.5% in March.

Still, the trade sector is in trouble. Rising private demand has brought in imports, but the shekel's exchange rate with the U. S. dollar has hovered around 3 shekels over the past year. That has hurt exports. After posting a $217 million surplus in 1992, the balance
of payments dropped to a $2.8 billion deficit in 1994. And estimates for 1995 call for a furthe
worsening, to $3.5 billion. To reverse that trend, Israel's power
Manufacturers' Assn. and the F
nance Ministry have called for a
further interest rate cut of at least 2%. That action would weaken the shekel, making exports more competitive.

For now, the Bank of Israel and the Finance Ministry are only considering altering the ba
ket of currencies to which the shekel is linked. BOI Governor Jacob A. Frenkel has indicated that he is unwilling to risk high
prices by cutting rates sharply. To him, it is too early to claim victory over so stubborn a foe a
inflation.

TAKEOVERS

CHRYSLER: THE INSIDE STORY

How Kerkorian's secret talks with the carmaker became a bid with no backers

You would think Kirk Kerkorian would be getting discouraged. The billionaire gaming mogul's $20.5 billion Chrysler Corp. buyout bid lies in tatters. He hasn't been able to line up financing, he hasn't hired an investment banker, and he can't seem to attract any partners to join him and Lee A. Iacocca in the deal.

But the 77-year-old investor isn't ready to call it quits. He's wooing bankers and weighing a legal challenge to Chrysler's poison-pill defense, say sources close to Kerkorian's investment company, Tracinda Corp. His likeliest next move will be a proxy fight, the sources say. Its aim: to force a vote on his $55-a-share buyout proposal or elect a new slate of directors that backs the plan. Alex Yemenidjian, Tracinda's key dealmaker (page 42), won't divulge his next step but warns: "It would be a mistake to count us out."

Chrysler, meanwhile, continues to adamantly resist a deal. In a May 3 letter to shareholders, Chairman Robert J. Eaton sought to undermine Kerkorian's proxy plans by continuing to raise the prospect of share repurchases and dividend increases. And Chrysler top execs will be visiting big shareholders before their annual meeting on May 18.

For now, Chrysler appears to have the upper hand. In late April, when lawyers for both sides met in New York to discuss proxy procedures, there were fleeting, delicate overtures for a compromise. But sources in both camps say no further talks are scheduled, and both sides now are so angry that the chances for a settlement any time soon seem slim.

How did this deal come to such a standoff? In an account pieced together by BUSINESS WEEK, the buyout effort's long and torturous history is markable for its miscues on both si Initially, say those close to the de Chrysler's brass liked the idea of a m agement-led buyout, then inexplica turned hostile at the last minute. Chr ler insiders, meanwhile, say executi listened politely but never backed a b out. "We told them we were not intere ed," says one Chrysler source. "They j didn't want to hear it."

Miscues aplenty: Dealmaker Gary Wilson and Kerkorian say Chrysler's brass expressed interest in their plans—then turned inexplicably hostile

ian about throwing his 36 million
res behind the deal. He met with
korian and Yemenidjian in Kerkorian's
:e just off Rodeo Drive in Beverly
s, Calif. Kerkorian found Wilson's idea
resting, too, but already was strong-
ıing Chrysler to boost its stock price
raising its dividend and buying back
:k. On Dec. 1, Chrysler took those
ɔs and raised the trigger point for
ysler's poison-pill to 15% of shares
ı 10%, giving Kerkorian the option of
ing more stock.
ıt about that time, Wilson ran into
ɔcca at a party at Day's house in Los
geles. Wilson pitched the buyout no-
to him, too. Iacocca also expressed
rest but didn't sign on. He suggested
ead that Wilson take his proposal to
ımas G. Denomme, Chrysler's vice-
ırman.
Iere, the deal got sidetracked, briefly.
er Chrysler announced a 60% divi-
d hike and a $1 billion stock buyback,
share price spiked to more than $50.
h a buyout becoming more expen-
, Wilson temporarily lost interest. By
ch, though, slowing car sales and ris-
interest rates sent the stock drifting back down to around $40 a share.

On Mar. 30, Denomme and Valade trundled back out to the airport. This time, Wilson presented a more detailed, 25-page plan. A source who knows about Wilson's plan says Wilson explained that the deal could be done with or without Kerkorian and suggested that he be asked to limit his ownership to the current 10%. Again, sources close to Wilson say he got a positive response. But a Chrysler insider contends that "at every step along the way, they were told there was no interest."

CRYPTIC RESPONSE. Nonetheless, Eaton decided to tell board members about the talks. Before the company's Apr. 6 board meeting, Eaton laid out the proposal to executive committee members Robert J. Lanigan, retired chairman of Owens-Illinois; Peter A. Magowan, chairman of Safeway; and Malcolm T. Stamper, retired vice-chairman of Boeing. They did not take the issue to the whole board.

In hindsight, they should have, because events rapidly accelerated. Kerkorian, exasperated by Wilson's slow pace, decided to move decisively on his own. On Apr. 10, Denomme and Valade returned to the Detroit airport for a third presentation, this time from two Tracinda officials, Yemenidjian and Dan Taylor, a financial executive. The duo walked the Chrysler brass through an 11-page presentation. Valade kept his copy, and Chrysler later turned it over to CS First Boston Group, the investment banker heading its anti-takeover defense.

The next evening, Kerkorian startled Eaton, who was in New York, with the news that he intended to push ahead with the buyout. Chrysler sources say Eaton agreed to take the proposal to his board. On Apr. 12, Eaton hopped a Chrysler Gulfstream G4 to Detroit to strategize with top executives and board members. At 9 a.m., Kerkorian rattled windows from Wall Street to Main Street with his blockbuster $20.5 billion bid. Yemenidjian, hoarse from a bad cold, endured a two-hour conference call with dozens of skeptical reporters. He laid out the bare outline of the plan: Use $5.5 billion of Chrysler's own cash as a downpayment, round up partners with $3 billion in equity, and raise $12 billion in loans and other debt. He admitted that none of the financing was in place.

Chrysler, meanwhile, was gearing up for war. During the day, Yemenidjian called William J. O'Brien, Chrysler's general counsel, to ask for the company's response. O'Brien's answer? A cryptic "business is business." Says Yemenidjian: "In retrospect, that was when I first knew we had trouble on our hands." At 7

(CLOCKWISE FROM BOTTOM LEFT) PHOTOGRAPHS BY JIM LEYNSE/SABA, STEVE WOIT, O. CRALLE/THE IMAGE BANK, NONE, JEFF SCHELD/GAMMA-LIAISON, JODI BUREN, LISA QUINONES/BLACK STAR, TIMOTHY WHITE/ONYX, CHART BY LISA KNOUSE BRAIMAN/BW

p.m., after conferring with board members by phone, Eaton released a statement saying the company was not for sale. Yemenidjian complains that top officials never signaled opposition to the deal until it was launched. "It was very clear to us that Bob Eaton was informed, and not once did he say to us, 'don't do this, it will be hostile, and we will fight you.'"

The following Monday, Apr. 24, Chrysler's board met at the company's sprawling technical center north of Detroit. Directors unanimously rejected the offer, then listened to possible defensive moves presented by Chrysler's bankers. The following afternoon, Kerkorian fired off a blistering letter, demanding that Chrysler put his $55-a-share offer to shareholders, or barring that, raise the dividend to $5 a share. Eaton refused.

How will this battle end? Even if K korian can rally grassroots supp among shareholders for a buyout, biggest hurdle still looks insurmountal raising the financing. Until he does, billionaire's plan simply lacks all credi ity. For now, at least, Chrysler see ready to try to wait him out.

By David Woodruff in Detroit a Ronald Grover in Los Angeles

KIRK KERKORIAN'S ALTER EGO

The private jet awaits the trip to New York. Team Kerkorian is assembling in an eighth-floor suite at the Four Seasons Hotel in Beverly Hills, Calif. Lee A. Iacocca is at one end of the sofa; at the other is Dan Taylor, a financial executive at Kerkorian's investment arm, Tracinda Corp. In the middle of all the activity, alternating between English and Armenian as he switches lines, Alex Yemenidjian is working the phones. A potential partner checks in from London. The boss, billionaire Kirk Kerkorian, calls from Las Vegas, sending Yemenidjian to the privacy of a second room.

Until the Apr. 12 unveiling of Kerkorian's $20.5 billion plan to take Chrysler Corp. private, the 39-year-old Yemenidjian largely was unknown to the outside world. But to those in the know, he's the 77-year-old billionaire's alter ego. Indeed, as Kerkorian regroups to battle a staunchly resistant Chrysler board and management, he is relying heavily on Yemenidjian.

YEMENIDJIAN: *From casino deals to Chrysler*

ALAN LEVENSON

BLUE-COLLAR BOYS. While Kerkorian has maintained his characteristic low profile since the Chrysler announcement, Yemenidjian has been on the front lines. The day of the announcement, he fielded questions for two hours from reporters. Since then, he has shuttled between Vegas, Los Angeles, and New York on Kerkorian's private jet, chatting up potential investors and plotting strategy.

Yemenidjian's role reflects his tight bond with Kerkorian. Although Yemenidjian was born in Argentina and Kerkorian in the U.S., both are sons of blue-collar Armenians. When they met at a 1989 lunch, Yemenidjian was the managing partner of an accounting firm, providing financial advice to Hollywood types such as TV anchor Mary Hart and actress Jennifer O'Neill. Within a week, Kerkorian hired Yemenidjian.

A CPA with a penchant for Hugo Boss suits, Yemenidjian quickly became the primary dealmaker for Kerkorian's empire of Hollywood and Vegas holdings. He raised nearly $900 million in debt and equity to build Kerkorian's MGM Grand Hotel & Casino and helped the boss sell the MGM film studio to Italian financier Giancarlo Perretti for $1.3 billion. When Kerkorian wanted to expand his MGM Grand luxury airline, Yemenidjian sized up ailing Pan American World Airways and Trans World Airlines. Kerkorian didn't bid on either, and late last year, Yemenidjian unloaded the airline for a small profit. "Kirk doesn't like to use investment bankers," says Kerkorian's attorney Terry Christensen. "He makes his own decisions, but he trusts the information Alex collects for him, and he trusts Alex' judgment."

TYSON'S RETURN. Before the Chrysler deal, Yemenidjian focused on expanding Kerkorian's casino holdings. He moved from Los Angeles to Las Vegas in 1992, and as chief financial officer at Kerkorian's 74% owned MGM Grand Inc., he supervised construction of the $1.1 billion MGM Grand hotel and hired its top staff. In March, Yemenidjian negotiated a six-fight deal—at the MGM Grand—for former heavyweight champion Mike Tyson's return to the ring after serving a three-year prison sentence.

Once Chrysler started heating up, however, Tyson turned into a sideshow. Yemenidjian won't divulge his next steps. But it's apparent that Kerkorian's angry Apr. 25 letter to Eaton, in which he challenged the auto maker to put his offer to a vote of shareholders, sums up Yemenidjian's sentiments as well. "Is the duty of management to protect their jobs and keep their bonuses, or to enhance shareholder value?" Yemenidjian asks. "And if they are not going to do something about increasing shareholder value, then we will do it for them."

How? Yemenidjian waves off the question. "Stay tuned," he says. "This is not greenmail, and we're not going away." With that, his team regroups to head for their next meeting. There's an airplane waiting.

UPERT MURDOCH'S THER NETWORK

l the mogul's GOP allies deflect the FCC?

OLD WARRIOR: *Murdoch's battle stretches back to 1985*

TOM SOBOLIK/BLACK STAR

upert Murdoch was in his element as he hobnobbed with Washington's power elite at the White House ·espondents' Assn. dinner on Apr. The News Corp. chairman sat with ıtor Alfonse M. D'Amato (R-N. Y.) they chatted a bit about a Federal ımunications Commission probe of ges that Murdoch hid his foreign pany's huge equity stake in the Fox vork. D'Amato didn't need much incing. "I think [the investigation] is ble," D'Amato griped. "It's a politi- endetta."

he smooth lobbying was vintage doch. His deft courtship of high- ered Republicans helped him launch urth network in the first place, and OP cronies appear to be bailing him again—and saving him up to $200 on in capital-gains taxes. In late il, the FCC staff recommended a ly restructuring of News Corp.'s est in Fox Inc., finding that it vio- l foreign-ownership restrictions. But ers say the agency has decided to Murdoch off the hook anyway, gh it has delayed the announce- t. "There's no case for any kind arsh punishment," says one FCC nissioner.

he imbroglio started as a regulatory er, but has evolved into a political . The players include House Speak- lewt Gingrich (R-Ga.), House tele- nunications subcommittee Chairman Fields (R-Tex.), Senate Commerce mittee Chairman Larry Pressler .D.), and House Minority Whip Da- Bonior (D-Mich.).

ING STRINGS. The FCC's investiga- was triggered in 1994 by complaints the NAACP and NBC. It picked up n after the November election. That Murdoch and his allies a hook from h to hang their claim that the es were politically motivated. His *York Post* has long been a stri- critic of President Clinton, and FCC rman Reed E. Hundt has close per- l ties to Clinton and Vice-President ore.

ough Hundt denies playing politics, Murdoch has been busy pulling strings. Last fall, he discussed the FCC dispute with the newly elected Gingrich, who had just signed a $4.5 million book deal with Murdoch's HarperCollins publishing unit. Bonior seized on the book contract, forcing Gingrich to give up the huge advance and charging that the media mogul was buying GOP influence.

That's all the Murdoch forces needed to spring into action. Calling Bonior's comments "scurrilous," Fox chief lobbyist Preston Padden helped rally congressional Republicans to his boss's defense. Pressler shot off an irate letter to Hundt on Dec. 23, accusing Democrats of trying to "politicize" the foreign-ownership issue. And Fields vowed in April to make life miserable for the FCC if it unfairly penalizes Murdoch.

The FCC gave Murdoch more fodder when its general counsel advised staffers to stay away from the Fox Christmas party, at the same time approving attendance at NBC's. "The FCC must like sticking pins in a Rupert Murdoch doll," gripes Representative Michael G. Oxley (R-Ohio).

Further undermining the FCC's case against Murdoch, GOP House members on May 3 called for repeal of all foreign-ownership restrictions as part of an overhaul of telecommunications regulations. That would remove the very regulation that lies at the heart of the FCC case.

The matter dates back to 1985, when Murdoch launched Fox. Then-FCC Chairman Mark S. Fowler, a gung-ho advocate of competition, was thrilled that the News Corp. chief wanted to challenge the three existing networks by buying seven Metromedia Co. stations for $2 billion. But Murdoch had a little problem: The law limits foreign ownership to 25% of equity. Murdoch was an Australian at the time, and his company, which would own 99% of the equity, was based in Sydney. So he became a U.S. citizen and devised a complex business structure that critics contend hid News Corp.'s full stake. FCC staffers insist they were duped, a charge Murdoch denies.

Although a majority of the five commissioners believes Murdoch may have violated the rules, they also think the competitive benefits of a fourth network outweigh any infraction, according to agency sources. Some commissioners say they are also miffed by what they see as Hundt's unseemly pressure on the staff to force the restructuring. "The chairman got rolled," says a colleague. That's the risk you take when you tangle with Murdoch.

By Mark Lewyn in Washington

ietting the FCC to drop its complaint will save Murdoch some $200 million in capital-gains taxes

DRUGS

A PATENT MEDICINE CALLED GATT

For makers of branded drugs, it could prove a powerful tonic

It wouldn't be surprising if Robert J. Gunter took a dose of his own medicine. President of generic drugmaker Novopharm USA Inc., he has spent five years gearing up to produce a generic version of Glaxo Holdings PLC's blockbuster ulcer drug, Zantac. He even invested $40 million in a plant in Wilson, N.C., built to pump out the low-cost version as soon as Glaxo's first patent expires in December.

Now, Gunter finds himself in the middle of a stomach-churning patent battle. Glaxo and other brand-name pharmaceutical giants are claiming that the General Agreement on Tariffs & Trade (GATT), signed by President Clinton in December, extends many of their patents, Zantac's among them. More important, they argue, the extended patent term gives them extra months—even years—of protection from competing generics.

While the case relies on complicated legal arguments, it boils down to whether provisions in GATT supersede a 1984 law that prevents the Food & Drug Administration from approving generics until the patent on a name brand expires. If the arguments prevail, more than 100 brand-name products will win an average of 12 months each of extra patent protection (table). A new study from the University of Minnesota estimates that the extra protection could give the drugmakers a windfall of $6 billion over the next 20 years. "That's obscene," fumes Senator David H. Pryor (D-Ark.). "American consumers are going to pay the bill."

"EUREKA" MOMENT. Pryor, a handful of other lawmakers, and the generics companies are fighting back. On Apr. 27, Pryor and five other senators asked the FDA to reject the brand-name companies' interpretation of GATT. Vows Novopharm's Gunter: "If the pharmaceutical industry thinks generics will roll over and play dead on this, they have another think coming." The FDA's decision is expected within weeks, but the wrangling won't end then. FDA officials and executives on both sides predict that whatever the FDA decision, the loser will take the issue to court.

The high-stakes controversy wasn't anticipated when GATT was approved late last year. The agreement harmonized U.S. law with the rest of the world's by changing patent terms to 20 years from the initial filing instead of 17 years after being granted. Most companies thought the change applied only to new patents, but soon after passage, Glaxo's lawyers had a "eureka" moment. Poring over the legislation, "we realized that for many of our existing products, patent life would be extended," says associate general counsel Marc Shapiro.

BESTSELLER: *A favorable ruling would keep Glaxo in the pink*

A WINDFALL IN THE MAKING

Pharmaceutical makers are seeking an average of 12 months' extra protection from generic competitors for more than 100 drugs

DRUG COMPANY/ USE	MONTHS OF ADDED PROTECTION	POTENTIAL EXTRA REVENUES BECAUSE OF LACK OF GENERIC ALTERNATIVE MILLIONS OF DOLLARS
ZANTAC Glaxo/ulcers	19	$1,000
MEVACOR Merck/ cholesterol-lowering	19	$448
DIFLUCAN Pfizer/ antifungal agent	20	$410
PRILOSEC Merck/ulcers	17	$586
CAPOTEN Bristol-Myers Squibb/hypertension	6	$101

DATA: PRIME INSTITUTE, UNIVERSITY OF MINNESOTA

NOVOPHARM'S KNOCKOFF: *Worth millions once it's available in the U.S.*

As a result, any patent that took under three years to win approval wo
have longer protection. Since the
Patent Office took only 17 month
grant the first of two key patents
Zantac, the change would give the c
pany an additional 19 months of
tection for its top-selling drug.

But even as GATT changed pat
terms, Congress tried to prevent h
to rivals that had been counting on
original expiration dates. Lawmak
inserted a clause permitting a comp
to introduce a competing product on
original patent expiration date if
company had made significant prior
vestments and if it paid the patent h
er a royalty or some other form of
uitable remuneration." While Jerem
McIntyre, counsel for generic drugm
er Geneva Pharmaceuticals Inc., c
that "a fair balance," on the theory t
it's better to pay a royalty than not
allowed into the market at all, the pr
sion would squeeze generic drugm
ers' already thin profit margins.

OVERSIGHT? Meanwhile, Glaxo, Bri
Myers Squibb Co., and other bra
name companies are arguing that
escape clause shouldn't even apply
the drug industry. The reason, they
is that it clashes with provisions i
1984 U.S. generic-drug law that
vents the FDA from approving a gen
drug until the brand-name patent
pires. Unlike other instances wh
Congress amended existing laws to
form with GATT, it failed to resolve
conflict—implying an intent to keep
isting law intact, says Glaxo's Shap
Pryor and others plead simple ov
sight. But the big drugmakers insist
claiming what they see as theirs.

In the coming fight, generic dr
makers face an uphill struggle. "
have to be better organized, and sp
more money to get our mess
across," says Bruce Dow
CEO of Barr Laborato
Inc., a generic drugma
in Pomona, N.Y. As
cymakers focus once ag
on rising health-care co
the generic companies
have one potent messa
If the brand-name com
nies win, Americans
pay billions more
drugs. Faced with
prospect of dramatic
higher costs, "I can't
lieve the [FDA] won't m
the right choice," says Lewis A. E
man, president of the Generic Phar
ceutical Industry Assn. Robert Gu
can only hope he's right.

ngressman Foley — tand Up for OUR JOBS!
Greetings from 420,000 American Sugar Families
WELCOME TO SOUTH FLORIDA

PROTEST IN FLORIDA: *This time, growers may have to accept reform*

BSIDIES

IG SUGAR MAY BE BOUT TO TAKE ITS LUMPS

e pressure is on to end "the most costly cartel…since OPEC"

n Mar. 29, Representative Dan Miller (R-Fla.) stood in a crowded Capitol Hill office and made what unts to a near-treasonous declaration nany Floridians: He vowed to kill a ral subsidy program that provides a billion annual windfall to U. S. sug-rowers. "It's corporate welfare," he ged. That sent Big Sugar's lobbying hine into overdrive. An hour later, a colleague from an adjoining district, k Foley, denounced Miller for aiding sidized European farmers at the ex-se of the U. S. sugar industry.

he exchange dramatizes the growing le in Congress about whether to kill ar growers' sweet subsidies. Al-ugh opponents have failed to do so y times before, GOP rts to balance the get make the program denly vulnerable.

FARE? The sugar-subsi-issue is explosive be-se it pits a strange alli-e of GOP free-marketers liberal Democrats inst supporters of pow-l, parochial interests. addition, the issue has industrial group—the wers—in combat with ther—big sugar buyers. gar's going to become poster boy for corpo-e welfare," predicts mas A. Hammer, president of the Sweetener Users Assn., which represents big corporate buyers of sugar. Their goal: to pay the lowest possible price for sugar.

Such interests have won the support of House Majority Leader Richard K. Armey (R-Tex.), who has led the charge to abolish what he calls "the most costly cartel to American consumers since OPEC." Miller and Representative Charles E. Schumer (D-N. Y.) plan to co-sponsor a bill in mid-May to kill the sugar-subsidy program, and a similar bill will be introduced in the Senate. "The political landscape has changed," says one Senate aide.

Sugar farmers know they've had a great deal for years. While the government doesn't give cane and sugar-beet farmers direct cash subsidies, it provides them with low-cost loans from the U. S. Treasury, guarantees a price much higher than the world market's, and restricts imports. The result: A 1993 General Accounting Office study found that inflated sugar prices cost American consumers $1.4 billion a year.

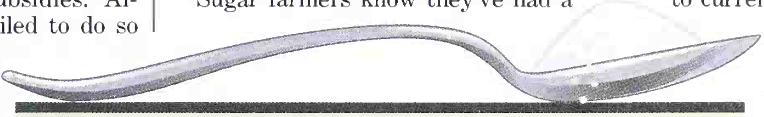
ODD BEDFELLOWS. In the past, growers fended off attacks by arguing that without the program, European producers would dump their own subsidized sugar onto the world market. But that argument is losing sway. Powerful corporate buyers such as Coca-Cola, Hershey Foods, Kraft Foods, and Nabisco Foods have teamed up with consumer groups and environmentalists for the first time. The odd bedfellows call themselves the Coalition to End Welfare for Big Sugar and have run ads attacking the subsidy.

Sugar is fighting back. At a congressional hearing on the subject held in Florida on Apr. 27, more than 500 farmers turned out to plead with lawmakers to save their jobs. Industry heavy hitters such as J. Nelson Fairbanks, president and CEO of U. S. Sugar Corp., have met with key Washington lawmakers several times. And Pepe Fanjul, CEO of Flo-Sun Inc., a huge sugar grower in West Palm Beach, Fla., hosted a March fund-raising dinner for Senate Majority Leader Bob Dole's Presidential bid. Rep. Armey calculates that the Fanjul family receives as much as $64 million in annual benefits, though they dispute the figure.

The growers also have a long history of generous campaign contributions. Sugar PACs and a few individual donors have contributed $11.3 million to congressional candidates and $1.3 million to current House and Senate Agriculture Committee members since 1979, according to the Washington-based Center for Responsive Politics.

But generous donations may not save sugar this time. House Agriculture Committee Chairman Pat Roberts (R-Kan.), a powerful ally for sugar producers, says the growers' best hope is to accept cost-cutting reforms "or their programs may go the way of honey, wool, and mohair." A bittersweet choice, to be sure.

By Mary Beth Regan in Washington



The Sugar Wars

GROWERS SAY IF THE SUBSIDY IS CUT:	BUYERS SAY IF THE SUBSIDY REMAINS:
▶ As many as 420,000 U.S. farm jobs would be lost	▶ U.S. buyers may be forced to move overseas
▶ Farmers would face subsidized European competition	▶ Consumers will pay an extra $1.4 billion annually
▶ World sugar prices would soar, causing higher U.S. prices	▶ U.S. prices will stay 8¢ per pound higher than elsewhere

First Chicago Investment Services, Inc.
BANK ON THE FLY
FASTER AND EASIER

BANKING

'THANKS FOR YOUR DEPOSIT. THAT'LL BE $3'

A plague of fees is spreading–and for good reason, bankers say

Outside the First Chicago bank branch in tony Lake Forest, Ill., Shaun C. Borden is threatening to take his "six-figure" account to another bank. "I don't like the attitude of First Chicago," says the president of Swiss Financial Securities Inc., a brokerage firm. Borden is steamed because of the bank's plan, announced on Apr. 25, to slap thousands of customers whose balances total less than $2,500 with a fee of $3 for visiting a teller when they could have used an ATM. Borden isn't in that category, but perception counts—and his is that the bank is unfairly jacking up its fees.

Like Borden, bank customers across Chicago are outraged. Now, the city's largest bank is scrambling to respond to what one of its board members calls a "public relations disaster." First Chicago Chairman Richard L. Thomas quickly mailed letters to all customers seeking to clarify the fee issue. Analysts think the bank may have to at least partially retreat from its new plans, though Executive Vice-President W. G. Jurgensen contends the bank is "only going after excessive transaction activity."

However First Chicago responds, though, bank customers everywhere are having to get used to forking over fees for what once came free. From Bank of America on the West Coast to Citicorp back East, banks increasingly are nickel-and-diming customers in ways that add up to big revenue. Since 1990, service charges on deposit accounts alone have grown from $11.4 billion to $15.3 billion (chart). And fees are likely to keep growing. Chris M. Bauer, chairman of Firstar Bank Milwaukee, predicts that eventually the whole industry may have to move in First Chicago's direction.

IRKSOME ACCOUNTS. Many banks already have. Indeed, First Chicago riled consumers over an old idea: In California, Wells Fargo Bank began charging teller fees for some accounts back in 1987; BofA did so in 1992. Meanwhile, fees keep rising even as banks add new ones. *Bank Rate Monitor* reports ATM fees rose 17% last year, to an average of about $1. Three years ago, 35% of banks leveled a charge on customers who unknowingly deposited someone else's check that bounced; today, it's 85%, reports the U. S. Public Interest Research Group. Banks impose dozens of other fees,

DON'T THEY WANT OUR MONEY? *No always. Some accounts are a pain.*

The fact is, many bankers would some customers to shift to a cr union or small bank. "As long as t is service available somewhere, let marketplace work," says Norwest C CEO Richard M. Kovacevich.

The trick is to coax unprofitable tomers into paying their freight. F Manhattan Consulting Group Inc. ures that 50% of households with b accounts are money-losers for ba These are low-balance customers constantly bug tellers with request inspect their balances or see if a ch has cleared. The result is anemic re nues and high costs. The dange dumping a whole class of customers course, is that the profitable custom could walk, too.

POLITICAL FLAK. One of the few ba to finely dice its customers by pr ability is Firstar Corp., the parent Bauer's Milwaukee bank. When ranked customers for money-making tential, 15% of households with inco over $125,000 were unprofitable, w 76% of households with incomes un $25,000 a year were profit generat The first group had relatively low ances but demanded costly personal tention; the latter group had even lo balances but eschewed tellers for l cost ATMs. The lesson: Getting ric low-income clients isn't the solution.

Still, bankers may ignite a polit powder keg with their fees. "A la proportion of the population belie they have a constitutional right to f banking service, including congressm says Joel Friedman, senior partne Andersen Consulting. Indeed, Rep sentative Maxine Waters (D-Calif.) u a May 3 press conference to denou First Chicago and push a bill freeze all fees for t years.

The bill proba won't pass, but ba can't afford to anta nize Congress wh pushing for repeal of Glass-Steagall Act b ring them from bu nesses such as securi and insurance. Eve First Chicago retreat bit, rising bank fees here to stay.

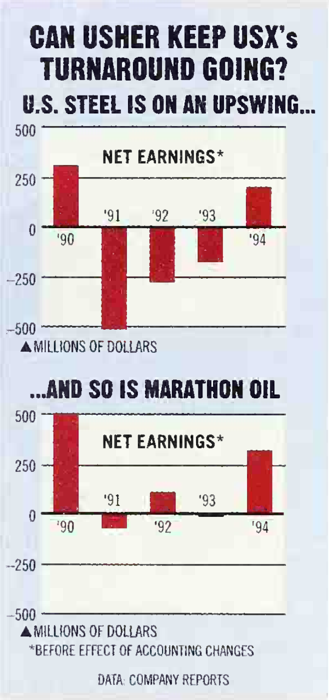
REAL STEELMAN OR USX

n Usher's record is solid, but his style could be a problem

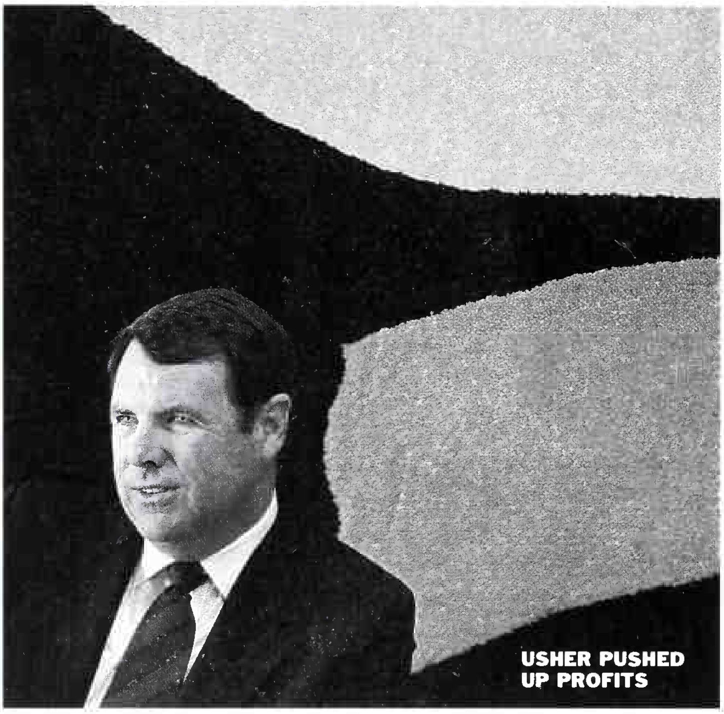
ast December, when USX Corp. Chairman Charles A. Corry was arrested in Washington for carrying a ed gun into a federal building, the onse in Pittsburgh was quiet glee. y, who faced a misdemeanor charge later was dropped, has never been vorite in Steeltown. After all, he the one who pushed U.S. Steel the energy business, with a $6.5 on buyout of Marathon Oil Co. in . Later, he put the steel unit on block but couldn't a buyer. Rumors led in the early '90s Corry even would e the headquarters he steel giant to ston.

ow the steel stal- ts can rejoice: One heir own is back in ge. On Apr. 25, the d of the $19 billion lomerate announced it has picked a vet- steelman, Thomas sher, 52, to replace y, who is retiring in , a year and a half d of schedule, citing onal reasons. As ident of U.S. Steel up for five years, er pushed up pro- ion and profits, ezing more tonnage mills in Gary, Pitts- h, and Birmingham. challenge: to keep the steel group the upswing while driving down s at the oil company. But now that on a broader stage, Usher may to ease up on his sometimes raw, t-from-the-lip style.



*BEFORE EFFECT OF ACCOUNTING CHANGES

DATA: COMPANY REPORTS



USHER PUSHED UP PROFITS

D-NOSED LITIGATION. In many ways, er boasts an ideal résumé for run- an industrial behemoth. He has a in systems engineering from the ersity of Pittsburgh and 29 years of rience in the company, much of it at plant level. He's smooth and articu- with Wall Street and at ease dis- ing global trends with his joint-ven- partners from Korea and Japan. jokes readily with workers, both at quarters and at the mills. "He's a ral leader," says Matthew Botsford, ident of WorldClass Processing Inc., a Pittsburgh steel servicing company. "People there believe in him."

However, Usher has been known to go too far. Two years ago, speaking to the Association of Women in the Metal Industries, attendees say that he opened with a lengthy series of sexual jokes, some of them targeted at specific members of the host organization. "It was pretty raunchy," recalls one member of the group. "It wasn't appreciated." Usher notes that the association continues to invite him to speak. Whether the jokes were offensive, he says, may be "in the eye of the beholder."

The chairman-to-be also shows signs of carrying on USX's tradition of hard-nosed litigation that sometimes backfires. In the most prominent case, the company was slow to settle a longstanding antitrust suit lodged against a former holding of U.S. Steel, Bessemer & Lake Erie Railroad, and ended up in 1993 on the wrong end of a $498 million verdict. What's worse, the money went in the form of damages straight to some of U.S. Steel's toughest competitors. Usher says that the best chances to settle were already lost before he and Corry started to run the company.

A year later, when National Steel raided his Gary mill, hiring plant management for top executive jobs, Usher sued National and pushed for an injunction. He and his team flew to Hammond, Ind., and insisted in state court that National was merely intent on crippling a competitor and stealing trade secrets. The injunction was quickly dismissed. But USX still is pushing ahead with a longshot suit against National and its Japanese owner, NKK. "We were the aggrieved party," he insists.

IMPROVING PICTURE. Despite such spats, Usher has led U.S. Steel to an impressive comeback. In the past five years, the company has pushed ahead of German and Japanese rivals in productivity. At the same time, he has prepared for a down market in common grades of steel by forging high-tech joint ventures with Japan's Kobe Steel Ltd. And last year he even teamed up with minimill nemesis Nucor Corp. in a joint venture to develop new steelmaking technology.

At Marathon Oil, Usher steps into an improving picture. Production is up 30% in two years, now that big projects in the North Sea and the Gulf of Mexico are coming on strong. But its consortium in Russia, the Sakhalin Energy Investment Co., is running into bureaucratic resistance. Marathon's stock—which was separated from the steel stock four years ago under pressure by Carl C. Icahn—is at 19, a 12-month high but still 25% below its level at the time of the split. More cost-cutting seems called for, and Usher certainly knows how to do that: U.S. Steel axed more than 100,000 jobs in the 1980s. With him at the helm, Marathon may be in for similar medicine.

DEALS

RYKA LOOKS LIKE IT'S ON ITS LAST LEGS

The failed L.A. Gear merger puts Ryka's future in jeopardy

As she left work on Apr. 27, Ryka Inc. Chief Executive Officer Sheri Poe was confident she had finally clinched a deal to sell her struggling maker of women's athletic shoes to larger rival L. A. Gear Inc. It hadn't been easy: A merger accord signed on Jan. 30 had fallen apart because of Ryka's deteriorating financial condition. But the two companies had hammered out a revised pact, and Poe hoped to announce the new plan as early as the following day. The two companies had even prepared a joint press release.

But moments after arriving home that evening, Poe got a call from L. A. Gear President William L. Benford. His brief, blunt message: The deal was off. Poe says Benford didn't really explain the sudden about-face. "I was shocked," she recalls. "It was bizarre."

BETRAYAL. Bizarre or not, the collapse of the merger has left Ryka struggling for its life. The Norwood (Mass.) company is in default on its main loan and faces a cash shortage and punishing losses. Poe says Ryka is in talks with several potential rescuers and hopes to secure a bridge loan. But time is short. Addressing speculation that Ryka only has enough cash to last two months, Poe says: "I don't know that we even have that long."

From the start, L. A. Gear wanted Ryka partly because it would add something entirely new to its line of hip, stylish sneakers. Ryka made its name as a pioneer in serious-minded "cause marketing." A rape survivor, founder Poe wove her personal trauma into a potent marketing message linking fitness and empowerment of women.

But the deal quickly began to sour. Committed to Poe's mission, many Ryka shareholders and employees felt betrayed when the company agreed to the $16.4 million L. A. Gear merger. They felt the price—just 62¢ a share—was inadequate. And the perk-laden employment agreement Poe cut (while leaving other managers to fend for themselves) made matters worse. Four shareholders filed class actions, while others started a grassroots campaign to kill the deal. In February, Ryka's chief financial officer, Roy S. Kelvin, quit in disgust.

Meanwhile, Ryka's finances began to deteriorate markedly. Since its founding in 1987, the company never has posted an annual profit and has been in a perpetual cash crunch. In 1994, it lost $511,000 on revenues of $16.3 million. Last August, when L. A. Gear approached it, Ryka was trying to secure new, long-term financing. The board opted for the merger instead.

But sales started to slip. Poe blames it partly on tough competition, partly on a dearth of new designs. But Ryka insiders also say that the merger caused some key customers to scale back orders, perhaps because many footwear retailers dislike discount-oriented L. A. Gear. Whatever the cause, Ryka announced on Apr. 6 that it expected a loss for the first two quarters, vs. a profit in last year's first half, and faced "a critical shortage of cash." Ryka was forced to go on bended knees to L. A. Gear for a loan.

After more negotiations, the two sides cobbled together a pact that called on L. A. Gear to pay far less for Ryka's stock—around 25¢ to 30¢ a share, estimates a source close to Ryka. Poe also agreed to cut back her employment package, and L. A. Gear was supposed to provide a $1.5 million credit line. Both boards had tentatively approved the deal by Apr. 21, insiders say.

"BAD MATCH." But L. A. Gear's Benford says he and Chairman and CEO Stanley P. Gold were growing increasingly edgy about Ryka's financial plight. The smaller company "was continuing to deteriorate as we went through the negotiations," he says. L. A. Gear was afraid that $1.5 million, which would be totally unsecured, might not be enough—and that the deal might be voted down by Ryka shareholders.

Benford denies any connection, but some outsiders believe L. A. Gear's own financial problems contributed to the deal's demise. On top of years of poor results, the company's first quarter, ended Feb. 28, was woeful: Inventories were up 25%, and the athletic-shoe outfit posted a loss of $12 million on revenues of $9 million. "At this point, L. A. Gear can't afford to overpay," notes Gary Jacobson, a Bankers Trust Securities Corp. analyst.

Lately, Ryka's share price has sunk to a measly 19¢, giving it a market capitalization of just $5 million. But not all is gloomy. "I'm really glad" the merger fell through, says Elizabeth Hermon, a psychotherapist in Cambridge, Mass., who, with her husband, owns 150,000 Ryka shares. "It was a bad match. I'd rather lose all my money than see Ryka run by L. A. Gear." Barring a miracle rescue, Hermon just may get her wish.

The athletic-shoe maker is facing big losses in '95, so CEO Poe hopes to find a new buyer. But time is short. Can its cash stretch for the next two months? Says Poe: "I don't know that we even have that long"

BUY A COMPAQ NOTEBOOK AND GET A DESKTOP FREE.

Compaq LTE Elite 4/75CX

Compaq SmartStation

$700 VALUE

Just how do you get two PCs for the price of one? Buy a Compaq LTE Elite 4/50E, 4/50CX or 4/75CX by May 31st, and we'll give you a Compaq SmartStation with it—free.

And what's so smart about a Compaq SmartStation? It's loaded with unique features like "VCR-style" motorized docking, plug-and-play capabilities and integrated Ethernet support. And, when combined with our top of the line LTE Elite, it's like getting a network-ready, expandable desktop. What's even more remarkable is that it's free—still another reason why you will find this combination to be the perfect solution for your needs in the office.

There's nothing lost when you're on the road, either. Because the LTE Elite is our most powerful notebook. And with its built-in AC adapter, you won't find yourself lugging around any extra baggage.

Simply put, buying an LTE Elite right now and getting a free SmartStation is a great deal. And this terrific offer is only available from Compaq. So, if you want to find out where you can buy one great computer for the road and get another for the office free, you should call us now.

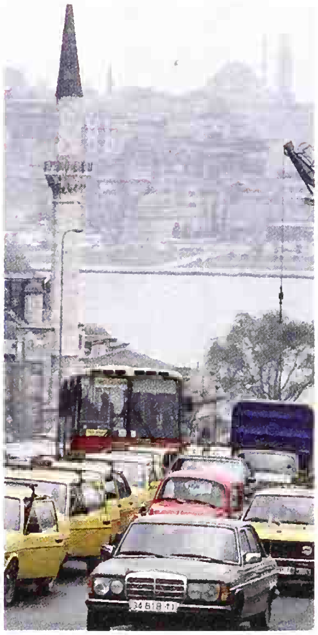
TOXINS

DON'T GET THE LEAD OUT

Great Lakes Chemical bucks efforts to ban leaded gas



LEAD SLEDS: *Istanbul still runs on regular gasoline*

> "Lead is a naturally occurring toxin, as are alcohol, sugar, and salt. Toxins are dangerous only at high dosage rates—in small amounts they do little or no harm."
>
> —Advertisement by a Great Lakes unit that ran on Feb. 25 in the Wellington (New Zealand) *Evening Post*

They all got out: DuPont, Ethyl, and Nalco. None wanted to continue making lead additives in the face of mounting worldwide efforts to stamp out their use in gasoline. The latest: On Apr. 28, the U. N. Commission on Sustainable Development called on all nations to reduce their use of leaded gas or phase it out entirely.

Then there's Great Lakes Chemical Corp., based in West Lafayette, Ind. The company is fighting a controversial rear-guard action to slow the demise of leaded gasoline. Why? Octel Associates Ltd., a British company that is 89% owned by Great Lakes, makes the tetraethyl lead used to boost octane in gas. Last year, Octel accounted for 60% of Great Lakes' $405 million operating profit and 26% of its $2 billion in sales.

BRINGING REASON. To try to lengthen lead's lifetime, Octel is disputing the chemical's toxicity. In New Zealand, the company has run ads that compare lead to "naturally occurring" substances such as alcohol, sugar, and salt. And Octel argues that unleaded gasoline may be worse for human health than leaded. "They are completely misleading," says Princeton University environmental researcher Valerie Thomas.

Studies have linked high concentrations of lead in the body with problems ranging from high blood pressure to lowering the IQ of children. The U. S. began phasing out leaded gas in the early 1970s. Japan, Sweden, Brazil, and several other countries already have total bans. Leaded gas remains in use in much of the developing world, from Turkey to China. Nonetheless, Great Lakes thinks the anti-lead campaign is moving too fast. Says Donald A. Hall, a member of Octel's management board: "We're trying to bring reason to the debate."

Hall argues that if refiners phase out lead too quic they're apt to benzene instead boost octane. A benzene, relea into the environm can pose a can risk. It's possible increase octane w out using much zene, but it c more. What's m Hall says, the c pany has run studies that fail correlate falling bl lead levels and decline of lead in

But Harvard U versity School Public Health P fessor Joel Schwa says that the cor lation between l in blood and lead in gas is ironclad. for the cost, international agencies the World Bank believe that obtain loans to upgrade refineries won't b problem. Loan payments might be nanced by a tax on leaded gasoline.

Tetraethyl lead sales by volume declining by some 10% per year. Great Lakes is using the enormous p its thrown off by the tetraethyl le business to spend up to $200 million nually on acquisitions to prepare for post-lead world. Still, with big earni at stake, don't expect the company back down any time soon.

AIRLINES

GROWING PAINS AT VALUJET

Can the hot little airline cope with success?

PRIDDY AND JORDAN: *"We just want to get rich"*

In October, 1993, four airline industry veterans spent $1 million and did the nearly impossible: They launched an airline that turned a profit in its second month of operations. Record results for ValuJet Airlines have been rolling in ever since. And the company's stock, offered to the public at $6.25 last June, now trades at $27.50. The company's price-earnings ratio: an impressive 26.

Now come the growing pains. To avoid the fate of other Southwest Airlines imitators that flared then faded, ValuJet must keep a lid on operating costs, deal with a tightening market for used DC-9s, and contend with flight attendants and mechanics who vow to organize into labor unions.

ValuJet Chairman Robert L. Priddy and President Lewis H. Jordan swear they'll keep squeezing penn "In prioritizing growth o cost control, we'll choose c every time," says Jordan. Fr its two-plane, three-city st ValuJet now flies into 24 ci with 29 planes for fares as as $39. The planes fly at an dustry-leading 75% capacy and at 43% full, they br even.

ValuJet's secret? Ticketl flying saves about $2 millio year. The airline's secondha DC-9s cost only $5.2 mill each. Add it up, and Valu flies for an industry-best per seat-mile. In 1994, its first full y of operations, the airline earned $2 million on $133.9 million in revenues

Still, growth must be served. P senger-service expenses grew 19% 1994's fourth quarter, and reservat costs jumped 23%—both well beyo

an 8% jump in passengers. Growth slowed in the first quarter, but still topped bookings. Plane costs could be rising, too. ValuJet recently passed on a group of aircraft priced at $6 million each, but it needs to add planes to maintain growth.

TEMP TANTRUMS. Unionization could raise costs higher. Hoping to thwart the effort, ValuJet on May 4 announced that it will offer sick-day and vacation pay for all employees. That takes some teeth out of the union push, but flight attendants want to boost pay from $11.76 an hour—well below the $16 industry average.

Union organizers also are raising workers' ire over ValuJet's relationship to Jordan Temporary Services, owned by Jordan's 25-year-old daughter, Jennifer, and ex-wife, Angela Ellerbee. Jordan Temporary, which hires most non-pilot workers and employs 1,450 of the 2,700 people working at ValuJet, earned $5.14 million from the airline last year. ts billings are up 30% this year. "This c pany is filled with nepotism," gri s flight attendant Anna Wootten. Valu says it pays Jordan a competitive r e.

Priddy and Jordan swear they'll k growth in line. "Every other sta wants to be another United or D or American," Priddy told analysts. just want to get rich." So far, ValuJ shareholders are doing just that.

VIDEO

GUTS 'N' GORE —IN 3-D!

Can cool graphics inject life into the video-game market?

Just a few blocks from O.J. Simpson's Los Angeles courtroom, another—albeit smaller—media circus will erupt on May 11. There, three titans of the video-games industry plan to use a multimedia trade show, E3 Electronic Entertainment Expo, to butt heads over the next generation of mind candy: three-dimensional game machines that represent a quantum leap beyond today's playthings.

Sega of America Inc. will herald the U.S. arrival in early September of Sega Saturn, its 3-D machine that leaves the graphics of the top-selling 16-bit Sega Genesis machine in the dust. Nintendo of America Inc., vying for market leadership with Sega, will unveil marketing plans for its Nintendo Ultra 64. And Sony Computer Entertainment of America will be showing off PlayStation, its first foray into the U.S. video-game market. The machine already has made a big splash in Japan. There's more. Tiny 3DO Co. demonstrated its latest 3-D technology, M2, on May 2.

They all are counting on 3-D graphics to inject new life into the slowing games market. The new players use state-of-the-art silicon and graphics engines to produce realistic-looking 3-D images. In a Saturn hockey game, for example, players can view action on the fly, from the perspective of the goalie, a defense man, or an overhead "camera."

JOYSTICKER SHOCK. The new technology is supposed to appeal to the MTV crowd, which has grown bored with the slower speed and graphics quality of 16-bit game players. Researchers believe this new generation of machines will recapture the buzz: Forrester Research projects 13.8 million consoles will be installed in homes by 1997, up from 1.8 million this year. Game makers hope the hardware sales also will lead to a surge in interest in their wares. According to Forrester, sales of video games for the new systems—at $40 to $60 a pop—should reach $1.6 billion by 1997, from about $400 million this year.

Still, the prognosticators may be wrong: Video-game loyalists may not step up to the plate, given the high cost of the new systems. "It's one thing to spend $99 to buy a Sega Genesis or Super Nintendo," says Robert A. Kotick, the CEO of Activision Inc., a producer of video-game and PC software. "It's another thing to bu a $250 or $300 device.

KID CONSULTANTS

MUCH ADO ABOUT SAFETY AT ALCAN

AS ALCAN ALUMINUM CONVENED its annual meeting in Montreal on Apr. 27, David Hackbirth, former president of its U.S. operations, was unleashing explosive charges against the company. Hackbirth, 60, says he was fired in February for refusing to water down safety, health, and environmental standards at the Cleveland-based unit—under orders from headquarters. Hackbirth says he was against saving money by loosening the company's safety and other standards but adds that, to his knowledge, Alcan's U.S. unit never violated the law. He says he will sue for wrongful dismissal on May 15 if Alcan doesn't thoroughly investigate the matter. A spokesman in Montreal says the company looked into the charges and found they have "no basis in fact."

CLOSING BELL

BAD CONNECTION

Judge Harold Greene's decision on Apr. 28 to let the Baby Bells provide long-distance service to their cellular customers is ringing hollow. At first, expectations of vast new revenues for the Bells boosted their stocks. But the ruling is so narrow—it only lets the telcos resell certain long-distance services from other carriers—that gains may be small. The decision mainly shows "how much we need [new] telecom legislation," says Bell Atlantic General Counsel Jim Young.

FORMAT WARS: THE SAGA CONTINUES

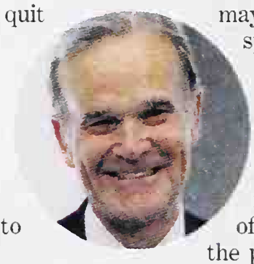
ANOTHER BATTLE IN THE WAR over electronics standards. Early this year, Toshiba and Time Warner declared victory for their digital video disks (DVD) technology—a format for playing movies and music on compact disks. The duo signed up powerful Hollywood studios and consumer-electronics companies to back the standard. Now, Sony and Philips have countered with a high-density CD format that holds reams of video, sound, and text—and unlike its rival, it's erasable. Sony and Philips are pitching their disks largely as replacements for CD-ROMs used in personal computers. But PC companies are urging the two sides to come up with a single standard.

ALICIA MUNNELL, FED GOVERNOR?

TREASURY ECONOMIST ALICIA Munnell, a 20-year veteran of the Federal Reserve, is emerging as the front-runner to replace retired Fed Governor John LaWare. While the White House maintains that no decision has been made, Munnell, 52, has the backing of Treasury Secretary Robert Rubin and National Economic Council chief Laura D'Andrea Tyson. As research director at the Boston Fed, Munnell wrote a 1992 report on racial bias in mortgage lending that discomfited some senior Fed officials. GOP appointees, who dominate the central bank, may not like her economic views much better: Munnell doesn't share their dedication to inflation fighting.

HEADLINER: CHARLES SANDERS

HIS HAT IS IN A RING OF FIRE



Can an urbane, soft-spoken executive unseat North Carolina Senator Jesse Helms? On May 1, Charles Sanders quit his job to run against the 23-year veteran. His pitch: "I'm neither conservative, nor liberal, nor ideological. I know how to solve problems."

The Democrat, 63, has some résumé: A cardiologist, he was in the Air Force Medical Corps and once ran Massachusetts General Hospital. For the past six years, he has been chairman of the U.S. arm of Britain's Glaxo Holdings PLC in North Carolina. His brother, Judge Barefoot Sanders of U.S. District Court in Dallas, is a forme aide to Lyndon Johnson.

But the vitriolic Helm may find some soft spots to attack. Sanders, a Dalla native, has bee in North Carol na just since 1989 and has never held publi office. If he wins the primary, he'll have to withstand Helms's strident campaigning. In 1990, Helms ads played off blacks against whites on af firmative action. Sanders says he finds negative cam paigning "abhorrent," but adds: "Who knows what you'll do when they start calling you names?"

ITED BY OWEN ULLMANN

EDICARE: NOW IT’S THE GOP’S URN TO SQUIRM

Republicans thought they had inoculated themselves from
political trouble with the powerful senior-citizens lobby by
pledging last fall to keep budget-cutting knives away
m Social Security. Too bad they forgot to include Medicare.
The government’s $175 billion health-care program for 37 mil-
ı elderly has replaced Social Security as the Democrats’
e-fire political weapon. With dreadful timing, the GOP began
king of curbing Medicare’s growth by $300 billion over sev-
years just weeks after the House passed $345 billion in tax
s that will mostly help the top 12% of U.S. taxpayers.

Gleeful Democrats claim the Medi-
e dilemma lays bare the contradic-
ns that have existed all along in the
Contract With America: You can’t
ance the budget, cut taxes, and still
tect popular entitlements from major
luctions. That’s particularly true for
dicare, the largest pot of available
lget-cutting funds now that the Re-
licans have put both Social Security
l Pentagon spending off-limits. An-
er complication: Medicare officials
Apr. 3 warned that the program
ıld go bankrupt by 2002. So it’s no
nder Republicans are begging Presi-
ıt Clinton for bipartisan negotiations to repair the pro-
ım’s finances—and GOP budget-balancing hopes.

LL CONFUSION MODE.” The likelihood of a quick compromise
l rescue? Nil. With the Republicans in disarray, the Demo-
ts don’t want them to stop squirming—at least not yet.
ıis is going to be the big political issue of the year,” predicts
rman J. Ornstein of the American Enterprise Institute.
ncedes a GOP senator: “It’s a very volatile and exploitable is-
and a loser for the Republicans.”

That does not bode well for solving Medicare’s big structu-
problem—costs that soar 10% a year. And panicked Re-
licans can’t agree on a cure. House Speaker Newt Gingrich (R-Ga.) on Apr. 28 promised not to use Medicare savings to balance the budget. Meanwhile, the Senate and House Budget Committee chairmen plan to do the opposite. “They’re in full confusion mode,” says one health-industry lobbyist.

The temptation at the White House is to sit back and enjoy the GOP’s plight. But Clintonites risk a backlash if they put smart politics above good policy. Advocates of seniors worry about Medicare’s insolvency and will be leaning on the Democrats to rescue the program. “The idea that Medicare should be used for other purposes is a mistake,” says Stanford G. Ross, a Democratic trustee of the Social Security funds. Solving Medicare’s shortfall “is going to take bipartisanship and a mechanism to fix the system in a way that gives both parties credit.”

GINGRICH: *Are budget cuts on hold?*

The answer may be a commission similar to the 1983 group that saved Social Security from bankruptcy. That panel grew out of a similar firestorm—Democrats had assailed President Reagan for trying to cut old folks’ pensions in 1981—and provided political cover for both parties to fix Social Security.

Senate Majority Leader Bob Dole (R-Kan.), who supports a commission, wants to solve the problem quickly so it won’t mar his 1996 Presidential campaign. But the White House is insisting that reform of private-sector health care—which the GOP scuttled last year—be linked to any Medicare repairs.

That means an ambitious, long-term fix can’t be completed until 1996, maybe even past the election. In the short term, modest cuts and reforms, such as spurring the use of managed care, must be agreed upon so a budget can be crafted. With the prospect of millions of seniors angry at Washington for playing politics with their benefits, doing nothing is just too risky.

By Paul Magnusson, with Richard S. Dunham and Susan B. Garland

INSURING BANK REFORM?

► House Banking Committee Chairman Jim Leach (R-Iowa) may have difficulty speeding passage of Glass-Steagall banking reform. Word was that Leach had struck a deal with Commerce Committee Chairman Thomas J. Bliley Jr. (R-Va.) to keep the bill clean of controversial provisions about bank sales of insurance. But sources say Bliley now wants the bill to address banks’ insurance powers, a move that could bog the measure down in bitter debate.

BUDGET SPAT

► The White House science office is in the thick of an Administration fight over whether every federal agency must cut its budget by the same percentage. The science advisers say that large departments with huge administrative overhead can trim bureaucracies more easily than the thinly staffed National Science Foundation, which spends over 90% of its $2 billion budget on grants. But most departments don’t want any one agency to get special treatment.

CHARLES TASNADI/AP/WIDE WORLD

CHINA

THE GLOVES ARE COMING OFF IN CHINA

President Jiang's crackdown on corruption could unleash an all-out power struggle

With Deng Xiaoping near death, Chinese President Jiang Zemin is looking for every opportunity to boost his stature. What better way than under the guise of a popular cause like cracking down on corruption? On Apr. 27, Jiang ousted a top rival, Beijing party boss Chen Xitong, who is being held responsible for suspect deals made by city officials. That came just weeks after the suicides of two officials, including a Beijing vice-mayor, who were targeted in fraud probes. Before that, the top executive at a Beijing steel plant was arrested. Now, Chinese sources say, at least 100 other city officials have been detained or arrested. "We are going to see more," says Huan Guocang, vice-president and senior economist at J. P. Morgan in Hong Kong. "It won't stop here."

Even while the 90-year-old Deng lingers on, the power struggle to succeed him is breaking out in earnest. Indeed, not since the student protests in 1989 has Chinese politics been racked by such tumult. Jiang, 68, hopes that cleaning out some corrupt officials will win support among ordinary citizens. Beijing locals are especially fed up with officials using their positions to enrich themselves and their families. Through these purges, Jiang is signaling opponents in the cities and provinces that none of them is safe. "Almost everyone has a skeleton," says one diplomat in Hong Kong.

It's a dangerous strategy. If Jiang pulls down many bigwigs, he could trigger a backlash among some powerful players. "If he pushes too hard, he'll make many enemies," says Tai Ming Cheung, a China analyst at Kim Eng Securities (Hong Kong) Ltd. Many Beijing leaders are also upset about Jiang's attempts to promote his "Shanghai clique" to positions of power within the capital. Jiang once served as Shanghai mayor and built a strong power base there. Moreover, the corrup issue cuts both ways. With so m government officials engaged in b ness activities, the trail could easily to embarrassing targets in Jiang's ca "If you use corruption to get at p ple, it's a real can of worms," say Western diplomat in Hong Kong.

As this power struggle sumes China's leaders, nomic reforms are floun ing. Jiang is more interes in maintaining social stab than forging ahead with initiatives. In recent wee he and his aides have sou to reassure the country's million industrial workers they will remain the "m ters" of the nation. The phasis now is more on tecting domestic indust than on attracting the m sive foreign investment ne ed to modernize the count infrastructure. Sorely nee reforms of the banking state sector are stalled. "D ing with things like infla and state-owned enterpr isn't easy at the best of ti and this isn't the best o times," says a Beijing le scholar. "We can expect nomic reform to further sl

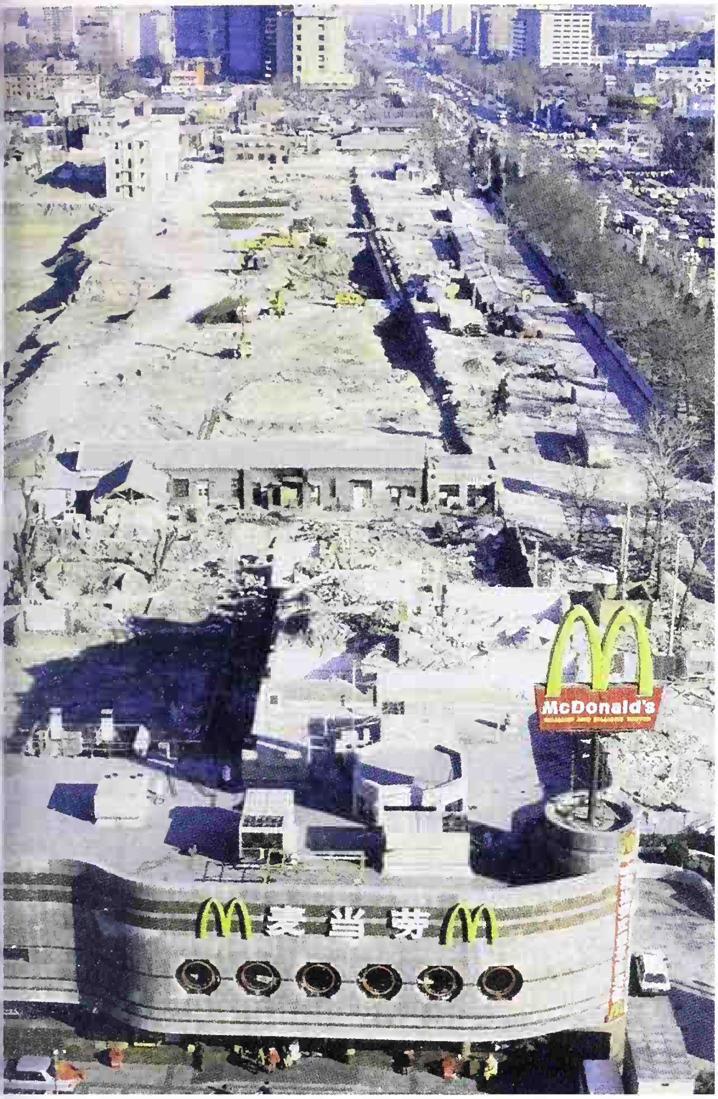
LIGHTWEIGHT. It's not surp ing that Jiang targeted C Xitong. Chen is an old po cal opponent of Jiang, l considered a lightweight w no future in the post-D era. As a result, Chen's cials often ignored cen government directives, es cially those regarding booming real estate busin That's where Jiang stands find the most ammunit With scores of big proje under construction in Beij analysts expect local offic to stand accused of large-s

Jiang's Agenda

By launching a high-level crackdown against corruption in Beijing, China's President is hoping to consolidate his power base as paramount leader Deng Xiaoping nears death. His goals:

WIN POPULAR SUPPORT	Since Beijing residents are upset about corruption among top city officials, Jiang gains some legitimacy through his purges.
ELIMINATE OPPONENTS	By ousting Beijing party boss Chen Xitong, Jiang can clean house in the nation's capital.
REASSESS TIANANMEN	Since Chen was a key backer of using violence against the students in 1989, Jiang may use him as the scapegoat for the bloodbath.
STALL REFORMS	More concerned with preserving stability, Jiang has little interest in pursuing needed but controversial overhaul of the state sector and banking industry.
REIN IN THE PROVINCES	His anticorruption drives send a signal to the more freewheeling provinces that they could be the next target if they don't toe Jiang's line.

DATA: BUSINESS WEEK



MAC ATTACK: LOCAL OFFICIALS TRIED TO OUST McDONALD'S

JEFFREY AARONSON/NETWORK ASPEN

Jiang is sure to find plenty of ammunition in Beijing, where scores of big development projects are under way. Says one Western consultant: "Almost everyone is involved in bribery"

ruption. "Almost everyone is involved bribery, and probably everyone is in- table," says a Beijing-based Western nsultant in the construction industry.

The battle between the central gov- nment and city officials may help ex- in the travails last year of McDon- l's Corp. The fast-food chain made adlines after city officials demanded it cate its central Beijing site—for which Donald's held a 20-year lease—to ke room for a $1.2 billion commercial nplex. But city authorities had signed on the deal without getting approval m the central government. After the Donald's case drew international con- mnation, the central government ervened. Now, it is considering a new, led-down design. Meanwhile, Mc- nald's is still operating at the site.

In the months since the McDonald's se surfaced, the central government s stepped up its crackdown. In Febru- y, a top official from the Hong Kong bsidiary of Shougang, the capital's emier iron and steel company, was tained for alleged "economic crimes" t has yet to be formally charged. At the same time, city officials were interrogated about a Beijing-backed investment scheme that raised $350 million, apparently without central government approval. Many suspect that's why Beijing Vice-Mayor Wang Baosen shot himself on Apr. 4, making him the most senior communist official to commit suicide since the Cultural Revolution, which ended in 1976.

The pressure is mounting outside Beijing, too. Officials in the provinces are getting the message not to take on the central authorities. In April, a former top official from Guizhou Province killed himself, just months after his wife, once the head of the province's investment company, was executed for massive bribe-taking and fraud. Beijing denies the official committed suicide.

SINGLED OUT. The anticorruption campaign could spell trouble for some of China's "princelings," sons and daughters of high officials. Chen's son, Chen Xiaotong, is deputy general manager of Beijing's New Century Hotel. According to Hong Kong reports, he has been detained since last month, allegedly for economic crimes. The well-connected younger Chen is said to be involved in property deals in Beijing. Zhou Beifang, the detained Shougang official, is also a princeling.

The fact that Jiang singled out the elder Chen may go beyond political rivalry. Some believe the President will use Chen's arrest to reassess the Tiananmen Square massacre of June, 1989. Chen, a strong proponent of the crackdown, may take the rap for being the official who passed on inaccurate information about the demonstrations to the central leadership. By making Chen the scapegoat, Jiang could help distance himself from the incident—and gain popular support. That might isolate Premier Li Peng, a Chen ally even more closely associated with the 1989 crackdown.

It remains unclear whether Jiang has strong enough standing within the party to launch a purge aimed at weeding out high-level corruption—and his political foes. Jiang may be acting out of weakness, stirring up a maelstrom that he won't be able to control. Even so, many observers who had written off Jiang are impressed. "I think all of us naysayers who have been pooh-poohing Jiang Zemin as a kind of weak transitional figure may find reason to reassess," says a Western expert in Hong Kong. "He's making a calculated risk, betting that he has got the support to do it at this time."

Jiang's power play is heightening anxiety about China in the outside world. For instance, Southeast Asian nations are increasingly concerned about China's expansionist policies in the South China Sea. More unpredictable behavior is likely to continue. Despite China's impressive economic changes, "the political system is the same as it was 25 years ago," says Carl Goldstein, vice-president of Washington-based consultants International Strategic Advisors. That's why for now, all eyes are on Jiang Zemin and his anticorruption bandwagon.

MEXICO

IS THIS TOUGH LOVE —OR A SAVAGE CRACKDOWN?

Well, both. Zedillo's recovery plan is taking hold and hammering ordinary Mexicans

STEPHEN FERRY/GAMMA-LIAISON

Fearing violence, Mexico's government-backed labor unions canceled their traditional May Day parade. But that didn't stop 70,000 independent union workers from thronging the Zócalo, the main plaza in Mexico City, to protest massive job losses caused by Mexico's financial collapse. There, they spray-painted the colonial-era National Palace with slogans such as "The fatherland is for sale."

Such ferment isn't scaring off foreign investors. In fact, Mexico City is a preferred destination these days for executives of such phone giants as AT&T, MCI, and GTE, which are racing to enter Mexico's newly opened market. Energy companies are also eyeing Mexico, intrigued by proposed rule changes in the long-closed petroleum industry. "Mexico still has explosive growth ahead of it," says Dan Crawford, chief operating officer of Avantel, a joint venture of MCI and Banamex, Mexico's largest bank.

Sharply divergent attitudes toward Mexico are typical these days, as President Ernesto Zedillo Ponce de León's economic-recovery program nears the end of its second month. Ordinary workers and the proprietors of small and midsize enterprises proclaim it an unmitigated disaster. But Mexican exporters, senior Mexican and American officials, and financiers contend that the country is making solid progress.

BUSY TRADERS The *bolsa* has bounced back to the point that some Wall Street analysts think it may now be overpriced

Both are right. Zedillo's harsh measures are doing their job. He has restored confidence in the financial markets. The peso has stabilized (chart). The *bolsa* has recovered some of its losses. And Mexico has been smoothly meeting its estimated $29 billion in foreign debt payments for 1995. More importantly, the devaluation of the peso has stimulated exports, helping to shift Mexico's trade account to a slight surplus for the first quarter, compared with a $4.3 billion deficit a year ago. "We have always said it would be a long road, but a number of indicators have turned favorably in the last two months," says Treasury Under Secretary Lawrence H. Summers, th Clinton Administration point man for Mexico.

But for Main Stree Mexico, Zedillo's austerit measures, which includ tight credit, steep ta hikes, and boosts in energy prices, are killers. Th government is predictin a 2% decline in economi output this year, and th more pessimistic privat forecasters expect a 5 contraction. "Markets ten to anticipate, and obviously they are ahead of th rest of the economy," say Finance Secretary Guillermo Ortiz. "In the rea economy, in terms of bus ness activity and employment, we have no touched bottom yet," h told BUSINESS WEEK.

Indeed, businesses an workers are being h hard. Store aisles are deserted. Construction site are lifeless. An estimate half-million workers hav already lost their jobs th year, and Ortiz warn that the biggest wave o layoffs is yet to com probably in July and August. The bright side i exports, which were u 32%, to about $18 billion, in the fir quarter. Exports from the Mexican factories of America's Big Three carmakers jumped 66%.

RICH GET RICHER. The crisis is apt t lead to major restructuring of the Mexican economy. Struggling small bank will be snapped up by larger domest or foreign institutions. Likewise, man of the big export-oriented manufacturer will wind up in a position to acquir smaller competitors. That risks strengthening the near-monopoly positions o some companies and skewing wealt distribution even further.

he picture is par-
larly grim outside
export sector.

YMENTS BUBBLE." Zedillo and his
s contend that Mexicans must go
ugh such pain to return to stable
vth. The question is how long it will
efore a recovery takes hold. Many
ysts expect modest growth to re-
e in 1996 or even earlier, but first
e will be some tough challenges.
n mid-July to mid-August, Mexico
s a "payments bubble" of $6.2 billion
ort-term debt. Although the second
of the $20 billion U.S.
out package will be-
e available on July 1,
huge payout could put
pressure on the peso.
here are also nagging
bts about Mexico's
ker banks. Bad loans
soaring, reaching 10%
he nearly $70 billion
tanding. Seven banks
e already borrowed a
l of 6.5 billion pesos—
e than $1 billion—from
government to boost
r capital to minimum
ls. Others are shopping
nd for buyers. William
Truscott, a portfolio
ager at New York-based Scudder, Stevens & Clark Inc., worries that problem loans may keep banks from extending credit, hurting the chances for a 1996 recovery.

Wall Street analysts think that Mexican stocks may now be overpriced, given the severity of the country's remaining problems. Lawrence D. Krohn, a Latin America analyst at Union Bank of Switzerland in New York, thinks the current financial rally was spurred mainly by Mexico's showing that it could meet its debt payments. "There could be a correction in all the markets," he warns, as investors start to focus on the real economy.

But even if there are some zigs and zags ahead, the crisis is forcing Mexico to move in ways that should pay off in the long term. With no cash to spare, Mexico's government has pushed through legislation allowing more privatizations and greater foreign and domestic private investment. The most tantalizing initiative was the surprise announcement that private companies, including foreign ones, would be allowed to build and operate natural-gas pipelines. That had been the exclusive right of Petróleos Mexicanos (Pemex), the state-run oil monopoly. Officials hope the move will attract financing for several major electricity plants and petrochemical privatizations. "We are prepared to move as soon as they are," says Rodney L. Gray Houston's Enron Corp.

At the same time that foreign investors are finding Mexico more welcoming, more Mexican companies are cracking new markets north of the border. Ilusión, a lingerie maker, has just sent its first shipment, worth $40,000, to a Los Angeles distributor that formerly favored garments from Taiwan. The company is negotiating much bigger contracts with several potential American clients, including Kmart Corp. "The devaluation is what made us think about exporting," says Benjamín Romano, one of five brothers who run the company.

But such upbeat tales are still the exception in an economic landscape dominated by layoffs and shutdowns. The question is whether exports and investments will prove to be strong enough medicine to keep the Mexican economy from plunging into the sort of malaise that could do serious damage to the country's social fabric. Zedillo's entire program hinges on just how fast the cure takes hold.

By Geri Smith and Elisabeth Malkin in Mexico City, with Dean Foust in Washington and Stanley Reed in New York

HANGING ON

With credit tight, prices soaring, and hundreds of thousands of jobs already gone, the peso's recent rebound won't mean much to Mexicans struggling to survive

BANKING

ON SECOND THOUGHT, WARBURG LOOKS PRETTY TASTY

Why SBC may buy the investment bank after denying it was interested just months ago

Back in January, Marcel Ospel, head of international banking at Swiss Bank Corp., was asked if his bank would consider bidding for S. G. Warburg Group PLC, whose attempted merger with Morgan Stanley & Co. had just collapsed. Ospel's answer was clear: "I would not want to expose shareholders, and more important, my staff, to a takeover of this magnitude."

Really, Marcel? On May 2, SBC admitted it is talking with Warburg about buying out the blue-chip British firm's securities and investment banking business for an estimated $1.3 billion. That would be SBC's third big acquisition in four years, following the purchase of options trader O'Connor Partnerships and asset manager Brinson Partners Inc. Buying Warburg would certainly weigh down SBC profits in the short term. And absorbing another culture would be one more headache for the Swiss, who are only now learning how to live with the brash Chicago traders from O'Connor.

DASHED HOPES. SBC isn't talking, but it's clear three crucial factors account for the change of heart. First, in one swoop, SBC could claim the title of Europe's preeminent investment bank and the world's largest underwriter of equities. Second, the price is right—roughly book value, as opposed to Deutsche Bank's 1987 purchase of Morgan Grenfell, which went for 2.5 times book. Third, if SBC lands Warburg, it avoids being outflanked by rivals who might want the British firm for themselves. Even now, a bidding war could pull in U.S. competitors such as Smith Barney Inc. or Merrill Lynch & Co., both said to be interested bystanders.

For its part, Warburg, whose global aspirations are dashed without a merger, must halt an internal crisis. Key executives have been leaving in droves: On May 2, in the latest defection, the four execs who led Warburg's European equities business decamped to Morgan Grenfell. Warburg has had to cut back operations in the U.S. and shutter most of its Eurobond operations. So Chief Executive Sir David Scholey's vow to remain independent now looks hollow. "It was difficult for Warburg after the Morgan Stanley fiasco," says a competing investment banker. "It's tough to carry on like nothing happened."

JAMES MORGAN TIMES NEWSPAPERS LTD

SCHOLEY: *Badly in need of a partner*

SBC's challenge is to grab Warburg fast enough to prevent any more decline in the franchise's value. SBC doesn't want Warburg's Mercury Asset Management division, which would duplicate its own in-house business. Instead, it wants Warburg's investment banking clients, including chemical giant ICI, Britain's General Electric, and pharmaceutical maker Glaxo/Wellcome PLC.

Capturing Warburg relatively intact would give SBC a leading role in European mergers and acquisitions and a strong London base for placing equ and debt globally. Those are critical e ments that have eluded SBC in its effo to become a full-service provider to c porate clients worldwide. Despite lea ing some high-profile corporate finar deals in London in recent years, s "still ranks as a second-rate operati there," says a former SBC exec. Besid being the top equities issuer, SBC/Warburg combine would be a for in foreign exchange and Eurobonc And SBC's $190 billion in assets wou certainly provide the capital Warbu has needed for so long.

It's not an ideal fit, though. Ev with Warburg, SBC still lacks the dist bution network it needs to tap the b U.S. market for privatizations and c porate debt issues. And though it w expand its foothold in Asia, SBC w remain a second-tier player there, tc

TOO FAR. Explaining the bid back hor might not be so easy, either. SBC's ori inal strategy was to build investme banking clout by relying on O'Conno options trading expertise. Instead, tra ing losses drove SBC profits down 40 last year, to 1989 levels. As a resu says Bank Julius Baer & Co. analy Hans Kaufmann, SBC is "going to very concerned about earnings dil tion" caused by a prospective Warbu purchase.

But SBC has pursued its dream of i vestment banking dominance too far back down now. If it loses the Warbu deal, it will have to watch Continent rivals like Deutsche Bank and tl Netherlands' ING consolidate their pos tions in London's investment bankir world. Given SBC's penchant for inn vation and aggressive behavior in r cent years, it's likely that Wall Stre and the City will be hearing a lot mo from the Swiss.

EDITED BY STANLEY REED

THE EMBARGO AGAINST IRAN: AMERICA SLAMS A WINDOW SHUT

At first glance, President Bill Clinton's decision to slap a total trade embargo on Iran sounds reasonable, even admirable. After all, why not push one of the world's most unpalatable regimes up against the wall? Many suspect an Iranian hand in the bloody 1994 bombing of a Jewish cultural center in Argentina. And there is mounting evidence that Tehran has been secretly working on a nuclear weapons program, which it aims to bolster by purchasing Russian nuclear technology.

But the U.S. government's tough actions may not be the most effective way of dealing with Iran—they could even backfire dangerously. Indeed, the U.S. could wind up looking silly trying to lead an initiative no one follows.

Clinton argues that ending the $4 billion a year in purchases of Iranian oil by such U.S. companies as Exxon Corp. and Mobil Oil Corp. and stopping $300 million in U.S. exports will help convince European and Asian allies that Washington means business. But getting key nations such as Japan, Germany, and France to sign on is going to be next to impossible. Germany, which sold Iran almost $2 billion in goods last year, is expressing doubts—as are Canada, France, and Britain. "We don't believe that a trade embargo is the appropriate instrument for influencing Iran," says German Economy Minister Günther Rexrodt.

SHUTOUT. The Europeans, and even some within the Clinton Administration, argue that constructively engaging the Iranians would have a better shot at changing Iranian behavior than an uncompromising shutout. They point out that North Korea, whose regime is at least as erratic and vicious as Iran's, has agreed to moderate its nuclear program thanks to creative American diplomacy. And Washington has kept dealing with the Chinese communist regime on trade and human rights issues, even after the international outcry over the Tiananmen Square massacre. With Iran, though, the Clint
policy is all stick and no carrot. And that could well exac
bate Iranian paranoia and belligerence.

Moreover, by isolating Iran instead of engaging it, the U.
may be discrediting members of Iran's governing elite w
have been arguing behind the scenes for normalization of re
tions with Washington. Iran's recent willingness to choose C
noco, rather than a French competitor, to develop a major
field probably demonstrated a political consensus in Iran
start dealing with Americans for the first time since the 19
hostage crisis. Such a deal might have given the U.S. a pote
tially valuable window into Iran's murky wor
ings. Trade, as former Assistant Secretary
State Richard W. Murphy notes, "is one way
getting a better feel for what a country is
to and where it is going. I don't feel we have
good fix on what's going on in Iran."

OIL WORKERS: *Buyers aplenty*

And the Iranian economy will hardly be
fected by Clinton's order, which is expected
end most American trade with Iran, includi
that of foreign subsidiaries. Within a fe
months, according to oil industry expert
Iran will be able to find new buyers of i
crude. And Iran will also be able to swit
over to new suppliers of oil field equipme
which now accounts for most U.S. exports. "The U.S. is
unique anymore," says John H. Lichtblau, chairman of t
New York-based Petroleum Industry Research Foundati
"We have good equipment, but so do others."

Clinton's order is likely to head off even harsher legislati
proposed by Senator Alfonse M. D'Amato (R-N.Y.). B
that's only a small benefit. The likelihood is that Clinton is g
ing to ratchet up tension with Iran, hobble American comp
nies, and get far out of step with America's allies for
achievable purpose.

with Amy Borrus in Washingt

GLOBAL WRAPUP

SUMMIT IN AMMAN

► A big Middle East economic development summit has been set for Amman, Jordan, next Oct. 29-31. It is supposed to follow up on last year's extravaganza in Casablanca, where there was much talk but few deals. On the agenda will be a $5 billion to $10 billion Middle East development bank, which the Israelis, Jordanians, and Egyptians want and the U.S. supports. But the Europeans think the bank is unnecessary, and the Gulf Arabs don't want to put up the money. Nevertheless, U.S. sources are confident that funding will be lined up from the U.S., Europe, Japan, and regional donors. Joint Jordanian-Israeli projects such as irrigation and hydroelectric schemes for the Jordan Rift Valley may have the inside track for funding because the Palestinian areas are so unstable.

But plans to build a pipeline from Aqaba on the Red Sea to the Dead Sea are also controversial. Many say the $2 billion to $4 billion price tag is too high, and the project will be yet another Middle Eastern white elephant.

WILL THE FRANC TANK?

► The French franc is likely to sag in the weeks after the May 7 presidential election—especially if the victor is Socialist Lionel Jospin. He plans to spend France's way out of 12.2% unemployment. Conservative Jacques Chirac would comfort markets more, yet he's less committed to a strong currency than departing President François Mitterrand. Even former European Union President Jacques Delors has joined other public figures calling for a looser monetary policy.

OFF THE HOOK
Loucks's restructuring comes none too soon for investors. Now, the CEO's job appears safe

STRATEGIES

SO BAXTER DOES HAVE A PULSE

Cost-cutting is reviving the health-care giant

Mike Hudson has never been a betting man. The 40-year-old general manager of hospital supplier Baxter International Inc. hates financial risks: As a young boy, Hudson watched his father lose the family farm after fire destroyed a harvest and he couldn't pay his debts. But last year, Hudson borrowed $1.3 million to buy 50,000 shares of Baxter. "I never thought I'd take out a loan that big on anything," he says.

Of course, it's tough saying no to the boss—and Baxter's controversial Chairman and CEO Vernon R. Loucks Jr. did not leave Hudson much choice. One of the health-care industry's most chronic underachievers, Baxter in recent years has suffered a steep margin slide, a plunging stock, and criticism over HIV-tainted blood products and its cooperation with the Arab boycott of Israel. Things got so bad that by mid-1993, investors were calling for Loucks's ouster. To keep them at bay, he ordered a major restructuring at the Deerfield (Ill.) company—and to make sure his top managers went along, the embattled CEO urged them to borrow twice their annual compensation to buy stock. "I was looking for help," says Loucks, who doubled his own shares, to 700,000.

So far, it looks as if he got it. A year after 63 managers spent $122.2 million snapping up 4.7 million shares, Baxter's health is returning. After a loss from continuing operations of $268 million in 1993 on sales of $8.9 billion, Baxter's profits jumped to $596 million on sales of $9.3 billion in 1994. And Baxter's operating cash flow soared to $954 million, three times 1993's $292 million (charts).

Better still, Baxter's stock, which fell to 22 in late 1993, now trad at 34. Although that's still low Baxter's late 1991 high 40, investor anger h dimmed—and Loucks's j seems safe. "The board h been supportive of Loucks, ten to [Baxter's] detrimen says one big shareholder. "B their patience seems to be pa ing off. He's done a good job

It hasn't been easy. A deca after acquiring American H pital Supply Corp., Baxter s faces big challenges selling AHS's lo margin products, such as medical gow and surgical trays, to hospitals. As co cutting repeatedly hit health-care co panies, Baxter's sales and earnings st nated. Meanwhile, Baxter's lucrati medical specialty business, which mal kidney dialysis machines and cardiov cular products, was booming. Unhap shareholders wanted the company sp but Loucks resisted. His plan: shri costs and boost cash flow in the matu supply market, then use the cash fund specialty-unit growth.

OLD WOUNDS. Since 1993, Loucks h pared Baxter's workforce 5%, to 53,5 and slashed management. Most imp tant, he has radically altered the medi sales force's operations. Until last ye dozens of salespeople from Baxter's di sions would separately hawk their war to hospitals. Now sales reps work teams. For example, 11-year veteran Ji McGorry, one of 180 account manage oversees relations with 10 hospitals North Carolina. When buyers need som thing, they deal directly with him.

Still, Baxter hasn't fully healed t wounds its old system caused with c tomers. Although Joan Ralph, a purcha ing executive at Good Samaritan Hos tal in Downers Grove, Ill., finds Baxt easier to deal with, sh not convinced it h eliminated other pro lems, such as constant running out of suppli and charging her high prices than neighbori hospitals. "It's a tru issue," Ralph says. still have memories the past, and they do go away overnight."

With cash flow n

king, sales rep McGorry is pushing customers such as Duke University Medical Center to pay faster. By cutting bureaucracy from the invoice process and offering better prices if Duke pays sooner, McGorry has cut the center's "days receivable"—the outstanding goods that haven't yet been paid for—by 30 days, to 8. Controls on inventory are also being tightened. By scrapping redundant products and installing information-management systems to better coordinate shipments to its big hospital clients, Baxter has reduced inventories 12%, to 88 days. By 1998, Loucks is aiming for 50 days.

If he can achieve such gains, analysts expect Baxter to generate operating cash flow of roughly $1 billion a year. Loucks will spend much of that expanding Baxter's high-margin global medical specialty business. It's easy to see why. While Baxter's U.S. hospital-products business, with 1994 sales of $5.7 billion, is growing at a 3% rate, its medical specialty sales, which hit $3.6 billion last year, are growing around 8% annually and even faster in Latin America, the Far East, and Eastern Europe. The surging unit—specialty products grew 17% in 1995's first quarter—now accounts for 38% of Baxter's sales and 61% of earnings. "That's really our oyster," says Loucks.

Still, Loucks's strategy is not without risk. Kenneth Abramowitz, health-care analyst with Sanford C. Bernstein & Co., warns that Baxter is playing catch-up overseas. And Baxter's new-produc pipeline is thin. A home-dialysis machine introduced late last year should hi sales of $100 million in 1995, but a device that pumps blood through th heart, though approved in Europe, isn' expected to be O.K.'d in the U.S. unti 1998. And Baxter's new blood substitute for use in emergency rooms—potentially a $3 billion market—faces sti competition. "In the next three to fiv years, they're going to need some significant additions to their product line, says CS First Boston analyst Ameli McDonald. Loucks may have won himself some breathing room, but Baxter' recovery is far from assured.

By Ron Stodghill II in Deerfield, Il

STRATEGIES

THE UNDERSEA WORLD OF SHELL OIL

It's discovering vast reserves in the Gulf of Mexico

Just a few years ago, Shell Oil Co. looked like it was running on fumes. A string of dry U.S. wells and curbs on overseas exploration were draining its oil reserves. After missing out on Prudhoe Bay and coming a cropper in offshore Alaska, Shell saw its oil production begin to slide rapidly: From 531,000 barrels a day in 1988, it pumped out just 398,000 a day last year. As executives began to fear for its future, even Shell's choice for a last stand, the Gulf of Mexico, seemed ill-fated. From its heyday in the early 1970s, production had declined so sharply by 1992 that oilmen derided the gulf as the "Dead Sea."

BLACK GOLD: *Gulf drilling could be a $1 billion-a-year bonanza*

The gulf's treacherous depths had already knocked one company, Placid Oil, temporarily into Chapter 11 bankruptcy, and oil giants such as Texaco and Mobil had fled the gulf throughout the 1980s for more promising fields overseas. But restricted to the U.S. by its parent, Royal Dutch/Shell Group, and unable to drill off California or the East Coast because of state restrictions, Shell had no choice but to hunt for oil thousands of feet below the gulf's surface. "From an exploration standpoint, we certainly would have faded away without it," says Robert L. Howard, Shell's recently retired vice-president for domestic operations.

Today, no one worries about Shell fading away—or the gulf's role in U.S. oi production. Thanks to a string of discoveries of huge reserves in the gulf's deep waters and technological advances tha have made it easier and cheaper to ge that oil out, Shell's once bleak fortune have been revived. Since it bega deepwater production last year, th Houston-based company has startled it oil-patch rivals with astonishing report about the oil it has found in the gulf' depths: In its three most advanced projects alone—two more are set to com onstream by 1997—Shell expects to gain an estimate 150,000 bbl. a day of production. That's worth $1 billion annually at current prices of $20.50 a bbl. When i comes to deepwater drilling says Amoco Corp. CEO H Laurance Fuller, "Shell i out in front of the industry.

HOT SPOTS. Indeed, Shell' success has sparked a feverish black-gold rush i the gulf: New players ar rushing to get in, while ol ones scramble to retur With the federal government's annual auction o gulf leases—set for Ma 10—drawing more interes than it has in years, bidding is expected to be furious. Requests for sales kit for the 10-year leases—which are granted for territory up to 200 miles from the U.S shore—are running nearly 20% highe than a year ago. Says analyst Robert W Esser of Cambridge Energy Researc Associates Inc.: "This is going to be on of the most significant exploration ho spots in the world for the next decade.

Forced to tough out conditions tha

VE'VE GOT 98 BILLION BRANCHES
ND YOU'VE NEVER HEARD OF US?

As one of the largest producers of timber in the United es, Cavenham Forest Industries is well known in the world rest products.

Less well known is the company that owns it: Hanson.

Frankly, as a diversified industrial management company, e used to the fact that many of our businesses are better wn than we are. Several of them, in fact, are quite familiar, Jacuzzi® Whirlpool Baths, Tommy Armour® golf equip- t, Farberware® and Peabody Coal.

But we prefer to impress our investors with something far e important than a list of household names—shareholder e. Something we've sought to deliver for 30 years.

Since being listed on the New York Stock Exchange in 1986, sales have soared to $17 billion, while total market capitalization is over $19 billion. At the end of 1994, our gross dividend yield was 6.2%, double the average of the S&P 500.

Obviously, there's a reason for our success: A management philosophy steeped in common sense. Namely, to own businesses that provide basic goods and essential services like timber, coal and building materials. And then to keep a firm eye on the bottom line.

In short, we are a company run first and foremost for the benefit of our shareholders.

It's a view, we believe, that's as breathtaking as any you'll see in one of our forests.

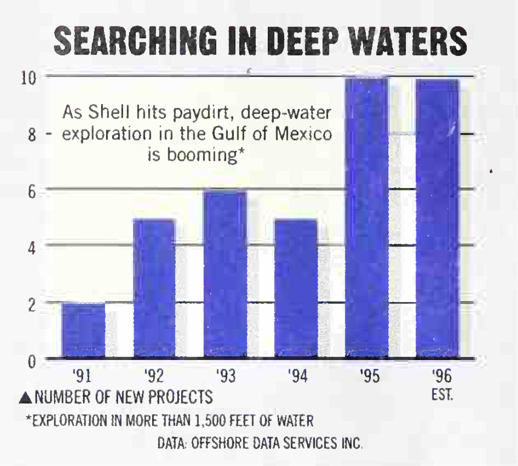
sent others packing, Shell now sits atop the most prized territories in the region. As other majors fled, Shell and a handful of independents hunkered down. By 1989, Shell hit pay dirt. With its discovery of the giant, 700-million-bbl. Mars field, Shell realized the region's potential was far greater than anyone knew. Over the next two years, it quietly assembled a huge collection of deepwater leases—571 in all. Today, Shell holds 30% of the existing leases in the gulf. Thanks to improved exploration techniques it has since pioneered, those leases may hold more oil than even Shell had anticipated. Although the Interior Dept. estimates that the gulf's deepest waters hold around 4 billion bbl. of oil and equivalents, industry sources say those numbers, based on incomplete company reports, may be out of date. Shell CEO Philip J. Carroll believes the figure is more like 8 billion to 15 billion—greater than Alaska's Prudhoe Bay.



*EXPLORATION IN MORE THAN 1,500 FEET OF WATER

DATA: OFFSHORE DATA SERVICES INC.

Yet for all the potential apparent today, Shell almost couldn't make it in the gulf. In the mid-1980s, plummeting oil prices forced Shell's engineers to rethink how they worked there. Oilmen then believed deep wells would collapse if too much oil was pumped out at once. But the high costs of working in deep water, combined with meager oil prices, made low volumes uneconomic. "It became apparent we needed high-flow-rate wells," says Rich Pattarozzi, Shell's exploration and production manager.

WELLSPRING Shell's success has rivals such as Amoco, Texaco, and Mobil scrambling to plumb idle fields, and the region is attracting a slew of oil-services companies that help lower costs

TROUBLED WATERS. Shell began experimenting with a platform in 1,600 feet of water. By slowly upping the quantities it pumped and by modulating the valves, pipes, and other equipment it used, Shell gradually learned how to boost oil flow. It also developed "modular" components that could be retrieved and reused, bringing down production costs. Its latest twist: using robot vehicles to link deepwater wells to a shared electrical and communications pod.

Unlike the shallower waters of the gulf—where natural gas predominates—the deepwater discoveries have been up to two-thirds oil. That's important because financing for oil development is easier and cheaper to obtain. And the rich flows Shell has attained dramatically improve the profitability of deepwater production. Shell's first deepwater platform cost $1.2 billion and included 32 well slots at an estimated cost of $10 million to $20 million each. Its latest, now in construction, will contain just 24 slots but will deliver twice as much oil.

Shell's perseverance is paying off. Although U.S. offshore wells on average produce just 1,000 bbl. a day, Shell is producing as much as 14,000 bbl. a day in wells at 2,800 feet. The additional production could contribute as much as $1.75 billion annually to operating cash flow by 1998. Nor is Shell alone. On Apr. 3, Enserch Corp. revealed its first deepwater well could start production at 6,000 bbl. a day—far in excess of the 2,500 expected. "It has gotten progressively better and better," says David Biegler, CEO of Dallas-based Enserch.

Of course, trouble is no stranger to these waters. In the mid-1980s, Placid Oil stumbled and its gulf fields were eventually sold off after a series of problems developing the necessary infrastructure thwarted its efforts to develop similar deepwater finds. Conoco and Exxon Corp. spent billions on gulf fields that proved to have little oil. But for Shell—which will have spent over $2 billion on deepwater exploration and production by 1997—the activity ha already reversed six years of production declines. In its Decembe quarter, Shell saw oil production ris 3%, while its March quarter brough a 5% jump over year-earlier results With strong chemical earnings, tha helped send Shell's quarterly operating profits up 38%, to $303 millior What's more, the reversal has com with only one of Shell's three bi gulf projects in production.

SMALL STAKES. Shell's gusher o good news has spawned a host followers. In recent months, Amoc Texaco, and Mobil have begun developing plans for gulf sites that lon sat idle, while France's Elf Aquitaine acquired its first-ever gulf stake i mid-April. Chevron Corp. and Exxo are planning to deploy floating platform that can be moved from site to site making drilling smaller fields profitabl "With advances in technology, suddenl a lot of these finds are more economic, says Standard & Poor's analyst Keit Petersen. Indeed, Oppenheimer & Co estimates that the costs of producin deepwater oil have fallen from $17 bbl. in 1992 to as little as $10 toda assuring that exploration will continu even if oil prices tumble again.

The improved prospects have also attracted a host of oil-service companie which in turn are lowering costs. I March, Leviathan Gas Pipeline Partner LP disclosed plans to build a new "gathering" pipeline to collect oil and ga some 200 miles out in the gulf; that wi save explorers the roughly $500,000 mile it costs to snake individual pipelines from fields to shore. "It make smaller and smaller opportunities increasingly viable," says W. Scott Young the team leader for Chevron's Gree Canyon deepwater exploration project And in late April, Reading & Bate Corp., a major drilling-services contractor, agreed to take a 20% stake in deepwater discovery project as part of deal to drill for Enserch. "Almost ever major company has or is formulating deepwater strategy," says Reading Bates CEO Paul B. Loyd Jr.

As for Shell, it's going ever deepe Shell subsea production engineer Denni C. McLaughlin says the company plan to explore gulf waters as deep as 8,00 feet. "Where we are today is not necessarily deep compared to where we wan to be in two to three years," he says For an oil company once in danger c running dry, Shell is finding there's n place like the bottom of the sea to ge really wet.

PITCHING TO PESO-PINCHERS

Mexico's slump has forced U.S. marketers to be creative

SPIRIT LIFTER Free makeovers are one way Maybelline is "investing to create loyalty"

KEITH DANNEMILLER/SABA

Late last fall, Carlos Canales was looking forward to ringing in a strong new year. With the personal-computer market booming, Apple Computer Inc.'s general director in Mexico expected sales to soar by as much as 70% in 1995. Now, he'll be lucky if he can hold the drop in dollar volume to 10%. Says Canales: "We're putting up a fight."

For U.S. marketers lured to Mexico over the past few years by the promise of an emerging middle class, December's 45% devaluation of the peso was a bruising reminder of the fragility of Latin American economies. Forecasts of 4%-a-year expansion have given way to warnings that consumer demand will fall by over 10% in 1995. With inflation raging at 70% and wage increases limited to 20% by government guidelines, purchasing power has shriveled. Middle-class Mexicans who just a few months ago could manage the downpayment on a car now struggle to pay the rent. The government expects that 750,000 jobs will be lost by midyear.

SWEET NUMBERS. Despite the turmoil, few U.S. businesses are abandoning the market. After upping their investment in Mexico by 50%, to $31 billion, since 1991, they're reluctant to walk away from the costly distribution systems and brand awareness they have built up. And the Mexican market still offers some irresistible numbers: a population of 90 million consumers, 60% of whom are younger than 25. "Long term, this is still a very good place to do business," says Peter Economides, CEO of McCann-Erickson's Mexican subsidiary, the country's largest ad agency.

But for now, marketers must reposition their brands for an economy gripped by austerity. They're raising the proportion of domestically produced goods as the price of imports soars, adjusting ad strategies, and working help local distributors stay afloat. A with the peso stabilizing and purchasi power expected to begin a recovery mid-'96, some companies see the cri as a chance to seize market share. Ma ket leader Coca-Cola Co., under fier attack from PepsiCo, has gone ahe with plans to roll out Fresca, wh Nestlé is continuing a planned assa on the supermarket ice-cream segme

Those who tough it out will face newly tightfisted consumer. No long flocking to expensive imports, Me cans are turning to miliar names, co brands, and value f the money. "Now, i smart to show you' with the people," sa Ian M. Reider, pre dent of pollster Ga lup Mexico. Wal-Ma Stores Inc., for exa ple, which has superstores and 22 Sam's Wholesa Clubs in Mexico, advertises produ as "proudly Mexican." Fast-food chai once positioned as a luxury for t working class, now show solidarity. P za Hut Worldwide pitched "crisis co bos" while McDonald's Corp. offers free burger with its McTrio Grande.

Sellers of big-ticket ite probably face the biggest ch lenge. "I don't think this is t time to tell a Mexican to buy new car," says Francisco Codiña, director of marketi for Ford Motor Co. in Mexi "It's a slap in the face." For with 20% of the Mexican ca and-truck market, has pos poned plans to introduce t Aspire, a Korean-made co pact. For now, Ford is bu nishing its image by spons ing a Mexican cyclist. At BM newspaper ads emphasize t jobs the company is creati at its new assembly plant ra er than its luxury image.

Maybelline Inc. is also wo ing to beautify its image. I giving free cosmetic makeove in the general-merchandi

Managing In Mexico

Despite the peso crisis, many U.S. marketers in Mexico are digging in for the long haul:

COMPANY	STRATEGY
APPLE COMPUTER	Continue ads; ease credit for dealers; hold demonstrations and seminars to create demand
FORD	Postpone new import model; shift manufacturing of some models to Mexico; new image ads
KRAFT FOODS	Cut margins on imported cereals; postpone launch of high-priced imports
MAYBELLINE	Continue importing from the U.S.; cut margins; offer free in-store makeovers
NABISCO	Shifted to domestic production before devaluation; will follow through on plans to launch new lines

es that are its main outlet. "It's a
to feel good, even if it's only 10
ites," says Mario Rubio, Maybelline's
eral manager in Mexico. "I'm invest-
to create loyalty." Maybelline start-
mporting its cosmetics into Mexico
years ago after decades of local
luction under license. Although the
's collapse has cut deeply into mar-
, Rubio says Maybelline, which sells
$10 million a year in Mexico, will
inue to import.

ven companies that manufacture in
ico are seeing costs rise. "Anybody
ating in Mexico this year is going to
ate under very, very difficult cir-
stances," says Catherine Moffatt,
-president for consumer and trade
keting for Nabisco Mexico, which
cookies, crackers, and other pack-
l foods. Still, Nabisco benefited from
llent timing. A month before the
luation, it launched Mexican-made
os and Chips Ahoy! cookies—which
at about half the price of their U.S.-
e counterparts. A new cracker and
ie will follow this month.

T A BUMP." Kraft Foods Inc. is also
positioned: It makes almost all the
million worth of products it sells in
ico each year locally, importing only
cereals and a few niche items. The
als have been a problem. To stay
petitive with market leader Kellogg
which produces locally, Kraft has
to sacrifice margins. But after sell-
cheese, margarine, and jam in Mex-
or four decades, Kraft has learned
de out boom-bust cycles. "It's just a
p in the road," says Ramiro Cebal-
general director of the grocery div-
at Kraft Foods México.

or many marketers, the hardest
has been to maintain distribution.
belline's Rubio found his retailers
erred to run out of stock rather
carry inventory at triple-digit inter-
rates. So he began sending out his
very trucks more frequently. "I'm
ributing with an eyedropper now,"
ets. To keep its more than 250 spe-
zed dealers afloat, Apple is providing
relief.

ranchisers, who have poured into
ico since 1992, are giving belea-
red franchisees a hand. Dryclean
which opened 70 stores over the
26 months, is accepting royalties at
xchange rate of 4.2 pesos per dollar,
above the market's 6 pesos—in ef-
discounting by 30% the fees its
chisees must pay. "Growth has basi-
come to a screeching halt," says
ie J. Rodriguez, president of
clean's franchise unit. "But the mar-
is very viable." If he's wrong, Dry-
USA won't be the only marketer in
ico that gets taken to the cleaners.

Syndications, by definition, open a window to larger pools of liquidity. Unfortunately, many capital providers reserve this service only for their largest customers.

At First Union Capital Markets Group, we take a different approach. We serve all clients, large and small, regardless of the size of the transaction. By applying innovative, yet flexible, structures and approaching client relationships as ongoing partnerships, we meet individual needs with responsive solutions.

Perhaps First Union should be on your short list if you're looking for a capital markets partner. We'd like the opportunity to show you why.

"WE NEED THESE PROJECTS" Shuster, chairman of the House Transportation Committee, says highway programs stimulate the economy. Like the Bud Shuster Highway near Altoona?

PHOTOGRAPHS BY CHRIS USHER; RICK BLOOM/SABA

CONGRESS

MEET BUD SHUSTER, PRINCE OF PORK

This Republican is out to spend $33 billion—or else

Those who think GOP stands for "gutting oversized programs" haven't met Representative E. G. Shuster. In March, the Senate tried to slash $140 million for highway programs attached to a $3 billion defense bill. But that was before Shuster, the tenacious chairman of the House Transportation & Infrastructure Committee, weighed in. By the time House and Senate conferees wrapped up the bill on Apr. 5, every cent for highways had miraculously been restored.

Chalk up another win for the Republicans' preeminent Prince of Pork. While his GOP colleagues are hell-bent on downsizing government, former software executive turned lawmaker Shuster (R-Pa.) is determined to spend more federal money—in his own district and those of his many political colleagues. And the 12-term representative, a die-hard Reagan Republican who has voted against just about every Big Government spending plan for two decades, except when it comes to his own domain, could care less if he's labeled a big spender. Shuster, who insists on being called "Bud" rather than by his real first name, Elmer, defends the highway programs as critical to the nation's infrastructure. With bridges and roads crumbling, "we need these projects," he says.

Now, fresh from his victory over the defense bill attachments, Shuster is launching a far more critical transportation battle: In May, he will try to remove from the federal budget the $33 billion in unspent airport and highway trust funds amassed from user fees and tolls. Currently, the trust-fund surplus finances government operations, an a counting technique that discourage Congress from looting the kitty. But Shuster succeeds, the trust funds wou be maintained as a separate accoun freeing the dollars to be spent.

The prospect of transforming th trusts into billions in bacon has lure 170 House members to co-sponsor Shu ter's measure—a show of strength th alarms deficit hawks. "The [Transpo tation] Committee would have treme dous power and autonomy," says Repr sentative Christopher Shays (R-Con of the House Budget Committee.

BIPARTISAN SUPPORT. That's fine wi Shuster, a jovial, back-slapping pol. Th holder of an MBA and a PhD in com puter science, he founded software ma er C3 Inc. in 1968—four years befo being elected to Congress from a roc ribbed conservative district in the A palachian Mountains near Altoona, P When his 1980 run for minority wh failed, Shuster deftly used his seat the transportation panel to build h clout. And, despite being a Republica in a then-Democrat-dominated Hous Shuster's ability to help forge biparti transportation bills won his distri countless porcine projects.

Take U. S. 220 between Altoona a the Pennsylvania Turnpike, a mult lane architectural marvel named th Bud Shuster Highway. It was built at cost of $90 million, 80% from feder funds, he said. In fact, the 1991 tran portation bill brought more money Pennsylvania—$934 million—than any other state. That included $2 million for Shuster's district, more tha what many states received. "This pr cess presents temptations to the pure of saints to feed at the public trough

Sending Home the Bacon

Growth of U.S. spending for transportation demonstration projects

	NUMBER OF PROJECTS	COST OF PROJECTS

CAN LARRY BEAT BILL?

Oracle's Ellison revs up to overtake Gates on the I-Way

On any other mountain, Lawrence J. Ellison would be king. From scratch, he has built Oracle Corp. into the overwhelming leader in the market for powerful database programs, one of the most important and fastest-growing software businesses in the world. He has overcome setbacks that would have sunk most others, including a failed stab at college, a nearly fatal surfing accident, and a financial scandal that had his company on the road to ruin.

Today, Ellison's success is unassailable: His wealth, topping $3 billion, places him among the two dozen richest people in the U.S. He's an impeccable dresser, a notorious ladies' man, a physical-fitness fanatic, a gourmet, and an adventurer.

But on the mountain Ellison is climbing, that's good enough to make him just second-best. The software industry, of course, is dominated by Microsoft Chairman William H. Gates III—younger, richer, and more famous. Oracle is the industry's second-largest company, Ellison its second-richest CEO. Gates has three times Ellison's fortune—and the reputation for be-

FITNESS FANATIC Will feisty Ellison settle for being No. 2 in software?

ing a visionary and an unparalleled businessman. Even if Gates occasionally indulges in hyperbole, customers and competitors listen when he spins his vision of the future. However, "when Larry says something, you do a reality check," says analyst Rick G. Sherlund of Goldman, Sachs & Co. "He has a tendency to get carried away."

Ellison, 50, has come too far to settle for No. 2. He has spent years transforming himself from a causeless rebel to a driven, disciplined warrior—a self-styled New Age samurai. Oracle's software is at the heart of thousands of networks, making Oracle an indispensable partner to every computer maker from Digital Equipment and IBM to Unisys, all of which use Oracle software to help sell their machines.

TO THE SUMMIT. With an explosion in demand for the systems Oracle software makes possible—customer service, direct marketing, and sales and inventory tracking—the company is on a steep ascent: Revenues are expected to jump 50% in fiscal 1995, ending on May 31, to around $3 billion, and to $4 billion in 1996. With shares trading at around $30—up from $18 a year ago—Oracle has a $13 billion market capitalization.

That puts Ellison in a position to make his move—to storm the summit and plant Oracle's flag where the Microsoft banner has long waved. His plan is to get there on the Information Superhighway. Just as Microsoft dominates the personal-computer industry today, Ellison wants to supply key programs for the next phase of the Information Revolution. He envisions a time when computers, smart TVs, video phones, and other appliances will connect to a worldwide network of information and entertainment services. Ellison wants Oracle to supply the software, starting with databases that will provide the foundation. "Microsoft is the past. Oracle is the future," he declares.

ORACLE VS. MICROSOFT

A comparison of FY 1994 data

	ORACLE	MICROSOFT
REVENUES	$2.0 BILLION	$4.6 BILLION
EARNINGS	$283.7 MILLION	$1.2 BILLION
GROWTH RATE	40%	24%
MARKET CAP	$13 BILLION	$49 BILLION

DATA: COMPANY REPORTS

As Ellison explains it, the Information Age is all about storing and distributing data. Computing power will be applied to the task of whisking digitized information—anything from a personnel file to a snippet of video—across a network. Oracle's database program, called Oracle 7, already manages all sorts of data for companies throughout the world. So Ellison asks: What better company for creating a super data pipeline than Oracle?

With that in mind, Ellison began putting his I-Way strategy together a few years ago. First, he spent millions of his own to buy supercomputer startup nCube. It builds so-called massively parallel machines—ultrafast computers with hundreds or thousands of chips that simultaneously store, reassemble, and feed data to thousands of destinations. Oracle's database software has been rewritten to work with supercomputers from nCube, IBM, Unisys, and others. Such machines, says Ellison, are the only hope for delivering video-on-demand at a reasonable price. A new video-server program now allows these machines to split a movie into thousands of chunks, store them on different disks, and distribute them to hundreds of viewers (page 96).

That's not all. Ellison's engineers have adapted Oracle 7 to run on all sorts of computers, from PCs to mainframes, so it

AESTHETE AND GOURMAND: Ellison at home in his garden inspired by love of Kyoto, in a New York limousine on the way to dinner at La Côte Basque

[illegible] LANSING/BLACK STAR

can be a universal standard. To help write "content" for the I-Way, Oracle is producing programming tools: Media Objects for digitized images and sound and Context to sift through the Internet.

A critical ingredient in Ellison's plan is to get I-Way carriers—phone and cable companies—and content providers in his corner. For two years, he has been circling the globe on a nonstop schmooze tour: to New York, London, and Tokyo to sign up technology partners, establish links with media moguls, and preach Oracle's Infobahn message.

Will such jet-lagged frenzy really pay off? Ellison has charmed, cajoled, and pushed his way into a series of impressive early contracts. Bell Atlantic Corp. is using Oracle technology in trials of video servers. So are British Telecom, Telecom Italia, and U S West. Meanwhile, Apple, General Instrument, Hitachi, Samsung, Scientific-Atlanta, and 55 others are working with Oracle to set software standards for TV-set-top boxes. And Ellison has signed up content developers including Capital Cities/ABC, Washington Post Co., and Home Box Office to use Oracle software for interactive TV.

Cover Story

But now, everybody's hat is in the I-Way ring—from DEC to IBM to Silicon Graphics. And Microsoft is pulling out all the stops to extend its software dominion into the online era. While Oracle rules among the minicomputers and mainframes that run big databases now, Gates sees a different future: Networks of microcomputers—running Microsoft database technology, of course—will take over. Gates has snagged deals to test his Microsoft Media Server with Tele-Communications, SBC Communications, and Nippon Telegraph & Telephone. "Oracle's not doing that much," says Gates. "Larry's hype has expanded to fill his ego."

"PRIVATE IDAHO." That there is plenty of hype—from Ellison, Gates, and other I-Way wannabes—is not in question. What is at issue is whether Ellison really has what it takes to make Oracle the dominant technology company in the coming era. A year ago, Ellison was saying Oracle's I-Way business might generate as much profit as its database business within a decade. But revenues from Info Highway deals are still so scarce that Wall Street analysts do not even factor them into their mostly bullish projections for the company.

Clearly, the I-Way frenzy has cooled. "There is no business on the Info Highway yet," says Nathan P. Myhrvold, M crosoft's senior vice-president for advanced technology. "An body who says they're ahead must be in their own priva Idaho." Some of Ellison's projects, such as the Bell Atlant trial, are on a slower timetable. And some deals Ellison sa he was about to close months ago—with Ameritech, Viaco and Nynex—have yet to jell. William Bluestein, an analyst Forrester Research Inc., likens Ellison's high-profile quest former Apple Computer CEO John Sculley's crusade to le the way in an era of wireless communications with the wil ly overhyped Newton personal digital assistant. "Larry El son could be to interactive TV what John Sculley was PDAs," he sniffs.

That's a harsh view. Unlike Sculley, Ellison isn't diverti huge sums and inordinate management resources to his p project. And as the arrival of interactive TV and movies-on-d mand recedes further into the future, Ellison has refocused projects that are closer on the horizon, including using the i tegrated services digital network (ISDN) high-speed pho lines to deliver to PCs such services as video E-mail.

Ellison remains the key to Oracle's bid for leadershi however. "Is Larry smart enough?" asks a former exec tive. "Yes. He has the bandwidth Bill Gates has. Is he insp ing enough? Visionary enough? Yes. But when you're talki about building a long-term institution, the fabric is importan

What kind of cloth is Ellison cut from? It's not easy judge. His public image is as carefully crafted as the Giev & Hawkes suits he buys on London's Saville Row. The La ry Ellison you see today—poised, athletic, articulate, char ing—is a far cry from what classmates and relatives expe ed (or feared) for young Ellison. Growing up in the south si of Chicago, he was a bright but unambitious student—so i different that his family feared he might not finish hi school. He wasn't a bad kid. He admits to such boyho stunts as "laundernauting"—taking a few spins in a lau dromat dryer—but he never got in serious trouble.

But Ellison was no ordinary kid next door. What t neighbors didn't know was that Lillian and Louis Ellis were really Larry's great-aunt and great-uncle. His bir

NONSTOP PROMOTER: Ellison at 5 had nothing like the drive of Ellison at 50: His life now is a frenzied tour to preach Oracle's I-Way message

her, their unmarried niece, gave up the infant Larry in
5 and headed for California. She didn't see her firstborn
n until about 1990. Even now, Ellison says little about his
ringing. "Some issues I'm just not going to go into," he
. He will say that he was close to his adopted mother, but
his adopted father. "My father was very tough," he says.
ouis Ellison, a Russian immigrant who took his name
Ellis Island, failed in real estate and in a run for Con-
s. The family wound up at the lower end of his neigh-
hood's economic ladder—a situation the teenage Ellison
painfully aware of. A high school sweetheart wouldn't
ry him, he says, because her father thought he was below
station. Doris Linn, his adoptive sister and a retired so-
worker, believes Ellison's tangled parentage played a
role in forming his sometimes shy, sometimes arrogant
onality. "Being rejected by your mother, for whatever rea-
is something that I don't know people ever really get
," she says. "Larry can be very arrogant."
ears later, Ellison let Oracle's public-relations depart-
t rewrite his life story. They told reporters that Ellison
pulled himself up from an impoverished, crime-ridden
hborhood and wrote press releases saying he had gone on

to get advanced degrees from the University of Illinois and the University of Chicago. Today, the South Shore area is run-down. But when Ellison was growing up, "it was a nice, middle-class neighborhood," says Linn. By the time Larry was in high school, Linn, 20 years his senior, was married to a prominent lawyer. "When he went on dates, he used my car," she recalls.

Ellison entered the University of Illinois with vague hopes of becoming a doctor. But he ignored courses that bored him, and records show he was dismissed in June, 1964, for failing to maintain a C average—after skipping final exams two semesters in a row. He then attended the University of Chicago for a semester before dropping out. About this time, he got his first programming job.

"I DID INHALE." With the hippie era in full flower, Ellison packed his belongings into his 1964 turquoise Thunderbird convertible and headed for Berkeley, Calif. The year: 1969. "I had long hair, but I did not wear beads," he says. "And, unlike Bill Clinton, I did inhale."

But not for long. He stumbled onto the computer revolution and, after years of drifting, got serious. What changed his course? "I wish I knew," says his sister. She didn't hear from him for years after he left for California. She suspects he was simply inspired by Silicon Valley. "He seems to have found God in the system," she says.

His first taste of it was working as a programmer at var-

Oracle's Info Highway Partners

BRITISH TELECOM (March, 1994) Completed first rial of video-on-demand services to 60 households in November, 1994.

Sun

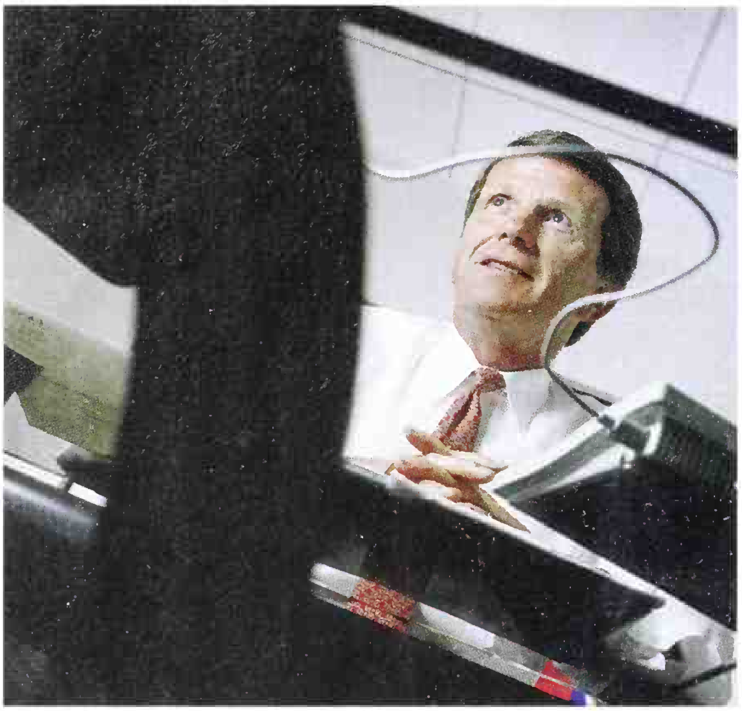
The Network Is The Computer™

ious outfits, including Ampex Corp. and Amdahl Corp. In 1977, Ellison left to start a consulting company, Software Development Laboratories, on $1,200. He persuaded his former boss, Robert N. Miner, to kick in an additional $400 and join what would become Oracle. The pair made two correct bets: Minicomputers would take over many mainframe jobs, and relational-database technology would be a boon to business because it made organizing and analyzing data far easier. At the time, businesses were using "flat-file" databases that made it difficult to spot trends—a sudden spike in demand, say.

Ellison's own explanation for his success: "I've always been an iconoclast. I've gotten into enormous trouble. It cost me dearly in school. It has helped me make out like a bandit in technology, where the conventional wisdom changes every five years." He also says a trip to Japan in the mid-'70s opened his eyes. During a lunch in Kyoto, a bluebird flew in the window and landed on the black lacquered table. Cherry blossoms drifted in and landed in a bowl. "Nobody spoke for an hour," he says. "When I saw Kyoto, I knew where God got the idea for heaven."

Too poetic to be true? Jenny Overstreet, his longtime personal assistant, insists it's for real. "I've arrived at his house to work, my arms full of papers, and we spend the first 45 minutes watching two squirrels playing in the trees, or a duck couple returning to the pond for the third year in a row. This is fascinating stuff for him. It's life-reaffirming."

ELVIS SIGHTINGS. This side of Ellison is rarely on display around Oracle's headquarters—twin black high-rises at the northern edge of Silicon Valley. There, the CEO is so aloof that some employees have nicknamed him Elvis and refer to his rare appearances as Elvis sightings. Unlike Gates, a frequent speaker at industry events who enjoys verbal sparring with peers and reporters, Ellison dislikes crowds and rarely attends non-Oracle gatherings. "I think Larry is a very shy person," says Steve Jobs. Ellison counts Jobs as one of his closest friends and sits on the board of NeXT Computer Inc.



DOWN-TO-EARTH
President Lane serves as Ellison's reality check

Adds Jobs: "He can get up in front of a crowd now becau he's learned how to do it. But Larry's a very sensitive gu

Others would disagree. He can match anyone in Silicon V ley with a put-down of a rival or its technology. Of M crosoft's video server, he says: "It hasn't worked, it does work, it cannot work, and it'll never work." And he's r known for diplomacy. At the April unveiling of a DEC compu er, for instance, he told reporters that Oracle 7 ran much fa er on the DEC machines than on IBM's—and proceeded denigrate the IBM product. That helped DEC's stock, but e raged IBM Chairman Louis V. Gerstner Jr., say IBM inside Ellison's associates co cede he has sharp elbov Intel President Andrew Grove, a friend, says: find him a kick. He's amusing, interesting p son. Nevertheless, n withstanding his charm would beware of him as businessman."

Although Ellison kee a low profile in the indu try, he does make hea lines—some of which would rather forget. Te ence J. Garnett, a form Oracle executive who h on occasion vacation with Ellison, sued his e boss last October, char ing he was wrongfully d missed after refusing to obey Ellison's orders to funn business to nCube. The suit was dropped without a sett ment. Oracle executives and board members say they a careful to review all deals for potential conflicts.

Ellison's most notorious lawsuit was brought last year an ex-employee who accused Ellison of firing her because s ended their sexual relationship. Ellison does not dispute t relationship, but denies the charges. Thrice married and vorced, he's happily aware of his reputation as a ladies' ma He recounts what Miner, who died last year, said: "As long Stanford keeps turning out beautiful 23-year-old women, L ry will keep getting married."

Ellison acknowledges, even celebrates, his toughness. H says he draws inspiration from Miyamoto Musashi, a 16th ce tury Japanese samurai who knew how to kill but was also a artist and poet. Ellison collects Japanese art and weapon

admits Oracle was on the edge
ankruptcy.
he company was saved by
ging in seasoned executives, in-
ing Chief Financial Officer Jef-
O. Henley and Oracle USA
sident Raymond J. Lane, for-
head of Booz, Allen & Hamil-
Inc.'s technology consulting
tice. Lane recruited thousands
onsultants to help major cus-
ers install applications such as
oll, accounting, and sales track-
on Oracle databases. Lane also changed the compensation
em so that salespeople get paid only when products are
vered. Henley revamped accounting and introduced a
e conservative approach to finances. "There is profes-
al management inside the company now," says Sherlund.
While Lane and Henley run the day-to-day operations, El-
n plots his big moves. In addition to lining up I-Way
s, he has been seeking acquisitions. His boldest move: a
born plan last fall to mount a hostile takeover of Silicon
Valley icon Apple Computer. Ellison figured he could create a huge Mac clone business and use the Mac interface for interactive TV. His board gave him permission to explore the idea, but most directors considered it a long shot. Sources say the deal fell apart only when Ellison's Japanese partners got cold feet. Ellison hasn't given up: "At some time down the road, if Apple's [stock price] became attractive, we would reconsider," he says. Apple declines to comment.

Another target has been Lotus Development Corp. Ellison admits discussing an acquisition with Lotus CEO Jim P. Manzi but says that the talks never got serious. A few weeks ago—before Lotus had a surprise $50 million loss and become an obvious takeover candidate—Ellison acknowledged that he was still interested but said the price was too high. "If Lotus was cheap, we'd buy Lotus Notes and cc:mail," he said then. Today, his response to rumors that he's accumulating Lotus stock is: "No comment."

Yet another candidate on the list: Novell Inc.'s Unix operating-system business. In March, Ellison met with Novell CEO Robert J. Frankenberg to discuss buying Unix, on which Oracle 7 is the leading database program. The idea was to make Unix a stronger competitor to Windows. Eventually, he says, he gave up because the deal might spoil relations with other software companies that depend on Unix.

Monday mornings, Henley and Lane meet with Ellison to discuss new opportunities. That's when the Oracle boss usually floats his latest acquisition or technology wish list. "Sometimes, Jeff and I absolutely fall off our chairs," says Lane. "Very few of those ideas get implemented." Some analysts are concerned that one day Ellison will succeed in talking Henley and Lane into something that's too big. "Larry's desire to grow at an unsustainable rate could put negative pressure on the company," frets one analyst.

For now, most of Ellison's energy is focused on keeping a step ahead of Bill Gates, which is getting harder. In addition to snagging some of its own I-Way deals, Microsoft has joined Hollywood's Jeffrey Katzenberg, Steven Spielberg, and David Geffen in Dreamworks, a new movie studio. And Microsoft is plotting an assault on Oracle's core business—database programs that run on powerful servers—with Sequel Server for the Windows NT operating system.

Does Ellison ever tire of the hustle? After a long day of meetings with New York media executives, he slumps in the back of his limousine on the way to La Côte Basque and reflects. He recounts a long-ago conversation with his

Portraits of Two Software Billionaires

sister. "One day, she asked me: 'Which is more important, to be loved or to be respected?' I said: 'Respected.' She said: 'Wrong,' and left the room." He pauses, thoughtfully. "With wealth and fame, you get respect. But 20 years later, I figured out she was right. Ambition is a false god."

In recent years, Ellison has made more time for family. He fusses over the two children from his last marriage. And a few years ago he hired detectives to find his birth mother and her family. Now, his 35-year-old half brother works at Oracle, and Ellis is putting a half sister through college.

But he hasn't exactly mellowed. During a lunch bre from a business meeting at his house he declares: "We're ve ambitious. We want to be the No. 1 software company the world." Does that mean he would like to displace Gat "You mean, do we want a monopoly like Bill's? I've always sented it when other people have monopolies. Our o monopoly would be swell." And a great way to beat Micros at its own game.

By Richard Brandt in Redwood Shores, Ca

'MICROSOFT PROGRAMMERS NEED MORE SLEEP THAN WE DO'

If Lawrence J. Ellison winds up leading the Infobahn race, it will be thanks to the efforts of a few young engineers. They're the guys who designed Oracle Corp.'s Video Server, a program to dish up digitized video. While most interactive TV technology is still gestating, British Telecom PLC and Bell Atlantic say that Oracle's system works and that they're ready to expand their trials. Not bad, considering the Oracle team built its first prototype in just two months.

UP ALL NIGHT

Oracle engineers built a video server in just two months

The project got started back in mid-1993, when engineers Andrew Laursen, then aged 34, and William Bailey, then 27, were already working on a program for sending video clips across a network. Laursen got the idea of trying the program on as many as 1,000 processors at once. Bailey's response: "You know, dude, I think we can do this."

The idea may have been simple. Getting it right wasn't. Broadcasting a digitized film is fairly easy. Serving up 100 different films to 100 houses at 100 different times is a programming nightmare. Laursen's idea was to use a supercomputer from Ellison's nCube Inc. to split the video data into 1,000 different segments and store each of them on a different disk drive, controlled by its own microprocessor. One processor coordinates all the others so the film flows seamlessly in the correct order. When a new viewer orders a film—whether it's 20 seconds or 20 minutes later—the first drives can start delivering the film.

In June, 1993, they took their plan to Ellison, who gave it an immediate thumbs-up. "Larry likes sexy-sounding technologies," says Bailey. Six weeks later, he dropped by the lab, where the programmers had yet to get a single video to play. But the boss wanted to show off the setup—at a conference less than three weeks away. After a quarter-million dollars in new gear and 1½ weeks of round-the-clock work, the team had its first success: At quarter to midnight on a Saturday night, it sent a Pink Floyd video to a PC. The programmers called Ellison at home, and within an hour he arrived, date in tow. "I wanted to see it," Ellison says. "I couldn't just leave her there."

The next step—getting more than one video at a time to play—was harder. The server worked, but the software for the three PCs that were to run the videos didn't. A day before the conference, two PCs were working. Then, one crashed. Finally, in desperation, they copied the entire program from the working PC onto the others, and at 10 p.m. on the night of the show, miraculously the system worked.

"UNBELIEVABLY COOL." How did the Oracle team do in two months what Microsoft Corp. took more than a year to pull off? "Microsoft programmers need more sleep than we do," cracks Bailey. Laursen believes that it had more to do with determination—and a prod from Ellison. The program has since been adapted to run on a wide range of computers, including systems from Digital Equipment Corp. and Hewlett-Packard Co.

Microsoft executives remain unimpressed. They believe that they can do the same thing with a network of PCs—for less than the $500 per household (not including the TV-set-top box) that a typical nCube system would cost.

While Oracle waits for the I-Way to take shape, it is trying to drum up business for its video server in corporations and online services. Using high-speed integrated services digital network (ISDN) phone lines, Ellison says, the server can send video to a 3-inch-by-4-inch window on desktop PCs. That would make possible video E-mail, for example. Oracle is working with Intel Corp., and sources say AT&T is considering joining the project. "This is like a video-enabled Internet," says Ellison. "It's unbelievably cool." Almost as cool as winning the I-Way race.

MARKETS

DOW 5000. DON'T LAUGH

Productivity is up, inflation is tamed. It could happen

A tattered dollar. A slowing economy. Rising prices for raw materials. Hardly a recipe for a roaring stock market. Yet the Dow Jones industrial average has soared past 4300, gaining more than 500 points this year. Is this yet another misadventure on Wall Street, a manic euphoria that makes for a speculative bubble and spectacular blow-off?

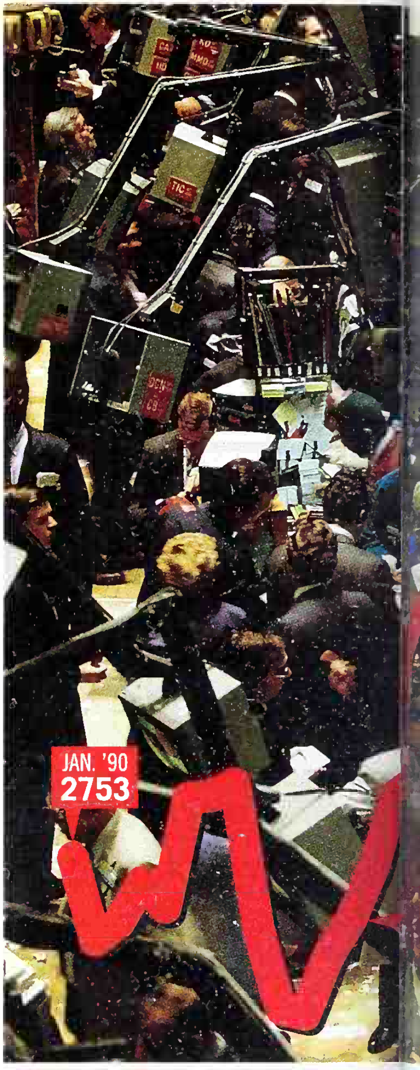
Certainly, market mavens are worried that the party is about to end. Stock market valuations are lofty by some measures. And fear that mounting price pressures will ignite inflation haunts the market. "We have concerns about a 4% to 5% inflation rate in the second half of 1995," says Edward G. Riley, chief investment officer for the private bank at the Bank of Boston Corp. Adds John P. Hussman, a money manager and investment newsletter writer based in Farmington Hills, Mich.: "There's a likelihood of slipping into a bear market at any time."

"IDEAL CLIMATE." Yet the economic fundamentals suggest stocks have a long way to go. In the new '90s economy, productivity has been rising at about a 2% average annual rate, double that of the previous two decades. The startling gains from corporate restructurings and the high-tech revolution will pay dividends for years. U.S. businesses are seeing remarkable profit growth, and disinflation continues. "Strong growth without inflation is an ideal climate for stocks," says Jeremy J. Siegel, professor of finance at the Wharton School.

A few economists are even starting to tempt the fates. "The Dow is heading for 5000," says Edward E. Yardeni of C.J. Lawrence/Deutsche Bank Securities Corp. 5000? Over the next several years, 5000 is not as outlandish as one might think, considering that it's only 14% above current levels.

Of course, like any other market, the stock market will take sudden, stomach-churning dips or stagnate for months on end. Risks are multiple in the new global economy, too, from unexpected currency devaluations, like the recent Mexican peso crisis, to political upheavals in developing nations, such as the anticipated power struggle when Deng Xiaoping passes away in China. Still, in the U.S. there are none of the economic and financial excesses that typically scream "trouble ahead." The banking system is sound. This is the first business expansion in the postwar period not fueled by a double-digit rise in corporate debt. "The economy has no significant imbalances that are necessary for a recession to happen," says Mark Zandi, economist at Regional Financial Associates Inc.

Indeed, the one credible threat to the market—an overheated economy—is fading fast. Last year's interest-rate hikes engineered by the Federal Reserve are ratcheting down the economy's growth rate to a more sustainable pace. Gross domestic product slowed from a 5.1% annual rate in the fourth quarter of 1994 to 2.8% in the first quarter. And there's little to fear that the "soft landing" will turn into a nosedive. The U.S. economy is resilient and prospects for a long global upturn are bright. Economies are expanding in 46 out of the 49 countries followed by Allen L. Sinai, chief economist at Lehman Brothers Inc. The synchronous growth of so many countries in so many areas of the world has no precedent in modern economic history, says Sinai. With U.S. export-oriented companies looking forward to record sal
this year and next, the economy cou
easily reaccelerate.



But won't a rebounding economy lea
to higher inflation, rising interest rate
and lower stock prices? Forget it. W

ey manager Trevor Stewart Bur- & Jacobsen Inc. Among them: the eral Reserve's tight-money policy; ning real government spending; bru- ompetitive pressures from deregula- and globalization; and consumer ilantes" who hunt down the best es. To top it off, U. S. companies inue to make gains in productivity, :h lead to lower costs.

ıst as important for the stock mar- labor costs are remarkably sub- l. Despite the economy's heady 4.1% growth rate last year, the employment-cost index, which includes wages and benefits, rose a mere 2.9% in the 12 months ended in March of this year, the smallest yearly gain since the index was first compiled in 1981. "The employment-cost index is consistent with our forecast for a deceleration in consumer inflation, bringing the [consumer price index] for 1995 below the 2.7% rate of 1994," says Richard F. Hokenson, chief economist at Donaldson, Lufkin & Jenrette Securities Corp.

The combination of high productivity and tepid wage increases is pushing corporate profits through the roof. In the latest business cycle, profits have exceeded the recovery in earnings during comparable periods by 70%, according to Henry Kaufman, who heads his own investment firm. With order books strong and exports improving, another rise in profits is likely this year, albeit at a somewhat slower pace than last year's 40% jump. In the first quarter, earnings for the 900 companies on BUSINESS WEEK's Corporate Scoreboard rose a strong 30% (page 122).

Solid corporate earnings explain why stock market valuations aren't zany. Equity prices are high, but not unreasonable considering the profit boom. Today's price-earnings ratio of 16 on the Standard & Poor's 500-stock index is below the p-e of 21 a year ago. Bonds have rallied over the past few months, with the yield on the 30-year Treasury bond falling by half a percentage point, to 7.25%. At current interest rates, the S&P 500 doesn't appear overvalued, according to Byron R. Wien, chief U. S. equity strategist at Morgan Stanley & Co.

True, the dividend yield on the S&P hovers around 2.6%, about as low as it has ever been, and a sign that stocks may be overpriced. Instead of hiking dividends, though, many companies have accumulated cash and engaged in large-scale repurchases of their stock—in effect, a policy that creates capital gains for shareholders, which is capped at a 28% federal tax rate rather than a top rate of 40% for dividends.

TOO ROSY? What's more, faced with billions of dollars in bills to pay for their children's college educations and their own retirements, an aging population is putting more of its income into stocks. Look at 401(k) retirement savings programs. According to data compiled by Access Research, a pension consulting firm in Windsor, Conn., equity investments make up 19% of 401(k) assets, up from 10% in 1990. Even more striking, approximately 70% of all new 401(k) contributions are going into stocks.

Is all this too rosy an outlook? Of course, economists are notoriously bad at forecasting markets, second only to doctors and dentists. Still, on the most fundamental level, the U. S. stock market reflects the outlook for the U. S. economy. And with inflation beaten into the ground and productivity on the rise, the signposts are pointing to better stock times ahead.

WHO WATCHES THE WATCHDOG AT NASDAQ?

Critics from all sides–even from within–say the market can no longer police itself

Joseph R. Hardiman, president of the NASDAQ stock market, had high expectations when he stepped up to the podium in late March to introduce a new trading system for small investors. But those expectations were soon dashed. Before an overflow crowd at New York's posh Inter-Continental Hotel, the press briefing quickly degenerated into a shouting match between the NASDAQ chief and dissident NASDAQ broker Sheldon Maschler.

Claiming he was representing a sports publication, Maschler demanded to ask a few questions. Hardiman refused and threatened to have the burly head trader of Brooklyn-based Datek Securities Corp. thrown out by hotel security. Undeterred, Maschler denounced NASDAQ's domination by the clubby big firms and blasted the organization's executives for using their regulatory powers to drive small firms out of business.

Hardiman now tries to put a positive spin on the embarrassing episode. While disputing Maschler's charges, the NASDAQ chief insists that one of the organization's biggest successes is treating all constituencies fairly. "Criticism by members is healthy," he says. "It shows us if we get out of balance."

STRUCTURAL FLAWS. The Maschler incident is symptomatic of increasingly serious management problems and bitter internal dissent at the rapidly growing market system. At the root of NASDAQ's troubles is its structure: Owned and operated by the National Association of Securities Dealers (NASD), NASDAQ is a group of nearly 500 market makers who trade with one another over the phone. They advertise offers to buy and sell stocks on thousands of electronic quote machines in brokerage offices nationwide. But a vocal group of small firms alleges that the market's rules are designed to boost the profits of the large NASDAQ firms that control the market—at small firms' and investors' expense.

These firms are aiding federal prob into possible illegalities on NASDAQ. Th Justice Dept. is investigating allege collusion to fix prices. The Securities Exchange Commission is looking in allegations of endemic late reporting trades and backing away from quote stock prices by traders. Academics ar investors have also questioned the fai ness of the way market makers co duct business. Indeed, pressure is slo ly building to transform NASDAQ into true national electronic execution m ket, which could curb many of the leged abuses—and wipe out much the big market makers' edge over sma er firms.

The heightened scrutiny could al lead to historic changes in the relatio ship between NASDAQ and the NAS Critics say the NASD may have a confli of interest: It not only owns NASDA but also has a congressional manda as a privately run regulator to poli the market and its member firms. "Co

AP/WIDE WORLD

> "Criticism by members is healthy. It shows us if we get out of balance"
>
> — JOSEPH HARDIMAN
> President, NASDAQ

A SQUABBLE FOR THE NEXT HUNDRED YEARS?

Critics, especially some small NASDAQ firms, say the NASD, which owns NASDAQ, abuses its power. The NASD says it runs its market fairly.

CRITICS	NASD
The NASD and NASDAQ boards are controlled by major firms, which sway policy to suit their own interests.	The NASD balances the interests of all constituents. The boards have been adding nonindustry members.
Some small firms are targets of unfair disciplinary actions, and their rights of due process are violated.	The system is not unfair. Cases are evaluated by a panel of peers. Decisions can be appealed to the SEC and federal courts.
The NASD retaliates against new firms set up by dissidents by restricting their activities.	Care must be taken in letting new firms into the business to make sure they have enough capital and experience.
The NASD, along with major NASDAQ market makers, has tried to limit trading by some small firms on the Small Order Execution System (SOES).	Some small firms trading on SOES take unfair advantage of a system designed for individual investors and create unnecessary volatility in stocks.
The NASD should be split off from NASDAQ. That would end the conflict of interest between the NASD's role as both NASDAQ's owner and its regulator.	The benefits of synergies in combining NASD and NASDAQ make any separation an unwise strategy. The Big Board and other exchanges have similar structures.

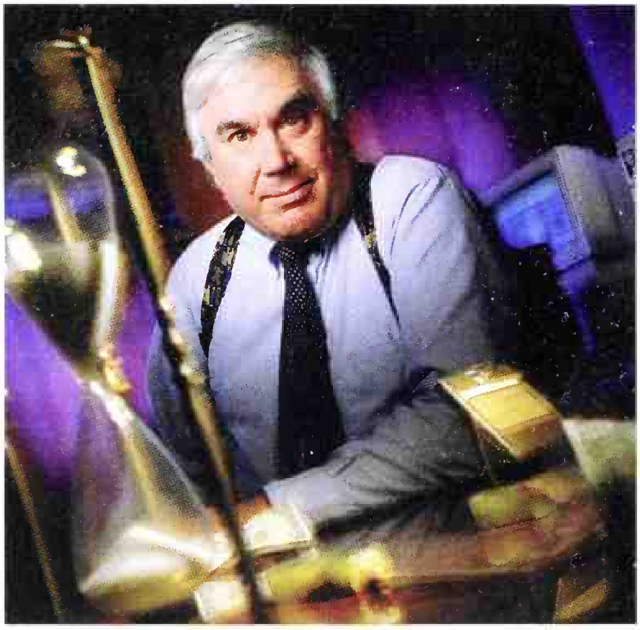
gress has created an entity that has more power than a king," says Robert C. Beers, a former NASD enforcement attorney now in private practice.

Managing the NASD's vast array of constituencies may be a nearly impossible job. In the past two decades, the market has ballooned from a backwater for the stocks of emerging companies to the world's second-largest stock market, trading 321 million shares of 4,900 listed companies daily. NASD oversees 5,429 firms and 489,000 brokers (chart, page 109). "The question is being raised if the governance structure has kept pace with the expanded responsibilities," Hardiman concedes.

To forestall government-imposed reforms, the NASD last November appointed an independent panel headed by former New Hampshire Senator Warren B. Rudman to study the market's organization and governance. Hardiman acknowledges that the committee is considering some radical proposals, including spinning the market off from the NASD. Rudman declined to discuss specifics but said the study should be completed this summer.



ROBIN THOMAS

BIG LOSERS. To its critics, nothing better symbolizes the NASD's preoccupation with protecting big market makers than the events that led up to the development of the new system—dubbed Aqcess—which Hardiman introduced at the March press conference. It started with the 1987 market crash, which prompted the NASD to force market makers to conduct trading on the little-used Small Order Execution System (SOES). The system, which guaranteed electronic execution of trades up to 1,000 shares, was seen as a way to protect investors from devastating market failures such as the crash, when brokers refused to answer telephones.

While designed for small investors, savvy dealers at some smaller NASD firms figured out that they could make tidy profits by using SOES to trade shares when dealers failed to update their prices. The losers often were big market makers that weren't paying enough attention to price changes by rivals in the same stocks.

When the large firms woke up, they struck back at traders they derisively labeled "SOES bandits." The NASD passed a series of rules that hurt these SOES firms—and investors as well—by limiting market makers' obligation to fill orders on SOES. Swayed by the NASD's arguments that SOES firms disrupted the market overall, the SEC rubber-stamped many of the changes. Some SEC officials now regret its action. "We took a system that wasn't perfect and messed it up even more," concedes SEC Commissioner Richard Y. Roberts.

Over the next few years, the NASD fought a series of pitched battles with the SOES firms to restrict their trading on SOES. The courts and the SEC, which began to take a harder line, ruled in favor of the SOES firms. Hardiman staunchly defends the NASD's steps. Some firms "were taking advantage of a system," he says. "We thought it was inappropriate."

> "The entire NASD process has mutated into a special agenda of a few large firms"
>
> — ALAN DAVIDSON
> President, Zeus Securities

The new version of SOES, Aqcess, is supposed to satisfy everyone's complaints. The proposed system offers execution for orders of up to 3,000 shares and is being promoted as the first central electronic market dedicated to small investors. Hardiman says most NASD member firms support Aqcess. But it's already under fire for giving firms a loophole to not always make good on their quotations. "Aqcess is the strongest evidence that NASD is not tryi hard to act in the public's interes says Rutgers State University of Ne Jersey's finance professor David Wh comb. "It's just trying to put forwar cleverly designed system with minim change."

NO CHOIRBOY. The SOES fight is har the only contentious issue. Many sma er members claim the NASD's discip nary mechanism is biased. Take t treatment of Maschler's Date Maschler admittedly is choirboy. He made a fortune notorious First Jersey Secu ities Inc. and has a disciplina record dating back to 1977.

Still, the NASD's treatment his firm raises questions. 1992, it suspended Datek fro trading for six months aft finding that Maschler violat some of the rules designed curb SOES firms. But the S found that two of the thr members of the disciplina panel worked at firms—Sm Barney, Harris Upham a Shearson Lehman Brothers that were involved as mark makers in 20% of the transa tions at issue. The conflict interest led the commission overturn the sanction. Masc ler now is suing the NASD and half dozen major Wall Street firms, see ing $24.6 million in damages. Maschle background "doesn't give license to t NASD to act improperly," says Beers, t former NASD attorney. Hardiman declin comment because of the litigation.

A less visible tool wielded by t NASD against dissidents and associates SOES firms is the "restriction letter"- document that dictates terms of ope tion for new and expanding firms. Ty cally, a firm with $125,000 in capital allowed to make markets in the stoc of 50 companies. But the rules seem change for mavericks. Take Big Boa member Domestic Securities Inc. It h a nine-year track record and a healt $1 million in capital, but its affilia company, All-Tech Investment Gro Inc., fought the NASD's efforts to rein SOES's use. When Domestic's new NA membership became effective in m 1994, the firm was approved for maki markets in only 50 stocks. A month l er, Domestic applied to increase th number and hasn't gotten an answ yet. "This is clearly retribution becau of All-Tech's criticism of NASD," sa Harvey I. Houtkin, head of both firm

Hardiman says the association has be careful in admitting new firms

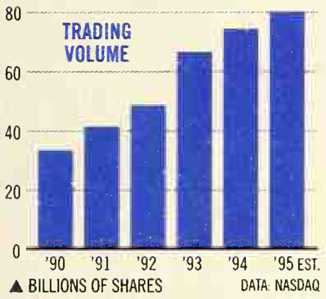
ut these moves aren't enough to
tall further pressure for change,
cially on the NASD's tight linkages
with NASDAQ. NASD supporters point out that the New York Stock Exchange and other exchanges have a similar combined organization. "But the legitimacy of those markets isn't being investigated by the Justice Dept. and SEC," says Junius W. Peake, a former NASD vice-chairman and professor at the University of Northern Colorado.

Fast Growth. Maybe Too Fast

Critics say booming volume has strained NASDAQ management



CHINESE WALL? Some academics advocate separating NASDAQ from the NASD. That would allow the NASD to perform its regulatory function without having to serve the interests of NASDAQ's membership. "There should be a separation," says Dale A. Oesterle, a professor at the University of Colorado School of Law. "Otherwise it's hard to get a market operating in the best interest of customers." Hardiman disputes the proposal, saying the system would lose synergies.

The Rudman committee likely won't recommend anything as radical as a spin-off but it might suggest a Chinese Wall between the NASD and NASDAQ members—particularly the influential major firms. One option under study is to separate management of the two organizations, which currently are both run by the same senior executives. Another is to move NASDAQ's headquarters from Washington to New York. But given the number of Rudman committee members with close ties to the association, many skeptics doubt the panel will propose much more than increasing independent board membership to 50%.

More pressure is likely to come from the SEC. It was embarrassed when Justice launched its price-fixing probe. And the commission's recent aggressiveness suggests it no longer rubber-stamps proposals the NASD sends over for approval—especially those that could hurt smaller firms or investors. The SEC might even become sufficiently fired up to force the ultimate reform: transforming NASDAQ into a fully electronic system with automatic execution to all investors. Market makers would no longer do trades over the phone and make money by keeping spreads suspiciously wide. NASDAQ would at last become what it has always claimed it already was: the stock market of the future.

Performance Measures: Your Standards For Success

Never has it been more vital for a company's management to ask: "Are we achieving our corporate objectives?" "Are we reaching our goals for customer satisfaction?" Or more simply: "How are we doing?"

The answers can be found in a company's performance measures. As vital signs, they communicate what's important throughout an organization: the corporate strategy from top management on down, process results from lower levels on up, plus control and improvements within processes. Performance measures tell people what and how they're doing as part of the whole.

The benefits of performance measures are clear. The first is customer satisfaction: With performance measures based on product characteristics or service attributes needed to satisfy customers, a company will always know its progress toward remaining competitive.

Other benefits? The right performance measures make process improvement not just possible but continuous. You can anticipate problems before they actually occur. Performance measures help break down barriers between "functional silos" and drive successful change throughout an organization.

Performance measures also make possible "management by facts." These performance measures can provide the information needed to compare your company's performance with other companies' performance. Arthur Andersen professionals utilize the Global Best Practices℠ knowledge base to explore performance measurement processes used by the world's finest companies. This can give you a quantum leap of creativity into insights, new ideas, and models for meaningful change.

Done right, performance measures can help everyone in a company focus on the right things. In the right place. At the right time.

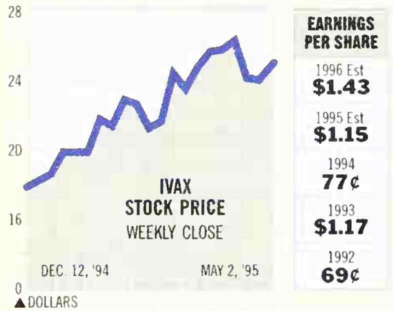
IVAX MAY KEEP FOILING THE SHORTS

So far, short-sellers have been disappointed in Ivax (IVX). The stock, which has one of the largest short interest on the American Stock Exchange, has been on the rise, oddly enough—climbing to 25 from 17 in late December. And they are likely to continue to be frustrated. What's the scoop? Ivax, the nation's largest generic-drugmaker, may be merger-bound, whisper some of the pros. They are convinced that BASF, the German chemical-and-pharmaceutical giant, will soon acquire 20% to 25% of Ivax. That, says one New York money manager who has been accumulating shares, could ultimately lead to a merger. In such a deal, Ivax could be worth 50 a share, he estimates.

GOOD CHEMISTRY WITH BASF?



DATA: BLOOMBERG FINANCIAL MARKETS, ZACKS INVESTMENT RESEARCH

Ivax Chairman Philip Frost, who was scheduled to meet with BASF top brass in Germany in early May, would not confirm or deny any such speculation. He noted, however, that Ivax and BASF had formed a joint venture in late March to sell generic drugs in Europe.

The joint venture, Knoll Norton, will initially operate in Germany. (BASF subsidiary Knoll is a major pharmaceutical player in Europe, while Ivax' Norton Healthcare is No. 1 in generic drugs in Britain.) BASF couldn't be reached for comment.

Some analysts believe that Ivax is undervalued just in terms of its existing business. David Saks of Gruntal & Co. says the stock could well rise to the low 30s this year and 42 next year, even without a merger. He notes that the Food & Drug Administration recently approved Cefaclor—the seventh FDA approval for Ivax so far this year and easily the most significant. Cefaclor is the generic equivalent of Eli Lilly's Ceclor, an antibiotic used to treat certain respiratory, urinary, skin, and ear infections.

Cefaclor will be "a blockbuster for Ivax," says Saks, who estimates it could add sales of $50 million its first year. Lilly's Ceclor generated worldwide sales of $812 million in 1994.

Cefaclor sales will start showing up in Ivax' second-quarter results, figures Saks. He notes that Ivax has 35 generics and several proprietary products still in its pipeline. Ivax also makes and sells personal-care and diagnostic products.

Another bullish factor: Frost's undying romance with Ivax stock. He has accumulated 13 million shares—12% of the outstanding stock. Frost isn't fazed by the short-sellers' interest. "I like it—because they will have to scramble and cover [their short positions] when more good news rolls in."

HEADS IN THE SAND —AS CYRK SINKS

Remember Cyrk International (CYRK)? On Nov. 28, this column reported that some big-money pros were heavily shorting the stock. Cyrk shares were then trading at 40, and the shorts were convinced the stock would collapse to 10 in a year. Boy, were they right. By May 2, the stock had already plummeted to 11¼.

Is the big decline finished? Hardly. The short-sellers, including Carl Icahn, who is said to have made $10 million on his position, are betting that the stock will fall to less than 5. They believe Cyrk, which designs and makes products such as baseball caps and T-shirts for use in promotional campaigns, will be in the red by the second half of the year.

Did the analysts ignore what had become obvious to the shorts? One analyst who kept on projecting bullish results for Cyrk was John Weiss of Montgomery Securities, which was the sole underwriter of Cyrk. (On Dec. 1, Montgomery Securities issued a secondary offering, of 2.5 million shares, to the public at 36.) As late as May 2, the day the stock dropped 18% in one session, Weiss sent out a fast report—with a "buy" recommendation on Cyrk. He conceded that first-quarter earnings of 5¢ a share "were below our 15¢-to-20¢ estimate." One reason: Orders from its one major client, Philip Morris, were significantly below his rosy expectations.

Even so, Weiss doesn't see Cyrk losing money. He says Cyrk expects a purchase order from a large company in May. But he has slashed his second-quarter earnings estimate from a lofty 50¢ to 3¢ a share. And for all of 1995, he pared his estimate of $3.15 to 60¢. Icahn and the shorts are unimpressed. They think he'll be dead wrong again.

FALLEN ANGELS TO RESURRECT

Notwithstanding the market's climb to record highs, investment manager Tony Spare finds that bargains still abound. Several of his picks are "fallen angels"—former growth stocks that disappointed the Street and that have hardly budged in the bull market. He has been snapping up shares of Bristol-Myers Squibb (BMY), Tambrands (TMB), and Dun & Bradstreet (RND).

Spare considers Bristol-Myers, currently trading at 66, to be way undervalued. Seen by analysts mainly as a drug company, Bristol-Myers is also a "diversified international consumer-products company that's well-positioned for strong growth worldwide," insists Spare. Its balance sheet remains strong, he adds, and recent earnings disappointments "have masked its excellent cash flow and leading market-share position of its many products." He sees the stock hitting 75 in a year.

SPARE: *Bargains galore, even in this bull market*

The Tambrands line of feminine-protection products, says Spare, "ranks very high in market share worldwide." He feels encouraged by a strong balance sheet and by a record of 47 years of steadily increasing dividends. He thinks the stock, now trading at 43, is also cheap—and will rise to 55 during this year.

Dun & Bradstreet has made its name, notes Spare, on the strength of publishing and financial-database operations worldwide. The stock is buttressed, he says, by a strong cash flow and high dividend yield—of 5%. His target for the stock, now priced at 52, for the year is 60.

TELECOMMUNICATIONS

CAN AT&T GET THROUGH TO JAPAN?

The American giant is finally making a serious push

Within hours of the earthquake that struck Kobe last Jan. 17, technicians at the network control center of Japan's national phone company, Nippon Telegraph & Telephone Corp., had to cope with a torrent of Kobe-bound phone calls—more than 50 times normal levels. Fortunately, NTT's damage-control experts had a new tool: AT&T had installed a $110 million system with four giant video screens displaying color-coded network maps that allowed frantic managers to quickly find solutions. "I shudder to think how much worse it would have been without the new system," says Minoru Matsuoka, a director of international procurement. "It functioned extremely well."

Those words must be sweet for AT&T, which, since entering Japan in the early 1980s, has gotten almost nowhere. It tried selling plain-vanilla telecom gear, let infighting break out among its business units, and launched a hodgepodge of joint ventures. Worse, AT&T did little to fight market barriers. The result: It's third in phone switches behind Northern Telecom Ltd. and L. M. Ericsson, and, say analysts, it could be outgunned by British Telecommunications PLC in data networks.

Clearly AT&T has immense potential. No single competitor can offer Japanese customers the U. S. giant's state-of-the-art technology and globe-spanning network services. Just ask a Japanese engineer. Michiyuki Uenohara, an executive adviser at NEC Corp. who spent 10 years learning the high-tech ropes at Bell Laboratories, can't quite hide his pleasure at AT&T's newfound sense of mission about Japan, despite the added competition. "I think they are getting themselves back on track," he says.

The phone giant decided to get serious about Japan last October. That's when CEO Robert E. Allen dispatched a 31-year company veteran, Louis C. Golm, to Tokyo to clean house. Golm, 53, had previously been in charge of marketing AT&T network services to U. S. businesses, and he is the highest-ranking corporate officer ever to lead Japan operations. His orders: Knit a cohesive team from disparate divisions—including the former NCR Japan, which dwarfs AT&T's other subsidiaries—and customize offerings for Japanese needs.

"BODY LANGUAGE." If anyone can accomplish such a transformation, AT&T watchers think it's Golm. For starters, he has clout at AT&T's Basking Ridge (N. J.) headquarters. Colleagues also say his manner—that of a kindly high school principal—goes over well with Japanese customers. Granted, he cannot speak Japanese and has no previous international experience. But Golm seems a tuned to local cultural quirks. "It a ways impresses me the way he pic up on Japanese body language," says key Japanese executive at AT&T Japa

Whatever his strengths, they seem to be working. AT&T sold 104 of its powerful model 3600 parallel computers last year, at $1 million to $10 million a pop, to customers such as Japan's top credit-card company, JCB International, and Nomura Securities' research arm. Another sal highlight: AT&T chips that process voi signals and record messages. They a in 2 million cordless phones made Tottori Sanyo Electric Co. AT&T recently proposed a chip to Tottori Sanyo for voice-activated dialing.

If there's a question mark over Golm, it's whether he'll take on Japanese bureaucrats. AT&T has always been the nice guy among foreign companies in Jap "They have no sense of going for t jugular," says one AT&T insider. But g ting tough can pay off. Motorola I lobbied loudly against barriers in t 1980s and offended Japanese offici

AT&T says NTT has refused to open
idding for a new mobile-phone system called PHS—which is similar to the Personal Communications Service setup being planned for the U.S.—after Japan agreed to procurement procedures with the U.S. last October. AT&T is designing switches for PHS with Nagoya-based Nippondenso Co. and wants into a market that analysts say will be worth over $600 million by 1997.

Golm's toughest challenge may be integrating the operations of the former NCR, purchased by AT&T in 1991 for $7.5 billion and renamed the Global Information Solutions Div. (GIS). NCR Japan, with a 75-year history in the country and its own Tokyo Stock Exchange listing, is about as Japanese as an American company can get. It has 5,000 employees, vs. the 600 or so who work for the rest of AT&T in Japan.

There's little coordination right now. GIS's Japanese executives are still listed in a separate AT&T directory and work in a different building. Worse, their pay ranks in the bottom third of foreign executives in Japan. Other AT&T employees rank in the top quarter. It does not help that GIS is coming off tough times. NCR's biggest business had been automated teller machines, and when Japan's economic bubble burst in 1990, sales plunged. With taxable income of $54 million in 1993, GIS sank to No. 42 among foreign corporations in Japan, from No. 19 in 1992. Hideaki Takahashi, head of GIS, is reversing the decline with sales of client-server computer networks. Revenues edged up 7% last year, to $1.16 billion.

Next, Golm wants to forge links between GIS and other AT&T businesses in Japan. Those units might snag some significant orders if they gain access to the old NCR accounts, which include top banks and retailers. Granted such synergies have not occurred in the U.S., but Golm says he'll make them happen. "Part of my coming here was a clear statement by Bob Allen that this is our fundamental strategy," he says. "I don't think anybody at AT&T misses that point."

MAJOR PRESENCE. Just in case, Golm installed himself in the GIS building. The troops are starting to get the message. GIS recently joined two other units in a business to furnish phone centers for distribution and service units of corporations. The business supplies equipment—GIS workstations and private branch exchange switches—and plans to add operators trained and employed by AT&T's phone services division. Bell Labs, too, is in on the synergy: It just melded its wireless computer technology with a system developed by GIS.

But competition for Japanese customers is heating up, particularly in the data-transmission services that AT&T is pushing. British Telecom has made Japan one of its top three priorities for its "Concert" phone service for multinationals and is on the prowl for Japanese partners. In March, AT&T landed NTT as a trial partner of its "WorldPartners" alliance, Concert's chief rival.

Golm says AT&T is committed to building a major presence in Japan, whatever the cost. The market may be hard to crack, but it's too big to ignore—and the competition is here. "If you're out of this market, if you don't know what they are doing, you are at risk," he says. It's a risk that AT&T can no longer afford to take.

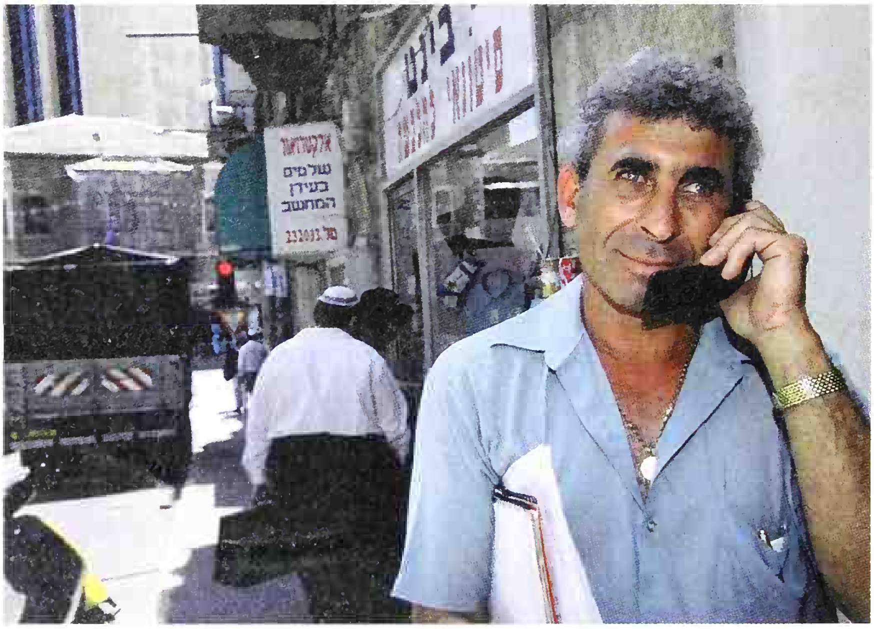
TELECOMMUNICATIONS

HELLO, BEZEQ? COMPETITION CALLING

Israel's telecom monopoly is in good shape as rivals charge in

For Israel's Bezeq Telecommunications Corp., it's a tumultuous time in the Middle East phone business. Despite the ups and downs of the peace process, the state-owned phone monopoly's international traffic is soaring as phone lines buzz between Israel and its Arab neighbors. The Israeli government is opening up the international market to competition, forcing Bezeq to compete for foreign traffic for the first time. And on Apr. 28, Britain's Cable & Wireless PLC snapped up 7% of Bezeq's shares.



The purchase could mark the start of a major new alliance—and boost Bezeq's chances of staying ahead of the coming competition. "This is merely one step toward a strategic partnership," says Cable & Wireless Chief Executive James H. Ross. "We are looking to make a contribution to shaping Bezeq's future." The British company paid $101 million, or about 18% more than the Tel Aviv Stock Exchange market price, to buy the shares from private Israeli investors.

Industry analysts see the Cable & Wireless move as a bid to get its foot in Bezeq's door ahead of its global rivals. Although the 7% stake is big enough to get a seat on Bezeq's board, it does not guarantee the British company a strategic role in Bezeq. But Cable & Wireless is already talking about upping its interest to at least 20%. That could happen later this year when the government, which currently owns 76% of the company, plans to sell off 25% more of Bezeq's shares.

A Bezeq-Cable & Wireless partnership could benefit both companies. Bezeq, which was spun off a decade ago from Israel's Communications Ministry, needs help with pricing, technology, and investment strategies to compete against international giants lining up to enter the Israeli market. AT&T, MCI, Sprint, British Telecom, and Deutsche Telekom are all teaming up with Israeli partners to take part in bidding to provide international phone service from Israel. The government is expected to award two new licenses this summer.

KEY STAKE. For Cable & Wireless, an alliance with Bezeq would give it a key stake in the growing Middle East market. The company owns minority stakes in telecommunications companies all over the world but is strongest in the Far East, Europe, and the Caribbea "We see enormous growth in the Midd East," says Ross.

Bezeq Chief Executive Issac Ka calls the Cable & Wireless purchase "vote of confidence" in his company. I recent months, the Israeli company ha reduced its workforce by 13%. At 4.8 employees per 1,000 direct phone line Bezeq claims to be one of the world's 1 most efficient telecom companies. It network is already 85% digital, an within two years will be all digital.

Moreover, even after competition a rives, Bezeq will enjoy advantages. Th company will retain its monopoly statu as provider of domestic phone servic and international consortiums will hav to pay Bezeq access fees when the hook into its domestic system. Beze earned net income of $100 million o $2 billion in sales in 1994. Internation calls produced on third of revenue and more than ha of profits.

ON THE GO

Bezeq is losing cellular share, but that didn't stop Cable & Wireless from snapping up 7% of its stock

While Beze seems to be read for big-time com petition, it coul still be in for som surprises. Despit its entrenched p sition, the compa ny was severely challenged by its fir rival in the cellular-phone market. Las December, Cellcom, a joint venture be tween BellSouth Corp., Brazil's Saf brothers, and Israel's Discount Inves ment Corp., launched a cellular-phon network to compete with Bezeq's on year-old joint venture with Motoro Inc., Pelephone. Offering cut-rate price that it claims are the lowest in th world, the company signed up 80,0 subscribers in just four months.

Cellcom captured 33% of the marke but then its growth stalled because technical glitches. Now, by cutting pri es and improving network quality, Pel phone is trying to win customers bac Even so, the company's share of th cellular market is expected to fall belo 50% once Israel licenses a third cellul operator when the market reache 300,000 subscribers.

As Bezeq gears up to compete, i goal is to keep growing even as its ma ket share declines. "The market itself going to grow rapidly," predicts Bezeq Kaul. As competition picks up in th Middle East phone business, Cable Wireless hopes to be the strategic par ner to help Bezeq stay on top.

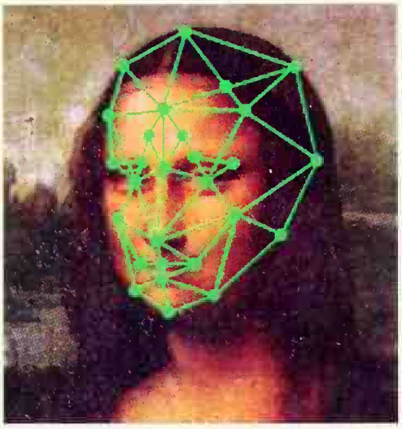
EIDOS NEVER FORGETS A FACE

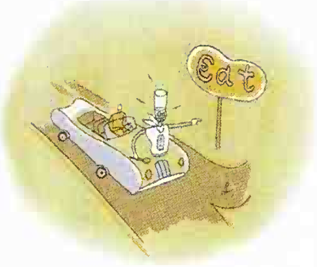


IN 1988, UNIVERSITY OF SOUTHERN CALIFORNIA neurobiologist Christoph von der Malsburg was pursuing a theory of how the visual cortex in the human brain processes information. When a person searches for a face in a crowd, he reasoned, the brain must strip away meaningless variations, focus on essential features, and confirm their relationships.

To test the theory, he and his colleagues at USC and Bochum University in Germany devised software that reduces images in a similar fashion. The system, called Eidos, worked so well that Germany's Deutsche Bank adopted it to beef up personnel security at its central computing facility in Dusseldorf. Other versions may soon be on sale in the U.S.

Eidos begins by scanning a facial image to find 45 landmarks—including eyes, nose, and lips—and frames them in a grid (photo). It describes those landmarks in terms of mathematical features called "wavelets," which emulate visual cells' responses in the brain. The software then compares the target image with other faces in a database. Deutsche Bank's system, running on a Pentium PC, takes just three seconds to verify the identity of the face, matching it against a stored template. The U.S. Army, which funded the USC research, is evaluating Eidos against competing recognition systems, including one developed at Massachusetts Institute of Technology's Media Laboratory.

A CAR COMPUTER FOR GASTRONOMY, NOT GAS MILEAGE



YOUR CAR'S COMPUTER WILL lead you by the nose if you have one of those fancy new systems with a dashboard screen that plots where you are on a detailed street map. Next, says Ray E. Eberts, an associate professor of industrial engineering at Purdue University, the computer may also help you sniff out your favorite chow.

Eberts is wrapping up a yearlong project that turned one car's computer into a restaurant guide on wheels. He fed the computer information on local eateries and built in a software "agent" that kept tabs on which restaurants the car visited. The agent, based on a "smart" program known as a neural network, quickly learned the passengers' dining preferences and how they varied depending on the day of the week, time of day, and number of occupants in the car. Assuming the patterns were fairly consistent, "the agent needed only about 10 examples to start making good predictions," says Eberts. After that, recommendations had a 90% accuracy rate or better. Eberts, who has worked six years on various neural network agents, hopes to show his mobile gourmet to Detroit's Big Three and other interested companies later this year.

OWING SEEDS AGAINST PROSTATE CANCER

OSTATE CANCER KILLS
,000 men each year. That's
d enough, but another
addening fact is that only
minority of the 240,000
en diagnosed annually
ve a virulent form of the
sease and need immediate
eatment. Sadly, even the
st tests can't tell precisely
who they are. So to be safe, many men with relatively benign tumors go through radiation therapy or surgery, which can cause incontinence and impotence.

A growing number of doctors are performing a procedure called "seeding," in which rice-size radioactive pellets are implanted directly in the prostate gland. The procedure has fewer side-effects and, according to a new study, may also offer good long-term results. In late April, Northwest Tumor Institute in Seattle reported that 100% of 111 prostate cancer patients were free of local recurrence five years after getting the implants. That rate beats external radiation treatment and is comparable to rates after surgery to remove the gland. The procedure costs half as much as surgery, and there are fewer cases of incontinence and impotence. Good news for patients and for Theragenics Corp. in Norcross, Ga., maker of the seeds used in the study.

SEMICONDUCTORS

NOW, TI MEANS 'TAKING INITIATIVE'

It's not waiting for others to find uses for its products

Sitting in a restricted Dallas research lab, Texas Instruments Inc. Vice-President Jack Harrod can't hide his glee as a no-name big-screen TV outshines the brand-name models on either side of it. Why so happy? The crystal-clear picture is courtesy of TI's patented digital mirror device (DMD)—a postage-stamp-size semiconductor covered with 400,000 mirrors that projects images far more efficiently and accurately than liquid crystals or cathode-ray tubes.

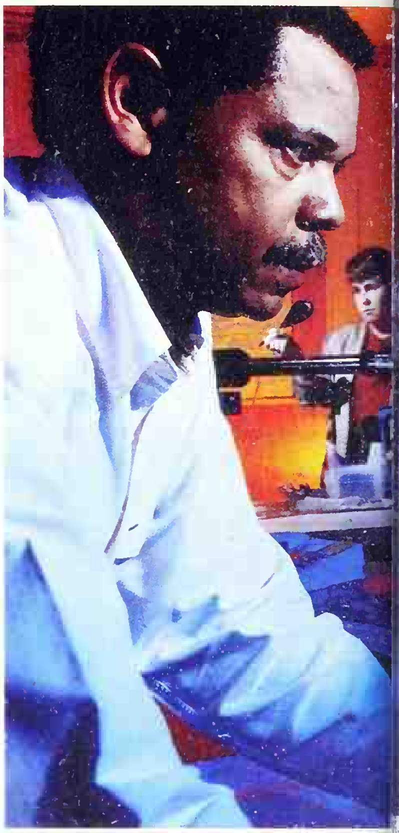
But the pretty picture tells only part of the story. After five years of research and development and more than $200 million, TI is determined to make its bet pay off. The company has hired optics scientists to make sure consumers will appreciate the sharper image. It has contracted with Asian TV screen makers to develop surfaces that can exploit DMD's higher resolution. And rather than sit around hoping TV makers take a look, TI has built prototypes of everything from portables to wall-size home theaters to grab their attention. "We're duplicating almost everything the TV maker would do," says Harrod. "But then, we're talking about changing the high-end display business forever."

Indeed, once-stodgy Texas Instruments is out to change the very nature of semiconductor marketing. With vast new markets such as TV set-top boxes and wireless PCs about to explode, analysts expect world chip sales to double, from $100 billion last year to $200 billion by 2000. TI isn't content to wait for manufacturers to come to it with chip orders. "Rather than just trying to understand where the world is going, we're trying to influence it as well," says Vice-Chairman William "Pat" Weber.

At first blush, this intense overhaul is hard to fathom. After all, TI is now one of the world's healthiest chipmakers. Its 1994 earnings jumped 49%—to $1.08 billion—on sales of $10.3 billion, up 21% from last year. Its stock recently hit an all-time high of $107. And while rivals are strapped for production capacity, TI has a network of cutting-edge chip factories financed, in part, by six joint-venture partners on three continents.

Now, Weber is attacking TI's weakest link: marketing. Famous for inventing—and then squandering—some of the most ingenious technologies in this century, including the original integrated circuit in 1958, TI has been left in the dust by rivals such as Intel, Hewlett-Packard, and Motorola. The solution, Weber says: to forge tighter links with key customers and do more industry spade work to create billion-dollar businesses for voice-activated phone systems, wireless notebook PCs, and a panoply of cellular-style equipment for tomorrow's electronic superhighway. "We want to be the company that makes this complex new digital world easy and useful," says Weber.

PIONEER. Bold visions, but can TI upstage such premier rivals as Intel, Motorola, and Canon, which have built electronic gold mines out of microprocessors, cellular phones, and PC printer engines? Certainly, TI has had successes. Almost singlehandedly, it pioneered the market for specialized sound and graphics chips known as digital signal processors. World sales of DSPs should grow from $2.6 billion in 1994 to $14.6 billion in 2000, predicts Forward Concepts Co. in Tempe, Ariz. But TI has had less luck building major businesses in software and portable computing.



IN THE LAB: *TI has a poor record in commercializing its own inventions*

Both are now linchpins in TI's stra gic overhaul. Impatient with the c pany's puny 4% sliver of the U.S. no book PC business, CEO Jerry R. Junk handed the unit to longtime resea director Pallab Chatterjee last fall. mandate: to bring sales up to $1 bill while achieving 20% return on asset or find a buyer for the unit.

Chatterjee quickly hired a team marketing consultants and commissio a four-month customer survey. It vealed that TI's products were too pensive and not well defined. But it indicated vast new opportunities. sponding to the report, Chatterjee pumping up marketing for its exist machines and adding new communi tions features to appeal to business r warriors. Later in the decade, Chat jee intends to field entirely new porta gadgets, merging TI's strengths in ch software, and communications.

Now, this effort to churn up new portunities is spreading throughout company. Most divisions will pres new strategic plans this month, lead

Where TI Sees Its Digital Future

onitor and TV markets for 1997.
ve decided not to just parade new
ıology in front of the market any-
," says Harrod.

ıe question is, will TI's customers
eciate the company's new way of
g business? After all, Sony Corp.
ɔther TV makers have pumped billions into display technologies of their own. And some of TI's strategic alliances may not be as solid as the company hopes. General Motors Corp. has developed a line of customizable microcontrollers with TI that could handle 80% of its processing needs. But the carmaker has yet to commit to production. Says R. Gary Daniels, a vice-president with Motorola, by far GM's largest processor provider: "Am I terrified of TI? The answer is no."

HAND-TAILORING. Still, TI does have an ace in the hole—DSPs. These single-minded racehorse chips, which can manipulate real-world sights and sounds far faster than general-purpose microprocessors such as Intel's Pentium, are already standard in cellular phones, hard disk drives, and PC sound cards—fast-growing markets all. After losing some momentum to rivals Motorola and AT&T Microelectronics in the early 1990s, says Forward Concepts President Will Strauss, TI took back 5% last year and now holds 43% of the DSP market on the strength of new products such as digital answering machines. "TI has broken from the pack by addressing new and different markets," he adds.

To keep its grip, TI developed processes to let customers hand-tailor their DSPs to include memory, power, and logic circuits from its vast portfolio. Sony, for example, designed TI's DSPs into the audio system in Boeing Co.'s new 777s, which gives every passenger up to 60 channels to choose from. By stuffing audio-compression circuitry onto the DSP, Sony eliminated the need to put circuit boards in each seat—landing TI a 10-year contract for about 600,000 DSPs.

Assuming TI can continue to help its customers with such innovation, it should keep outperforming the industry, analysts say. "There are going to be very attractive markets for all this stuff, and TI is going to be in a better position relative to most chip companies," says Montgomery Securities analyst Thomas A. Thornhill, who has a one-year target price of $140 a share. As it is, the pace of consumer-product acceptance has never been faster. Thomson Corp.'s RCA brand satellite televisions hit the 1 million production mark just 10 months after last fall's launch. That's one-quarter the time it took compact disks to reach the same volumes. Not surprisingly, TI's chips were inside the box. In fact, it's hard to think of an electronics-product launch for which TI couldn't supply the chips, the software, or even help with the product design. Customers may not ask for that yet. But Texas Instruments is ready and waiting.

Corporate Scoreboard

A WELL-OILED PROFIT MACHINE

The first quarter saw a 30% leap. Not bad for an old-timer of a recovery

Corporate America's tireless profit machine continued to chug along in the first quarter. Powered by a combination of strong economic growth and lower operating costs, earnings for the 900 companies on BUSINESS WEEK's Corporate Scoreboard rose a robust 30% in the first quarter. That's slower than the phenomenal 71% advance posted in the previous quarter, but still nearly double the 16% growth rate of a year ago. "It's the Energizer Bunny recovery," says John Ryding, senior economist at Bear, Stearns & Co. "It just keeps on going and going

Credit the confidence of both consu ers and corporations for the profit e pansion. Gross domestic product gre 2.8% in the first quarter, down from 5.1 in the fourth, but still strong enough encourage spending. In the first qua

DATA: STANDARD & POOR'S COMPUSTAT, A DIVISION OF THE McGRAW-HILL COMPANIES

capital spending on new plants and pment leaped by an annualized rate)%, compared to a 14% increase for f 1994. In all, sales rose 12% in the quarter, to $1.2 trillion—the biggest) in seven years.

nce again, recent corporate restructing gave some added thrust to profits. ıks to lower operating costs, profit gins widened to 6.5%, from 5.6% in 's first quarter. The weaker dollar helped. Corporations such as Coca- Co. and Procter & Gamble Co. reed better profits in the first quarin part because of higher sales in and Europe. Many economists be- the dollar's fall on currency markets continue to fuel U.S. export sales in e regions (page 126).

ıstaining this profit expansion is ıd to get tougher for the remainder 995. "As we go through this year into 1996, profit momentum will dish as the economy slows down," says ard D. Rippe, chief economist at ential Securities Inc. BUSINESS WEEK omists believe GDP growth will slow % by the final quarter.

URBING TRENDS. General Motors , headed the list of BUSINESS WEEK's 15 earners during the first quarter. nation's biggest carmaker saw its ts climb by 34%, to a record $2.2 n. A healthy consumer appetite for popular models as the Chevrolet ina and Blazer helped drive up GM's by 15%, to $43.3 billion. The benef cost-cutting were also obvious, as margins widened to 5%, from 4.3% 94's first quarter. Ford Motor Co.'s ıg performance earned it the No. 3 among the top profit performers, as arnings soared 71%, to $1.6 billion, 14% sales increase to $34.8 billion.

ne auto makers are unlikely to keep he torrid profit pace. Both GM and rsler reported weaker U.S. sales in l, the start of the second quarter. a closer look at first-quarter results als disturbing trends. For example, ı of Ford's profits came from European sales and gains by Ford's financial services. Earnings at Ford's U.S. auto operations rose only 1.1%, to $825 million, because of higher costs to develop new models and upgrade existing ones.

Evidence that Motown may be entering a slump was perhaps most striking at Chrysler Corp., which is fending off a hostile takeover by financier Kirk Kerkorian. Earnings at the company, which has no significant sales outside North America, fell 37%, to $592 million, on a 3% sales increase, to $13.6 billion. Chrysler's profits were also hit by a $115 million pre-tax charge to fix the rear latches on its minivans and the cost of production changeovers for its new minivan.

As a group, computer makers were big winners in the first quarter. IBM's profits surged 229%, to $1.3 billion, on an impressive 18% jump in sales to $15.7 billion. Sales of its mainframes were especially strong. Big Blue also benefited from the dollar's decline. Digital Equipment Corp. posted its first back-to-back profitable quarters in four years. The company earned $73.7 million, compared with a loss of $183.3 million a year ago. Sales increased 6%, to $3.5 billion. Cost-cutting, combined with rising demand for Digital's new Alpha 64-bit microprocessor, helped keep DEC in the black.

Not surprisingly, such cyclical industries as paper, steel, and chemicals posted strong gains as the economy rolled along. Rising demand and higher prices helped all three. Earnings at International Paper Co. rose 224%, to $246 million, as its sales rose 32%, to $4.5 billion.

The quarter also had its share of los-

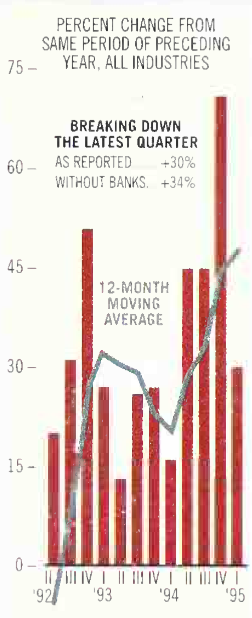
AFTERTAX PROFITS QUARTER BY QUARTER



INDUSTRIES WITH THE BIGGEST DOLLAR CHANGE IN THE QUARTER

First-quarter profit increases are rarely this good. The 30% uptick posted this time is the largest earnings jump since 1984's first-quarter leap of 45%. How deep was the strength of the first quarter overall? Of the 67 industry groups in the scoreboard, 59 showed earnings gains. The 12% increase in sales is the largest such advance since the first quarter of 1988.

Sustaining this profit expansion is bound to get toughe Many economists are expecting slower GDP growth

ers. As an industry, airlines were the worst performers. The first quarter is traditionally slow, as consumers stay home during the winter months. The biggest loser: USAir Group Inc., which lost $97 million, compared with a $196.7 million loss in the same period of 1994. The airline's revenues rose 5%, to $1.8 billion. Still, some analysts believe that after years of cost-cutting and tighter control of capacity growth, the industry may be poised for takeoff. "This is going to be the first profitable year they've had since 1989," says analyst

Michael W. Derchin of NatWest Securities Corp.

Elsewhere, trading setbacks continued to confound some banks. Bankers Trust Co. was the biggest loser of the quarter, with its red ink totaling $157 million, compared with a profit of $3 million a year ago. The bank's reve declined 1%, to $1.7 billion. Bank Trust blamed losses in its derivat business and Latin American tradin

Still, there were some bright spots the trading front. Citicorp, for insta reported a 36% profit gain, to $829 lion, thanks largely to foreign excha trading. More good news like that in months ahead and Corporate Amer profit momentum may keep goin while longer.

By Lori Bongiorno in New Y

FOR EXPORTERS, IT'S FOLLOW THE BOUNCING BUCK

The Dollar's Weakness Varies

Percent change in value against the dollar, Jan. 2-Apr. 28

MEXICAN PESO	–20%
CANADIAN DOLLAR	+3%
GERMAN MARK	+11%
JAPANESE YEN	+16%

DATA: BLOOMBERG FINANCIAL MARKETS

The dollar's slide against the yen and the mark may have ignited panic in Tokyo and Bonn, but it's sparking profits for U.S. business. Even before the dollar hit its recent low of 79 yen, U.S. companies with operations abroad were posting big first-quarter gains as their sales in foreign currency translated into more dollars back home. Furthermore, since the buck's latest drop is just beginning to boost export sales, profits—especially for exporters of capital goods and equipment—are likely to get a second currency kick.

Don't expect all exporters to benefit equally, though. The dollar's recent fluctuations have been uneven. It's down sharply against the yen and mark, but it has lost little against the Canadian dollar and has risen against the Mexican peso. Measured against all currencies weighted by trade volumes, the dollar is virtually unchanged. "The dollar doesn't benefit companies in some areas of the world, but does double duty in others," says John E. Silvia, chief economist of Kemper Financial Services Inc. in Chicago.

STRONG EDGE. Right now, the worst market for U.S. companies may be Mexico. January's crisis pushed the peso down sharply and sent Mexico into recession. While the peso has come back from its lows, U.S. offerings still look pricey to cash- and credit-strapped Mexicans. To the north, the Canadian economy is softening, weakening prospects for U.S. sales.

Asia may offer brighter opportunities for U.S. exporters. Growth in South Korea, China, and Southeast Asia promises to remain rapid. In many countries, such as Hong Kong, Taiwan, and Malaysia, currencies closely track the dollar. That gives U.S. companies a strong edge against Japanese competitors hobbled by *endaka*—the strong yen. A U.S. firm exporting to Hong Kong, for example, can undercut a Japanese competitor's price by 15.5%, thanks just to exchange-rate changes since the start of the year. The weak dollar may even help U.S. companies penetrate the Japanese market. Such high-tech exporters as Intel, Compaq, and Apple could benefit from increased Asian sales.

U.S. companies may also find stronger sales in Europe, where economies are recovering from a long downturn. Local manufacturers may not be able to match the prices of U.S. rivals. For example, the prices of German goods elsewhere in Europe are rising as the mark advances against other European currencies. Who could benefit? Kemper Financial projects smart earnings gains for General Electric Co. and Emerson Electric Co Such manufacturers usually do well at the start of an economic upturn.

PRICE SQUEEZE? The broader question about the dollar's impact on profits is whether U.S. manufacturers can keep up with rising export demand. Many export-oriented industries—machine tools, instruments, auto parts, and construction and data-processing equipment—are running at close to full capacity, and unfilled orders for capital goods are up 22% over a year ago. The squeeze could put upward pressure on prices both at home and abroad. But the U.S. slowdown now underway may eventually ease the pressure. "If we can redirect production from domestic sales to exports, prices won't be a problem," says L. Douglas Lee, chief economist of NatWest Washington Analysis. The dollar's drop may prove to be the profit windfall Corporate America is counting on.

By Mike McNamee in Washington

First Quarter 1995

CORPORATE SCOREBOARD

ossary

ES: Includes all sales and r operating revenues. For ks, includes all operating nues.

FITS: Net income before aordinary items. For banks, its are net income after rity gains or losses.

GINS: Net income from inuing operations before aordinary items as percent ales.

RETURN ON INVESTED CAPITAL: Ratio of net income before extraordinary items and discontinued operations, plus minority interest and interest expenses adjusted by tax rate (all for most recent 12 months), to latest available total funds invested in company.

RETURN ON COMMON EQUITY: Ratio of net income available for common stockholders (most recent 12 months) to latest available common equity, which includes common stock, capital surplus, and retained earnings.

PRICE-EARNINGS RATIO: Based on Apr. 21, 1995, common-stock price and corporate earnings from continuing operations before extraordinary items for most recent 12-month period.

GROWTH IN COMMON EQUITY: Annual percentage growth in common equity for latest five-year period.

GROWTH IN EARNINGS PER SHARE: Annual percentage growth in earnings per share, including all common-stock equivalents, for latest five-year period.

MARKET VALUE: Latest available shares outstanding times stock price on Apr. 21, 1995.

EARNINGS PER SHARE: For most recent 12-month period. Includes all common-stock equivalents.

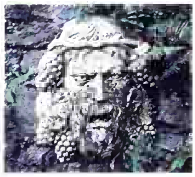
From metal-mesh evening gowns to red polyvinyl suits, *Gianni Versace* has earned a reputation for boldly creative designs. And lately, they're brought to life on a new IBM ThinkPad® 701C. Working from the bedroom of his Lake Como villa, Versace draws on neoclassical surroundings for design inspiration, using his ThinkPad to freely experiment with color and style. An approach that, uniquely, marries 18th-century art with 20th-century technology.



There is a difference™

EDITED BY AMY DUNKIN

AN UNSETTLING DEADLINE FOR SETTLING TRADES

Charlie Pack is not looking forward to June 7. That's when a new federal regulation will require investors to fork over the cash to pay for securities in three days after a trade instead of five. The rule applies to all stocks, corporate and municipal bonds, and mutual funds. Pack is steamed because he'll lose flexibility over where he parks his cash. "It forces me to keep my money with the broker," says the 56-year-old software engineer from Los Altos Hills, Calif., who trades about twice a month.

INVESTING

Trade-plus-three, or T+3 as it's known, will undoubtedly make more money captive to brokerage money-market funds and asset-management accounts, where it's easily accessible to cover trades. But the Securities & Exchange Commission's stated reason for the shortened pay-up period is to make the markets more efficient and less volatile. The idea is to reduce the number of open transactions at any one time, hence increasing the liquidity of the markets. T+3 also means investors will receive sale proceeds two days sooner.

LATE FEES. For decades, investors who didn't already have spare cash with their brokers to pay for a purchase of stock, bonds, or mutual-fund shares have usually been able to wait to receive a confirmation notice before mailing in a check for the stated amount. Five business days for settlement was plenty, even for the U.S. Postal Service. But under T+3, that won't be the case. Instead, investors will have to deliver the checks in person, send them via overnight delivery service, pay by electronic transfer from your bank, or keep more cash on hand with your broker.

T+3 is already raising hackles with people used to buying securities under the old system. For one thing, they can no longer use their confirmation slips as payment notices. "They have to understand that by the time they get their confirmation, they should have already paid for the trade," says Allan Jo ston, regional manager Wedbush Morgan Securit in Anchorage, Alaska.

Indeed. this change co make mailing checks to y broker obsolete. "You ha to send the payment on day the trade is execute says Fidelity Investme Senior Vice-President Do Morris. "With the m there's no guarantee check will arrive by the s tlement day." If it does you can face fees for l payment or risk losing trade and being held lia for any losses in the sec ity or fund when the bro liquidates your position.

The shorter settlem deadline is especially pro matic for investors who h

some brokers are
to accommodate
customers. Dis-
broker Charles
ab offers free
services through its Schwab One account. In October, Fidelity Investments plans to offer a similar service called Equity Dividend Reinvestment Program.

Keeping cash in a brokerage money-market fund or asset-management account may well be the easiest and most efficient way to meet the shorter settlement deadline. Asset-management accounts, sometimes called core accounts, typically offer a choice of competitive money-market funds to capture stock dividends and sales proceeds and to hold cash for future purchases. They also provide extra services such as "gold" credit cards, debit cards, check-writing privileges, consolidated statements, and tax information. Some enable you to transfer money electronically to and from your bank. Most asset-management accounts also carry additional insurance against broker failure. The Securities Investor Protection Corp. insures regular brokerage accounts for up to $500,000, but it protects many asset-management accounts for $50 million or more.

At full-service brokerages, asset-management accounts generally require a $10,000 to $20,000 minimum and cost $75 to $100 a year, but most brokers offer a more basic version for $50 a year that may not have such extras as the enhanced insurance or credit card. And some discount brokers don't charge any fee for centralized cash accounts such as the Schwab One and Fidelity Ultra Service Account, which is free with at least one trade a year or a $50,000 minimum.

MOVING MONEY. Another way to go is to keep your money in a separate money-market account at the same brokerage firm as your securities or mutual funds. The difference is that you have to instruct your broker to move the funds to or from that account when you make a trade. With a cash-management account, the transfer is made automatically. But money-market funds carry small minimums and no extra service fees beyond the management expenses. "It makes sense to have a money-market fund with your broker," says John Markese, president of the American Association of Individual Investors. "There's no true loss because you're just moving money from one cash-equivalent account to another." Returns for most money-market funds don't vary much from one broker or fund company to the next.

If you have upwards of $250,000, you can use a bank trust department as the nexus of your brokerage activities. This enables you to "do all your transactions in one place while keeping the flexibility to deal with different brokers, which is good for frequent traders looking for the best price," says William Newell, managing director of private banking at Chemical Bank. But such freedom comes at a steep price. The fee for Chemical's private banking account is $800 a year.

The new three-day limit could make mailing checks to your broker obsolete

Mutual-fund holders will have an easier time adapting to T+3 since their securities are already in street name. But they still must have fund payments in by the third day after the trade to ensure buying shares at a specific price. Most people making long-term investments in mutual funds don't care about the exact purchase price. And in such cases, fund companies such as T. Rowe Price Associates will avoid confusion by waiting until they receive the funds before placing the trade, says Debbie Seidel, a T. Rowe Price vice-president.

Investors who chafe at the new T+3 rules may be distressed to learn that there are rumblings in the industry of eventually moving to one-day or even same-day trade settlements. But by the time that happens, advances in electronic banking should have pushed us to a true cashless society. And that's still T+many years away.

Pam Black

Speedier Securities Trades

▶If you have a sizable brokerage account, usually cash and securities totaling $10,000 or more, open an asset-management account. Stock dividends and sale proceeds will automatically be swept into your choice of competitive money-market funds, giving the broker ready cash for future trades.

▶Keep a separate money-market fund at your broker for quick cash transfers. You avoid the fees of an asset-management account. But you won't get extras such as check-writing privileges and you must instruct the broker to liquidate fund shares when money is needed.

▶To avoid delaying the completion of a trade while you send in paper stock and bond certificates, have your broker hold your securities in "street name."

DATA: BUSINESS WEEK

SMART MONEY

A SAFER WAY TO DRIVE DOWN WALL STREET

Convertibles, stung last year, are sweet deals now

If you'd like to buy shares of a certain company, but its lofty stock price makes you nervous, see if a convertible is available. Since these securities (most often bonds but sometimes preferred stocks) can be exchanged for a set number of common shares, their prices tend to track their companion stock on the way up. But because they pay coupons higher than the stock dividends, they don't fall as far in a downturn. The result: "You get nearly the same returns as the stock at less risk," says John Calamos, president of Calamos Asset Management in Naperville, Ill.

Convertibles are a particularly good value right now. Like all fixed-income investments, they got hammered last year when interest rates were rising. A lot of forced selling took place as managers liquidated holdings to cover leveraged positions. "That's why we feel this is an extraordinary time for someone to get into the convertible market," says Warren Bree, president of Wolverine Asset Management in New York.

CONVERSION COSTS. The main way to assess a convertible is to look at the "conversion premium." This is the difference between the common stock price and the price at which the convertible can be exchanged for stock. Convertibles nearly always trade at a premium, since you get the added benefits of higher yield, seniority in a bankruptcy, and the conversion option. But because you pay a premium, it rarely pays to convert the bond.

Right now, conversion premiums are the lowest they've been in years. At the end of 1993, new-issue convertibles typically carried a 25% premium. Now, you can find excellent ones, such as Barnett Banks or Ford Motor, trading at a 10% premium or less, Bree says. If the premium is low, the convertible tracks the stock much more closely, so on a bond with a 15% premium, you could figure on getting 85% of a stock's positive return. If the convertible isn't selling for much more than a similar corporate bond, you could be subject to only a fraction of the stock's decline.

If getting most of the upside and a lot less of the downside appeals to you, your best bet is to choose a diversified portfolio of convertibles through a mutual fund or money manager. This frees you from having to evaluate convertibles yourself. Top-performing funds for the past five years include MainStay Convertible (17.18% average annual return), Bond Fund for Growth (15.25%), and Fidelity Convertible Securities (15.02%). Check if the fund emphasizes current income or capital appreciation and review credit quality to find one that meets your risk tolerance.

Another way into the convertible market is to find a stock you like and then check out its convertible. "You never buy the convertible if you wouldn't buy the common stock," Bree says. To determine whether a convertible is a good deal, many investors compare the conversion premium to the difference between the convertible's yield and the stock dividend. If there is a 7%-a-year yield advantage to owning the, vertible, and you plan to it for three years, a 21% p mium may be justified, s Mitchell Cone, assistant m ager of Franklin Convert Securities. "You also have check what downside prot tion you're getting," s Cone. To do this, see how yield stacks up against t of similar quality paper. convertible's yield will climb past t level, no ma how far stock declin Also check call provision a convertibl called early, may not reco the premium paid.

VALUES. C pare converti to other issue the same in try. Cone is ing good val now in conv ible real est investme trusts, such Liberty Prop ty Trust, as as oil-and-gas sues such Parker & P sley Petrole Bree likes so regional bar and Calar likes the tered automo and financial sectors.

If you later grow so f of the company that you w to own the stock, you sho probably sell the convert and purchase shares, desp the cost of commissions, s Ted Everett, assistant p folio manager of Bond F for Growth. You should c convert the bond if the c pany calls it at a price below its market price o the dividends on the st are higher than on the c vertible—although that' rarity. Right now, converti are so attractive, conser tive investors may ne want to go back to own the stock. *Amey St*

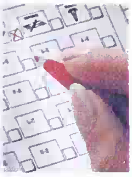
here are tons of reasons to own the new Canofile 510.

to see how the new Canofile 510 electronic filing system ıp to ordinary manual filing. But how well does it stack ıer electronic systems? So beautifully, we hardly know begin.

is, the compact, Canofile 510 is the fastest, easiest ıt filing system of its kind. With just the stroke of a pen, it allows you to scan—front and back—a quick 50 pages per minute. All you do is mark the appropriate boxes on our easy-to-use Canofile Registration Sheet then sit back at your large, tilt-screen display and relax. The system automatically does the rest.



Sheets make filing
e efficient

you never have to worry about how much you file. h interchangeable Canon 5.25" Magneto Optical Disk[*] ıp to 13,000 documents,[**] there's virtually no limit to ɔer of documents this system can store.

ourse, once your files are scanned in, the Canofile 510 every file-management advantage you can think of. Our Post Indexing feature lets you file documents by name, number, date or any combination. It allows you to retrieve documents in an instant, view them in full on the LCD display, even copy them to other disks. Plus when the Canofile 510 is used in tandem with the Canon Fileprint 300, you can make eight crisp, clear laser printouts every minute.

File or retrieve at any IBM PC or compatible

The Canofile 510 also makes sharing files a cinch too. Not only can you index, scan and view documents at the system itself, but at any office IBM® PC or compatible using optional CFView™ and CFIndex™ software (for Windows®) and an external Magneto Optical Disk Drive.[†] The Canofile 510 even lets you retrieve and view files from the Canofile 250.

Choose CFView and CFIndex software for Windows

PUTTING MAN INTO A FISH'S ENVIRONMENT

TRAVEL

If you think aquariums consist primarily of fish tanks stacked three-deep along darkened corridors, then you haven't visited one lately. The new Atlantic Coral Reef exhibit that opened on Apr. 7 at the National Aquarium in Baltimore features underwater caves and crevices alive with porcupine fish, wafer-flat lookdowns, and other exotic creatures, all contained in a doughnut-shaped tank with a descending ramp in the center. Chicago's Shedd Aquarium boasts a 3-million-gallon saltwater oceanarium housing beluga whales, Pacific white-sided dolphins, and harbor seals. And the three-year-old river museum in Chattanooga, Tenn., is home to a 65-pound catfish nicknamed Babba, who lives in the 25-foot-deep Nickajack Lake exhibit.

INTO THE DEEP: *Diver and sea turtle at Chicago's Shedd Aquarium*

GOOD STORIES. Ever since the Baltimore aquarium, which opened in 1981, started attracting more than 1 million visitors annually, U.S. cities have rushed to expand or build sea or fresh water museums. Some 36 are now operating, and around 20 are planned to open within five years, in places as diverse as Cleveland, Denver, Riverhead, N.Y., and Houston.

New technology has made such marine supershowcases possible. Hardy acrylic windows and elaborate life-support systems allow environmentally sensitive creatures to survive far from their tropical, polar, or river haunts. And novel interactive devices, such as the Flippers, Flukes & Fun exhibit that teaches about whale vocalization at the Monterey Bay (Calif.) Aquarium, engage visitors as never before. "Aquariums now offer quality entertainment-education, with a twist of conservation," says Kathy Cloyd Sher, deputy director in Baltimore.

Some newer sites capitalize on local marine life. The three-year-old Thomas H. Kean New Jersey State Aquarium in Camden displays such Jersey Shore inhabitants as brown sharks, silver dolphin fish, and horseshoe crabs. Chattanooga's facility lets visitors follow the path of the Tennessee River from an Appalachian cove forest to the Mississippi Delta. Rainbow and brook trout course through deep pools and a river in one 55-ft.-long stretch, and a delta panorama features red-bellied turtles and water moccasins. "The Tennessee Aquarium proves that freshwater stories are just as compelling as the saltwater stories," says Daniel Kohl, vice-president of Larson Co., a Tucson-based aquarium designer. He says "traditional lines between zoos, aquariums, and natural science museums are disintegrating."

RIBBET: *A red-eye tree frog in Baltimore*

Indeed, several zoos have diversified into the marine business. On Apr. 1, Omaha's Henry Doorly Zoo launched Kingdoms of the Seas, featuring an underwater tunnel that runs through a 900,000-gal. tropical reef system. Designed to mimic the sensation of walking at the bottom of the sea, the exhibit showc 2,000 species. On May 29 aquarium at the Colum Zoo in Powell, Ohio, will c a 100,000-gal. coral reef hibit that includes simul rolling ocean waves.

The Tennessee Aquariu

MALL WALK. For-profit op tors, inspired by Anheu Busch's Sea World park Florida and California, hope to make a big spl Tarlton Aquastar of Da will open two Underw World exhibits in 1996 San Francisco and in su ban Minneapolis' huge Ma America. The attractions transport visitors on mov walkways through acrylic nels teeming with marine Admission will be $11 adults and $5.50 for kids seniors—on par with mu pal-owned aquariums.

Sensitive to environn talists' concerns, some aq ium developers are emph ing their humane treatn of animals. The three-y old Oregon Coast Aqua in Newport expects to d thousands to see Keiko, 7,000-lb. killer whale starred in the movie *Willy*. Keiko, currently cramped enclosure in Me City, may find a 2-million pool more to his liking w he arrives by jet in Dec ber. Keiko won't have jump through hoops to his keep, but people sh find him entertaining way. *Johanna Knapscha*

THE WEEK AHEAD

CTIVITY AND COSTS

ay, May 9, 10 a.m. ▶ Output per orked in the nonfarm sector probably ery little in the first quarter. That's ted by the slower growth rates for nic output and total hours worked. tivity increased at an annual rate of n the fourth quarter. The small gain luctivity means that unit labor costs rew just a bit below the 1.7% pace fourth quarter.

L SALES

lay, May 11, 8:30 a.m. ▶ Retail robably rose by 0.5% in April, ing to the median forecast of MMS ational, one of the McGraw-Hill Cos.

Sales had been very weak in recent months, falling 1% in February and rising 0.2% in March. The solid gain in April likely reflects a late Easter and the receipt of tax refunds that were delayed as the government checked tax returns for fraud.

PRODUCER PRICES

Thursday, May 11, 8:30 a.m. ▶ Producer prices of finished goods likely increased 0.3% in April, after no change in prices in March. Yearly inflation at the producer level is running at less than 2%. And the recent reports from the National Association of Purchasing Management suggest that price hikes for business supplies are not sticking.

CONSUMER PRICES

Friday, May 12, 8:30 a.m. ▶ The MMS forecast projects a 0.3% increase in consumer prices in April, slightly faster than the 0.2% rise in March. Still, annual inflation should stay below 3%, as slower growth keeps price rises to a minimum. April's one wild card could be higher food prices, as shortages caused by the California floods begin to show up at the grocery store.

BUSINESS INVENTORIES

Friday, May 12, 10 a.m. ▶ Inventories held by manufacturers, wholesalers, and retailers probably increased 0.5% in March, say the MMS economists. Business stockpiles jumped 0.9% in February.

Index to Companies

This index gives the starting page for a story or feature with a significant reference to a company. Most subsidiaries are indexed under their own names. Companies listed only in tables are not included.

THE SENATE: A MIDDLE ROAD NOT TAKEN

If ever there was a time that America needed the Senate to play its characteristic role of stable, pragmatic policymaker, it is now. Fresh from its spring vacation, the Senate has before it some of the nation's most important legislation in decades. Through the Contract With America, House Speaker Newt Gingrich (R-Ga.) has focused on critical problems that must be solved for future prosperity: a chronic federal budget deficit, government regulation that has gone too far, a legal system that is too easily abused, and environmental laws that are too often byzantine and costly to business.

Unfortunately, the House has drafted a mishmash of sloppy proposals that offer unrealistic and sometimes contradictory solutions. The Senate, a more deliberative legislative body, would normally serve to modify the unreasonable and take moderate, bipartisan steps to remedy the wrongs of the status quo.

Sadly, its leaders appear to have another agenda. The siren call of Presidential politics is poisoning the legislative atmosphere of the Senate. Some aspirants to the White House are increasingly running from responsibility in their run for power. Because the nomination process is set up so that courting the extreme right seems to be essential to gaining the nomination, Presidential hopefuls appear willing and ready to sacrifice the nation's well-being in the process. It is a shameful spectacle.

Most disappointing is Senate Majority Leader Bob Dole (R-Kan.), a respected lawmaker who has built a lifelong reputation as a principled pragmatist who is more interested in solving complicated policy problems than scoring political points.

In his bid to preempt conservative firebrands such as Senator Phil Gramm (R-Tex.) and Representative Robert K. Dornan (R-Calif.), Dole has veered rightward, especially on critical economic and regulatory issues. True Senate conser
tives believe that there is nothing more important to
fiscal security of America than balancing its budget. But
ing this while also cutting taxes sharply defies fiscal logic
the past, Dole has been a deficit hawk. Now, he is throw
his weight behind tax cuts just when the country ha
chance of becoming fiscally responsible for the first time
more than two decades.

On the key issue of regulation reform, the Senate Majo
Leader has ganged up with other hardliners in throwing
support behind a bill that could allow restrictions on reg
tions to be applied retroactively to long-standing health, s
ty, and environmental rules. An alternative bill by William
Roth Jr. (R-Del.) is far more sensible, dealing with cost
efficiency without hamstringing regulators.

Presidential politics threatens to wreck what could h
been a year of historic legislative accomplishment. In
lurch to the right, the Senate leadership appears ready to
dorse tax cuts and legal and regulatory reform propo
that are certain to lead to legislative gridlock and Presiden
vetoes. Nothing will be solved, and the usual blame game
be the end result. Instead of listening to their campa
strategists, Senate leaders should pay heed to the wise v
of Senate Budget Committee Chairman Pete V. Dome
(R-N. M.), who is trying to persuade increasingly reluctant
low Republicans to swallow the tough cuts needed to bal
the budget by 2002.

The time is right for a consensus-building Senate Majo
leader to save the day on legal reform, regulatory re
and deficit reduction. The middle path might not comple
satisfy fringe groups. However, Dole, and other contend
may find that doing what's right for the country is good
itics, too.

ENGAGEMENT, NOT EMBARGO, IN IRAN

It is an odd sight to see the U.S. deeply engaged in serious negotiations with one outlaw nation, North Korea, while it moves to totally isolate another rogue regime, Iran. The embargo announced by President Clinton may appear sensible, given Tehran's propensity to support terrorists and its clear desire to build nuclear weapons. However, Washington's tough actions may end up yielding only angry European and Japanese allies, lost U.S. business, and an even more paranoid, hostile Persian foe.

By trying to isolate Iran, rather than engage it, Washington alienates that part of Iran's governing elite that has been pushing for normal relations with the West. In fact, Tehran's recent decision to choose Conoco Inc. rather than a French company to develop an oil field was the first obvious effort to begin dealing with the U.S., at least in narrow economic arenas, since the hostage crisis that ended 14 years
Had the Clinton Administration permitted Conoco to
ceed, it might have been the first of many bilateral ties.

As it is, the American embargo will have little effect.
many's sales to Iran totaled $2 billion in 1994, and it hope
sell even more. France, Britain, and other nations have
made it clear they intend to go on ignoring Washingt
pleas. The U.S. has no lock on oil-field equipment or ene
technology, and Iran will shop the global bazaars for wha
needs.

If there is a model for restraining outlaw nations f
making nuclear weapons, it is the one Washington is buil
with Pyongyang. It involves both carrots and sticks. So fa
appears to be working in north Asia. It's probably the l
shot in the Middle East as well.

SAN FRANCISCO
EMERGENCY SERVICES

SAN FRANCISCO HAS AN EARTHQUAKE KIT WITH MILLIONS OF GALLONS OF WATER, THOUSANDS OF FLASHLIGHT BATTERIES AND FIFTEEN AST COMPUTERS.

BE PREPARED. IT WAS GOOD ADVICE when you were a scout. If you ask city officials in San Francisco, it still is.

To help prepare for any eventuality on the Richter scale, the San Francisco Office of Emergency Services chose AST® computers, fourteen desktops connected to a server. All bolted to their desks, naturally.

At a moment's notice, they're ready to help police, fire, housing, transportation, water and power employees restore city services. Hospitals and ambulances are connected, too. So's the governor.

City officials chose AST for many reasons. Easy start-up, to name one. Ease of use by people from a broad range of city departments was just as important. People under intense pressure, we might add.

It was also reassuring that AST ranked among the "best" in *PC World Magazine's* reliability and service study.*

That goes for our entire line of products, including Ascentia™ notebooks, Premmia™ and Bravo business desktops, Advantage!® PCs for home or small office and Manhattan™ servers.

Finally, the fact that AST is one of the world's largest PC companies also went a long way toward easing jitters about installing any new computer network.

For information, call 1-800-876-4AST. Maybe there's something vital and important you should be extra prepared for. You know, something like tomorrow's meeting.

$30,000

is a lot of money.

Too bad the other

luxury car companies

don't think so.

Introducing the Infiniti I30.

Flagship styling, space and performance for around $30,000.

Never before has a company worked so diligently to create a mid-priced luxury sedan that incorporates the styling, space, performance, safety and luxury of their flagship model. Witness the extraordinary Infiniti® I30.™

Through innovative technology, revolutionary design and sophisticated thinking, Infiniti has created a true luxury car for around $30,000.[*] One that doesn't sacrifice performance for luxury. Or luxury for performance.

Step inside the I30 and you'll experience a luxurious interior conceived to blend sophistication and comfort with state-of-the-art ergonomics.

The I30 actually has a larger interior than the Lexus ES 300, BMW 5 Series and Mercedes E Class luxury sedans. It even has more head room and front leg room than the Rolls Royce Silver Spur III.

But where the I30 truly redefines the mid-priced luxury sedan is under the hood. It possesses a revolutionary 190-horsepower, low-friction V6 that can out-accelerate many luxury V8s. In fact, its 0-to-60 time is faster than the BMW 740i, Mercedes-Benz S420 and Lexus LS 400.[**]

For around $30,000, most luxury car companies will offer you a car that only looks like their most expensive model. One that is under-powered, under-spaced, and under-appointed.

Infiniti thinks you deserve more. That's why the I30 is dedicated to giving you flagship styling and safety, with more performance, more space and more luxury than you ever thought $30,000 could buy.

INFINITI®

If there's something missing from your $30,000 luxury car, you'll probably find it in ours.

Some mid-priced luxury sedans simply don't have the same standards of luxury and performance as their higher-priced siblings.

But not the Infiniti I30.

The I30 has a luxurious interior with all the amenities. A six-speaker Bose® audio system with CD and cassette, and driver and front passenger power seats are just a few.

The ergonomically designed cabin also features an optional Integrated HomeLink® Transmitter.† An innovative remote control system, it can be programmed to control radio-operated garage doors, gates and security systems.

Simply glance under the hood and you'll find a remarkably compact 190-hp, V6, all-aluminum engine that allows for a more spacious interior cabin.

Study the I30 and you'll see that it's engineered with rear Multi-Link Beam™ suspension for a smooth ride and superb handling. The I30 is also equipped with 4-wheel anti-lock brakes, dual air bags, and protective steel side door guard beams.

But the most rewarding component in the I30 is the personal and attentive service bestowed upon all members of the Infiniti family. Every Infiniti owner enjoys The Total Ownership Experience,℠ 24-hour Roadside Assistance and a free service loan car.§

Unlike other luxury car companies, Infiniti recognizes $30,000 is a substantial amount of money. That's why the I30 meets the highest standards of luxury and performance ever imagined for a mid-priced luxury sedan.

For more information on the luxurious I30 or any of the other Infiniti luxury sedans, call 1-800-335-1413 and ask for the I30 video and brochure.

INFINITI.

To Our Readers

AROUND THE WORLD IN 41 YEARS

On a clear, bone-chilling March day in 1954, a tall, 23-year-old Dartmouth College graduate named John Wills Patten walked into the Chicago office of McGraw-Hill to start work as a trainee. His job: to sell classified advertising for the company's trade magazines. Thus began a wide-ranging career at McGraw-Hill that culminated in a 10-year reign as publisher, then president, of BUSINESS WEEK. Now, 41 years later, Jack is retiring.

Jack's work took him all over the world on a remarkable variety of tasks. He traveled through New England selling advertising for McGraw-Hill's mining magazines. He opened the company's regional office in Denver. And for 13 years, he was based in London as European director for all of McGraw-Hill's magazines—a job that frequently took him to the Middle East as well. After returning to New York, Jack was named publisher of *Aviation Week,* a dream job for an Air Force veteran who still enjoys flying small planes.

Jack became publisher of BUSINESS WEEK in 1985, presiding over some of the magazine's most successful years. On his watch, our worldwide circulation grew to more than 1 million, the largest of any business magazine. Anticipating the globalization of business, Jack expanded our international edition and helped to launch three foreign-language editions—in China, Russia, and Poland. Last year, BUSINESS WEEK won the National Magazine Award for General Excellence, the highest honor in our industry.

JOHN W. PATTEN, PRESIDENT

SIGNING THE BW CHINA DEAL IN 1986

To those of us who have worked with him, Jack has been more than an accomplished and dedicated publisher. He's an endearing man—warm, quick with a quip, generous in his praise for a job well done, and strong in times of stress. Jack, who played end on the Dartmouth football team, is an avid sportsman who loves to fish, hunt, and play golf (his handicap is 12). He and his wife, Caroline, have two sons, who are also in the magazine business: John sells advertising for *National Geographic,* and James helps plan special events for BUSINESS WEEK.

Writer Beryl Markham once said: "If a man has any greatness in him, it comes to light, not in one flamboyant hour, but in the ledger of his daily work."

That's Jack—and we shall miss him.

TAKEN? *Workers are suing*

ESOP FABLES

UNITED WORKERS: WE WUZ ROBBED!

UNITED AIRLINES' WORKERS overpaid more than $1 billion for the carrier last year, alleges a federal suit filed by three employees. To implement their employee stock ownership plan, or ESOP, United workers made $5 billion in wage and work-rule concessions in return for 55% of the company's shares.

The dissidents' attorney, Kevin McBride, figures the concessions were worth about $200 a share. But workers received stock that started trading at $88. Even though workers paid extra for control of the company, McBride says the price was too high. The suit targets the ESOP's trustee, State Street Bank & Trust, which was supposed to make sure the deal was fair. The bank insists it acted in the employees' best interests. United itself is not named.

Will the suit fly? Since ESOPs started in 1974—there are 10,000 now—only 75 suits have been filed alleging overpricing. Employees have won half of them, reports the National Center for Employee Ownership. The center's executive director, Corey Rosen, says plaintiffs often lose if the stock is rising. UAL's stock price has risen 30%, to $115 since the deal went through. *Susan Chandler*

EXECUTIVE SUITES

A MEDIA KING'S COZY CASTLES

BLACK: *Posh pieds-à-terre*

THE AUSTERITY Conrad Black brings to his latest major acquisition doesn't apply to executive living quarters. Layoffs, employee buyouts, and cost-cutting have been the watchwords at the *Chicago Sun-Times* since the city's feisty second newspaper became part of Black's media empire 13 months ago. But the paper's parent, American Publishing, has shelled out $4 million on real estate for executives.

Some $3 million bought a New York co-op for megamillionaire Black to use rent-free, according to the company's recent proxy. An additional $1 million went to buy a Chicago condo for Chairman David Radler, a Vancouver (B.C.) resident who needs a place to stay when visiting. Union leaders grouse that it's a lot of money for a seven-year-old company that just turned its first annual profit.

Radler says the Chicago condo is an investment and a better deal for shareholders than costly hotel bills. He adds that Black's co-op will be used "to make this company grow."

Growth is sorely needed at the *Sun-Times*, whose circulation has fallen 4%, to 500,969, since American Publishing took over. Since then, investors have watched their stock drop to 10, from a 52-week high of 15. *Susan Chandler*

THE FEDS

LIVE FREE AND DIE?

SAY FAREWELL TO A WHOLE truckload of Washington-mandated highway safety rules: the 55-mph speed limit, mandatory seat belt use, and required motorcycle helmets. Congress wants to ax these regs as part of a drive to give more power to the states.

DRIVE TIME: *Federal safety rules may*

While states technically aren't bound by Uncle Sam's rules, those that flout them lose a chunk of federal highway funds. Critics, though, think highway laws should be tailored to local conditions. Westerners particularly question the federal speed limit when there are vast stretches between towns. "Each state is the best judge of what the speed limit should be on its highways," gripes Senator Don Nickles (R-Okla.). He is fighting to repeal the speed limit as part of a pending highway spending bill.

Rule-backers fear Nick
popular plan will lead to m
fatalities. They note tha
1974, when the 55-mph sp
limit took effect, car-rela
deaths dropped by 1
When the limit rose in 1
to 65 mph in most areas,
talities shot up about 20%
tionwide, says Jacqueline
lan of the Advocates
Highway & Auto Safety.
Nickles says states can lo
speeds in accident-prone
as. Even with opposition f
the powerful auto-insura
industry, it looks like a cl
road ahead for many of
changes. *Christina Del V*

THE LIST FIGHT! SELL!

Colleges and universities, later to the licensing game than pro sports, are making up for lost time. Sporting logos and names on everything from T-shirts to credit cards has blossomed into a $2.5 billion business. According to industry consultant John Bevilaqua, being a perennial powerhouse such as Notre Dame—which had top royalties despite a so-so football season—doesn't hurt. Winning the national football title helped Nebraska break into the top five.

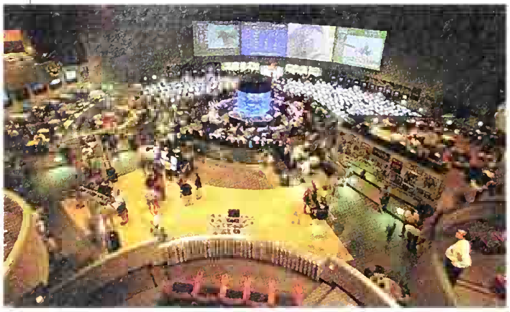
SPORTS BIZ

NOT YOUR FATHER'S OTB PARLOR



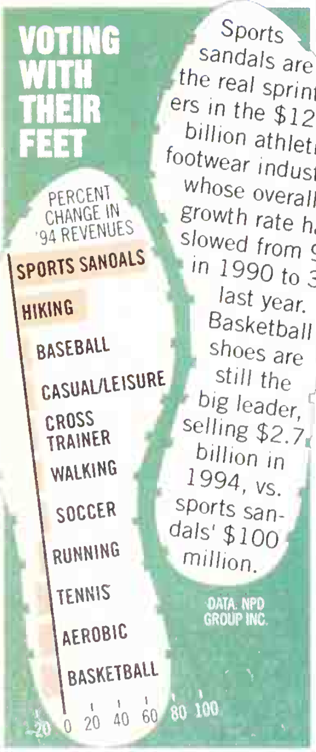
HORSE LATITUDES: *Pampered in New Haven*

GLITZ HAS COME TO THE gritty world of offtrack betting. In New Haven, a Vegas-like entertainment emporium has just opened, offering a shark tank, a discotheque, upscale bars, leather sofas—and oh, yes, wagering.

Autotote Enterprises, which owns and runs the Nutmeg State's OTB parlors, spent $9 million to buy and fix up the four-story building à la Caesar's. Called Sports Haven, it shows simulcast races from North American tracks—horses and greyhounds—on four massive overhead screens and hundreds of TVs. On Kentucky Derby day, May 6, it raked in $330,000, four times its downtown predecessor's take. New York and Illinois are trying a similar approach, although nothing on Sports Haven's scale.

The pitch is geared to younger customers, not the typical middle-age OTB crowd. Says Autotote President Rick Cowan: "It's vitally important if racing is to survive." Horse betting at the track is declining (down 5.5%, to $8.8 billion, in 1993) because of casino gambling's rise. Offtrack wagering, now in 11 states, rose 4% in '93, to $4.8 billion, only because more states are adding it. Oklahoma, for instance, just O.K.'d the idea. While OTB wagers are climbing in Connecticut, the amount bet has been falling in New York, the largest OTB state, since 1988. *Doug Royalty*

THE BIG PICTURE



VOTING WITH THEIR FEET

Sports sandals are the real sprinters in the $12.4 billion athletic footwear industry, whose overall growth rate has slowed from 9% in 1990 to 3% last year. Basketball shoes are still the big leader, selling $2.7 billion in 1994, vs. sports sandals' $100 million.

CAVEAT EMPTOR

'SCAVENGERS WHO PICK THE BONES'

THE LATEST TRICK IN THE con artist's playbook is scamming victims of telemarketing fraud for the second time. In this scheme, called "the recovery room," swindlers offer to recover the victim's earlier losses on everything from phony prize promotions to fake wireless cable licenses. Some victims have forked over more than $100,000 to recovery rooms.

Con artists buy "sucker lists" from other scamsters for as much as $10 per name—mostly those of homebound seniors isolated from sound advice—who have previously been ripped off. Pocketing an advance fee th normally ranges from $400 $4,000, the scamsters opera under such respectable-soun ing names as the Bureau Consumer Awareness and t Consumer Protection Fou dation, the feds say. "They' scavengers who pick t bones of people says Federal Tra Commission atto ney David Fix.

In one case, a r tiree who had lo $100,000 on a pri promotion schen wired $250 to St ven Tinsley, a salesman wi Refund Information Servic in Las Vegas. The cash car from the retiree's Social S curity payments. Tinsl pleaded guilty in February mail and wire fraud and is jail awaiting sentencing. H recovery room is no long in business. *Phillip Zwe*

THE BEST B-SCHOOL FOR GAYS: HARVARD

HARVARD BUSINESS SCHOOL IS at the top of one list—as the most gay-friendly of the leading MBA schools. That's something, given its slide lately in the B-school ratings game. In 1994's BUSINESS WEEK poll, Harvard fell two places to No. 5, its lowest ranking ever.

The gay study, the first of its kind, ranks and grades the 22 best B-schools on eight criteria, such as: Do they have written nondiscrimination policies explicitly mentioning sexual orientation? The study is authored by Jason Lorber, an MBA stude at Stanford University, whi funded the six-month r search effort.

While Stanford and Harvard both get As, Harva ranks slightly ahead. Purdu Krannert School is the on top business school flunk. Reason: It lack among other things, d mestic-partner benefi for students and facul members. Dean Denn Weidenaar says th doesn't mean the scho is antigay: "We don't di criminate against an body." *John Byr*

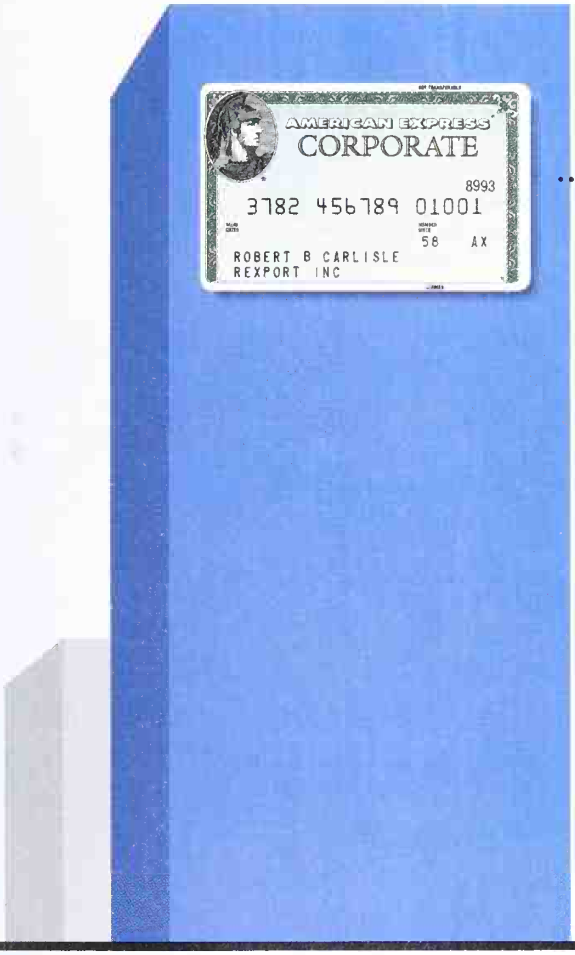
The Choice.



**70%
of the Most Profitable
U.S. Companies rely
on The Corporate Card
Program from
American Express.**

The Reason.

Perhaps no companies are as money-wise as those deemed the year's Most Profitable. For 70% of them, The Corporate Card Program from American Express is the choice for managing T&E expenses. While some corporate cards focus on short-term "deals," we look for long-term ways to save companies money. We provide information that's *actionable* – to monitor spending and improve purchasing power. And throughout our partnership, we keep customers looking forward, identifying new opportunities to improve the T&E management process. After more than 20 years of experience, we offer the tools that companies can really profit from.

E GENIUS OF *a truly*
it building goes well beyond
elements which give it a spec-
ilar appearance.

A great building must also
eal itself to be a great environ-
it. This means comfortable
oor temperatures. Superior
iting. Proper humidity levels.
well, the ability to accommo-
e the various needs of those who
abit it.

At Johnson Controls, our
suit is to create the ideal build-
environment.

One of the most practical ways to achieve this is through outsourcing. This is a tool whereby you contract with an outside company to perform typically in-house services that are often quite distinct from your core business.

We have over 40 years' experience in integrated facility management, and the skills necessary to manage an entire building. This includes energy management. Data and telecommunications network support. Even structural maintenance.

Our approach to outsourcing also means you'll be able to deal with today's complex regulatory climate. We know the issues, from air quality to disability requirements.

As the experienced leader, we've proven that any building can realize its maximum potential. Why should your building be an exception?

Perhaps it's time you considered Johnson Controls. People committed to improving life in the great indoors. To learn more, call 1-800-972-8040 ext. 131.

Readers Report

KIRK AND LEE'S CHRYSLER ADVENTURE

I would like to comment on "Target: Chrysler" (Cover Story, Apr. 24). Finally, your writers and editors have come to the realization, long understood in the auto industry, that Lee Iacocca has never had Chrysler Corp., its stockholders, or employees as his central interest.

The truth is that Iacocca was not the genius behind the Ford Mustang. His contribution to Ford was the Pinto and Maverick and an attempted coup against Henry Ford II that cost him his job there. At Chrysler, he marketed the company in the 1990s quite successfully, but he had, in the end, to be forced into retirement by the board. It was Robert Eaton and Robert Lutz who managed to turn Chrysler into a world-class auto producer with some of the most innovative products on the road in its lineup.

For the customers, suppliers, and employees of Chrysler, a successful endeavor by Kirk Kerkorian and Iacocca would be a disaster.

Geoffrey K. Wascher
Utica, Mich.

"A greedy grab for Chrysler" (Editorials, May 1) is right on. However, you ignore the central issue.

We have a public market for shares and, as such, investors are allowed to bid, and directors and shareholders are faced with decisions. As you point out, there is a lot of greed involved in this issue, but a free market is the most important issue, and it should be allowed to run its course. Damage is a possibility, but damage to the free-market system by short-cutting the process would be far greater.

John Burress
Winston-Salem, N. C.

"So, you're an 'HP' man, huh!
I've heard that stands for Higher Prices!"

FIVE REASONS TO BUY TI PRINTERS.

All kidding aside, a lower price is only one of the advantages we have over HP. Here are some others:

YOU MONEY. Not only do Pro series printers from Texas Instruments cost less to purchase than comparable HP models, longer-lasting toner cartridges and imaging units mean our printers also cost less to operate. All of which makes them a smart investment.

TANDING SUPPORT. Since the purchase of any printer is a rather significant one, we offer a 30-day risk-free trial*. And because we understand that when your printer stops, so does your business, we provide a repair warranty†, complete with door-to-door pick-up service.

LY COMPATIBLE. Every TI laser printer we make comes DOS/Windows/Mac compatible, at no extra charge.

ER PAPER HANDLING. If you like HP's paper handling, you'll appreciate our Pro series printers. They come standard with not one, but two 250-page paper trays.

FRIENDLY. To simplify your life, we offer a convenient feature which allows you to switch automatically between Windows and Mac environments, at no additional charge. And speaking of simple, nothing's easier to set up than a TI printer. Just follow our step-by-step instructional reference card.

Of course, these are just some of the reasons a printer from Texas Instruments is the right solution for your business needs. To learn of others, call us at 1-800-TI-TEXAS, or e-mail us at 2ti@msg.com for a free brochure. Or print your own literature from our new Home Page on the Internet (www.ti.com).

EXTENDING YOUR REACH™

ny's profits increasing 36%, to $810.7 million, these salaries are even more extraordinary. But here's the best part. Benson says: "Most of our compensation comes when we build the stock price up." What a unique concept. It boggles the mind to wonder what would happen if all major companies based their executive compensation on this simple proposition.

Gary W. Priester
Black Point, Calif.

Are you serious about the story of Cabletron executives bucking the high executive pay trend? They may only be paid $52,000, but how many people own $927 million worth of stock? Their disgust with out-of-control executive pay is at the very least hypocritical. The two are seen as valiant do-gooders for taking so little pay, yet Mr. Levine has the ability to write a $70,000 personal check. On closer examination, their low pay has less to do with some noble cause and is more likely linked to their huge bank balances accumulated from the sale of $500 million worth of stock.

Edward O'Doherty
Norwalk, Conn.

A SPECIAL ISSUE INDEED

BusinessWeek
How nations and industries will compete in the emerging global economy
21st CENTURY CAPITALISM

The most gratifying accolades come from one's peers. So we are very pleased that our special issue, "21st Century Capitalism," won the award for "Best Magazine Reporting from Abroad" from the Overseas Press Club this year. Under the direction of editors Robert J. Dowling, Frank J. Comes, and Christopher Power, some 80 correspondents, editors, designers, and photo editors devoted six months to this project.

We are also proud to have had three finalist entries in the prestigious Gerald Loeb Awards for Distinguished Business and Financial Journalism.

OFF WELFARE —AND THEN?

One cannot help but notice that all of BUSINESS WEEK's columnists have two things in common. No, make that three: They're white, they're male, and they're not on welfare. These demographics coincidentally apply to those who govern this nation. So it's no wonder Gary S. Becker, who has doubtless never missed a meal in his life, suggests, in "The best reason to get people off the dole" (Economic Viewpoint, May 1), that the best way
to make this country's poor self-reli
and get them off the dole is to shor
the time they can receive welfare.

Becker's solution is incredibly sim
Or is it simplistic? Like solving the d
problem by just saying no. Or solv
the homeless problem by legislat
them off the streets.

This may come as a surprise, but
poor don't aspire to be poor. They d
think supporting a family on welfar
akin to spending weekends in the Ha
tons. They don't find comfort in be
the scourge of white society. Beck
logic would appear to be: Ignore th

cut off their welfare, and they'll go away.

The jobs Becker would have them take (by cutting off their "assistance") don't exist (not in this country at any rate), and if they do, the poor lack the education and skills necessary to qualify. The poor are caught in the middle of a lose-lose situation.

Gary W. Priester
Black Point, Calif.

WHY SOCIAL SECURITY IS SO INSECURE

In "Social Security: Apocalypse soon—or sooner" (Economics, May 1), Paul Magnusson correctly notes that the projected date for the insolvency of Social Security may be as soon as 1997 because of slow growth in real wages. Yet the fundamental reason for the abatement of growth in real wages seems to elude him—namely, the burgeoning costs associated with ever-expanding employment-related legislation and regulation. The very real benefits associated with OSHA, ERISA, ADA, the Medical & Family Leave Act, and dozens of other laws come at a cost to U.S. workers and retirees. In essence, productivity-based increases in real wages have already been absorbed ("invested") in regulatory compliance. Public policy analysts, economists, and, ultimately, voters will need to address these trade-offs.

Richard E. Kopelman
Professor of Management

Baruch Executive MSILR Program
New York

MAYBE THE EEOC ISN'T EQUAL TO THE TASK

Your article "The EEOC: Too swamped to shoot straight" (Social Issues, May 1) implies that the only problem with the Equal Employment Opportunity Commission is a lack of money. The same implication is also often used in reference to other federal agencies.

Assuming that your chart at the bottom of the page is reasonably accurate, the indication is that there are far too few investigators to handle the caseload at EEOC. However, if you assume that each investigator would cost $100,000 (including fringes and appropriate clerical support), the total for the 732 investigators amounts to only $73.2 million out of a $230 million budget. It is unimaginable to me that the major activity of an organization should only amount 32% of its expenditures. No efficient c ganization could live with this.

The problem with many governme agencies is not a lack of money but lack of organization and efficiency.

Net Revenue by Product

YOU'VE

TRACKED

NEW BUSINESS

$ These days, a prime source of new business is the business you already have. For Norwest Corporation, selling more products meant fully understanding their existing customers' needs. But with customer profiles fragmented across 12 different databases, it became increasingly difficult to determine who needed what. $ How was Norwest able to better manage its commercial banking relationships and increase revenues in the process? With the help of Gemini,™* a consolidated sales and marketing account management system, built on a foundation of Microsoft® products, including Windows NT™ Server and Microsoft SQL Server,™ part of the BackOffice family. $ "We evaluated other systems, but only Microsoft gave us the power and flexibility we needed to reach our goals," says Daniel G. Pocrnich, Chief Financial Officer at Norwest Bank Minnesota. Gemini provides a comprehensive view of ever-changing customer profiles. So customers receive more personalized service. And cross-selling opportunities become abundantly clear. The result? Products sold to existing customers increased by 34 percent. What's more, Norwest increased account fee revenues from 39 to 60 percent of total revenue. $ To get more information on how Microsoft can help you gain a business advantage using computers, call (800) 437-3119, Dept. GN4.

EXCELLENT CADAVERS
The Mafia and the Death of the First Italian Republic
By Alexander Stille
Pantheon • 467pp • $27.50

THE ITALIAN MAFIA: WOUNDED, STILL DEADLY

Journalists in Italy sooner or later run into the Mafia. For me, it happened in late 1991, when one Libero Grassi, owner of a small business in the Sicilian capital of Palermo, published an open letter denouncing the Mafia clan that was extorting money from him. Such payments of protection money—called the *pizzo*—total billions of dollars a year. A few days after the letter appeared in Palermo's main newspaper, Grassi was gunned down on the sidewalk. I traveled to Sicily to find out more and spent a sad afternoon with the slain man's son, Davide, who said he held out little hope for justice since only 2 out of every 10 homicides in Sicily result in a conviction. I asked when he thought things would change in Sicily. "Maybe in 20 years," said Davide. "If we're lucky."

In fact, as Alexander Stille writes in *Excellent Cadavers: The Mafia and the Death of the First Italian Republic*, his masterful study of the Sicilian Mafia and its stranglehold on Italy, Grassi's violent death was one of the events that helped galvanize the struggle against the Mafia. Less than two weeks after Grassi's murder, the Italian government approved desperately needed anticrime measures, from the creation of an Italian version of the FBI to tough, new antiracketeering laws. *Omerta*, the fearsome Mafia code of silence, was broken as dozens of witnesses came forward to testify. In that tormented summer of 1992, the tide began to turn against the Mafia. Over the next two years, arrests in Southern Italy increased by almost 50%, while the murder rate in the entire country declined by a stunning 42%.

It was no coincidence that the old regime that had governed Italy since World War II—providing the petri dish in which the Mafia virus could grow so wildly—was also collapsing. Popular disgust with the corruption and inefficiency of the Christian Democrat-dominated political system helped the Clean Hands political-corruption investigation take off after the initial arrest—that of a small-time politician—in Milan in early 1992. Within months, the game was up for "a political class that accepted a culture of illegality and knowingly used the Mafia's strength in Southern Italy for its own political advantage," as Stille writes.

Stille, a young journalist who won a *Los Angeles Times* Book Award for his 1992 study of Italian Jewish families under fascism, here delivers a stiletto-sharp portrait of the bloodthirsty Sicilian Mafia. American wiseguys seem positively pacifist compared with such Sicilian cousins as Pino "the Shoe" Greco, a sadistic hit man thought to have killed at least 80 people before a rival rubbed him out. Then there's Palermo boss Filippo Marchese, who personally strangled his victims in a stifling, central-city apartment known locally as the "room of death." Meanwhile, the political Establishment looked the other way.

Not everyone else did, though. Italy's two most prominent anti-Mafia investigators, Giovanni Falcone and Paolo Borsellino, both from solid professional Sicilian families, represented the best of an honest, hardworking, and patriotic southern Italian culture that neither the Mafia nor corruption has yet annihilated.

These and other investigators fought an uphill battle against the Mafia—whose regular murders of law-enforcement officials resulted in the *cadaveri eccelenti*, or prominent corpses, referred to in the book's title. They also had to contend with Italy's political barons and their lackeys. A top Supreme Court
judge, Corrado Carnevale—known

NAVITIMER 92

The updated version of Breitling's famed Navitimer design introduced in 1952, Model 92 is a compact feat of stylish engineering. Discreet enough to add eye-catching appeal to a feminine wrist. And sophisticated enough for anyone looking for a high-performance mechanical chronograph combining extreme accuracy and an extensive power reserve.

The Navitimer 92's rotating bezel is designed to serve as a slide rule, computing speeds as well as multiplying and dividing.

Heavy use of the chronograph cannot affect the Navitimer 92's perfect timekeeping.

Since time and its various measurements are so crucial to air navigation, Breitling Navitimer chronographs are and remain invaluable personal instruments for the world's pilots and flight crews.

Selfwinding mechanical chronograph with 1/5th second graduations.

30-minute and 12-hour totalizers.

Power reserve in excess of 42 hours.

Slide rule for solving speed-time-distance calculations.

Case water-resistant to 30 m with glareproofed cambered sapphire crystal.

In solid 18K gold. Also available in steel or in steel with 18K gold bezel.

Available with three types of leather strap with either tang-type buckle or folding clasp, or with Pilot bracelet.

The Canon Cartridge. In laser beam printers, personal copiers and plain paper fax machines, it's the heart of the desktop publishing revolution that's transformed homes and offices around the globe.

The key components of the imaging mechanism are combined with the toner in an all-in-one cartridge so simple to replace that anyone can do it. Replacing the cartridge ensures the highest output quality. It also makes your equipment virtually maintenance free. It's clean as well as simple, too; so there's no need to dirty your hands.

Please return your spent Canon cartridges.

For output quality and operating convenience, no other system comes close. And here's the point we'd like to emphasize — when the cartridge is returned to Canon, the environment is benefited because landfill waste is reduced.

When returned to Canon, cartridges are carefully disassembled. Reusable parts are painstakingly screened and cleaned. Over 95 % by weight of collected cartridges' parts and materials are used in making cartridges or other products. The result: It's good for you. It's also good for the earth. Return your Canon cartridges when they are of no further use. Please.

As part of our Clean Earth Campaign in the United States, Canon makes donations to charitable organizations dedicated to environmental issues. Used cartridges are returned under the Clean Earth Campaign via the United Parcel Service (UPS) or Mail Boxes Etc. Shipping costs are paid by Canon, so there's no charge to our customers. Easy shipping instructions can be found in the cartridge box.

For your home or office, choose any of the wide range of products that use Canon cartridges.

CHEAP AND EASY STORAGE SPACE

My home and office computers both have 540-megabyte hard drives, an unimaginable size just a few years ago. Compression software allows me to squeeze a billion bytes on each. Still, I am critically short of storage space—without giving any room to disk-gobbling multimedia games. Even with gigabyte hard drives costing less than $500, the proliferation of huge programs, pictures, sounds, and video clips emphasizes the first law of computing: You can never have enough disk space.

The way to deal with this iron law is to move some of those megafiles onto removable disks. Traditionally, removable mass storage has been too slow or too expensive to be practical for most users. But at long last, inexpensive removable storage devices allow you to move less-used files off your hard drive and still have them handy for use in seconds.

FILE HAULER. While slower than conventional hard drives, removable disks are many times faster than floppies or even CD-ROMs and are speedy enough to store and run programs. They are also handy for backing up data in case your hard disk crashes and for transferring large files between your desktop and laptop.

The Zip drive from Iomega Corp. (800 697-8833) is the first of this breed. The external drive, with a street price of just under $200, comes in an attractive dark blue plastic case about the size of a typical modem. The hard-shell disks are four inches square and a quarter-inch thick, a bit bigger than a 3½-inch floppy. The 100 MB disks retail for under $20, and a 10-disk "giga-pack" is available for as little as $149. The Zip drive includes some nice design touches, including rubber feet that let you set it up horizontally or vertically and a window that allows you to read the label of a disk in the drive.

zip
zip
zip
100

The Zip comes in two flavors. One version connects to a PC through its parallel printer port. The other version can be used with all Macintoshes or any PC equipped with a SCSI (pronounced "scuzzy") interface. If you don't already have the SCSI interface (call the place where you bought your computer if you're not sure), Iomega offers a $50 interface card. I found the card much easier to install than most. Generally, SCSI is the way to go. The connection is more reliable and moves data more than twice as quickly. Both versions come with some useful software, especially a cataloging utility that keeps track of which files you've put on what disk.

COMPETITION COMING. What's more, you're about to get a second choice, the EZ135 Drive from SyQuest Technology Inc. (800 245-2278). The EZ135, whose $200 drive and $20 disks match the Zip in price, will store an extra 35 MB on each disk. Unfortunately, the rival drives use different technology and incompatible disks, and each company claims that its product is better than the other. While the EZ135 is not yet available for testing, my experience with an older, more expensive SyQuest 270 suggests that the EZ135 may be faster than the Zip, but probably not enough to matter to most users. It also comes in two versions. An internal unit that fits in a floppy drive bay on the front of your PC will be available in early June, while a Mac/PC external SCSI version will arrive in late summer. By yearend, a third contender, being developed by Compaq, 3M, and Matsushita, may also hit the streets.

You'll find a Zip or EZ drive good for more than adding storage space. The drive makes it much easier to create and use backup copies of your critical files in case your computer crashes. The new disks can also be handy for transferring from one computer to another any files too big to fit on a 1.44 MB floppy.

No matter how big internal disk drives get, it seems that software will always grow at an even faster rate. Removable drives finally help you keep pace.

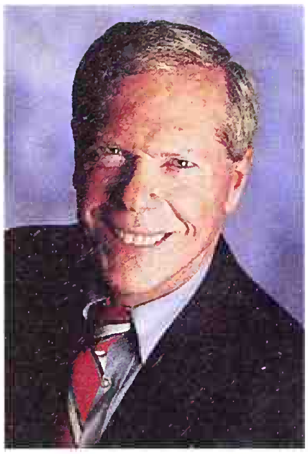
BY PAUL CRAIG ROBERTS

IS THE FED SURRENDERING TO BIG BROTHER?



INTRUSIVE: By bowing to pressures for race and gender data in lending, the Fed gives regulators a chance to micromanage the process

On Apr. 19, the Federal Reserve Board yielded to Clinton Administration pressure for racial quotas in bank lending. Despite fears expressed at that day's board meeting about the Community Reinvestment Act's "potential for regulatory-driven credit allocation," the Fed agreed to changes that will permit the CRA to be used as a mechanism for racially allocating credit.

The regulatory changes, which Governor Lawrence B. Lindsey shepherded through the Federal Reserve Board, are the outcome of 21 months of negotiations involving the Fed, the Office of the Comptroller of the Currency, the Office of Thrift Supervision, and the Federal Deposit Insurance Corp. One change repeals a color-blind regulation dating from 1976 that forbids banks collect data on race, color, gender, or national origin from its loan applicants. Another new regulation requires banks to report their loans by census tract, a proxy for racial reporting.

In his presentation to the board, Governor Lindsey acknowledged that these changes will give federal regulators "the capacity to micromanage bank decision-making to an unprecedented degree." Nevertheless, Lindsey marshaled hope that regulators will "use balance and reasoned judgment" and "avoid this micromanagement." Otherwise, he warned, regulators will "undermine the functioning of the market and therefore the underpinnings of capitalism" with racially allocated credit. "As believers in democratic capitalism," Lindsey said, "we are therefore extremely perturbed about race-conscious and gender-conscious practices."

"CONTENTIOUS." With so many reservations about the potentially dire consequences of the regulatory changes, it's natural to ask why the Fed acquiesced. Governor Lindsey answers that it is no longer politic for the Fed to hold out for color-blind safeguards. "This board's position that the use of such irrelevant characteristics as race, gender, religion, and national origin has no place in decisions regarding the provision of credit" is "not as widely accepted as it once was" and has become "contentious." To avoid "the extreme requirements sought by some special interests" that would result in a harmful "extreme policy activism," Lindsey reported to his colleagues that he had struck the best
compromise he could get. Americans, Lin
sey said, "have long since lost the figh
against Big Brother."

Perhaps hoping to constrain expansiv
interpretations, Lindsey emphasized that th
requirement that loans be reported by cer
sus tract does not mean that loans have t
be made in each tract. "The law," he says
"does not require that a bank serve ever
community or meet every perceived need,
and CRA regs are not supposed to "adverse
ly impact the profitability" of the banks.

Governor Lindsey is whistling in the dar
I have reported in this space (Jan. 24 an
Oct. 3, 1994) instances of banks being force
into allocating credit by race prior to th
new rules. Resolution Trust Corp. economis
Vern McKinley found CRA regulations to b
"blatant credit allocation" prior to the lates
regs that make this result more likely, an
the Justice Dept. has an established patter
of misusing the CRA to force banks to lo
cate branches in minority census tracts an
to issue below-market loans.

LOOKING FOR COVER. In his Apr. 19 surren
der speech, Lindsey urged his Federal Re
serve colleagues to be "eternally vigilant
in resisting racial lending quotas. In Wash
ington, such exhortations are useful for cov
ering one's behind, but they are ineffectiv
against "the natural tendency of the bureau
cratic rule-making process."

The Fed could have stood on principle an
empirical evidence. Nobel prize-winners Gar
S. Becker and Kenneth J. Arrow have note
that evidence of discrimination would be low
er mortgage default rates among protecte
minorities, a sign that they were being hel
to higher standards. Last November, a stud
was released by Federal Reserve economist
Glenn B. Canner and Timothy H. Hannan
Freddie Mac economist James A. Berkove
and University of Southern California econo
mist Stuart Gabriel that examined 220,00
Federal Housing Administration mortgag
loans and found no evidence of discriminatio
against minorities. The study reports tha
blacks default at twice the rate of white
and "exhibit significantly higher default rate
in both urban and suburban locations."

By compromising on principle, the Fe
has opened the floodgates for regulators t
inappropriately second-guess and micro
manage the lending process in the name o
civil rights.

Paul Craig Roberts is John M. Olin Fellow of the Institute for Political Economy and Distinguished Fellow of the Cato Institute in Washington, D.C.

MM. IS THAT CREAMING OUND OMING FROM UR NEW 64-BIT ATABASE ERVER?

R FROM UR 32-BIT OMPETITORS?

It's probably a bit of both. Running the new 64-bit pure Oracle7,™ our new AlphaServer™ 8200 and 8400 systems give you performance gains that sound unreal: up to one hundred times faster than conventional 32-bit enterprise systems. With multiple 64-bit processors howling along at 300 MHz and Very Large Memory capability, they support the world's largest in-memory relational database, and let your applications directly address up to 14GB of data in main memory. All of which could account for our competitors emitting some rather distressed noises, like the plaintive cry: "Why would anyone need 64-bit systems? Why would anyone need that much power?" Several reasons: Like time. Money. And the ability to gain a real competitive advantage. For example, in the time it takes a 32-bit system to execute a handful of stock trades, ours will let you do hundreds. Global retail inventory that once took weeks now takes days. You get the idea. The advantages extend in all directions, to everything from on-line transaction processing to micromarketing, decision support and more. Fact is, it can give your whole information system a real boost, for around one-tenth the price of an IBM ES/9000™ running DB2. (Was that a yelp we just heard?) For details, contact your Digital reseller. Or give us a holler at 1-800-DIGITAL. Or reach us via our Internet address: moreinfo@digital.com.

ARE AMERICANS OVERWORKED?

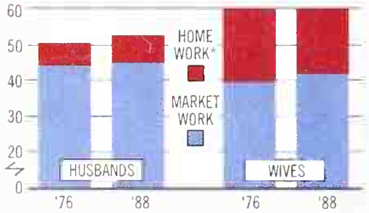
Not if you count less work at home

A popular view is that a baleful trend afflicts American workers: Whereas many European workers have been curtailing their workweeks, their U.S. counterparts have often been forced to work longer hours just to maintain their living standards. In other words, Americans are working more and enjoying life and leisure less.

Not so, claim Kristin Roberts and Peter Rupert of the Federal Reserve Bank of Cleveland. Their analysis of survey data of American families from 1976 through 1988 confirms that the average American is indeed spending more time working for pay than in the past. But once they add "home work" to the equation—that is, such activities as cooking meals, laundry, home maintenance, and child care—they find that most of the increase simply reflects a shift from time spent in home production to time spent in paid market work.

SURPRISING STABILITY IN TOTAL HOURS AT WORK

MARRIED COUPLES WORKING FULL TIME



▲ AVERAGE HOURS PER WEEK *HOUSEHOLD CHORES

DATA: FEDERAL RESERVE BANK OF CLEVELAND

Market-work hours of married couples in which both partners work for pay full time, for example, rose by three hours a week from 1976 to 1988 (chart). But home-work hours fell by three hours, so total weekly work hours for such couples remained about 109.5. In households with nonworking wives, total work hours also stayed relatively stable, at about 82.5 a week over the period.

The difference between total work hours of working couples and those of couples with nonworking wives, of course, reflects the fact that women in male-worker couples are occupied only with household work. In 1988, such wives spent an average 32.2 hours a week doing home work, double the time working wives spent at such chores. But the latter also spent an average 41.4 hours in market jobs.

Roberts and Rupert conclude that rather than forgoing leisure hours, Americans are mainly substituting market work for home work—a trend fostered by smaller families, labor-saving appliances, and other developments.

BUY GOLD WHEN INFLATION IS LOW

It could pay off, says an expert

If you think gold is a good investment only in periods of soaring prices, think again. According to Marc M. Groz of Quaternion Group Inc., a financial consultant that uses mathematical models of markets, gold is also a sound investment in a low-inflation environment.

Groz bases his view on a study that analyzed the performance of gold in periods of high (more than 6%), medium (3.5% to 6%), and low (less than 3.5%) inflation over the past 25 years. Perhaps predictably, he found that gold provided an average return of 22% in years of high inflation but also exhibited high volatility, plunging as much as 20% in some years. In years of medium inflation, on the other hand, its average return was actually slightly negative.

The big surprise was gold's performance in years with inflation below 3.5%. It not only posted a respectable average return of 11.1% but did so with much less volatility and downside risk. The moral of the story, says Groz: "Gold can not only act as an inflation hedge in periods of high inflation but also can provide high real rates of return with relatively low risk when inflation is low."

CLUES TO A SAVINGS RIDDLE

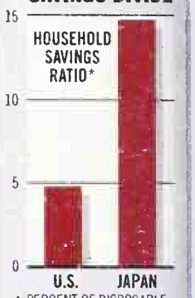
Why U.S. and Japanese rates differ

Americans are poor savers, while the Japanese save a lot. According to economist Albert Ando of the University of Pennsylvania, one reason for the difference may be diverse reactions to the high prices of key commodities.

Ando notes, for example, that the decline in the U.S. savings rate over recent decades has closely paralleled the upward trend of medical outlays as a percent of national income. This spending boom has occurred despite skyrocketing medical inflation, which would nc mally curtail demand, in part becau many Americans consider medical care necessity at almost any price.

By contrast, whereas a nation health system has kept Japanese mec cal outlays relatively low, the cost housing in Japan is extraordinarily high. This has induced the Japanese to consume very little housing in real terms.

THE U.S.-JAPANESE SAVINGS DIVIDE



▲ PERCENT OF DISPOSABLE INCOME

*1986-1993 AVERAGE

DATA: OECD

Thus, in each case, says Ando, the high cost of a key consumption item has affected household saving—reducing saving in the U.S., where high medical costs are no deterrent to spending, and enhancir saving in Japan, where high housir costs restrain housing outlays.

This issue bears upon current U. efforts to cut business and governme health outlays by passing more of tl tab directly to the public. While busine has cut its spending, in part by requirir higher copayments from workers, tl public's out-of-pocket health-care outla as a share of consumption have rise sharply, from 5.7% in 1988-1989 to 6.9 in 1993. If the trend continues, it cou dampen future U.S. household saving

A DISPUTE OVER JOB CREATION

Small business sees no letup

The April decline in U.S. payroll er ployment has reinforced the vie that a "soft landing" is here and eve raised some recessionary fears. Econ mist William C. Dunkelberg of the N tional Federation of Independent Bus ness is skeptical, however.

Noting that the Labor Dept.'s "pl factor" to reflect hiring at busine startups was reduced by some 22,0 jobs in April, Dunkelberg argues th the agency is missing the boat on j creation: Rather than losing steam, er ployment gains at small businesses a actually gathering strength. He poin out that hiring plans by members the NFIB in April were running close their highest level in 21 years. Thu he expects "some major upward rev sions in the employment numbers."

WHAT'S MIRIAM BERGMANN'S SECRET TO CULTIVATING AWARD-WINNING RIGOLETTO DAHLIAS?

(IT AIN'T THE WATER.)

"Sure, they need the moisture, but the little darlings really perk up to the classics," said Miriam.

It occurred to her at the San Jose Center for Performing Arts. She made the intuitive leap during a particularly stirring passage of Stravinski's Rites of Spring. Miriam, and her dahlias, can be a lesson to us all: a community endowed with a healthy portion of the Arts enriches the lives of all who live there.

But the numerous, quality Arts groups within the Valley can't continue to enrich our lives if the groups themselves are undernourished. The Arts need money to grow.

Enter the Silicon Valley Arts Fund. This unprecedented project creates the financial foundation on which the Valley's Arts groups can prosper and grow. Without it, the Arts, like any entrepreneurial Silicon Valley business, would be locked into a start-up mode.

We are calling on those in positions to support a thriving community of world-class Arts to do so. And make no mistake, we're seeking major investors. Because an investment in the Arts Fund is nothing less than an investment back into the fabric of Silicon Valley. It's present. And it's future. So that for many seasons to come, music, dance, theater, the visual arts, and imaginations, can spring eternal. After all, this used to be called the Garden Valley. To talk seriously about supporting the Silicon Valley Arts Fund, please call 408-244-6391.

An Idea Without Mass Production Just Won't Float.

At Advanced Micro Devices, we champion ideas that make a difference to our customers. Ideas we will have plenty of capacity to produce within our worldwide manufacturing facilities. This year, AMD is adding enormous capacity with two billion-dollar mega-fabs, one producing a new generation of Microsoft Windows® compatible microprocessors, the other producing flash memory devices. To our customers in the personal computer and communications industries, that means clear sailing into the future. Backed by a clear vision of where we're headed together:

If it's a good idea. If it makes a difference. Run with it.

AMD
Run with it.

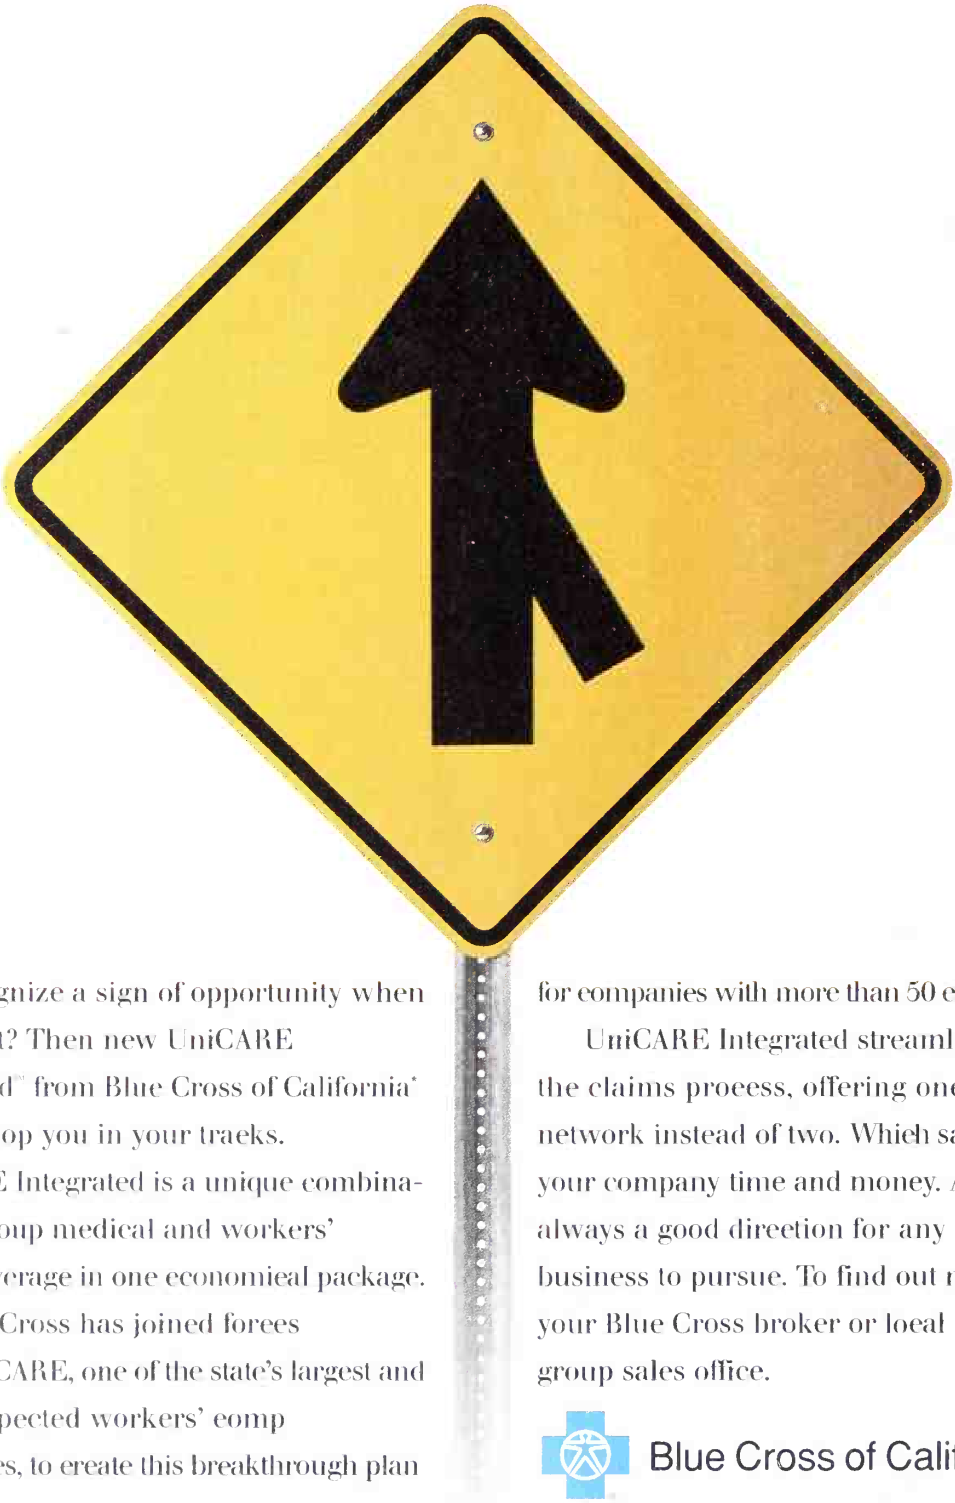
Introducing a new direction in health care coverage.



Recognize a sign of opportunity when you see it? Then new UniCARE Integrated℠ from Blue Cross of California* should stop you in your tracks. UniCARE Integrated is a unique combination of group medical and workers' comp coverage in one economical package.

Blue Cross has joined forces with UniCARE, one of the state's largest and most respected workers' comp companies, to create this breakthrough plan for companies with more than 50 employees.†

UniCARE Integrated streamlines the claims process, offering one doctor network instead of two. Which saves your company time and money. And that's always a good direction for any business to pursue. To find out more, call your Blue Cross broker or local group sales office.

Blue Cross of California

JAMES C. COOPER & KATHLEEN MADIGAN

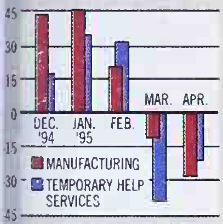
AKE A DEEP BREATH, RELAX, ND FORGET THE 'R' WORD

U.S. ECONOMY As the old saying goes, be careful what you wish for. You ant a soft landing? It might just be on your doorstep. ut as the data now clearly show, a soft landing means ft sales and hiring, and people are starting to get ervous.

A few economists are even using the "R" word, but ecession worries right now are way out of place. The onomy is in the middle of what is likely to be a ort and sharp inventory correction brought about the impact of the Federal Reserve's interest-rate kes on housing and consumer spending. A similar rrection resulted in a slowdown in 1986, after which e expansion went on its merry way.

As businesses wrestle their inventories into better shape relative to sales this spring and summer, industrial production will remain on the weak side and employment gains will continue to slow. But after the slowdown, the economy is more likely to pick up again than it is to spiral downward toward recession—although it will not regain its 1994 pizzazz.

TWO AREAS THAT ARE LOSING JOBS



▲THOUSANDS, MONTHLY CHANGE

DATA: LABOR DEPT., BUSINESS WEEK

Growth has plenty of supports to prevent a recession. or one: Falling long-term interest rates will buoy ousing. The yield on the benchmark 30-year Treasry bond crashed through 7% on May 9 to close at .93%, the lowest in 14 months (page 41). Of broader imortance, refinancing activity is already showing some arly signs of activity, says the Mortgage Bankers Assn.

Also, business outlays for high-tech equipment and onstruction are strong and likely to remain so. And the rag on U.S. exports resulting from Mexico's recession vill have run its course by the second half, when forign demand elsewhere and the cheaper dollar willregnite export growth.

IKE THE 1986 SLOWDOWN, the 1995 episode might vell have a bonus: It could extend the expansion. Slowr growth will keep pressure off wages and prices as it ases constraints on capacity and as it unwinds some of he recent tightness in the labor markets—already evdent in the April job report (chart).

At first blush, those job numbers looked pretty omiious. The unemployment rate jumped to 5.8%, up from .5% in March, and payrolls actually shrank by 9,000, he first decline in more than two years.

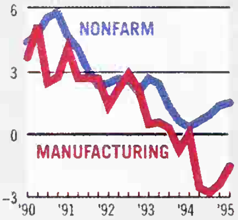
To be sure, job growth is slowing, but the Labor Dept. pointed to "an unusual set of circumstances" that exaggerated the April weakness in payrolls. Because of seasonal quirks, the poor showing was in effect a payback for questionably large job gains in February and March. Also, the April dip included 32,000 striking supermarket workers in California.

Still, signs of slower growth were evident. The 48.7% of industries adding workers in April was the lowest in 2½ years. Big job losers in the month were manufacturing, down 28,000, and construction, off 20,000. Temporary-employment services shed 21,000 temps, typically the first to go as business wanes.

The factory workweek fell a steep 36 minutes, to 41.3 hours. A shorter workweek usually precedes cutbacks in output and hiring. The drop in manufacturing hours suggests a second consecutive decline in industrial production in April.

So far this year, job gains have averaged 173,000 per month, down from nearly 300,000 during the second half of last year. Given the recent uptrend in initial jobless claims, job growth for the rest of the year seems likely to maintain a slower pace. Hiring will be sufficient to generate income for consumers, but the jobless rate may drift up a bit.

UNIT LABOR COSTS: STILL UNDER CONTROL



▲PERCENT CHANGE FROM A YEAR AGO

DATA: LABOR DEPT., BUSINESS WEEK

ONE KEY ARGUMENT for recession is that the Federal Reserve has already raised—or is about to raise—interest rates too much and thus drain the monetary blood from this expansion. Overtightening has always contributed much to past recessions.

However, the Fed's actions of the past 16 months were preemptive strikes against inflation. And the latest data on productivity and unit labor costs show that price pressures are almost nil (chart). In fact, the slowdown in unit costs actually strengthens the case that the Fed's next move could be one of easing.

Productivity in the nonfarm business sector grew at an annual rate of 0.7% in the first quarter, on top of a revised 4% advance in the fourth. In manufacturing alone, output per hour worked jumped 3.6%. Over the past year, factory productivity has risen a steep 4%.

Growth in productivity in coming quarters will not look as strong. The cyclical forces that pushed up efficiency early in this expansion have pretty much run

ERIC HOFFMANN/BW

their course. But companies will remain committed to increasing efficiency, because rising productivity has kept a lid on unit labor costs and bolstered profits.

Unit labor costs—the cost per unit of output—rose at an annual rate of 3.4% last quarter, after falling slightly in the fourth. Over the past year, though, unit labor costs are up just 1.4%, while factory unit costs have dropped 1.5%. The puny growth in overall unit labor costs among all nonfarm businesses is about half the rise of inflation economywide. That gap means businesses are in a good position to make money even as sales volumes slip during the slowdown.

BUT WILL WORKERS make any money? A steady drop in consumer spending is another part of the recession thesis. So far, incomes are growing at a healthy pace. The torrid rise in credit, though, bears watching.

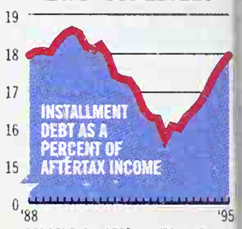
In April, hourly nonfarm wages increased 0.6%, to $11.39. That gain and a longer overall workweek pushed up weekly paychecks by 0.9%, implying that personal income rose in April. How much of that went to taxes remains to be seen when the Commerce Dept. reports the income data on June 1.

April spending doesn't look as encouraging, however. Early reports from retailers and a drop in motor vehicle sales suggest that consumer spending struggled to rise last month, after growing at an annual rate of just 1.4% in the first quarter.

But even though spending looks sluggish, borrowing doesn't. Installment credit grew $13.8 billion in March, after gains averaging $8.3 billion in the previous two months. The March surge was the biggest since August, and half the rise was in revolving debt, which includes credit cards. It jumped $6.7 billion.

As a percentage of disposable income, installment credit rose to 18% in the first quarter, the highest since the debt-crazed 1980s (chart). To be sure, some of the increase can be linked to convenience use of credit cards—balances that are paid off at the end of the month. But because retail sales have slowed so sharply, the rise may also say that consumers are trimming their monthly repayments of old debt.

DEBT IS BACK TO LATE-'80s LEVELS



▲PERCENT, QUARTERLY AVERAGES

DATA: COMMERCE DEPT., BUSINESS WEEK

If so, higher rates are squeezing some households. A recent survey by Western Union Commercial Services shows that "paying other financial obligations" is the reason most frequently given by delinquent borrowers.

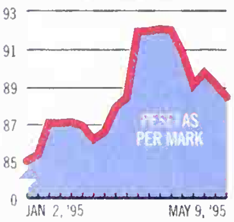
As long as incomes grow steadily, though, consumers are unlikely to throw in the towel. Their spending will buoy the expansion this year, helped by capital investment and exports. Growth in those three sectors should keep the recession bears at bay.

SPAIN

THE PESETA: CALM AFTER THE STORM

Despite Spain's improving economy, its financial markets languished earlier this year, as the peseta weakened and was officially devalued on Mar. 6. Now, however, the peseta has stabilized, and the stock market has hit a 1995 high with record volume, while bonds are rallying as well. Both foreign and domestic investors are showing enthusiasm amid strong first-quarter profits and continued economic gains.

THE PESETA REGAINS ITS BALANCE



▲PESETAS

DATA: DRI/McGRAW-HILL

Real gross domestic product rose at an annual rate of 3% in the first quarter, according to estimates by the Bank of Spain. That's in line with the 3% pace expected for all of 1995 and up from 2% in 1994. Exports, growing at a 20% annual rate, are fueling industrial output with help from business investment. Consumer spending still lags in the face of wage restraint, low confidence, and high—but diminishing—joblessness.

The peseta's new balance appears sustainable. Further interest-rate hikes to control inflation seem likely, and the Socialist government manages to hang on despite accusations of corruption. Also, the currency does well during the summer tourist months.

Risks remain, however, especially politically. The May 28 regional elections will shape the direction of Spain's much-needed fiscal reform, since regional governments have increasing sway in central government policy. Ruling Socialist Party Prime Minister Felipe González wants a lean 1996 budget, but the Socialists are expected to lose ground in the upcoming elections.

The Socialist alliance with the center-right Catalan nationalists is showing cracks, and the main opposition, the center-right Partido Popular, is expected to gain. So chances for early general elections are rising, and the 1996 budget may be watered down, leaving the tough cuts to the nex government.

The other potential spoiler in Spain's outlook is inflation. So far this year, wage demands are modest, and plenty of capacity remains idle—but pressure from both sources will grow next year.

TRADE

YOUR MOVE, JAPAN

Clinton bets Tokyo will talk turkey before his painful sanctions kick in

It was a balmy Sunday afternoon, but the mood inside the Oval Office on May 7 was somber. President Clinton, Treasury Secretary Robert E. Rubin, and other top economic advisers were mulling punitive tariffs against Japan after the collapse of talks aimed at prying open Tokyo's auto market.

The President's chief worry: Would sanctions roil the financial markets? In the past, talk of a U.S.-Japan trade war caused the dollar to tank against the yen, sending jitters through Wall Street and making the White House back away from the brink. This time, Rubin assured Clinton that traders had already discounted the dollar in anticipation of sanctions. "Not acting could be just as pernicious" to the greenback as pressing the fight, warned one senior adviser.

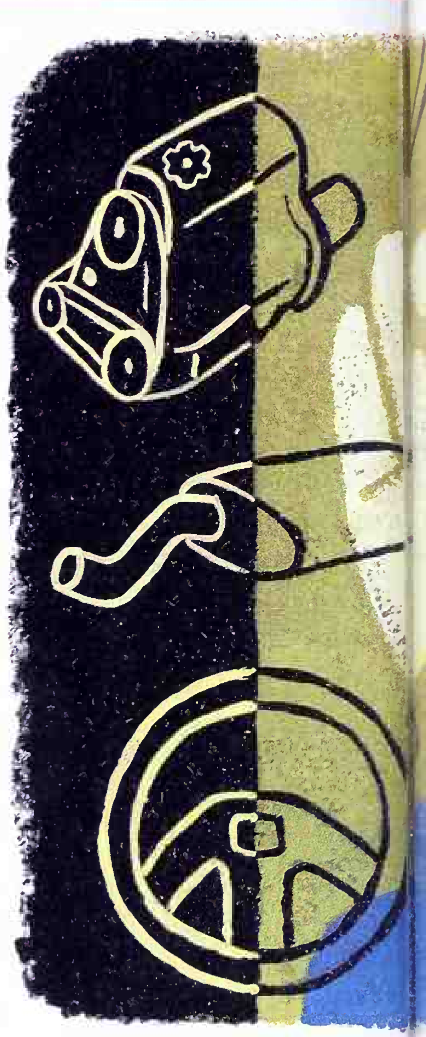
As the 40-minute meeting wrapped up, a resolute Clinton gave unqualified approval to the most serious trade confrontation with Tokyo yet. The strategy now is two-pronged. The Administration will slap up to $5 billion worth of tariffs on Japanese luxury-car and minivan imports. And the Clintonites plan to take their case to the new World Trade Organization, accusing Japan of collusive practices that shut out competition in its car and auto-parts markets. "We're going to resolve this matter and open Japanese [auto] markets one way or the other," vows U.S. Trade Representative Mickey Kantor.

The unprecedented penalties on Japanese imports would take effect by June unless the Japanese offer a deal—and Administration officials calculate they will. Japanese officials, who have threatened a WTO complaint of their own in response, seemed caught off guard by the tough actions. Now, world markets appear to be betting that Japan will blink first. On May 10, announcement of the U.S. actions pushed the dollar up slightly against the yen. Big Three auto stocks also jumped.

JUMPING THE GUN? Tokyo thinks it has good grounds to challenge the U.S. actions. Japanese officials contend that the U.S. needs WTO approval before it can slap sanctions on their products. "Unilateral actions that violate international rules are not acceptable to us," says Kiyohiko Nanao, a top economics official at the Japanese Embassy in Washington. Yet even before the announcement of sanctions, U.S. officials said Japan was hinting at a resumption of talks to resolve the dispute before the first shot in the trade battle is fired.

Whatever the outcome, this is a high-stakes game. Just the prospect of crippling tariffs on Japanese imports is sending shock waves through auto circles from Motown to Toyota City. The sanctions, which would send duties soaring from a current 2.5% to 25% or more, would clobber sales of upscale models such as Toyota's Lexus, Honda's Acura Legend, and Nissan's Infiniti. The Japanese auto makers already have been hurting from the yen's 19% rise against the dollar so far this year, and the tariffs will price them out of the most profitable U.S. niche. "It could be devastating," says Jack H. Thompson, president of Thompson Lexus of Doylestown, Pa. "It could ruin Lexus."

Detroit may suffer damage as well.



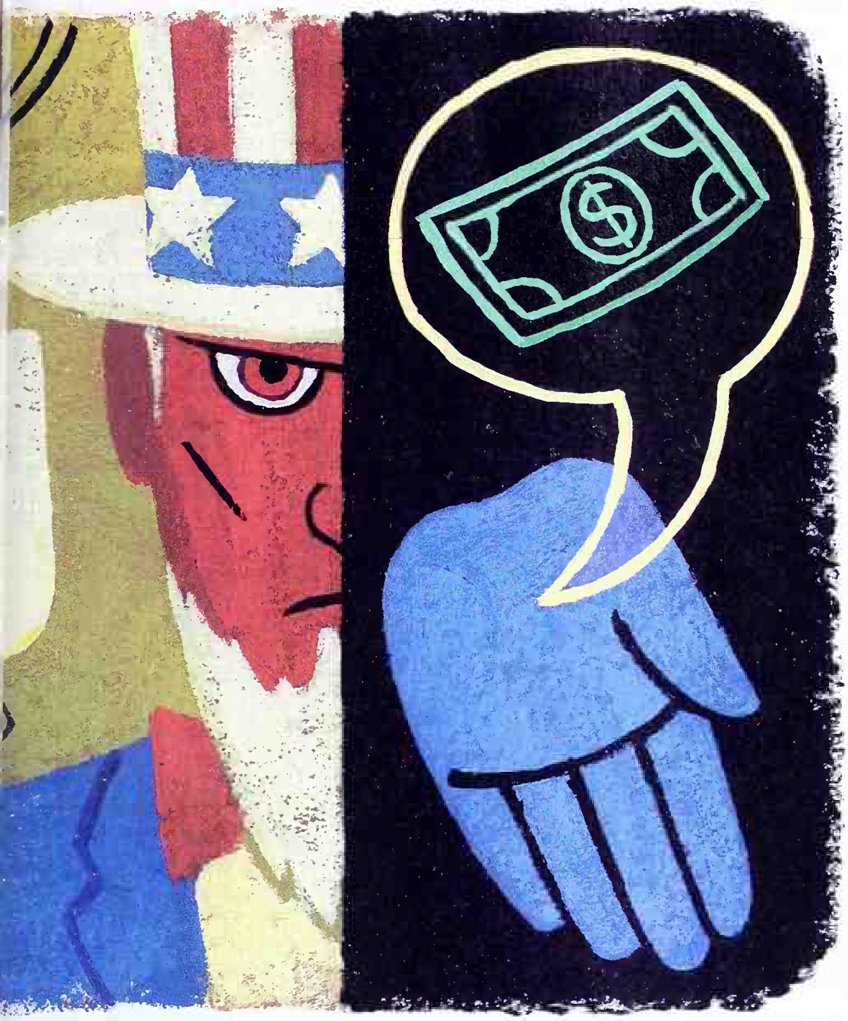
TARGETING JAPAN

SOAK THE RICH Japanese car lin
such as Toyota's Lexus, Honda's Ac
and Nissan's Infiniti, hold 32% of t
U.S. luxury market. Sanctions on th
would mainly hit wealthy, not midd
class, buyers. A potential hitch: Th
main beneficiaries could be Germa
Mercedes and BMW, not Detroit.

Many Lexus and Infiniti dealers als own Cadillac or Lincoln shops and are highly leveraged. If their Japanese luxury franchises are wrecked, "you could end up toppling a house of cards and pulling other dealerships down with it," warns Jim Olson, Toyota Motor Corp.'s group vice-president for external affairs.

It's a risk U.S. policymakers are prepared to take. They're frustrated after

The President seems to have the upper hand: Cheerleade



linton Administration's strategy is to hit Japanese products with big puni-
ariffs while hurting as few American consumers as possible:

MPTIVE STRIKE GM, Ford, and ler control nearly all of the U.S. an market. Already, Japan's share market has plummeted since a Big Three complaint that Japa- carmakers were dumping mini- n the U.S. The big losers are a's Previa and Mazda's MPV.

FULL-COURT PRESS The Clintonites will file charges with the new World Trade Organization against Japan, charging the Japanese with a pattern of collusive trade practices that shuts out competition. Japanese officials are threatening to file countercharges that U.S. sanctions violate WTO rules.

) months of fruitless negotiations over ars and auto parts, which account for early 60% of Tokyo's $66 billion trade urplus with the U.S. The problem, Ad- inistration officials claim, is that Japan asn't budged much in talks aimed at roviding greater access for Detroit's ars in Japanese showrooms and relax- ng regulations that bar the sale of U.S. arts in local repair shops. The biggest sticking point has been Japan's refusal to agree to increase U.S. auto-part purchases by a specific amount, a key Administration demand.

So far, Tokyo has won the public-relations war. Japanese officials scored points by condemning the U.S. proposal as "managed trade." But the Clintonites figure the domestic political payoff and the global economic consequences of a threatened trade war are overwhelmingly in Washington's favor. Hanging tough with Japan will play well with disaffected blue-collar workers, especially members of the United Auto Workers, a potent Democratic force in key electoral states such as Ohio and Michigan. U.S. business has chimed in, too. "The federal government should make it clear to the Japanese that they aren't playing fair and that we won't stand for it," says Roland S. Boreham Jr., chairman of Baldor Electric Co. of Fort Smith, Ark.

SURER TOUCH. The showdown with Tokyo gives Clinton an opportunity to appear strong at a time when he has little chance of moving an agenda through the Republican-controlled Congress. "Standing up for reciprocity in trade is tantamount to standing up for America," says Democratic pollster Geoffrey Garin. An added benefit: The moves will blunt the criticism of neo-isolationists who oppose Clinton's free-trade moves in Latin America and Asia (page 124).

Often ham-handed when it comes to confronting Japan on trade issues, the Clintonites seem to be showing a surer touch. The breakdown in trade negotiations with Tokyo in February, 1994, sparked a run on the dollar. This time, "sanctions have been widely advertised by the Administration," so the impact on the markets has been muted, says David Hale, chief economist at Kemper Financial Services Inc. in Chicago.

In fact, financial trends are running in Washington's favor. The strong yen threatens to prolong Japan's recession, but the U.S. stock market is setting records almost daily, and the bond market is rallying (page 41).

To minimize harm to U.S. industry and middle-class American consumers, the Administration chose to target Japanese luxury imports. Would-be Lexus buyers have lots of alternatives, from U.S. Cadillacs and Lincoln Continentals to German BMWs and Mercedes. That surgical strike is meant to pressure Japanese carmakers into pledging to buy more U.S.-made parts. And bringing a broad claim against Japan at the WTO could undercut its threats to file unfair-trading charges against the U.S. at the new global court.

But the political rhetoric on both sides has escalated to the point that it will be tough for either to find a face-saving compromise. "Everyone has drawn too many lines in the sand," frets

d record Dows at home, a reeling economy in Japan

one U. S. official. The worst-case scenario goes like this: The sanctions go into effect, Tokyo retaliates by quietly slowing exports of electronic components essential to the U. S.—forcing American plants to cut production. Financial markets get fidgety. Then, in a year, the WTO decides in Japan's favor.

But even if that happens, Japan could still lose out. Its auto makers would be hemorrhaging red ink—Mazda Motor Corp. and Nissan Motor Co. are already hurting badly. And a WTO decision against the U. S. could prompt Clinton to withdraw from the WTO under pressure from America Firsters. That would undermine a new world trading system it took seven years to negotiate.

With so much at stake, both sides will probably blink—eventually. But
right now, with Japan least able to
ford a drawn-out confrontation, the U.
is waiting for Tokyo to make the ne
move. So long as the stock and bo
markets take the showdown in stric
the Clintonites have no intention
backing down anytime soon.

IN JAPAN'S CORNER, A RESOLUTE INFIGHTER

With his Elvis sideburns and wicked wit, International Trade & Industry Minister Ryutaro Hashimoto scarcely fits the role of Japanese mandarin. Then there's his penchant for caustic outbursts. When U. S.-Japanese trade talks collapsed on May 5, Hashimoto likened his dealings with U. S. Trade Representative Mickey Kantor to returning home to face his angry wife after a late-night drinking session.

Irreverent, yes. But Hashimoto's in-your-face style is playing well with Japanese voters worried about the runaway yen and resentful of America's trade brinksmanship. A former Finance and Foreign Minister, Hashimoto, 57, is emerging as a Liberal Democratic Party (LDP) heavyweight who is showing Japan how to say "no" to America. "There is a sense that the U. S. has set out to destroy the Japanese economy through manipulation of the currency rates," says James Abegglen, a professor of international business at Tokyo's Sophia University.

UNREPENTANT Hashimoto let Kantor know that scoldings would get the Americans nowhere fast

GOLDEN OPPORTUNITY. Hashimoto's brashness seems certain to enhance his ambitions to become Prime Minister. His shot at the top could come soon. Japan's incredible political morass—three governments have fallen since 1993—has resulted in incredibly weak leadership. Stung by the government's poor handling of the Kobe earthquake in January, the approval rating of Prime Minister Tomiichi Murayama plummeted to 39.1% in April. Murayama's grab-bag coalition, dominated by the LDP and his own Social Democratic Party, looks vulnerable. "Murayama is already gone," says Yasunori Sone, a political scientist at Keio University. "He's a lame duck." However, the rival New Frontier Party, formed by LDP defector Ichiro Ozawa, hasn't shown much appeal with voters, either.

With a general election likely late this year or in early 1996, the probusiness LDP will probably maintain control of any new government. That means the next Prime Minister may well come from the LDP's ranks. Hashimoto is on the short list, as is Foreign Minister Yohei Kono, who warned on May 9 that U. S.-Japanese trade ties were getting too "emotional." Both men are representative of a new generation moving into key decision-making posts. Unlike their elders, their perceptions of the U. S. aren't shaped by America's benevolence in the years immediately following World War II.

The son of an occupation-era Cabinet minister—he was a second-grader when the U. S. bombed Japan into submission in 1945—Hashimoto has long viewed America more as a rival than a protector. His early career as an executive of a textile company was deeply influenced by U. S. trade restrictions on Japanese cotton goods in the 1960s. If Hashimoto's political ambitions prevail, Washington will be facing the most assertive Japanese Prime Minister in postwar history.

DON'T BULLDOZE. Hashimoto occasionally shocks American visitors. At a U. S.-Japanese business meeting in February, he lit into Caterpillar Chairman Donald V. Fites when Fites asked if the government shouldn't push Japanese auto dealers to be more open to U. S. goods. Departing from talking points crafted by MITI bureaucrats, Hashimoto said Japan would give in "if you Americans force IBM dealerships to sell Fujitsu and NEC computers," according to one U. S. businessman who attended the affair.

That kind of chutzpah is gaining more currency in a Japan that is edgy about its economy and less worried about offending the U. S. "The best that we can do for relations right now is to get the trade dispute over with," frets U. S. Ambassador to Japan Walter F. Mondale. If Hashimoto rises to the top, however, Washington may find that it faces a leader who has a taste for settling old scores.

By Brian Bremner in Tokyo

OBODY SAW HE YIELD SIGNS

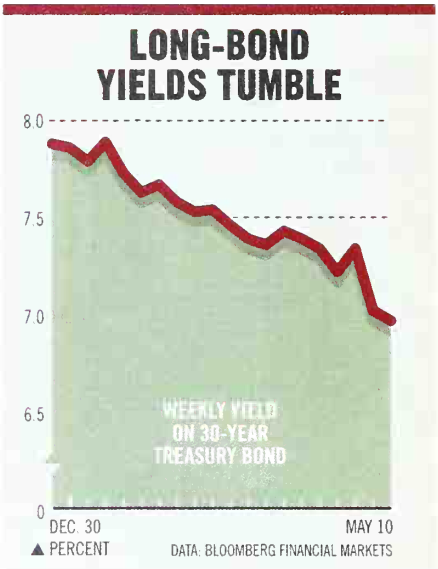
hy the startling bond rally caught Wall Street off guard

A bad case of whiplash. That's about the only way to describe what government-bond traders have expe- enced since the beginning of May. In st six trading sessions, 30-year Treas- y bonds rallied almost half a percent- e point before stalling on May 10. at move sent the yield of long bonds wn to about 7%, its lowest level in ore than a year. Between furious uts of trading, flummoxed traders ied to make sense of a dramatic move at few had forecast.

What caused the out-face in market ntiment? Weaker- an-expected auto les, retail sales, and nployment numbers e the main factors. ch signs of economic owdown all but wiped it inflation fears. "Re- ession, recession, re- ession: That's the buzz- ord [on the trading oor]," says Chicago oard of Trade Chair- an Patrick H. Arbor.

Few trading houses nd banks will admit to aking a hit, but trad- rs say many firms, in- luding some primary ealers of government ecurities, were short- ng Treasuries as re- ently as May 3. Then ame April's employ- ent report, released n May 5. Its higher-than-expected job- ess figures sent investors scrambling to over short positions. "You could see a t of what you'd almost call panic buy- ng," says Arbor.

The severity and swiftness of the ove in bonds was largely unexpected. aniel J. Callahan, head of government ecurities at PaineWebber Inc., calls it one of the most startling rallies the arket has seen in a long time." In- eed, since Jan. 1, the long rate has fal- en about one percentage point. Eco- omic fundamentals can explain the ownward direction, but Callahan ties he magnitude of the move to foreign entral banks buying dollars—more than 40 billion so far this year—and put- ing money into two-year notes.



DATA: BLOOMBERG FINANCIAL MARKETS

> Downward pressure on Treasury yields was expected. The severity and swiftness of the drop was not

The Bank of Japan has been a big buyer, says Alfred Kingon, head of investment firm Kingon International and former U. S. ambassador to the European Community. To keep the yen from bouncing higher, "they're buying our bonds, driving the market up, and stabilizing the dollar for the short-term," he says. Traders betting the Japanese support plan would fizzle took big short positions in notes, says Leslie Rosenthal of Chicago trading firm Rosenthal-Collins Group: "Guys were waiting for Japan to dump."

That's just one reason for all the action in Treasuries. "There is significantly less corporate issuance in the world, because corporations need less money," says Peter G. Hirsch, head of the government desk at Salomon Brothers Inc. Also, fewer mortgage securities are being created. Such a shortage of paper makes Treasuries all the more alluring.

WHY NO CHEERS? A rush out of mortgage-backed securities also contributed to the incredible shrinking Treasury yield. If the Fed were to lower rates to stave off a recession, prepayments on mortgages would speed up. That scenario has money managers and investors seeking noncallable paper to lengthen the duration of their portfolios. That means buying more government bonds.

Why aren't the Wall Street firms raking in the bucks and cheering this decline in rates the way they did in 1993? True, investment houses have an inventory of bonds, and their fortunes improve anytime interest rates go down. But this time, inventories of Treasury bonds were probably too thin to yield any significant profits. "Some traders may have been bullish on bonds, but after being kicked in the head by last year's bond market, they probably didn't have the courage of their convictions," says Joel Unger, a partner in New York investment management firm Stralem & Co.

Where do rates go from here? Naturally, a lot depends on how sharply the economy slows and how the Fed reacts. "The market is implicitly forecasting that the Fed will ease by 50 basis points in the next six months," says the head of fixed-income trading at a major investment house. He regards that possibility as "highly unlikely." Salomon's Hirsch agrees that rates could go back up. He thinks that the market is ahead of itself, being driven more by technical factors than fundamentals.

Still, recession fears may keep the pressure on yields for the next few months. In the longer term, Unger is willing to forecast that yields could fall to less than 5% "if it appears that we're on a path toward a balanced budget." If so, bond markets could remain turbulent for some time. Traders, beware of whiplash.

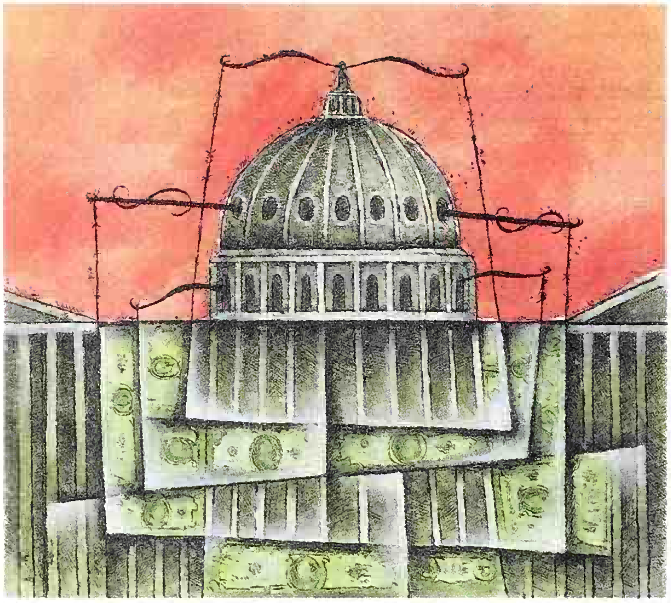
THE ECONOMY

BIG GOVERNMENT READS ITS OWN OBITUARY

Even watered-down GOP budget cuts would rock Washington



Ever since their landslide election last November, congressional Republicans have vowed to bring a revolution to Washington. Now, stepping beyond the slogans, they have begun to show the public just what their vision will mean. On May 9-10, the GOP-controlled House and Senate Budget Committees unveiled fiscal agendas that not only propose to balance the budget but would profoundly restructure government.

Medicare would be overhauled to slow spiraling costs. Medicaid and welfare would be cut and turned over to the states. Funds for national parks, federal law enforcement, highway and mass-transit building, environmental protection, and export incentives would be slashed. The Senate panel would kill more than 100 programs and agencies, including the Commerce Dept., while the House would ax more than 300.

Even Social Security—which the GOP pledged to leave unscathed—would take a modest hit, though it would come through the back door. By proposing to lower the official measure of inflation, the House Budget panel would reduce annual cost-of-living increases for retirees.

BUSINESS UNSPARED. Ultimately, the GOP would dismantle many of the corporate subsidies they created, as well as the social safety net built by Democrats. "You're talking about the biggest structural change of our government in decades," says Steven E. Schier, a political scientist at Carleton College in Northfield, Minn. Adds House Budget Committee Chairman John R. Kasich (R-Ohio): "We're about a revolution in this town."

The GOP leadership has a long way to go before the spending targets produced by the budget panels actually become law. Their ambitious blueprints will be under tremendous pressure from Democrats and from traditional GOP constituents—farmers upset over cuts in crop supports, veterans angered by curbs on benefits, and corporate executives who don't want to lose their business subsidies. "Republicans are going to take incredible political heat for the next nine months," says Stephen Moore, director of fiscal policy studies at the libertarian Cato Institute. "They're going to have to have the fortitude to pass a budget that's going to be very unpopular."

Ultimately, indeed, there is little chance that spending cuts of the magnitude of those proposed by the House Budget panel—slashing $1.4 trillion fr
spending in seven years—will be ena
ed. Even if such a plan made it to t
White House, President Clinton wo
never sign it. But the Administrat

nilies receive some government cash or kind benefits. Overall spending for the st of government—discretionary pro- ams ranging from Amtrak to job train- —would be 12% less than today and % lower after inflation.

All these cuts, though, send a potent essage: The GOP has drawn a stun- ng contrast to Clinton. Elected in 1992 the candidate of change, he has now become a symbol of the status quo. Where the GOP would demolish, Clinton would do a little remodeling.

Who will the public back? To the GOP's critics, the draconian budget plans are destructive. "This is antigovernment," says Robert Shapiro, vice-president of the moderate Democratic Progressive Policy Institute. He argues that voters want Washington to act as an "efficient and effective partner" but they don't want to give up their benefits. Cato's Moore, a frequent adviser to Republicans, counters: "I hope what they want is substantially less government." Want it or not, by 1996, that likely is what the public will get.

COMMENTARY

By Aaron Bernstein

THE CPI: WHY POLITICIANS SHOULD BUTT OUT

It has become a familiar refrain in recent months. Federal Reserve Chairman Alan Greenspan and other economists have argued that the consumer price index should be lowered because it overstates inflation—a position that delights budget-whacking politicians on Capitol Hill. Because Social Security benefits and tax thresholds rise with the CPI, lowering the index would therefore cut automatic increases in government spending and raise taxes. Indeed, a new budget proposal by House Republicans contains $52 billion in spending cuts and tax hikes over four years on the assumption that the Bureau of Labor Statistics will reduce the index.

An easy fix, yes—but a bad idea. The reason: The CPI understates inflation as well as overstates it, other economists say. And no one is yet sure of the net result.

HIDDEN HIKE. Arcane as this debate may seem, it has a huge effect on all sorts of Americans. The CPI is used to set federal tax-bracket thresholds, personal exemptions, and the earned-income tax credit. A lower index would reduce exemptions, push more taxpayers into higher brackets, and make others ineligible for the credit—creating a hidden tax hike. Social Security, food stamps, and pensions for federal workers also would be pinched. A 0.5% CPI cut would cost the average Social Security recipient a total of $2,700 over 10 years, figures David Certner, an economist at the American Association of Retired Persons.

Economists have struggled with CPI distortions for decades. Every month, the BLS surveys 25,000 retail outlets to collect prices for some 95,000 goods and services. Measuring the posted price is easy. But the BLS also tries to discount portions of price hikes that reflect improved quality. Drawing that line is no easy task. Critics say the CPI undervalues many quality gains, such as drugs with fewer side effects or cars that need less repair work. Overall, inflation may be exaggerated by 0.5% to 1.5% a year, say Greenspan and some private economists.

But many mismeasurement problems run the other way, too. For instance, the BLS considers federally mandated smog-control devices for autos a consumer benefit, so their cost isn't counted in the CPI. But the CPI is designed to measure what individuals buy, not social benefits such as cleaner air. The index would have climbed nearly 0.1% a year faster since 1967 if it included what auto buyers spent on smog control, the BLS says. "If people scrutinized the CPI for downward biases with the same intensity that they do for upward ones, I'm sure you'd find the same size biases," says Daniel J. B. Mitchell, a labor economist at the University of California at Los Angeles. "The political incentives are to find only the upward ones."

QUICK FIX. Changing the CPI would just sow confusion. Companies and unions use it in private contracts, which might then have to be changed. And the markets—as well as the Federal Reserve—make decisions about the economy based on CPI-adjusted wages, productivity, and gross domestic product growth. If the CPI truly does overstate inflation, a good argument can then be made that Greenspan probably has pushed interest rates higher than is necessary to meet an overstated threat.

Given what's at stake, the best response is to keep politics out of the debate and let BLS economists deal with the issue. They've already responded to complaints of inaccuracy. In January, the bureau changed the way items surveyed for the index are sampled to adjust for a weighting bias it had found.

The BLS is engaged in a long-term review of the CPI that likely will bring more changes. That may not satisfy Washington politicians hungry for a quick budget remedy. But it sure beats turning a statistical battle into a political one.

Aaron Bernstein covers the workplace.

PLAYTIME'S OVER Today's children will eventually pay big taxes for small entitlements. The beneficiaries? Baby boomers

GOVERNMENT

VICTIMS OF THE GOLDEN YEARS

Are kids shortchanged as seniors reap vast federal benefits?

To a lot of people, the Republican blueprints for balancing the federal budget over seven years portend a major sacrifice for older Americans. Headline writers, the health-care industry, and seniors' lobbies have focused mostly on proposed cuts in Medicare, the $178 billion health-care program for 34 million elderly.

In reality, though, the cuts may strike just as deep at the other end of the age spectrum. What's striking about the GOP's budget plans is that they do nothing to alter two major trends of the past two decades: the growing imbalance of federal spending on the elderly at the expense of the young, and the increasing poverty rates for children (chart).

Despite GOP rhetoric, seniors suffer relatively mild cuts under the new budget plans. Social Security, the $350 billion retirement program, is left almost untouched. Even Medicare spending will still be allowed to balloon to $283 billion by 2002. That's an annual growth rate of 6.9%, more than double the expected rate of consumer inflation. Federal retirement plan increases remain unchanged.

Much of the elderly's recent gain in wealth has been derived from federal programs that transfer money from young to old. Current U. S. spending on those 65 and older totals $600 billion, more than a third of the $1.6 trillion federal budget and four times as much as is spent on those under 25. Social Security and Medicare cost $15,387 per senior, while combined local, state, and federal spending on elementary and secondary education accounts for just $6,675 per child.

Under the GOP's budget, spending on education and welfare would be cut; the House plan would eliminate the Department of Education entirely. "We are underinvesting in our kids, while feeling obligated to retain our benefits to older people," laments Douglas W. Nelson, executive director of the Annie E. Casey Foundation, which tracks the economic status of U. S. children.

Even if all GOP cuts were adopted, programs for the elderly would still grow far more rapidly than any other segment of the budget. For the average couple retiring today, total health benefits alone are worth $230,000 in constant dollars, up from $65,000 in 1970. By 2010, as baby boomers begin to retire, the benefits under current law will be worth $350,000. The GOP plan would slow but not eliminate the growing imbalance.

Poor children and their parents won't see much relief from income tax cuts in the House version of the GOP proposals, either. That's because federal programs for the elderly are financed by a highly regressive 15.3% payroll tax levied on the first dollar in wages. This tax, which none of the Republican plans address, falls most heavily on the working poor and indirectly on poor kids, whose numbers have exploded in the wake of the single-parent-family boom and 20 years of declining wages among young fathers without college degrees.

The purchasing power of young families has declined, too, even as the wealth of the elderly has increased. In the early 1960's, the average consumption of 70-year-olds was 71% of the corresponding consumption of 30-year-olds. By the late 1980's, it was 118%.

GENERATION GAP. When today's children grow up, things won't necessarily improve. That's because their "generational tax burden"—the excess of taxes paid over entitlements received—is likely to rise sharply to help support the boomers. The vast majority of today's seniors will reap far more in government benefits than they paid in payroll taxes. But men who turned 40 in 1992 can expect to pay 34% more than they will receive in transfer benefits, according to Boston economist Laurence J. Kotlikoff.

Of course, eliminating the federal budget deficit, as the GOP promises to do, will help today's youth by not adding to their debt burden. But here, too, the GOP plan falls short, for it depends on continued borrowing from the Social Security trust funds to produce a balance on paper. When today's baby boomers begin hitting the shuffleboard courts around 2010, the trust funds will contain a massive $1.3 trillion worth of IOUs as a result of this borrowing. Guess which generation will be handed the bill?

THE BEST-RATED UNIX® SYSTEM.

(OH NO, NOT ANOTHER ONE.)

Recently, IBM was awarded best-rated UNIX system by a noted consultant, D.H. Brown.

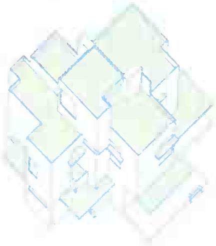
Now we're as proud as anyone to be ranked No. 1, but we can't help but notice that other companies are being ranked No. 1, too. And proudly telling the world.

Which raises a pesky question: If everybody can be ranked No. 1, what should you look for in a UNIX partner?

Good point.

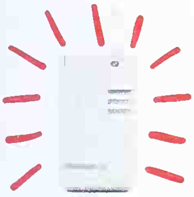
We suggest you look at a number of things. The operating system. Range of applications. Depth of experience in enterprise computing.

And perhaps, above all, the ability to run your company using the different computers and platforms you already have in place.



Over 10,000 programs from design to data mining.

Something that, you may have guessed, we're no strangers to at IBM. In fact, at the last Enterprise Management Summit, IBM surpassed all other vendors in systems and network management. On top of that, our RISC System/6000® and its UNIX operating system, AIX,® connect to all hardware systems, including HP,® Sun,® DEC® and PC LANs, so you'll be able to keep working with your existing business computers.



RS/6000 is a leader in UNIX midrange sales.

What's more, RS/6000® products extend from notebooks to high-performance parallel computers, so your investment is protected as your business needs grow. As for software, with over 10,000 commercial and technical applications, your network can run everything from engineering to accounting to major databases.

Not surprisingly, when Kodak Japan needed a UNIX system that could deliver faster same-day service and would scale from their smallest warehouse to the largest, they went with RS/6000.

RS/6000 keeps United Airlines flying on time.

And when United Airlines system aircraft maintenance controllers needed to access critical information instantly and communicate it to a fleet of 550 airplanes, they chose RS/6000 to keep them connected.

The UNIX platform is a very powerful tool. And with our proven RS/6000 system running on AIX, there are hundreds of ways it can help your business stay competitive.

We'll be glad to show you how. Call us at 1 800 IBM-3333, ext. FA116. Or, if you're on the Net, visit our Home Page at http://www.ibm.com. And see for yourself how we stack up.

IBM®

10/94 D.H. Brown Report "UNIX Matures": IBM AIX 4.1. International Data Corporation (IDC) ranks IBM as a leader in 1994 Worldwide UNIX Midrange Systems Revenue. MARKETING

SCOTT ROLLS OUT A RISKY STRATEGY

It could revitalize its brands–or confuse consumers

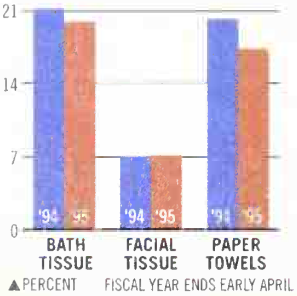
‘Everything but your family and your dogs in this world is for sale at the right price,” Chief Executive Albert J. Dunlap told Scott shareholders on Apr. 18. Whoa: Scott Paper Co. for sale? Dunlap did nothing to dispel the acquisition rumors. On May 1, he announced he would sell extensive timberland and pulp operations. With all this coming on top of massive cost-cutting moves, says a top rival executive in Europe: “[Dunlap] may be polishing up the company to show it off to potential buyers.”

Could be, but if Dunlap is out to sell Scott Paper, he has a fall-back strategy. Dunlap also has replaced much of its top management with savvy industry veterans from the likes of Coca-Cola Co. and Kimberly-Clark Corp. The new team is rethinking Scott's entire marketing approach. It will roll out new packaging and products in June. Says Richard R. Nicolosi, a former Procter & Gamble Co. vice-president who is now Scott's senior vice-president for worldwide consumer products: “We are talking about a revolution.”

LOGO LAUNCH. Scott needs fixing. After a surge that more than doubled its value, to better than $91 a share, Scott's stock lately has settled in under $90. Even takeover rumors haven't given it a boost. Dunlap's 13 months of cost-slashing have hiked profits, but market share is faltering (chart). In the year ended Apr. 2, Scott's bath-tissue sales in key U.S. markets slipped nearly 1%, to $592.6 million, according to market-tracker Information Resources Inc. In paper towels, Scott lost some 5.2% in sales, to $324.8 million.

PAPER TIGER?

SCOTT'S MARKET SHARE WITH FOOD AND DRUGSTORES AND MASS MERCHANDISERS



▲PERCENT FISCAL YEAR ENDS EARLY APRIL

DATA: INFORMATION RESOURCES INC.

Scott's new marketing blitz could revitalize its brands—or just confuse consumers. Some fault Dunlap's plans to use the Scott name and logos on several product lines. “This guy should study history more closely,” says independent marketing strategist Jack Trout. “You've got to have focus. If you have a lot of Scotts, it doesn't mean anything.”

Indeed, Scott is turning time-tested consumer marketing theory on its head. “ScotTowels” now are called “Scott Clean.” “ScotTissue” becomes “Scott 1000.” A breezy blue logo on both bath tissue and towels replaces the distinctive—if tired—brand packaging.

The changes come at a time when potent rival brand names are stealing Scott's thunder. P&G's industry-leading Bounty helped the company achieve a 20.8% sales gain in paper towels last year, and James River's Brawny recently eclipsed ScotTowels, the perennial No. 2 brand. “We're just starting to threaten them now,” says Michael A. Linton, a top exec with James River Corp.

Is CEO Dunlap “polishing up the company to show it off to potential buyers”?

Dunlap is betting that unifying the Scott name will help its products stand out. At the same time, Scott's marketers are trying to expand the brand franchises for Cottonelle tissues and Viva towels. They're adding baking soda and moisture, for instance, to the Cottonelle line, dubbing the product an “advanced personal hygiene” system. And the Viva name is replacing Scott on a line of hardy scrub cloths.

Scott's overseas strategy is even riskier. Its Andrex bath tissue is a top-seller in Britain, for instance. But Dunlap plans to phase the name out. He'll do the same with local brand names in the 80 foreign countries where Scott garners some 45% of its $3.6 billion in sales. His argument: Coca-Cola commands respect the world over, and so does Scott. Says Dunlap: “I truly believe the greatest name of [our brand names] is Scott.”

Taking chances with a healthy fra chise such as Andrex worries some e perts. True, the brand consolidati would save money. Scott plans to shu ter some European factories. But, fre Michael Peters of Identica Ltd., a Bri ish marketing consultant: “Andrex h such good vibes in this country. It is shame...they want to dilute it.”

Dunlap argues that global brandin which will allow for common advertisi messages around the world, will prov to be more important than local sent ment for brands. He also contends th the new strategy marks the end Phase One of his turnaround of Scot “We are out of the restructuring bus ness, and we're in the building bus ness,” he says. And if that doesn't worl he can always fall back on another stra egy: Find a buyer.

By Joseph Weber in Philadelphi with Paula Dwyer in London

GAS PAINS: *Hess is suffering from weak prices at the pump*

EXECUTIVE SUITE

A NEW HESS HELMING HESS

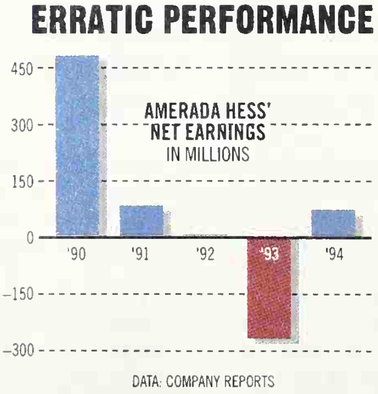
They say the new CEO is a "quick study." He'll have to be

When John B. Hess got married 10 years ago, he made an unusual choice for best man: his father. Friends saw it as another sign of how arge Leon Hess, longtime head of Amerada Hess Corp., looms in his son's ife. But now that John, 40, has taken the chief executive's post from his 81-year-old dad, oil-patch executives wonder whether young Hess will remain in Leon's very long shadow.

Tapped on May 3 to take the chairman and CEO's post at the family-controlled company, John Hess probably still will deal a lot with Dad. The tough-minded oilman who built Hess from a tiny home-heating concern into a global oil company still controls 12.9% of Hess stock, compared with his son's 1.7%. He continues to chair the board's executive committee. And although Leon is giving up the corner office in Hess's New York City headquarters, he's still likely to come by daily. Says Eugene L. Nowak, oil analyst with Dean Witter Reynolds Inc.: "Leon is not going to fade away."

MODEST REBOUND. That could be a problem, since change may be what Amerada Hess needs. The company has been struggling with erratic sales and profits for the last five years. Hess showed a $268.2 million loss in 1993, as sales dipped to $5.9 billion. Last year's rebound was modest: a $73.7 million net on $6.7 billion in sales (chart). In 1995's opening quarter, Hess earned just $25.2 million on $1.98 billion in sales, down from last year's $83.7 million gain on sales of $1.87 billion.

John Hess, who pumped gas as a youngster at Hess stations, is expected to seek more solid footing. A 1977 Harvard University MBA graduate, he has already done a six-month study aimed at boosting profits. Soon he'll implement changes, a Hess spokesman says. He'll likely call for aggressive cuts in $3.7 billion in debt left over from a costly three-year capital-spending program. Both Hesses declined to be interviewed.



ERRATIC PERFORMANCE

DATA: COMPANY REPORTS

Hess may have to proceed carefully, if he wants to undo moves by his father that have depressed earnings. For instance, he may seek partners to help shoulder the cost of Hess's giant Virgin Islands refinery. The facility, recently upgraded for about $1 billion, is the pride of the elder Hess. But it has suffered from weak gasoline prices. Grouses one investment manager who is steering clear of Hess stock: "They dumped a lot of money on St. Croix, which turned out to be a bad investment."

Friends call John Hess a quick study. As senior executive vice-president, he has overseen exploration and production operations, helping develop fields in Canada and the Gulf of Mexico. Although unschooled in geology, he's as conversant with oil-field science as staffers, associates say. David F. Chavenson, a Harvard classmate and treasurer of a Hess joint-venture partner, Oryx Energy Co., describes Hess as "very thorough, very smart."

John Hess has slogged around foreign oil fields with his father since he was 7. Fluent in Arabic and Farsi, he studied in Beirut as a Harvard undergraduate and later grew close to some Middle Eastern oil ministers. At B-school, he played down his moneyed background. "John doesn't jump off the page at you. He's very thoughtful," says Lorillard Inc. Chief Andrew H. Tisch, another former classmate and frequent tennis partner.

STRONG HAND. Young Hess shares his father's passion for the family business, working the same long hours. And like his father, who owns the New York Jets, he leaves coaching to the pros, even though he regularly attends home games. "Neither one of them has ever sent in a play," says Jets President Steven L. Guttman. But he's always deferential to his father. One analyst recalls him obliging Leon's request at one meeting to fetch Cuban cigars for visitors.

If Amerada Hess is to put some better numbers on the board, young Hess may have to play a stronger hand with his father. Leon Hess routinely deferred to his own father, Mores, the company founder who stayed on the job until his death at age 92 in 1965. Each morning, Leon brought his father the checks to sign. That, at least, is one task John Hess may be spared.

DEALS

TWO FOR THE I-WAY

News Corp. and MCI shake on a $2 billion multimedia deal

Rupert Murdoch is on a roll. In early May, he announced that his News Corp. had notched up $220 million in pretax profits for the third quarter, a hefty 20% gain. On May 4, the Federal Communications Commission O. K.'d Australia-based News Corp.'s ownership of Fox Broadcasting Co. The next day, he hopped on a plane to Los Angeles, where he shook hands with MCI Communications Corp. Chairman Bert C. Roberts Jr. to cement a deal that stunned the communications world: a 50-50 joint venture designed to put the companies on the leading edge of the multimedia revolution.

As part of the deal, announced on May 10, MCI agreed to invest up to $2 billion for a 13% stake in News Corp. The deal has significance well beyond the money involved, though: The venture aims to meld MCI's high-tech distribution network and sophisticated billing systems with News Corp.'s vast supply of movies, TV shows, and newsgathering capability. Neither company will discuss specific plans, but both acknowledge their intent to distribute information, education, entertainment programming, and new pay services around the globe. Says Murdoch: "Both companies understand how the market is changing."

PARTNERS: *Murdoch's programming and Roberts' distribution could be a monster*

FEARFUL SYNERGY. Talks between Murdoch and Roberts began last fall. Over the course of several informal meetings at industry gatherings, the two executives saw that their companies had complementary skills and cultu For MCI, the combinati builds on its efforts to diver fy away from the commod long-distance industry and i content-oriented business with high profit margins. L year, it began selling its o software program and n services for the Internet. A in March, the company nounced a venture with t Public Broadcasting Serv to develop and distribute el tronic information.

The tie with Murdoch h the potential to take M much further along the Way than any of those deals. Pote tial rivals recognize that. "MCI doesn bother me," says Tele-Communicatio Inc. Chairman John C. Malone. "B Murdoch scares me to death." A British Telecom PLC, MCI's large shareholder, is thrilled. "The opport nities are limitless," gushes spokesm Ted Graham. With profits up, the F imbroglio over, and a big multimed deal in hand, Rupert Murdoch could agree more.

By Mark Lewyn in Washington, wi Ron Grover in Dallas and Pau Dwyer in London

COSMETICS

AU NATUREL? AU CONTRAIRE

A more glamorous look is reviving cosmetics sales

Shopping for makeup on Chicago's Michigan Avenue, Sebrena Coleman gives her usual dark-brown lipstick the go-by. This May afternoon, she wants a brighter, redder lipstick and blush, plus a new foundation. "I'm tired of the same old look," says the fortyish Coleman, who is on a business trip for the Louisiana Dept. of Revenue. "I've always been a blend-in person. Now I'm willing to make a statement."

Amen to that, say cosmetic companies. Makeup sales have been drab since 1989, when the natural look came to the fore. Now, many fashion executives say, a glamorous, more colorful look is making a comeback. Reds and coral shades are in; browns and taupes are becoming passé. Some forecasters even predict baby-blue eye shadow could become popular again. "There's definitely a return to pretty, clear colors," says Kat James, a model and makeup specialist for Maybelline Inc. "We've missed color for so long it's something that is going to endure several seasons."

STAR POWER

Hollywood can set makeup trends: In the '40s, well-painted Hedy Lamarr was an icon

MASS APPEAL. The net result: Makeup sales are definitely picking up. Mass-market cosmetic sales rose 3% through Apr. 15 vs. a 5% increase for all of 1994. Colorful items are doing even better: Lipstick and eye shadow sale have each jumped 5%, accor ing to A. C. Nielsen Co. Bon ta Austin, a Prudential Secu ities Inc. analyst, predicts tha mass-market makeup comp nies, including Maybellin Revlon, and L'Oréal, as we as Procter & Gamble Co. Cover Girl and Max Fact lines, will get a sales boost.

Why the switch? The natu ral look has been around f five years—eternity in th fashion world. Also, Hollywood actresses such as Sharon Ston are reviving the glamorous "starlet" image. "The 1990s have been duller tha dishwater," says Allan Mottus, publishe of *The Informationist*, a beauty bi newsletter. "People are looking for something that will bounce out at them."

The new look likely won't go as far a the stark color contrasts of Hedy Lamarr and other 1940s icons of glamou Improved milling technology has mad blushes and eye shadows more translu cent than they were then, so women ca use more color without looking too made up, says Maybelline Executive Vice-President Cathy Wills. Better tell Madonna.

INDUSTRIES

FULL-FLAVORED, UNFILTERED STATEHOUSE SHENANIGANS

Big Tobacco's big bucks can still turn antismoking laws around

Near midnight on May 5, two dozen lobbyists—the Tobacco Team—gazed at the TV monitor in the rotunda of the Florida state legislature. They watched in silence as votes were tallied on a proposed repeal of a law that had paved the way for the state's suit to recover $4.4 billion in smoking-related Medicaid costs from the cigarette industry. As soon as the landslide vote in favor of repeal was announced, the lobbyists erupted in high fives and back-slapping. "It was a big night for us," Philip Morris Cos. lobbyist John French says with a grin. "I felt like I finally got the monkey off my back."

The monkey really never had a chance. Ever since Governor Lawton Chiles slipped the cigarette amendment into an otherwise innocuous Medicaid bill in the waning hours of the 1994 session, an incensed tobacco industry had been on the warpath seeking its repeal. The industry relied on its traditional strengths: money, power, and influence. The combination worked once again—proof that tobacco makers are far from vanquished by negative public opinion and antismoking legislation.

PALM BEACH STORY. Indeed, a year after state-initiated Medicaid suits such as Florida's started appearing, the tobacco industry is fighting back with a vengeance, building on its decades of highly effective statehouse lobbying and courtroom maneuvering. And while it could take years to resolve the state cases now pending (table), the industry has again demonstrated its durability.

Until the legislative appeal, Florida's suit, filed in a Palm Beach court last January, had appeared the strongest. Chiles had crafted an amendment designed specifically to deny the cigarette industry several of its tried-and-true legal defenses. Manufacturers would be prevented from arguing that consumers willingly assumed the risk of smoking; the state, meanwhile, would be able to establish a statistical connection, rather than a direct causal link, between smoking and health problems.

TOBACCO'S BATTLEFIELD

Major pending state cases against the tobacco industry

CALIFORNIA State legislator Richard Katz introduced a Florida-style Medicaid reimbursement bill on Feb. 23. Legislation was tabled in mid-April.

MINNESOTA The state and Blue Cross/Blue Shield filed suit last August seeking recovery of tobacco-related health expenses paid by Medicaid and Blue Cross. The industry wants to disqualify Blue Cross as a plaintiff.

MISSISSIPPI The state, seeking reimbursement of up to $100 million annually in health-care expenses, has won two key procedural victories in court and survived the industry's motions to dismiss.

WEST VIRGINIA In early May, tobacco attorneys persuaded a judge to drop 8 of 10 counts brought by the state, leaving only antitrust and consumer protection claims intact. The state is contemplating appeal.

DATA: BUSINESS WEEK

Ultimately, though, the innovative legal strategy was beaten by politics and big-money. The tobacco camp hired the cream of the Tallahassee lobbying crop—including Jim Krog, the governor's former campaign manager. Signing up new troops from across Florida and as far away as Washington, a contingent of more than 50 strong descended on lawmakers and editorial boards.

By conservative estimates, the indu
try spent no less than $750,000 on t
repeal campaign; it gave $121,500
campaign funds to the lawmakers in t
Republican-dominated legislature,
cording to Florida Legislative Report
Inc., which tracks contributions. Mea
while, it enlisted as an ally Associat
Industries of Florida Inc., a 6,000-me
ber trade group that filed suit to ch
lenge the state law's constitutionali
That suit still is pending.

BAD OMEN. In West Virginia, mea
while, a state judge on May 3 thre
out 8 of Attorney General Darrell
McGraw Jr.'s 10 counts against tobac
makers. McGraw had sued in Septe
ber, 1994, seeking about $1 billion
Medicaid costs. He sa
he will appeal the judg
decision. But the rul
is a bad omen for of
cials in other state
whose cases rest on t
same legal rationale: th
as innocent third partie
states have unfairly be
stuck with the cost
treating tobacco-relate
illnesses of poor and in
gent patients.

The innocent-victi
argument may be th
weakest part of the ca
es, argue tobacco atto
neys. They expect to us
the legal theory of subr
gation, which holds th
third parties can colle
damages only if the vi
tim could have collecte
on his own. So far, "n
[victim] has been able t
do that," asserts Danie
W. Donahue, deputy gen
eral counsel for R.J
Reynolds Tobacco Co.
Mississippi judge rejecte
such reasoning in a Feb
ruary decision. Still, th
Florida law, which essen
tially outlawed the subro
gation defense, was criti
cal, concedes W. Dexter Douglass
Chiles' general counsel. Without the law
"it's not nearly as certain a lawsuit."

The fight, clearly, is far from over
Governor Chiles has vowed to veto the
Florida repeal. Polls indicate two-thirds
of Floridians favor his law, and he'l
work to lure enough Democratic legislators to avoid an override. But Team Tobacco has staying power. Public opinion is against it. Yet money, and lega
acumen, often talk louder than voters.

By Maria Mallory in Tallahasse

It took seven people to buy this hammer.
The hammer cost $17. Their time cost $100.

We all know that the cost of acquiring maintenance and repair items is too high—often higher than the cost of the item itself.

Grainger can help you cut that cost dramatically. As a matter of fact, we're already doing it for two thirds of the Fortune 100. How? Here are some examples:

We supply thousands of products—broad selections, many lines—enabling you to replace hundreds of suppliers with just one.

With our sophisticated systems, we get your orders to you fast—and error-free.

We can even help you restructure your entire purchasing process to make it more cost-effective. And make your people more productive.

Maybe you should take advantage of our experience and capabilities to make the next step in your cost reduction programs. Call: 1-800-905-3338 ext. 1389.

EDITED BY KEITH H. HAMMONDS

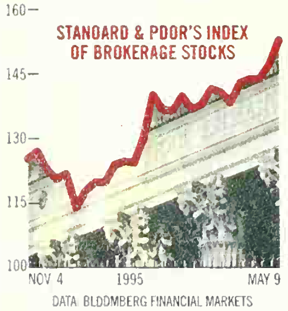
RUMORS OF DOW CORNING'S DEATH . . .

IS THIS THREAT FOR REAL? Dow Corning announced on May 5 that it is "actively considering" filing for bankruptcy-law protection. The chemical maker reported robust first-quarter earnings but noted that escalating legal costs from breast-implant litigation could impair its operations. That is, perhaps, an understatement: A federal judge determined that a $4.2 billion global settlement reached with Dow Corning and other companies last year will not nearly compensate all the women filing claims. Nevertheless, some legal experts think that Dow Corning's bankruptcy warning is merely a bluff meant to cow plaintiffs into settling. Dow Corning has gotten some good news lately, too: On Apr. 24, the government said it had dropped a two-year criminal inquiry related to implants.

CLOSING BELL

SEE A SHADOW?

When bulls stampede on Wall Street, brokerage stocks are usually the first to jump. So it goes in the current equity bull run: Since late last year, Standard & Poor's index of brokerage shares has climbed 38%, more than double the market's gain. The trend isn't completely incidental. Brokerages are sort of the groundhog of Wall Street: Historically, they have started to sputter four to six weeks before the broader market heads south. For now, there's no sign of weakness.



DATA: BLOOMBERG FINANCIAL MARKETS

LIABILITY REFORM'S BIG STEP FORWARD

TIME TO PUT UP A NEW SIGN outside Congress: "GOP-controlled, business-friendly." After 15 years of pushing for changes to the product-liability litigation system, Corporate America has finally achieved a breakthrough: On May 10, the Senate voted 61 to 37 to pass reform legislation. The Senate version, which would limit punitive damages for lawsuits on defective products, actually is less aggressive than the corresponding House legislation. But it may stand a better chance with the White House, which has threatened to veto a broad-ranging law. A House-Senate conference on the bill is expected as early as this summer.

SHE WORKS HARD FOR THE MONEY

THE FACE OF THE FAMILY breadwinner is changing. In a study entitled *Women: The New Providers*, released May 11, 55% of 1,502 employed women surveyed said that they provide half or more of their families' income. Even among employed married women, 48% earn at least as much as their husbands. An additional 24% expect their earnings to provide more financial security for their families over the long term than their partners—a jump of 15 points since 1981. The upshot: "If we care about families, we have to care about women's pay, because women's earnings are directly related to the welfare of families," says Arlene Johnson of the Families & Work Institute.

HEADLINER: GERALD McENTEE

EXIT LANE?

The battle lines have been drawn. On May 9, public employees leader Gerald McEntee announced that an 11-union coalition would select candidates to oppose AFL-CIO President Lane Kirkland when his term expires in October.

For months, McEntee and other opponents have urged Kirkland, 73, to yield to a more aggressive leader. Their top choice: Secretary-Treasurer Thomas Donahue. But Kirkland refused to leave, prompting Donahue on May 5 to retire rather than be caught between his old friend and the reformers. "If Tom had run with Lane, it would have been more difficult for us," says McEntee. "But now Lane stands alone."

The dissidents, who represent almost 50% of the federation's 13.3 million members, likely will push Kirkland from the office he has held since 1979. Among those mentioned to head their slate are machinists leader George Kourpias, mine workers chief Richard Trumka, and service employees head John Sweeney. Says Kourpias: "It would be sad to see Lane end his career in a defeat, but that's a decision he has to make."

By Aaron Bernstein

A FORCED LANDING FOR TWA

THE WEAKEST BUCKLED FIRST. On May 9, financially strapped TWA said it was backing off the $50 cap on travel agent commissions imposed by the industry last February. Under an agreement with the American Society of Travel Agents, TWA will resume paying 10% commissions on all domestic tickets. In return, the carrier will be dropped as a defendant from the agents' antitrust class action. But other airlines, with pockets deeper than TWA's, likely won't follow suit.

KIMBERLY-CLARK QUITS SMOKING

YIELDING TO SHAREHOLDER pressure and the threat of legal liability, Kimberly-Clark announced on May 9 that it would spin off its $404 million tobacco-related businesses. That represents a startling about-face for the maker of Kleenex and Huggies, which had very publicly resisted the move. But months of attacks from activist shareholder groups and customers, including a March letter-writing campaign dubbed "Kleen Out Tobacco From Kimberly-Clark," took their toll. The company will shed its cigarette paper and reconstituted tobacco business. Kimberly-Clark's stock rose 3.3% on the news.

ET CETERA . . .

■ Swiss Bank will pay $1.37 billion for S. G. Warburg's investment banking business.
■ Rubber workers voted to end their 10-month strike at a Bridgestone/Firestone plant.
■ Caterpillar rejected an offer from auto workers to reopen "full-scale" bargaining.
■ W. R. Grace said it likely will sell off its National Medical Care subsidiary.

OWEN ULLMANN

IAYBE EVEN THE GENERAL CAN'T UTFLANK THE TWO-PARTY SYSTEM

was a fleeting moment, but to disgruntled Americans who iew the established political parties as rotten to the core, was sweet. For a few weeks in June, 1992, Texas billion- Ross Perot led Republican incumbent George Bush and nocratic challenger Bill Clinton in the polls.

'erot, of course, went on to talk himself out of a chance for White House. But his legacy—an impressive 19% of the e—inspires backers of a "third force" Presidential bid. ir new champion: retired General Colin L. Powell. Amid ipant cynicism with politics as usual, Powell ‹s tantalizing. He's a war hero, an African erican whose bootstrap rise gives him appeal oss racial lines, a fiscal conservative with lerate social views, and a man untainted by shington's partisan stench.

'here's only one problem with this dream didacy. Powell's odds of winning as an inde- dent or third-party candidate are only slight- etter than Saddam Hussein becoming Emir Kuwait. True, Powell-mania will build this fall he blitzes through a national tour promoting inspirational memoir. But campaign pros ıbt Powell poses a potent threat if he es- ws the party system.

Vhile Americans voice strong support for independent candidacy, they dislike casting test votes. Just ask George Wallace in 1968 John Anderson in 1980. Both were distant ds. "The American mind has two [parties] as a limit," says mocratic pollster Claibourne Darden. "One of the major ties would have to disintegrate first."

Since Powell's stands on the issues are largely camou- ged, the idea of his unbeholden candidacy is more powerful n its reality. He represents a rejection of political career- , ideological extremism, and partisan sniping. Widespread gust with the status quo explains why Powell, with little ganization, wins up to 28% of the vote in three-way matchups with Clinton and Senate Majority Leader Bob Dole (R-Kan.) "Powell has tremendous appeal," admits GOP consultant James H. Lake, an adviser to California Governor Pete Wilson's Presidential campaign.

But history may be an insurmountable barrier. The last time a third party won was when the new Republican Party supplanted the Whigs, and their candidate, Abraham Lincoln, captured the White House in 1860. Since then, only one third-party candidate has even finished second: In 1912, ex-President Theodore Roosevelt, campaigning as a Progressive, got 28% of the vote.

POWELL: *GOP bound?*

MIDDLE GROUND. Perot is flirting with another run, but pollsters believe he peaked in '92. And rights activist Jesse Jackson has hinted he may wage an independent campaign, though his left-leaning base seems too narrow. In contrast, early polls suggest Powell could approach Teddy Roosevelt's numbers. Yet Democrats and Republicans still command the support of at least 30% of the electorate apiece. So Powell would have to win the votes of virtually everyone in the middle to come out on top.

That sobering reality convinces top GOP operative Kenneth M. Duberstein, part of an informal kitchen cabinet of Powell advisers, that longtime independent Powell should run as a Republican—if he runs. Others float his name as a potential GOP Vice-Presidential candidate. But the General remains coy about his intentions.

There is, experts caution, one scenario for an independent winning in '96: The GOP nominates a far-right candidate, and Clinton is hit by new Whitewater bombshells or some other scandal. "Under those circumstances, I can see Powell winning," says Claremont McKenna College political scientist John J. Pitney Jr. Barring that chain of events, Powell, Perot, and other heroes of the third force will remain bigger hits on the lecture circuit than at the ballot box.

CAPITAL WRAPUP

EARISH INDEXED-BOND MARKET

Wall Street may scuttle the Trea- ury Dept.'s plan to issue inflation-in- exed bonds, securities that offer re- urns linked to the inflation rate. Ad- ninistration economists like the idea ecause it might lower the Trea- ury's borrowing costs. But bond ealers—fearful flexible rates would educe the need for trading—appear o have the ear of Treasury Secre- ary Robert E. Rubin, an ex-Wall Street trader who's said to be lean- ng against the idea.

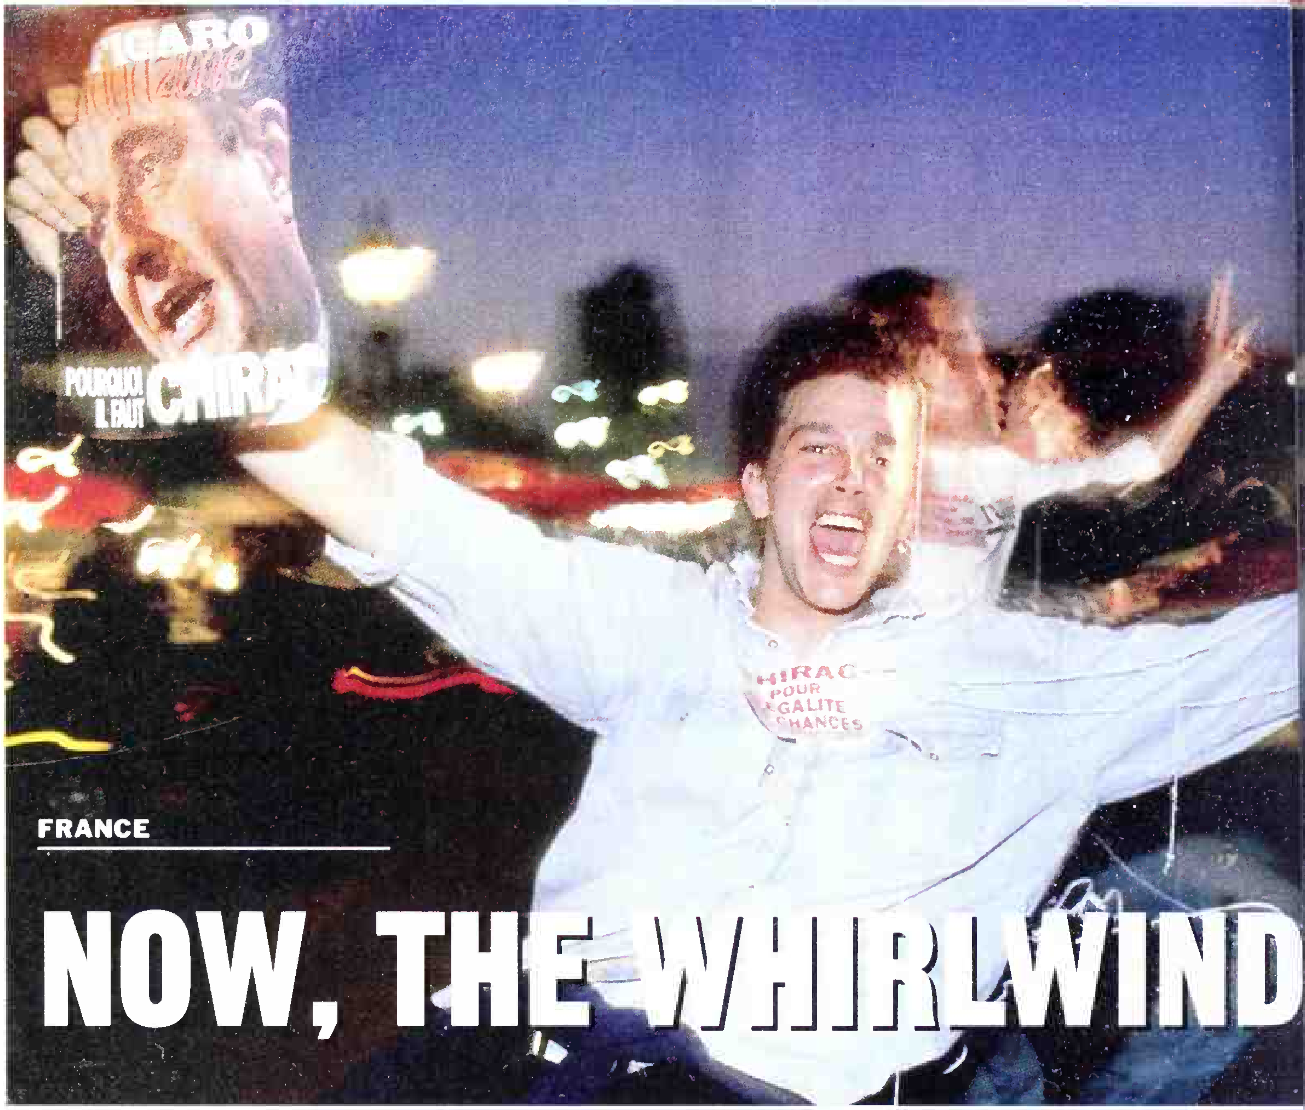
SPECTER'S SLOW START

▶ Senator Arlen Specter (R-Pa.) is the first Jewish GOP Presidential contender. So how's he doing with fellow Jews? Don't ask. Specter trails Senate Majority Leader Bob Dole (R-Kan.) among Jewish Republicans 49% to 10%, according to a May 2-5 poll conducted for the American Israel Public Affairs Committee. The same survey shows Jewish voters favoring President Clinton over Dole by 3 to 1—even wider than Clinton's 1992 margin over George Bush.

TAX-CUT CUTBACK?

▶ Even House Majority Leader Richard K. Armey (R-Tex.), a top tax-cut diehard, is bowing to the inevitable: compromise with the Senate on the massive tax reduction the House approved in April. With polls showing deficit reduction more popular than tax cuts, the Senate is sure to pass a bill less generous than the House's $345 billion seven-year plan. When the two chambers meet over differences, "there may be some latitude" to deal, Armey concedes for the first time.

DENNIS BRACK/BLACK STAR



FRANCE

NOW, THE WHIRLWIND

Chirac's first months will see a barrage of action aimed at cutting joblessness

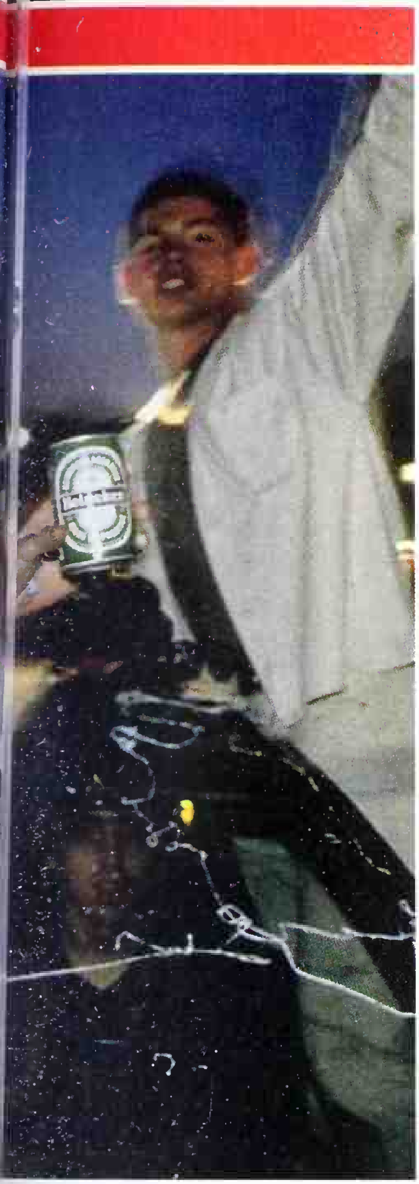
As they sat side by side at a Paris parade marking the end of World War II, the two men evoked distinctly different eras. Ailing, gray-skinned François Mitterrand, 78, who has run France longer than any elected leader in its history, looked like a wizened war veteran applauding the Foreign Legion as it marched down the Champs Elysées. Beside him, Jacques Chirac, tall and trim at 62, seemed the vigorous image of the "deep change" he promises after succeeding Mitterrand as France's President in mid-May.

It's a historic moment for France—the first time a conservative has occupied the Elysée Palace since 1981. Chirac inherits a France torn by record unemployment and a sense of disorientation about its place in global politics. An astute politician who has never articulated a clear philosophy, the new President will move fast to jolt his country out of its despondency. Most likely he will resort to a range of measures. Those include tax breaks, privatization, and pension reforms, as well as more statist tactics such as employment programs and bullying the central bank into lowering interest rates. Says Chirac: "France needs oxygen."

Chirac's first months in office will see a barrage of action, and his choice of top ministers is crucial. For Prime Minister, Chirac's likely pick is Alain Juppé, the outgoing Foreign Minister. A respected technocrat, Juppé is a centrist who would reassure French and foreigners alike. "Juppé is the anchor this administration needs," says Peter Ludlow, director of the Centre for European Policy Studies in Brussels. The likely choice of fre
marketer Alain Madelin as Finance Mi
ister would assure the markets that Ch
rac favors budget reform and furthe
deregulation. More disturbing to outsi
ers would be a top post for National A
sembly President Philippe Séguin, an e
onomic nationalist who led France's figl
against the Maastricht Treaty.

STRIKE THREAT. Creating jobs is all-in
portant for Chirac and his advisers. B
mid-July, a bill to encourage hiring shou
reach parliament, which is 80% controlle
by Chirac's allies. Among other proposal
it should pay companies cash subsidie
for new hires, cut their social securit
contributions, and possibly launch publi
works programs.

Chirac claims he also wants to lighte
the government's heavy hand. "We hav
too many bureaucrats," says the ne
President, who promises to cut the num
ber of Cabinet ministers to a bare mi
imum. Many experts think bureaucrati
meddling limits French competitivenes



PARTY TIME: *Parisians danced in the streets to celebrate Chirac's win*

in global markets. Some French executives are skeptical of his resolve to shrink government, however. The CEO of a large French consumer-products company notes that conservatives have traditionally been more partial to state direction of the economy than the French left. Although Chirac plans to continue privatizing industry, his stated goal is to offset budget deficits rather than boost industrial efficiency.

To win over those who have jobs, Chirac has hinted he'll raise the minimum wage beyond the inflation-pegged annual hike due on July 1. He has been jawboning business to share the wealth of rising profits, arguing this will boost consumer spending. Jacques Calvet, chairman of carmaker Peugeot, wishes the new President would stop such talk. "Wages should be discussed in each company, not forced by government," he complains. "This centralist tradition must be destroyed."

It's the centralist tradition that the unions want to uphold. Long docile, French organized labor mounted a gaggle of preelection strikes—including five walkouts in two months at Air Inter, the domestic airline. Unions promise more actions unless pay packets get fatter. Many observers warn that France's two rounds of presidential balloting may be followed by a "third round"—of workers voting with their feet in the streets.

As he faces pressure to create jobs, Chirac may push the Bank of France to lower short-term interest rates. A cut in rates would surely force the franc down against the German mark, and a weaker currency would boost exports and create some 50,000 jobs, says Paris-based economist Eric Chaney of Morgan Stanley & Co. However, Chirac might have a fight on his hands with the central bank, which won independence only last year and has yet to test its mandate.

LOOSE CANNON? More important, any move by Chirac to weaken the franc will resurrect fears that he is willing to imperil its status as a hard currency whose value moves in lockstep with the mark. "That would be very, very risky," says one senior German official, who warns that higher French interest rates would result. In turn, a crack in the franc would call into question Chirac's commitment to the Franco-German "special relationship" that lies at the heart of the European Union.

Chirac insists he wants to strengthen that relationship, yet he opposes many of Germany's favorite Euro-ideas, including a European Parliament with expanded powers. He would prefer that national governments have a greater say in EU matters. Chirac's personal ambiguity on Europe combined with far-right pressures in his party seem likely to push France closer to British views on maintaining national sovereignty, and away from German federalism.

Many outsiders fear France's new leader may prove a loose cannon on Europe's decks. Mayor of Paris and twice France's Prime Minister, Chirac has a history of changing tack according to the era and the audience. Last fall, he proposed a second French referendum on European monetary union—narrowly approved by voters in 1993. He recanted during the campaign but then seemed to change his mind once more in the final days before the presidential election, again proposing a referendum on European institutions. The shift apparently occurred in the wake of the far right's success in the first-round balloting on Apr. 23, when it won 20% of the vote.

As a Gaullist, Chirac is also heir to a strong nationalistic tradition. A British diplomat in Brussels predicts the new President will have "a harder edge" than Mitterrand in defending France's interests. Not to worry, says Yves-Thibault de Silguy, one of France's two European Commission members and a former aide to conservative Prime Minister Edouard Balladur, whom Chirac trounced in the elections. "Chirac is fundamentally a European" who wants to continue the drive for unity, de Silguy insists.

CHIRAC'S PRESIDENCY

HIS PLAN...

JOB CREATION Look for a two-year suspension of corporate social security taxes plus cash subsidies to hire the long-term unemployed.

LOOSE MONEY Pressure on Bank of France to lower interest rates is now likely. A slightly weaker franc probable.

NEW TAX RATES The 56% marginal rate on individual incomes will be cut. But the value-added tax will probably rise from 18.6% to 20%—"temporarily."

RETREAT FROM EUROPE Job creation gets priority over the single currency. A bid to recoup some powers given to the European Commission should occur.

...AND HIS ADVISERS

ALAIN JUPPE Age 49. Currently Foreign Minister, but the likely Prime Minister for Chirac. A master of tact, he'll favor pro-Europe policies in the Cabinet.

PHILIPPE SEGUIN Age 52. Right-wing president of National Assembly. A Gaullist who favors state intervention in the economy and opposes monetary union.

ALAIN MADELIN Age 49. Minister for small industry. A free-marketer, if made Finance Minister, he would speed privatization and pension reform.

PIERRE LELLOUCHE Age 44. Chirac's city-hall cohort. A possible Foreign Minister, he is pragmatic and outspoken.

DATA: BUSINESS WEEK

For now, Europe will have to take that on faith—just as French voters must hope that Chirac's program will produce genuine change. The markets have already given one sign of confidence: The French franc has not cracked since the presidential election. Now, Chirac must sustain this confidence by proving he can manage a troubled country.

By Stewart Toy in Paris, with Linda Bernier in Brussels and Bill Javetski in Frankfurt

COMMENTARY

By Bill Javetski and John Templeman

WHY EUROPE SHOULD BE BANGING ON JAPAN'S DOOR, TOO

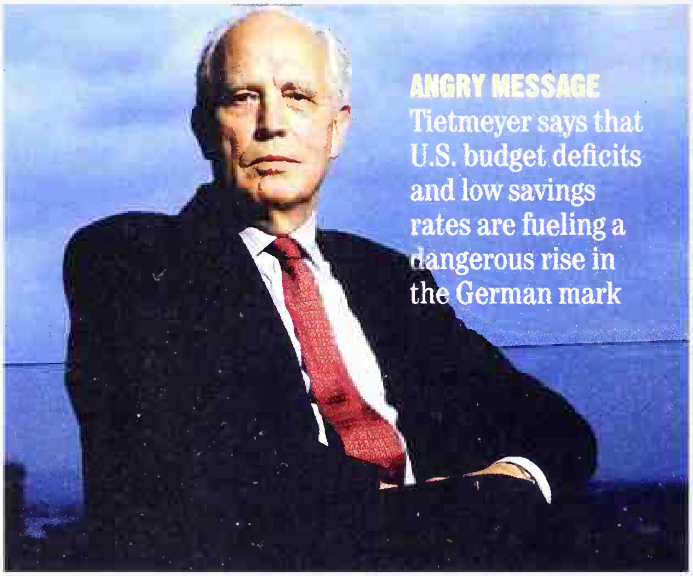
Nobody has ever accused Hans Tietmeyer of being shy. Lately, the president of the German Bundesbank has been even blunter than usual in blaming the Clinton Administration and Congress for the dollar's 13% decline against the German mark since January. For Tietmeyer, the U.S.'s low savings ratio and high budget deficits are fueling the mark's rise and threatening Europe's economic recovery.

There's no doubt that the U.S. needs to get its economic house in order. But Tietmeyer's blast was ill-timed. He should instead have been making common cause with Washington to pressure the Japanese to open their markets and correct their trade imbalance with the world. That's because Japan's trade policy is driving up the mark even as it batters the greenback.

DOWNWARD SPIRAL. Make no mistake, the crossfire between the dollar and the yen is wounding Germany and the rest of Europe. As trade tensions push the dollar to historic lows against the yen, money traders are diving for cover into the world's only other reserve currency—the mark. "If you feel you have to get out of the dollar, where's the alternative?" says Rolf-E. Breuer, a managing director at Deutsche Bank in Frankfurt. "The strength of the mark is the reflection of the dollar-yen struggle."

The rising mark immediately hits the bottom line of German manufacturers like Daimler Benz Aerospace, which has to price its planes and helicopters in dollars while paying its workers in marks. But that's just the beginning of the downward spiral. As global money managers pile into marks, they pull out of weaker European currencies, from the Spanish peseta to the Italian lira to the British pound. That's a double whammy for German exporters, who must then struggle to compete against ever-cheaper products from such European powerhouses as carmakers Fiat and Volvo and British chemical giant Imperial Chemical Industries PLC.

The irony is that the yen-dollar crisis is having a far greater impact on Europe than on the U.S. This currency turmoil will eventually come back to haunt most of Europe in the form of higher inflation. In this chaotic atmosphere, Europe's hopes for monetary union slip further and further into the future. Meanwhile, there is no sign in the U.S. that the falling buck is about to spark a runup in inflation, and American exporters are picking up market share globally.



ANGRY MESSAGE Tietmeyer says that U.S. budget deficits and low savings rates are fueling a dangerous rise in the German mark

Policymakers in the Old World know the Japanese will not voluntarily open their markets enough to bring down the yen and thus halt the mark's rise. "Japan has been in surplus a long time, and there's no likelihood it will reduce the surplus by its own measures," says a senior German official. Some Europeans are already on board with the idea of tougher measures. "It's time to speak up and take action," says Klaus-Peter Müller, a managing director at Commerzbank. "The Japanese are persistent and tough. We need to be the same."

Here's what the Europeans should do. They should lend their voice to the American push for market-opening measures in Japan. Europe's weight in this dispute could be critical in bending Tokyo's bureaucrats to open their economy and resolve currency misalignments. Then the Europeans must be prepared to back up U.S. actions with their own retaliatory tariffs against Japanese autos, auto parts, and electronic components. They should even remind Japan how adept the Europeans can be in slowing imports to a trickle. After all, it was the French who more than a decade ago forced many Japanese products to pass through an inefficient customs post in out-of-the-way Poitiers.

FIGHTING. European leaders have been leery about jumping into what has been a fight between the U.S. and Japan. But this dispute is lurching toward a full-blown trade war that will spare few of the developed economies. Yet European negotiators have so far quietly let the U.S. do the fighting, knowing Europe will benefit from any new barriers to Japanese products in the U.S. as well as any openings in Japan. Already German carmakers such as Mercedes-Benz and BMW foresee sales gains in the U.S. should sanctions block Infiniti and Lexus imports.

The risk is that such noninvolvement lets the Japanese play the Europeans off the Americans. And Tietmeyer's comments about poor U.S. domestic policy encourage the Japanese to claim that Americans have only themselves to blame for the dollar's anemia. Europe's leaders have to change their rhetoric, if only out of self-interest.

Javetski and Templeman cover European economics.

MEXICO

PINATAS ON 18 WHEELS

Truck-jackings in Mexico are way up, outraging U.S. companies

It's happening all too often in Mexico: A trailer-rig packed with hundreds of thousands of dollars' worth of imported U.S. merchandise is pulled over by armed men claiming to be police for a "routine" cargo inspection. The "police" then throw the driver into the trunk of a waiting car. While they drive him around for a couple of hours, accomplices steal the cargo and, sometimes, the truck.

Shippers say truck hijackings in Mexico have skyrocketed since devaluation of the peso last December triggered an economic crisis. This surge in highway crime is a big problem for business because 85% of the trade between the U.S. and Mexico is carried by truck—and traffic is way up, thanks to the North American Free Trade Agreement. The Mexican police say 270 truck hijackings were reported on federal highways alone in 1994, and there were many more on state and local roadways. An estimated several hundred million dollars' worth of goods were lost. "If hijackings continue, they are going to jeopardize the successful entry of some companies into the Mexican market," says John Rodriguez, Levi Strauss & Co.'s security chief for the Western U.S. and Mexico.

Faced with big losses, many companies are beefing up security at their Mexican operations. Sears de México, which has 47 retail stores across the country, brought in former FBI agent James R. Sutton last September to be its security chief. Last year, Sears suffered 49 truck hijackings, losing merchandise worth more than $2 million. In one ill-starred week, Sears lost three trucks to bandits posing as policemen. "We get the double whammy—not only are we targeted when we bring in goods from the U.S., we also get hit when we distribute the merchandise to stores," Sutton says.

The robbers are particularly fond of blue jeans because they can sell them quickly at thriving thieves' markets. The highwaymen are also helping themselves to pricier items, such as CD players, TVs, and computers. Sutton and others say they suspect that crooked customs agents and drivers alert the bad guys to juicy targets.

Insurers are being hit hard. Bruce Healey, an assistant vice-president at insurance broker Marsh & McLennan in Mexico City, says the situation "is bordering on catastrophic." He has handled claims on three stolen shipments worth more than $1.8 million in the last three months. One brazen band of thieves ripped off a truckload of industrial kitchen equipment and then had the nerve to call the affected company to find out how to price the cargo. Shippers say that some insurers have doubled their rates. Others are balking at writing Mexican policies.

In the meantime, security expe
are doing what they can to cut the r
of theft. Sutton has reduced hijacki
to just two in the past two mont
through such measures as doing ba
ground checks on drivers and getti
rid of those with criminal records
other black marks. He's also orderi
drivers to take expensive but safer
highways. Recently, Sutton eliminat
the familiar Sears logo from the sides
many delivery trucks. "We found th

Getting, moving and using information can help you target your promotions to the customers you really want to reach.

If you're like most companies, you've probably got plenty of raw data. What you need are the tools that can turn it into marketable customer information.

One of our clients had their data sitting stovepiped in eight different databases. Sales had one, Marketing had another, and so on. And nobody ever compared notes.

But when we cleansed and combined these stand-alone systems into a single database, and gave them the capability of analyzing detailed customer information, it immediately became apparent to our client that they'd been missing out on major opportunities.

Opportunities to move significantly more product by targeting the right customer with the right product, at the right time, at the right price.

We can help you do all this because we're the company that unites Computing and Communications. So we can GET customer information right from the point of transaction, MOVE it throughout the enterprise, and help you USE it to make decisions that serve your customers better.

Find out what a Customer Focused Solution™ can do for your company. Call 1 800 447-1124, ext. 1039. We'll tell you more.

EDITED BY STANLEY REED

IN MOSCOW, THIN BORSCHT FOR CLINTON

It was a display of militarism Moscow hadn't seen in years. As late-model jet fighters zoomed overhead, tan and green tanks rumbled down nine-lane Kutuzovsky Prospect. There were lots of red flags with hammers and sickles.

The military parade seemed to give a big boost to the morale of a public whose pride has been hurt by the collapse of the Soviet Union and the hardships that followed. When a flight of helicopters thundered above, a plump middle-aged woman called proudly to her young son: "Look, Misha. Ours."

President Bill Clinton was in Moscow for the celebration of the 50th anniversary of the defeat of Adolf Hitler as well as a private session with President Boris N. Yeltsin. This was Clinton's first opportunity to see the more confident but also somewhat more scary Russia that has been taking shape over the past few months. What he encountered was a country that still wants a constructive relationship with the U.S. but is no longer willing to follow Washington's dictates as it did just after the Soviet Union's collapse.

"A WIN-WIN MEETING"? *Not exactly*

APPLEWHITE/AP/WIDE WORLD

MORE ASSERTIVE. What's happening in Moscow is not terribly surprising. Russia lost the Cold War to the U.S. A few years ago, with its economy a shambles, its leaders thought they badly needed U.S. help and had little choice but to heed Uncle Sam. Now, with its economy stabilizing, Russia is once again growing more assertive—as Japan and Germany have in the decades following World War II.

The good news is that there is now much less chance of a total collapse in Russia, with the frightening implications that might have. The bad news is that the Russians are going to throw their weight around in ways that could be troubling or even threatening to the West, as in Chechnya.

Yeltsin did give Clinton some small gifts to take home. He agreed to modify Russia's controversial nuclear reactor de with Iran so as to make it harder for the Islamic republic produce nuclear weapons. He said he would delay transfer the reactors pending a review by a joint U.S.-Russian grou

But Clinton's claim that this was a "win-win meetin seems exaggerated. He did not get Yeltsin to scrap the Ir deal outright. That could prompt U.S. Republicans to move kill some $788 million in aid to Russia. Yeltsin also declined sign off on NATO's admitting former Warsaw Pact countries though he did agree to participate in Cli ton's Partnership for Peace. There's al little sign that Clinton made any headwa in getting Yeltsin to call off his troop in Chechnya.

Yeltsin seemed eerily out of touch. A a joint Kremlin press conference, Yelts told incredulous reporters that in Chec nya "there are no hostilities there, ther is no military there." As he spoke, wi services were reporting that Russian for es were shelling a village southeast Grozny, the Chechen capital.

But the news on the economy wa very positive for Clinton. Privatization thriving. Inflation rates continue thei downward swing, while recovery is a real possibility nex year. Russia is fast developing the sort of regulations and f nancial markets that could underpin an economic power. Say U.S. Treasury Secretary Robert Rubin: "If these things ca be accomplished, the potential for attracting foreign capital i enormous."

There's a chance that Russia's undeniable economic progres will push forward political reform and strengthen foreig links, thus holding Russia's traditionally aggressive tendencie in check. But it's more likely that relations between Russi and the West will be turbulent for the next few years.

By Peter Galuszka, with Patricia Kranz, in Mosco

GLOBAL WRAPUP

QUEBEC'S DEBT MESS

▶ Quebec Finance Minister Jean Campeau, acknowledging that his province's spiraling debts are "a veritable cancer," recently unveiled plans for sharp spending cuts and higher taxes. To some critics, that serves as an indication that Prime Minister Jacques Parizeau can no longer afford—politically or economically—to push secession from Canada.

J. Anthony Boeckh, chairman of Montreal-based BCA Research Group, notes that Quebec's $80 billion foreign debt and deficit—equal to 11.6% of the gross domestic product—rank the province alongside many developing economies and "nearly bankrupt" industrial countries. Boeckh warns that in order to persuade global investors to support independence, Parizeau would have to get Quebeckers to agree to "the unthinkable"—a drastic drop in living standards similar to the one Mexico has been experiencing since the peso crisis. Otherwise, Quebec might face massive capital flight and a "catastrophic" currency devaluation.

SO MUCH FOR ISOLATING IRAN

▶ Just a few days after President Clinton announced a beefed-up trade embargo on Iran, Turkey has inked a huge deal with the Islamic republic. Under the $20 billion agreement, Iran will supply Turkey with natural gas for 23 years. Although the deal has been in the works for a long time, the timing surprised observers because Turkey is a NATO member and a close ally of the U.S. Turkey's move seems yet another indication of how difficult it will be to isolate Iran.

WE'RE SORRY, BUT ALL OTHER FLIGHT BAGS HAVE JUST BEEN GROUNDED.

If you were planning to take off with some no-name flight bag, you might want to reschedule. At 30,000 feet, the Samsonite® Soft Carry-On Piggyback® is far above the rest. Its book-opening design and mesh dividers make packing a breeze. The large sturdy wheels and wide wheelbase help it roll more smoothly over the competition. Its two front pockets are deeper and roomier than others. And its retractable Piggyback strap carries another bag for you. The Samsonite Soft Carry-On Piggyback is the only place you'll find every one of these special features. Finally, there's a flight bag to put your trust in. **For a brochure on this and our other first-class flight bags, call 1-800-262-8282, ext. 20.**

Striking A Positive Chord For Business

Our nation's lawmakers and opinion leaders have begun singing a different tune. Less government regulation. More initiatives for business to expand and create jobs. Emphasis on self-sufficiency, entrepreneurship. Cutting waste in the name of efficiency.

For corporate America, it's music to our ears.

It's also a familiar sound for the intermodal industry. Because what so many of today's government leaders are preaching echoes what intermodal companies have been practicing for nearly two decades.

Deregulation, for example. Intermodal is a child of the sweeping transportation reform in the 1980s, which opened the door to competition throughout the industry. For a government striving to reduce regulations and international trade barriers, intermodal can serve as a model for success. The level playing field in our industry has stimulated all transportation providers to improve service, develop technologies, and compete aggressively to gain market share.

Entrepreneurship? Without the benefit of federal subsidies, intermodal helped reinvent the nation's freight transportation, by creatively blending rail and containerized shipments with traditional motor carrier transport. The result: for American shippers, a fast, efficient, and economical transportation alternative networked door to door, coast to coast; for intermodal, consistent double-digit growth, making us the fastest growing segment of the transportation industry.

Intermodal companies have also set an example for streamlining operations, by trimming the fat from operating budgets. In this process we've worked closely with our customers and business partners to create service packages that maximize resources, to cover a multitude of needs.

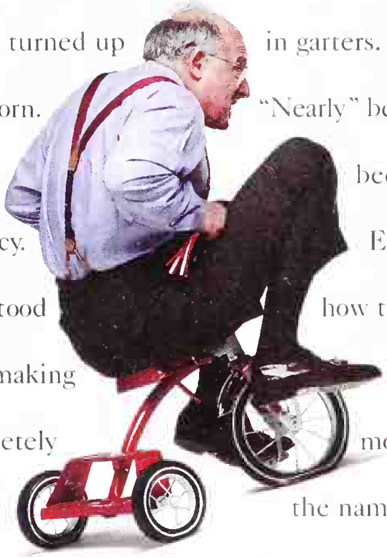
As Washington awakens to the realities of the '90s, it's not surprising that so many lawmakers and federal officials are viewing intermodal as a key factor in America's economic future. Intermodal transportation is at the core of the Department of Transportation's recent reorganization plan, and a centerpiece of national transportation policy in the Congress.

Intermodal is also environmentally sound. It saves fuel. It protects our highway infrastructure from further decay. It enables our transportation system to more than hold its own in worldwide competition.

Is Capitol Hill taking a page out of intermodal's songbook? We'd like to think so. With so much at stake for our economy and our citizens, it's time for business and government to work in harmony.

CSX
INTERMODAL

WHY YOU CAN'T MEET EVEN SIMPLE OBJECTIVES WITH A FLAWED EXECUTION.



*I*n 1823, Charles Mackintosh took a little-known material that artists used to rub out pencil marks, spread it between two layers of cloth, and made the world's first waterproof coat. Soon this new material, known as rubber, turned up in garters. Suspenders. Then handmade shoes. An industry was nearly born. "Nearly" because when the rubber goods were exposed to extreme cold, they became hard and stiff. And in heat, they assumed a sticky consistency. Even an unpleasant aroma. It was 20 years before someone understood how to properly make a raincoat. Or a pair of rubber shoes. Rubber making had to be entirely reinvented. Its fundamental components completely modified. The person who succeeded in making it work was a man by the name of Charles Goodyear.

A similar reassessment is taking place today in corporate America. Companies are taking a careful look at their transportation systems and finding the old methods lacking. It's something to think about when examining yours. Is it working as efficiently as it should? Or is it based on the belief that transportation is a fixed cost—a concept that's inherently flawed?

CSX Intermodal is the only transportation company in the country with truck, rail, and terminal operations stretching across North America. We've studied intermodal from every angle. And from our customer service to equipment management, we're helping companies like yours use it more strategically. Because today, transportation affects your financial performance as much as any other decision you make.

If you'd like to learn more, we encourage you to call us at 1-800-279-6779. After all, Charles Mackintosh sold only a few raincoats, but Goodyear's company became a multibillion-dollar business. Which proves there's nothing quite like having the right formula.

HOT GROWTH COMPANIES

They're quick, creative–and have outpaced bigger rivals

Fore Systems Inc. was the quintessential risky startup. With just $100,000 from savings, four researchers from Carnegie Mellon University launched the company five years ago based on a simple notion: The high-speed networking switches being developed for telephone companies could also be used to up the capacity of smaller computer networks that link workstations and PCs. "Our biggest concern," recalls Chairman and CEO Eric C. Cooper, 36, "was why wasn't anyone else doing it?"

While others were on the sidelines, Fore Systems used the new technology, called asynchronous transfer mode (ATM), to build a big lead in the market for switches and the accompanying software that help run high-speed, flexible local-area networks. With networked computing taking off, revenues for the fiscal year ended March more than tripled, to $75.6 million. Profits were up over 250%, to $7.4 million.

TEAMWORK. Its mix of top-flight growth in sales and earnings plus torrid return on capital helped land Fore Systems the No. 4 spot on BUSINESS WEEK's Hot Growth list. Fore has more than 60% of the $100 million market for ATM switches. But Cooper and his band of techies will have to fight hard to stay on top: Rivals such as Cisco Systems Inc. and 3Com Corp. are gearing up to take a bigger share as ATM edges out the old Ethernet technology for local networks. To meet the challenge, Fore is rolling out new switches that can transmit data ever faster, while tackling new markets through deals with big players such as Northern Telecom Inc. "There are more people entering their market," says Needham & Co. analyst G. Arjavalingam. "But it's clear Fore will be the dominant supplier of this technology for at least the next few years."

Quick. Opportunistic. Creative. Those are the traits linking the companies on BUSINESS WEEK's 1995 Hot Growth list. Like Fore Systems, the 99 other companies have outpaced far heftier rivals by getting there first and doing things better. Even as 1994's strong economy gave Corporate America its most sizzling year in a decade, these tiny dynamos continued to race to the head of the pack. Over the past three years, sales for the companies on the list grew an average of 66%, compared with 5% for the Standard & Poor's industrials index. Earnings jumped 164%, compared with the S&P's 27%, while return on invested capital hit 30%, against 10%.

Niches in high-tech and health care are helping some dodge the slowing economy

Fore Systems isn't the only Hot Growth company capitalizing on technology. As personal computer sales boom, demand for wireless and other telecommunications technology soars, and computers spread to every business, 25 of the 100 companies on the list were software- or computer-related, while five were in telecommunications. "More technology companies were meeting or exceeding earnings estimates than I've seen in years," says Jack LaPorte, portfolio manager of the T. Rowe Price New Horizons Fund, a small-company mutual fund.

Like Fore, companies that successfully tapped into the shift to networked computing were particularly hot. NetManage Inc. (No. 15) develops programs that run local-area networks. Cambridge Technology Partners Inc. (No. 12) helps companies design large-scale integrated computer systems. Plenty of profitable prospecting is also being done in health care. Employee Solutions Inc. (No. 9) helps small companies lower health-care and workers' compensation costs by bundling their staffs together to negotiate rates with insurers and managed-care providers. Growing fears of transmittable diseases helped Safeskin Corp. (No. 10) boost sales of its specialized latex medical gloves by 70.2% annually since 1991.

Of course, plenty of companies made the list by mining untechie veins. Despite a rather tough retail climate, Urban Outfitters Inc. (No. 76) carved out a lucrative perch by catering to

DATA: STANDARD & POOR'S COMPUSTAT, A DIVISION OF THE McGRAW-HILL COMPANIES

the unglamorous fashion tastes of Generation Xers. And the No. 1 spot goes to Happiness Express Inc., a New York-based toymaker that scored big with kids' accessories based on TV characters such as the Mighty Morphin Power Rangers.

COOL MARKET. Much of the fuel for growth last year came from a booming economy. Some saw sales explode thanks to the healthy growth of big corporate customers, while others created robust demand carving out new niches ahead of big rivals. Can they keep it up? A slowing economy may make it hard for some small companies to sustain heady growth. "It's going to be a much tougher environment," warns LaPorte.

Special Report

Wall Street has already soured on some small-company stocks. Even Hot Growth companies that delivered eye-popping results last year often trailed bigger brethren in the market. Shares of stocks on this year's list are currently trading at an average of 16% below their 52-week highs, while the average S&P industrial stock is trading at 8.9% below its 52-week high. The reason: For much of 1994, investors favored big cyclicals as the surging U. S. economy fueled robust earnings for auto makers, chemical producers, and the like. "The wind was clearly in our face," says James P. Goff, portfolio manager of the $1.5 billion Janus Venture Fund, a growth company fund.

That stiff breeze also cooled initial public offerings. After setting a fiery pace in 1993 with more than $57 billion raised, new public companies raised just $34 billion in 1994. In 1995's first quarter, less than $4 billion in equity has been sold through IPOs. Analysts say that reflects the general swing toward big-cap stocks, though as the market heats up, some pect IPOs to do likewise. Start-up funds still abound: cording to *Venture Capital Journal*, $3.8 billion in vent capital was raised in 1994, up from $2.5 billion in 1993.

And last year's ill wind may yet blow investors so good. T. Rowe Price's LaPorte believes that many sm companies are selling at bargain prices. LaPorte measures t richness of small-cap stocks by comparing the average pri to-earnings ratio of the stocks in his portfolio with the p-e tio of the S&P 500. Today, LaPorte's stocks are trading in t lower half of their historical range relative to larger-compa stocks. That, he says, leaves plenty of room for an uptur

Indeed, small companies able to dodge the slowing eco my may soon be back in vogue. For one thing, a slowdown growth will first hurt the earnings of the cyclical business that the market has favored. And if Congress does pass capital-gains tax cut, growth stocks stand to be big benefi aries. "The flow of funds in the market is rushing back growth," says Robert E. Stansky, portfolio manager of t $3.7 billion Fidelity Growth Company Fund. "Money is mo ing out of cyclicals and into fast-growing small companies.

Of course, these fleet-footed little racers always run the ri of stumbling (page 80). Some could prove too dependent one or two products or customers and get tripped up changing tastes or shifting markets. Others, cautiously threa ing their way among the elephants, may get squished. But t smart, the lucky, and the swift on BUSINESS WEEK's H Growth list stand a good chance of outmaneuvering the tita today—and joining their ranks tomorrow.

By Amy Barrett in Washingt

HAPPINESS EXPRESS

HAPPINESS IS A HOT TOY

It was three in the morning when Joseph A. Sutton, CEO of Happiness Express, first learned that his wife had put an alarm in their Mercedes. "Stand back," screeched the alarm, when a cat clambered over the car. "You are too close to the vehicle."

But rather than losing sleep, he turned his nocturnal wake-up into a new toy: A small kids' doorplate decorated with characters from the popular TV show, it bleats out *"Stand back! This room is protected by the Mighty Morphin Power Rangers!"* when intruders venture close. Within months, the doorplates hit the market—and together with Power Rangers gloves introduced in mid-1994, they've propelled Happiness Express forward since. With Power Rangers products accounting for 75% of sales, revenues for fiscal 1995 swelled 50%, to $60 million, while earnings rose 10%, to $7.5 million. That earned Happiness the No. 1 spot on BUSINESS WEEK's 1995 Hot Growth Company list.

Since Sutton, 42, and his brother, Ike, Happiness Express' 46-year-old COO, founded the company in 1989, they've carved out a niche producing toys and accessories based on popular licensed characters. Longtime independent sales reps for small toy companies, the two figured they could do better on their own. By 1993, the brothers built a portfolio ranging from Walt Disney Co.'s Little Mermaid to TV's Simpsons. But it wasn't until a flashlight decorated with Barney, PBS' purple dinosaur, scored with kids that Happiness hit paydirt. Barney-related gadgets brought 55% of fiscal 1994 sales. When Barney fell below 1% a year later, Power Range picked up the slack.

ROBIN THOMAS

MIGHTY MORPHIN WITHDRAWAL? THE SUTTONS ARE SPREADING THEIR BETS

And that raises a whopper of question: What will replace Pow Rangers when they fade? CEO Sutto says fears are misplaced. His strat gy is to create products based o lots of licenses, then gear up pr duction when one hits big: "We'v proved to the industry that we kno how to go where the action is."

RIGHT STUFFING? Still, Wall Street i worried. Since December, the stoc has fallen from its high of around 1 to 12. "Every toy company that ha derived more than 50% of its profi from one product has gotten into financial difficulty when that produc cools off," says analyst Sean F McGowan at Gerard Klauer Mattison & Co. He expects earnings t fall 33%, to $5 million in fiscal 1996

To avoid that fate, Sutton is rapidly diversifying. The CEO has lure executives away from big rivals such as Hasbro Inc. and Tyco Toys Inc. and he's launching new product lines.

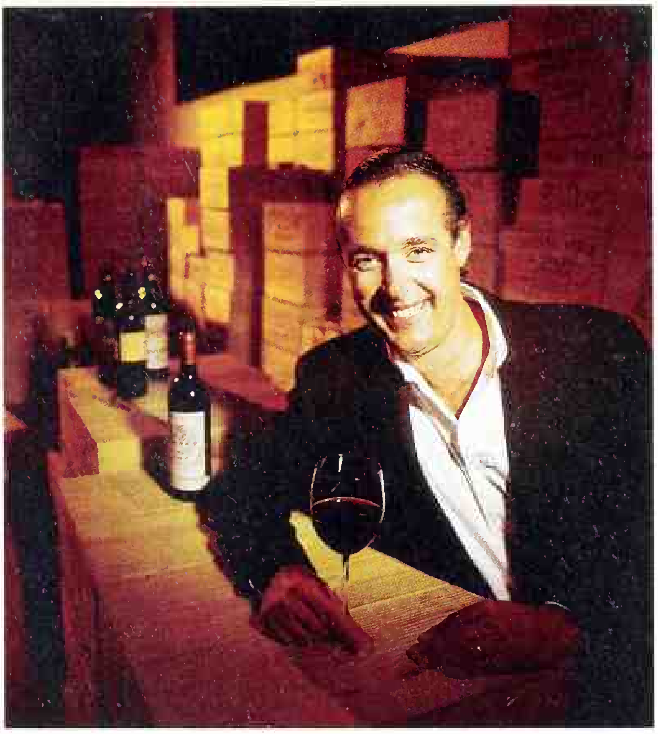
And a whole new slew of licensed products is coming, including stuffed animals based on Nickelodeon's TV series *AAAHH!!! Real Monsters*. "We have a lot of things going on," says Sutton. "You can't grow unless you have a lot of different oars in the water." That's true—as long as the stream Happiness is rowing doesn't run dry.

By Lori Bongiorno in New York

GEERLINGS & WADE

IT WAS A VERY GOOD YEAR

Most customers who get lousy service from a retailer just take their business elsewhere. But former oopers & Lybrand accountants Huib . Geerlings and Phillip D. Wade turned eir bad experience with a liquor store to a fast-growing small company. After aiting three months for a case of wine be delivered, they decided they could ll wine more efficiently themselves. o they started Geerlings & Wade, now e nation's largest direct-mail wine arketer and No. 7 on BUSINESS WEEK's ot Growth list.



CEO WADE. IN '94, PROFITS FOR THE DIRECT MARKETER REACHED $1.3 MILLION

Selling wine y mail is hardly ew. But Geerngs & Wade deeloped a formula that no one in the 5 billion U.S. wine trade matches. It arkets wines in all price ranges hrough mass mailings and an 800 numer. Last year, sales swelled 64%, to 20 million, while profits more than uadrupled, to $1.3 million. "We've been bsolutely fanatical about delivering on ime and with flawless execution, and t's working," says Wade, the 38-year-old resident.

ORE CONTROL. The partners started he business in 1987 by linking up with n acquaintance of Geerlings' who ran he Wine Exchange, a Connecticut mailrder wine merchant owned by a Dutch company. Initially, they used the Wine Exchange's marketing materials and wine inventory to sell in Massachusetts.

But the arrangement fell apart in 1988, when Geerlings & Wade wanted room to expand and more control over delivery schedules. The Wine Exchange sued to stop them from competing. The suit was eventually settled, and Geerlings and Wade, who had already put $180,000 into their business, kept going by raising another $100,000 from family and friends.

When Geerlings & Wade went out on its own, sales exploded. Prospecting for customers from subscriber lists for *Gourmet*, *The Economist*, and other publications, it carved out a niche selling wines ranging from $5 California chardonnays to $100 bottles of Chateau Margaux. Last year it raised $11 million in a public offering that valued Geerlings' and Wade's initial investments at a combined $14 million. The company, based in a warehouse in Canton, Mass., now operates in 20 states.

The question now is whether the company can stay out in front in a business wide open to competitors. Mitchel H. Sonies, an analyst with Brean Murray Foster Securities, thinks high barriers to entry will slow rivals. A key obstacle: complying with a patchwork of state regulations on liquor sales—a legacy of Prohibition.

The real threat to Geerlings & Wade's growth may come when it has penetrated all 30 states where mail-order wine sales are legal. But Wade says that his firm has plenty of room for expansion through acquisitions, possibly of catalog companies selling oenophile paraphernalia. Geerlings & Wade can only hope that, like fine wine, its results will keep improving with age.

By Geoffrey Smith in Boston

WONDERWARE

ANIMATED AUTOMATION

It was supposed to be a temporary name: "Wonderware." Founder Dennis R. Morin typed it into his company's incorporation documents in 1987 when he couldn't think of something catchy that included "integrated" or "micro." Now, with Wonderware Corp.'s cartoon-like logo emblazoned on a building in an otherwise anonymous industrial park in Irvine, Calif., the company still seems a little light-hearted. Indeed, more serious competitors' ads sneer at Wonderware's "fun-to-use" software.

NONFAT
MILK

CASH COW: CEO MORIN BRINGS A LIGHT TOUCH TO HEAVY INDUSTRY

Wonderware is no joke, though. It's a serious player in the mushrooming market for industrial-automation software, and No. 38 on BUSINESS WEEK's Hot Growth list. College dropout Morin started Wonderware when he was laid off from his umpteenth job, the last one designing software. "I'd never been promoted; I'd never held a management position," he says. "I decided that the only way to get to the top of the corporate ladder was to start there."

PINBALL WIZARD. Morin's inspiration came from an early computer game called *Pinball Construction Set*. Players could design their own pinball machines by placing flippers and bumpers where they wanted. Morin wondered: Why not build the same flexibility into the engineering software used to control valves and temperature gauges in factories?

That insight led to the creation of Wonderware's InTouch industrial-auto-

mation software. While other industrial software required each machine to have its own display panel and individual controls, InTouch allows engineers to "watch" the workings of the entire factory through on-screen animations that continually mimic what's going on. As they watch, engineers can change manufacturing processes instantly. Most important, InTouch works with every piece of equipment on the factory floor. So, like the pinball player who can move his on-screen flippers, InTouch users can quickly rejigger controls factorywide.

Other signs of InTouch's pinball parentage include software commands that let users add light touches to their screens, such as birds coursing their way over factory equipment. But don't mistake whimsy for lack of business savvy: By designing his InTouch system for Microsoft Corp.'s Windows instead of DOS, Morin gained a two-year lead on rivals. Fueled by its ability to run on off-the-shelf PCs, sales have zoomed. Revenues increased 67% last year, to $35.7 million, as profits doubled, to $7.6 million. For 1995's first quarter, net income rose 75%, to $2.6 million, on revenues up 62%.

Now, Morin, 49, aims to expand Wonderware at 60% per year, to a half-billion-dollar company within five year "Our strategy is to supply all the sof ware components you'll need to aut mate a factory," he says. More pro ucts are already in the pipeline, ar Morin is also busy working on the co porate culture. "I like the idea that yo can have fun while doing seriou things," he says. This year, the cove of Wonderware's annual report feature an image of a cow stepping out of computer screen, to illustrate how In Touch could control a mythical dairy products company called WonderMo An excuse, perhaps, for the papie mâché cow that Morin just commissioned to adorn the lobby.

By Larry Armstrong in Irvine, Cali

ROCK BOTTOM RESTAURANTS

BREWING UP SOLID PROFITS

The line snakes out the door at the Rock Bottom Brewery in Denver, but nobody's complaining. As a khaki-clad waiter passes out complimentary beer, the crowd of young professionals plays pool, checks out the brewhouse, and eyes platters of chicken enchiladas whizzing by.

CEO DAY KNOWS THE VALUE OF QUALITY SERVICE AND FOOD, AND S DOES WALL STREE

Rock Bottom diners aren't the only ones with a taste for the brew pub. Wall Street is positively drooling over Rock Bottom Restaurants Inc., which owns six Rock Bottom brew pubs as well as Old Chicago, a chain of 18 pizza restaurants. Last year, net income at the company—No. 25 on this year's Hot Growth list—shot up 36%, to $1.9 million, on revenues of $38.9 million, a 57% gain. Michael G. Mueller, a managing director at Montgomery Securities, expects revenues to reach $74 million this year, with net income more than doubling to $4.5 million.

Old Chicago cooked up nearly 60% of revenues last year, but it's the Rock Bottom brew pubs that have caused Wall Street to hoist the stock to nearly 22, some 30 times projected earnings. Rock Bottom was launched five years ago by Chairman and CEO Frank B. Day—a former Burger King Corp. franchisee and Harvard MBA. It's now the most advanced player in the race to build a national chain of brew pubs, a rush fueled by the soaring popularity of tiny local microbreweries. After testing out the formula in its original Denver brew pub for two years, the company began expanding in 1993. Now Day, 62, plans to double the lucrative chain to 13 restaurants by the end of 1996.

Rock Bottom has thrived because, unlike many pubs, it emphasizes good food. And unlike most restaurants, it also does a good job with the beer. "We're very serious about it being a restaurant. Some brew pubs are not; they're more interested in being a tavern," says Day. "We try to keep a balance." It's a mix that works: Some 45% of revenues, about twice the national restaurant average, come from alcoho mostly beer, which Rock Bottom brew for 20¢ a glass and sells for $3.

Day, who opened Boulder's first fer bar in the early 1970s before launchin the Old Chicago chain in 1976, know firsthand that quality service pays off i the restaurant business. Rock Botto employees rely on teamwork, run eac other's orders to tables, share grun work, and rotate undesirable shifts Each new hire serves a 30-day proba tion period—and must get the approva of 10 employees before becoming part o the permanent staff. As a result, th turnover is approx imately half the na tional average i restaurants.

FICKLE? Of course Rock Bottom's ap peal could go flat Restaurant custom ers are notoriousl fickle, and som young professional have already tire of the brew pub. " used to go to th Rock Bottom, bu it's been taken ove by women in bi hair who've hear men in suits han out there," says Denver lawyer, who is doing her party ing elsewhere.

So far, others have taken her place Rock Bottom "is doing 25% better i volume than in our wildest dream when we opened it," says Day. Now that kind of success is something t drink to.

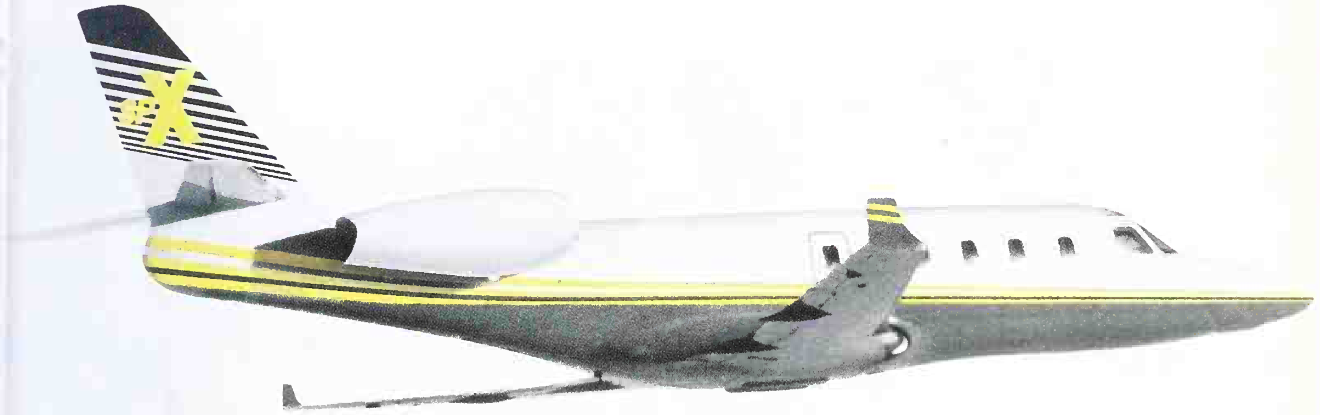
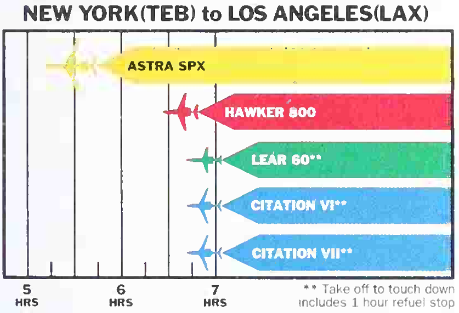
ASTRANOMICS: THE NEW REALITY IN BUSINESS AVIATION

The new Astra SPX.

Introducing the practical benefits of advanced technology.

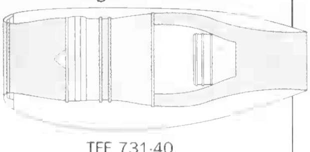


The new Astra SPX brings a whole new dimension to the world of business aviation. Born of advanced technology, the fuselage fits the human form and achieves the highest degree of aerodynamics. Interior space is maximized while minimizing the external frontal drag. As a result, the SPX can fly non-stop* from New York City to Los Angeles at a speed of .82 Mach. That's one hour faster than any other manufacturer's mid-size business jet. The Lear 60, Citation VI and VII require a stop* to complete the mission.

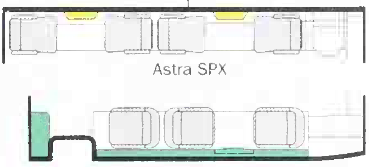


Climb to the top

Thanks to the new more powerful, highly efficient AlliedSignal 731-40 engines, the SPX offers a range of 3690 miles, 600 miles greater than the Hawker 800. The digitally controlled engines were derived from AlliedSignal's highly successful turbo fan engines with a history of more than 28 million flight hours. Truly a global performer, the Astra SPX will fly you to London from New York, non-stop. Combining the 731-40 engines with the new wing design, the SPX achieves extraordinary short field performance. On a 1,000 mile mission, it can take off from runways 500 feet shorter than any of its mid-size competitors. In fact, the SPX can take off from shorter fields than the Beechjet 400A and has an operating cost per mile less than the Citation V Ultra. The SPX offers the most advanced digital avionics that will be available on future larger business jets like the Challenger 604, Falcon 2000 and the Astra Galaxy. This advanced Collins avionics package provides your pilots with greater information and reliability.



TFE 731-40



More comfort on the inside

The SPX can cruise above the weather at 41,000 feet for longer periods of time than any mid-size business aircraft, adding to the comfort and quietness of the cabin environment. Henry Dreyfuss Associates designed a cabin interior around their human engineering philosophy. The SPX offers greater leg room than a Lear 60 and has a longer cabin.

Your stockholders will applaud

The Astra SPX is part of a new generation of Astra business aircraft. This comes at a time when large and small corporations are looking at new ways to reduce their overhead and improve their profits. It's something we call Astranomics: the new reality in business aviation. It's something your stockholders will applaud. Call our president, Roy E. Bergstrom, at **1 609 987-1125** or fax us at **1 609 987-8118** for more information.

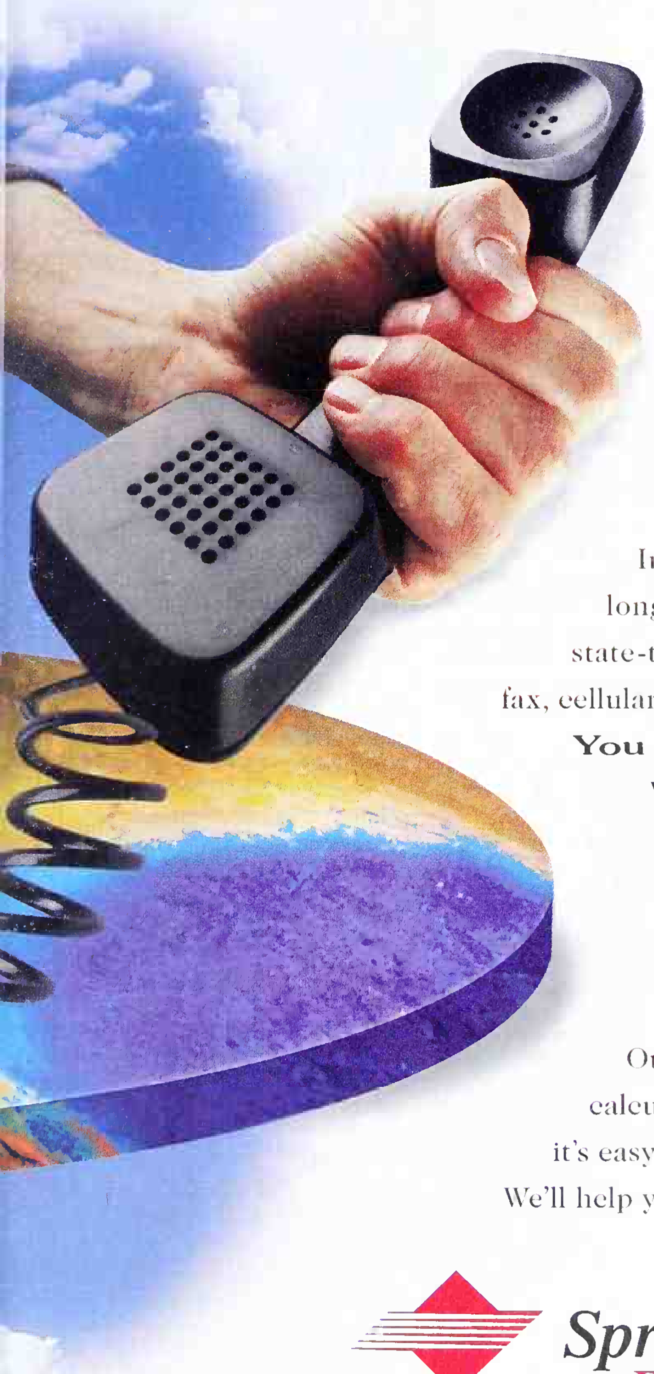
t's for you! Sprint's low, flat rates
for small businesses.



Thanks to Sprint Business, now the world is flat.

Introducing low, flat rates on your long distance services. That includes all your state-to-state calls, as well as Sprint 800 service, fax, cellular long distance and calling cards.

You pay the same low rate whenever you call.

Day or night. Weekdays or weekends. On the road, or at the office. Even if you spend as little as $50 a month.

Your long distance costs are simple to understand.

Our low, flat rates end the confusion of calculating your cost per minute. And it's easy to sign up. Just call now. We'll help your business do more business.

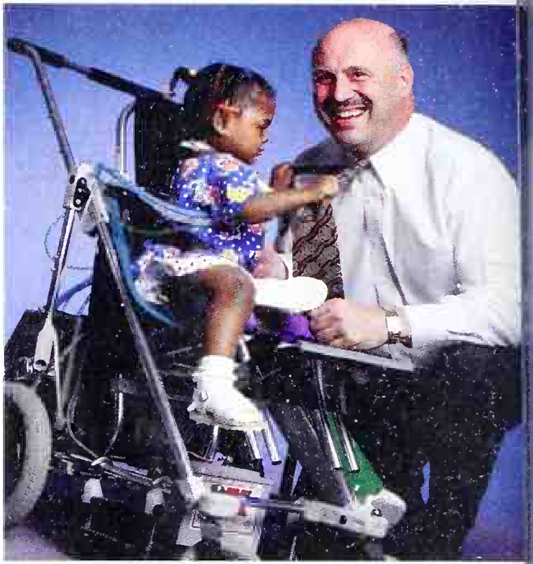
PEDIATRIC SERVICES

SPECIAL CARE FOR SICK KIDS

There's a popular doll making the rounds at Pediatric Services of America Inc. (PSA). If it weren't for the black-felt moustache, you might mistake it for a Cabbage Patch Kid. But the play money bulging from its diapers—and a face resembling CEO Joseph D. Sansone—is a dead giveaway that this doll wasn't made for the kids that PSA serves. Crafted by PSA nurses, the Joe Doll instead starred in a recent employee skit toasting the company's success.

Special Report

And successful it has been: No. 50 on BUSINESS WEEK's Hot Growth list, PSA is the nation's fastest-growing provider of children's home-health-care services. The Norcross (Ga.) company cares for the most fragile patients around: acutely ill babies and children. PSA's 12-state network of nurses, therapeutic services, and equipment offers a thrifty alternative to long, expensive hospital stays. With 63% of PSA's $48 million in sales for the year ended Sept. 30, the pediatric business drives PSA's growth.



PATIENTS OF JOE: PSA IS THE FASTEST-GROWING PROVIDER OF KIDS' HOME CARE

HIDDEN JEWEL. Eight years ago, the company, then known as Ambulatory Services of America, was a candidate for intensive care itself. The $17 million company was hemorrhaging red ink, and its balance sheet was awash in uncollected receivables. That's when industry veteran Sansone, 51, was brought in by then-parent Charter Medical Corp. Sansone slashed receivables and automated the back office. He also hired its first-ever chief financial officer. "They basically had an accountant—not even a CPA," he says.

Sansone also discovered the company's hidden jewel: its neglected pediatric home-care operation. He realized that when it came to medical treatment, "children aren't just small adults" and figured a company focusing on their needs would work. So he took a $50,000 second mortgage, and bought the unit in a $9 million leveraged buyout in 1989.

He hasn't looked back. Working closely with pediatricians, PSA has built a reputation for providing equipment geared to children, as well as nurses accustomed to their medic tion and therapy needs. La June he took PSA public, rai ing $14 million. Much h gone to pay for seven acqui tions, which are fueling PSA'S growth Sansone extends its territory. The dea should boost revenues 46%, to $70 mi lion, for fiscal 1995, while analyst Ran Huyser of Furman Selz expects ear ings to rise 86%, to $3.9 million. If th company keeps pulling in cash at th pace, that Joe Doll is going to need bigger diaper.

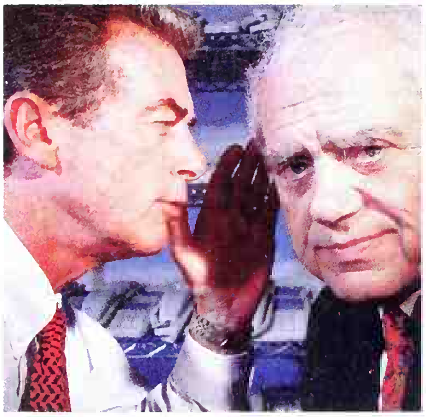
By Maria Mallory in Norcross, G

CIDCO

PICKING UP ON CALLER ID

You'd expect Robert L. Diamond and Paul G. Locklin to be exultant. In three years, they've taken Cidco Inc. from a blip on the radar screen to the No. 1 maker of caller-ID gear. But don't expect swagger. Says Diamond: "We stay awake at night. We worry about every pin that drops. And we worry about every competitor. We cannot rest."

So far, the work and worry is paying off. No. 5 on the Hot Growth list, Cidco saw sales nearly triple, to $100 million in 1994, while earnings rose 181%, to $11.7 million. The trigger for such growth: big demand for the service that identifies callers and flashes their name and phone number on an LCD screen before you answer. Forecasters predict new subscribers will double this year, to 6 million—and with 60% of the market today, Cidco is poised to pick up the lion's share. Says Diamond: "We happened to be standing there to catch the wave."



LOCKLIN AND DIAMOND HAVE SEEN EXPLOSIVE GROWTH—TO 60% OF THE MARKET

Cidco built its success on a winning distribution strategy. It sells only 15% of its devices through retail outlets, focusing instead on ties with phone giants. Many relay orders directly to Cidco's computer. Within 48 hours, the system is sent to the customer. Says analyst Nicholas P. Coutros of Alex. Brown & Sons Inc.: "Cidco is outsourcing the entire headache for the phone companies."

Good connections have been with Cidco from the start. It was founded in 1988, when longtime associates Diamond and Locklin got wind that phone companies wanted to offer caller ID. Both ha industry ties: Diamond, 62, owned New York-based consulting firm tha did work for AT&T; Locklin, 49, ha founded PCI Pte., a Singapore maker LCD screens and cordless phones.

When word of caller ID got out, Dia mond and Locklin each ponied u $50,000 to make a prototype with th help of a contract engineer. Eightee months later, Bell Atlantic Corp. ordere 7,500 units. Cidc was on its way.

Today, Lockli oversees opera tions from tiny Morgan Hill, Calif., while Diamonc builds sales out of New York offices Cidco's stock, which debuted a year ag at $15, now sells at about $35. "We are experiencing something most people only dream about," says Locklin. "The industry is in its embryonic stage, and we're in the driver's seat." Could anything snarl their plans? The biggest risk is mismanaging the supernova growth. Given the work-and-worry mode of its founders, analysts aren't too concerned. Ask Locklin about his goals for Cidco, and he says: "Not to fumble."

By Kathy Rebello in Morgan Hill, Calif.

Contact Scudder Investor Services, Inc., Distributor, for a prospectus, which contains more complete information, including management fees and other expenses. Please read it carefully before you or your employees invest or send money.

BRIGHT STARS AND BURNOUTS

Some former hotshots are still hot. Others…

Back in 1993, the world was Just Toys Inc.'s playground. The New York-based toymaker had hits with products such as Bend-Ems and the Beauty and the Beast Talk 'N View Magic Mirror. Sales had topped $32 million in 1992, after growing more than 200% for three years running, and the future looked bright for Allan Rigberg and Rose Evangelista, the husband-and-wife team who co-founded the company. Indeed, Just Toys was so hot two years ago, when it topped BUSINESS WEEK's Hot Growth Companies ranking, that Rigberg declined to answer questions about the company. He feared the Securities & Exchange Commission might accuse him of hyping the red-hot stock.

There's little chance of that these days. Just Toys sports the second-worst two-year total return of the Hot Growth Class of '93. Its stock fell 93%, from 18 to a recent 1¼. What spoiled the fun? Just before last Christmas, a few of its Quick 'N Easy Micro-Bake toy ovens emitted sparks or melted. When it recalled thousands of units, results melted down too: In 1994, Just Toys lost $15.7 million on sales of $23.9 million.

Special Report

In March, Rigberg and his wife were fired, and outside director Morton J. Levy was installed as the new chief executive. The pair complained that they were made "scapegoats." Levy counters that their capricious management style was the problem: "They didn't get that they were running a public company," he says.

CYCLE SYNDROME. No one ever said investing in Hot Growth companies was for the faint of heart. While high-flying companies can dazzle investors with their prospects, inexperienced managers can stumble when faced with exponential growth. As a group, the Hot Growth Class of 1993 posted an 8.8% total return over the last two years, compared with the 26.5% return of the Standard & Poor's industrials. Small-company mutual funds rose 25% for the same period, says Morningstar Inc. Why the big gap? Small companies typically see growth rates slow as they get bigger—while investors tend to bail out at the first sign results are weakening and move money into companies earlier in the growth cycle.

Still, it's the promise of picking out the rare star capable of breaking from the pack that keeps adventurous investors betting on bustling young companies—such as Computer Associates International Inc., one Hot Growth alum that's made it big. A $100 investment in Computer Associates when it made its Hot Growth debut in 198 would be worth $2,102 today.

Business Week's Class of 1993

THE WINNERS...	TWO-YEAR TOTAL RETURN
U.S. ROBOTICS	286.6%

DATA: STANDARD & POOR'S COMPUSTAT, A DIVISION OF THE McGRAW-HILL COMPANIES

FOR WHOM THE BELL TROLLS: FORMER JUST TOYS EXEC EVANGELISTA

U.S. Robotics Corp. isn't in that leagu yet, but the Skokie (Ill.)-based manufacture of modems and network management systems is the clear valedictorian of the Class of '93. It eve graduated right off the Hot Growth roster, since its 1994 sale of $378.7 million far overshot the list's $150 million cap. U.S Robotics beat out its Hot Growth classmates as the best-performing company thus far: Its stock is up 287%, to a recent 79

The secret? As offices and homes across the country lin up to networks and online information services, U.S. Robotics sits in the middle of the action. And unlike most of it competitors, the company buys inexpensive, generic chip for its modems, rather than buying more expensive specialize chips. "They buy lower on the food chain and add their ow value," says Montgomery Securities analyst Todd A. Dagres "They also have [their industry's] best management."

Good management is also playing a role in the turnaround of another highflier of 1993: Longhorn Steaks Inc., a Atlanta-based restaurant chain. Its stock began to tumble i the middle of 1993 when it expanded with too many nev restaurants in iffy locations. Founder Georg McKerrow Jr. made rare move: He essentiall fired himself as CEO Though he remains chairman, he brought in seasoned industry veteran to run the show. The nev team of experienced managers has begun to pu things right. Althoug Longhorn's stock is stil down 28% from 1993, i has climbed 62%, to 13 since the beginning o 1995. Having learned it lesson from too-ho growth, Longhorn i working its way back int investors' favor.

1995

HOT GROWTH COMPANIES

o win a position in this table, .ompany must excel in three /s. The selection process be- s by ranking companies ac- ding to their three-year results sales growth, earnings growth, 1 return on invested capital. ranks in the table are calcu- ed from these numbers. A npany's composite rank is the n of 0.5 times its rank in re- n on total capital, plus 0.25 es each of its growth ranks. Standard & Poor's Compustat, division of The McGraw-Hill npanies, which has computer- d financial data on 10,000 publicly traded corporations, provided the pool of companies from which winners were selected. To qualify, a company has to have annual sales of more than $10 million and less than $150 million, a current market value greater than $1 million, a current stock price greater than $2, and be actively traded. Banks, insurers, real estate firms, and utilities are excluded. So are companies with sharp declines in current financial results, as well as companies where other developments raise questions about future prospects.

SALES and **EARNINGS** are the latest available through the most recent 12 months. Earnings include net income from continuing operations, before gains or losses from extraordinary items.

INCREASES in **SALES** and **PROFITS** are calculated using the least-squares method. If results for the earliest year are negative, the average is for two years.

RETURN ON CAPITAL is earnings plus minority interests and tax-adjusted interest expense expressed as a percent of total debt and equity. For ranking purposes, the maximum allowable annual return on invested capital is 100%. If companies have made substantial accounting restatements, long-term returns may be averaged for two years instead of three years.

Time periods vary according to the month of a company's fiscal yearend. Profitability and growth are calculated based on the most recently available data.

STOCK PRICE data are as of April 28, 1995. A ● indicates that a company also appeared in last year's rankings (BW—May 23, 1994).

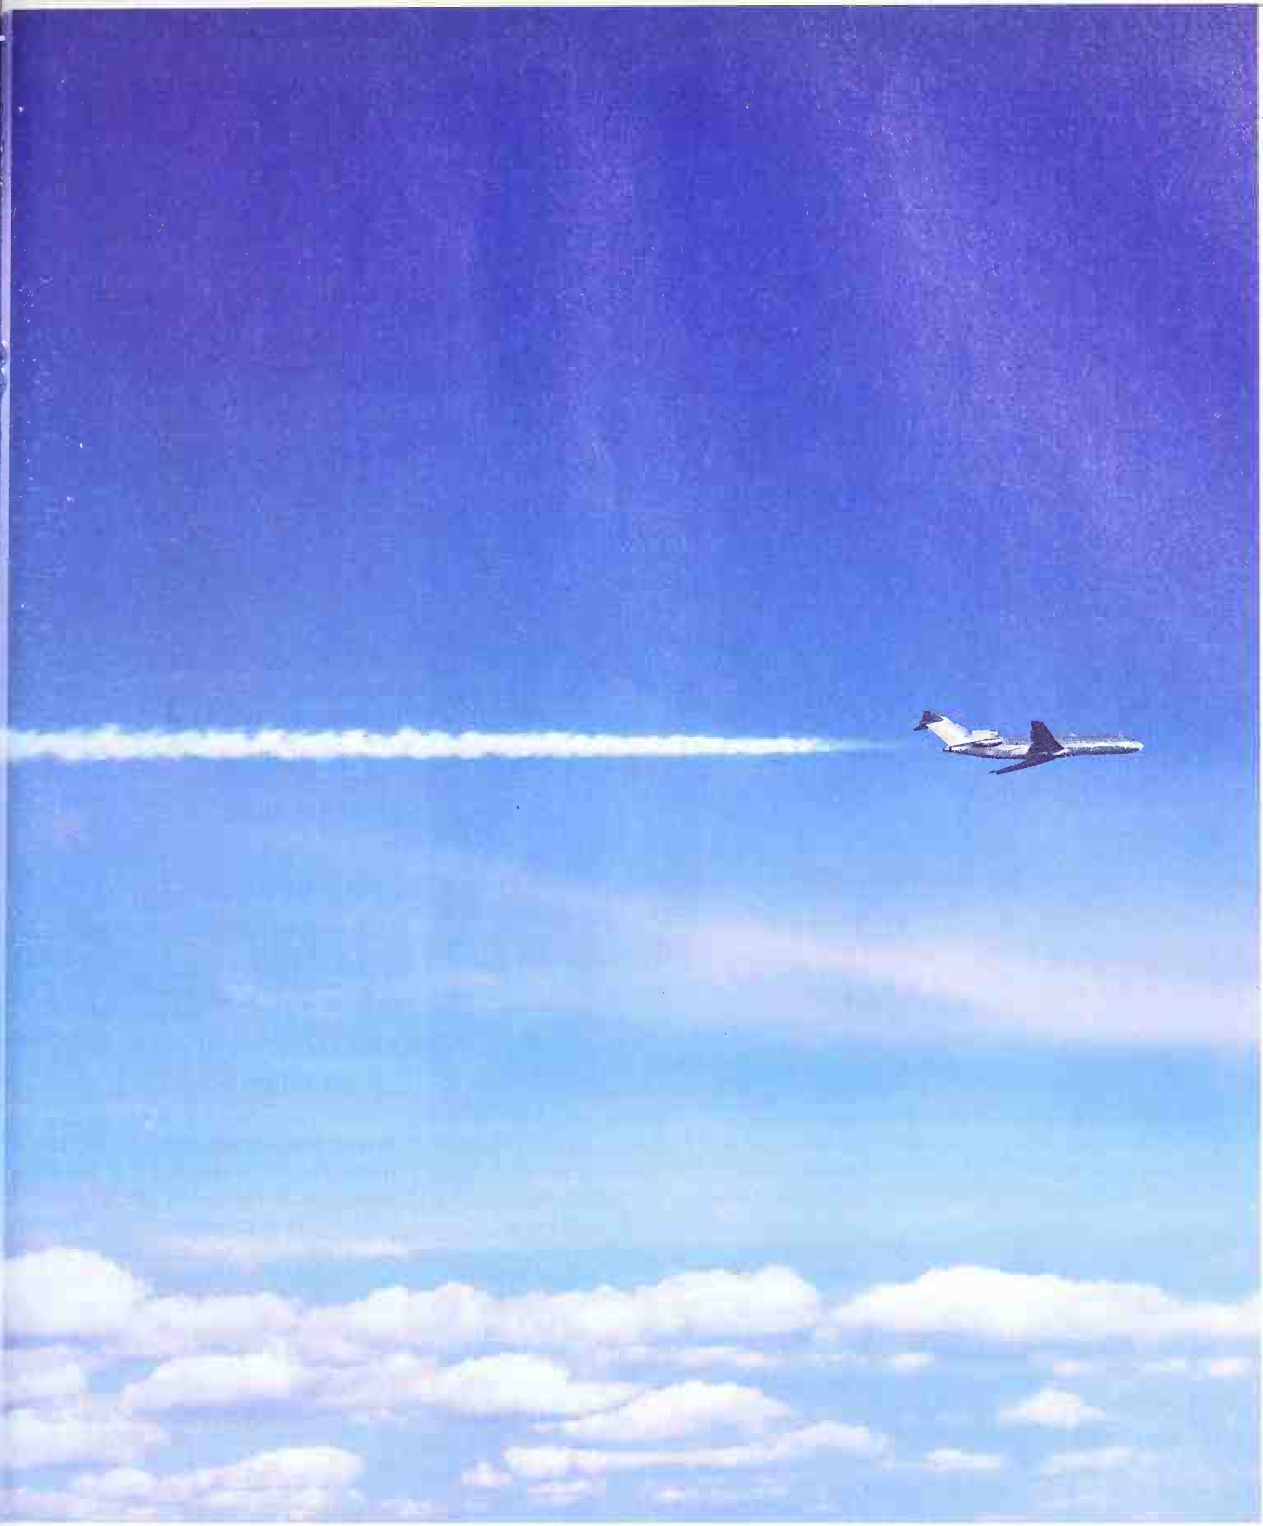
HOW AIG'S ABILITY TO CONTROL FINANCIAL RISKS PUT ONE AIRLINE ON A STRAIGHTER COURSE.

An airline's first-ever energ hedge in jet fuel, using a series of fixed-for-floating-rate transactions. It's no blue-sky idea but how we recently helpe a major U.S. carrier manage risk. Since the airline's international operations generate a multiple-currency revenu



tream, we also act as one of its primary foreign exchange partners. And we provide primary and excess roperty/casualty insurance for its buildings and aircraft, fidelity and international insurance coverages. Products and ervices for which more and more corporations are heading in AIG's direction. For the definitive response to risk.

AIG **WORLD LEADERS IN INSURANCE AND FINANCIAL SERVICES.**

American International Group, Inc., Dept. A, 70 Pine Street, New York, NY 10270.

CRUSADERS

NO TIME FOR TEARS

Racing to save his sons, Brad Margus is all business

THE MARGUSES With one hand, Brad runs a shrimp business. With the other, he and Vicki seek a cure for Quinn (left) and Jarrett (right)

When the news came—the news he both dreaded and expected—Brad Margus was away on business, visiting customers of his shrimp-processing company. His wife, Vicki, heard first. Two of their three boys, Jarrett, 4, and Quinn, 2, had ataxia-telangiectasia, or A-T. If the disease progressed as expected, they would be dead by age 20.

TV movies prime us to expect miracle cures and happy endings from such circumstances. In life, more often, a devastating disease hits, a family grieves and learns to cope, and eventually, inexorably, the illness prevails. If the disease picks on the children of a Brad Margus, though, the killer is in for a fight.

GENE HUNTING. Brad and Vicki Margus grieved for about six weeks. Then they got busy. Within four months, they formed the nonprofit A-T Children's Project. Working nights and weekends while running his company, Kitchens of the Oceans Inc., Brad Margus recruited top scientists worldwide to do research, tapped companies for funding and gene-hunting gear, lobbied Congress, and built a database of victims of the little-known disease. Eighteen months later, the A-T Children's Project has funded $1 million in research, sponsored three conferences attended by researchers from around the world, begun collecting victims' blood samples, and helped found a clinic at the Johns Hopkins Hospital. Says J. Craig Venter, head of the Institute for Genomic Research: “I've nev seen anyone do so much in so litt time.”

CHASING A CHILD KILLER

NAME Ataxia-telangiectasia, or “A-T.”

SYMPTOMS Around age 2, muscle control deteriorates. Cancer, immune deficiencies common. Victims wheelchair-bound by 10, totally disabled in teens. Fatal by 20.

VICTIMS At least 600 U.S. children; 1% of population are thought to be carriers. Gene may be a factor in thousands of cancer cases.

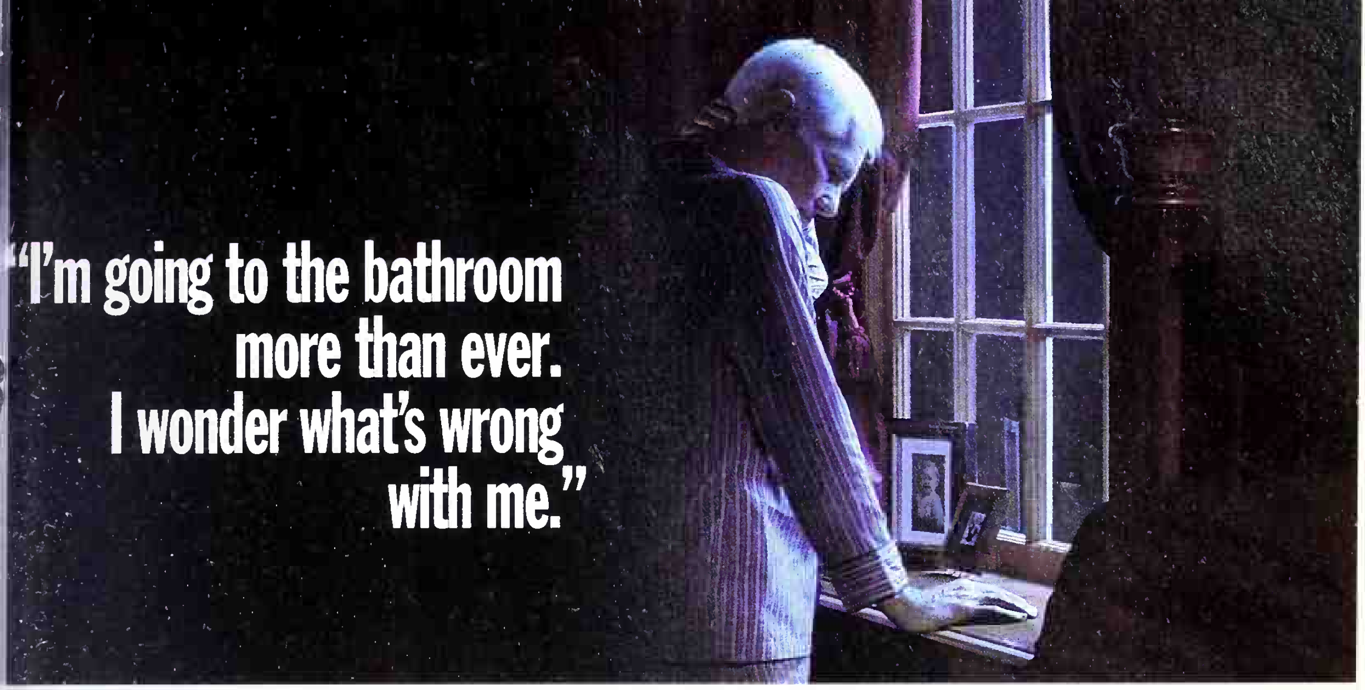
OUTLOOK Gene that causes disease may be identified in a year. Developing a cure will take years.

For Brad Margus, 34, it's all in a 1 hour day's work. Confronted with crisi he fell back on what he knew best: bu ness. Growing up in Tokyo, Margus fir carried a briefcase as a four-year-o traveling with his father, Al, who r H.J. Heinz Co.'s Asian operations. I 1971, his father joined the Deerfie Beach (Fla.) processor now called Kitc ens of the Oceans, and the family r turned to the U.S. Brad peeled his fir shrimp at 11, bulked up for high scho football by toting 70-pound cases crustaceans, and designed a shrimp-pe ing table at 16. While earning an MBA Harvard University in 1985, he track the shrimp company's numbers via con puter hookup. Before graduating, h helped his father engineer a $5 milli management-led buyout.

For a time, lif was idyllic. Margus wed Vick whom he had me at a Harvard con puter lab. The had three son and moved int a four-bedroor home on a five acre spread outside Boca Rator Brad took ove Kitchens' operations as his fathe moved toward retirement, and the con pany thrived. He built a network c suppliers in Indonesia and Thailand an invested in a processing joint venture i Ecuador that let him halve his U.S workforce while boosting production. I 1993, sales jumped 27%, to $57 millior and profits climbed 8%.

Then Jarrett, the middle son, bega bumping into walls and falling down lot. A neurologist ascribed the probler to a birth accident and said it wouldn' grow worse. First son Cole had no balance problems, but when Quinn bega to walk, he was clumsy, too. The problem was obviously genetic.

Batteries of tests followed. A-T i rare—there are only about 600 know U.S. victims—and it's often misdiagnosed as cerebral palsy. But cerebra palsy, for all its cruel consequences, ha nothing on A-T. Children with A-T begi losing balance around age 2 and hav slurred speech when they start talking Loss of muscle control usually put them in wheelchairs by about 10. B 15, they can't move their eyes to read Cancer and immune deficiencies ar



"I'm going to the bathroom
more than ever.
I wonder what's wrong
with me."

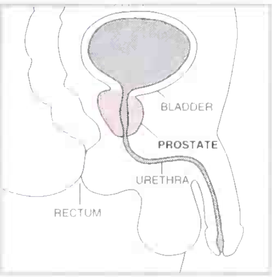
Your urinary symptoms may be caused by a condition called benign prostate enlargement or BPH. BPH is not cancer and does not lead to cancer, although the two conditions can exist at the same time. Remember, only a doctor can evaluate your symptoms and their possible causes.

Today, symptomatic BPH can be treated by your doctor in several ways. The options are monitoring the condition with regular checkups, surgery, or oral medicines. One oral medicine is PROSCAR, the only prescription medicine for the treatment of symptomatic BPH that can shrink the prostate.

Is this you?	Yes	No
Do you get up more than once or twice a night to urinate?	☐	☐
Do you often have sudden, uncontrollable urges to urinate?	☐	☐
Do you have a hesitant or slow urine stream?	☐	☐
Do you have a frequent need to urinate?	☐	☐

If you answered yes to even one question, tell your doctor.

PROSCAR works by blocking a hormone that can cause the prostate to enlarge. *But it is important to know: PROSCAR doesn't work for everyone. Although the prostate may shrink, there may not be an improvement in urinary symptoms. However, in clinical studies with PROSCAR, some men have seen an improvement in their urinary symptoms after 2 weeks. Others have found that PROSCAR took up to several months to help them.* Because all men are different, you and your doctor will need to determine how PROSCAR is working for you.



The prostate surrounds part of the urethra, the tube that carries urine from the bladder. As the prostate enlarges, it can squeeze the urethra and cause urinary problems.

If you have any urinary symptoms, see your family doctor or a urologist soon, and ask about PROSCAR. **For free information to help you discuss your symptoms with your doctor, call 1-800-261-5563.**

For the treatment of symptomatic BPH

PROSCAR® 5mg
(FINASTERIDE)

The only medicine that can shrink the prostate.

Please see the patient information on the next page.

PATIENT INFORMATION ABOUT PROSCAR® (Prahs-car)
Generic name: finasteride (fin-AS-tur-eyed)

PROSCAR is for the treatment of symptomatic benign prostatic hyperplasia and for use by men only.
Your doctor may prescribe PROSCAR if you have a medical condition called benign prostatic hyperplasia or BPH. This occurs only in men.

Please read this information, as well as the leaflet which accompanies your medication, before you start taking PROSCAR. Also, read the leaflet each time you renew your prescription, just in case anything has changed. Remember, this leaflet does not take the place of careful discussions with your doctor. You and your doctor should discuss PROSCAR when you start taking your medication and at regular checkups.

What is BPH?
BPH is an enlargement of the prostate gland. After age 50, most men develop enlarged prostates. The prostate is located below the bladder. As the prostate enlarges, it may slowly restrict the flow of urine. This can lead to symptoms such as:

- a weak or interrupted urinary stream
- a feeling that you cannot empty your bladder completely
- a feeling of delay or hesitation when you start to urinate
- a need to urinate often, especially at night
- a feeling that you must urinate right away.

Treatment options for BPH
There are three main treatment options for BPH:

- **Program of monitoring or "Watchful Waiting".** If a man has an enlarged prostate gland and no symptoms or if his symptoms do not bother him, he and his doctor may decide on a program of monitoring which would include regular checkups, instead of medication or surgery.
- **Medication.** Your doctor may prescribe PROSCAR for BPH. See **"What PROSCAR does"** below.
- **Surgery.** Some patients may need surgery. Your doctor can describe several different surgical procedures for BPH. Which procedure is best depends on your symptoms and medical condition.

What PROSCAR does
PROSCAR lowers levels of a key hormone called DHT (dihydrotestosterone), which is a major cause of prostate growth. Lowering DHT leads to shrinkage of the enlarged prostate gland in most men. This can lead to gradual improvement in urine flow and symptoms over the next several months. However, since each case of BPH is different, you should know that:

- Even though the prostate shrinks, you may NOT see an improvement in urine flow or symptoms.
- You may need to take PROSCAR for six (6) months or more to see whether it helps you.
- Even though you take PROSCAR and it may help you, it is not known whether PROSCAR reduces the need for surgery.

What you need to know while taking PROSCAR

- **You must see your doctor regularly.** While taking PROSCAR, you must have regular checkups. Follow your doctor's advice about when to have these checkups.
- **About side effects.** Like all prescription drugs, PROSCAR may cause side effects. Side effects due to PROSCAR may include impotence (or inability to have an erection) and less desire for sex. Each of these side effects occurred in less than 4% of patients in clinical studies. In some cases side effects went away while the patient continued to take PROSCAR.

  Some men taking PROSCAR® (Finasteride) may have a decrease in the amount of semen released during sex. This decrease does not appear to interfere with normal sexual function. Rarely, some men have reported breast swelling and/or tenderness or allergic reactions such as lip swelling and rash.

You should discuss side effects with your doctor before taking PROSCAR and anytime you think you are having a side effect.

- **Checking for prostate cancer.** Your doctor has prescribed PROSCAR for symptomatic BPH and not for cancer—but a man can have BPH and prostate cancer at the same time. Doctors usually recommend that men be checked for prostate cancer once a year when they turn 50 (or 40 if a family member has had prostate cancer). These checks should continue while you take PROSCAR. PROSCAR is not a treatment for prostate cancer.
- **About prostate specific antigen (PSA).** Your doctor may have done a blood test called PSA. PROSCAR can alter PSA values. For more information, talk to your doctor.
- **A warning about PROSCAR and pregnancy.**

  PROSCAR is for use by MEN only.

  PROSCAR is generally well tolerated in men. However, women who are pregnant, or women who could become pregnant, should avoid the active ingredient in PROSCAR.

  If the active ingredient is absorbed by a woman who is pregnant with a male baby, it may cause the male baby to be born with abnormalities of the sex organs. Therefore, any woman who is pregnant or who could become pregnant must not come into direct contact with the active ingredient in PROSCAR.

Two of the ways in which a woman might absorb the active ingredient in PROSCAR are:

Sexual contact. Your semen may contain a small amount of the active ingredient of the drug. If your partner is pregnant, or if you and your partner decide to have a baby, you must stop taking PROSCAR and talk to your doctor. If your partner could become pregnant, proper use of a condom can reduce the risk of exposing her to your semen (discuss this further with your doctor).

Handling broken tablets. Women who are pregnant or who could become pregnant must not handle broken tablets of PROSCAR. PROSCAR tablets are coated to prevent contact with the active ingredient during normal handling. If this coating is broken, the tablets should not be handled by women who are pregnant or who could become pregnant.

If a woman who is pregnant comes into contact with the active ingredient in PROSCAR, a doctor should be consulted.

Remember, these warnings apply only if the woman exposed to PROSCAR is pregnant or could become pregnant.

How to take PROSCAR
Follow your doctor's advice about how to take PROSCAR. You must take it every day. You may take it with or between meals. To avoid forgetting to take PROSCAR, it may be helpful to take it the same time every day.

Do not share PROSCAR with anyone else; it was prescribed only for you.

Keep PROSCAR and all medicines out of the reach of children.

FOR MORE INFORMATION ABOUT 'PROSCAR' AND BPH, TALK WITH YOUR DOCTOR. IN ADDITION, TALK TO YOUR PHARMACIST OR OTHER HEALTH CARE PROVIDER.

We know, you've had it up to here with the better value this, better value that story. So we put an end to it by recreating the Compaq ProLinea.® The computer that started it all.

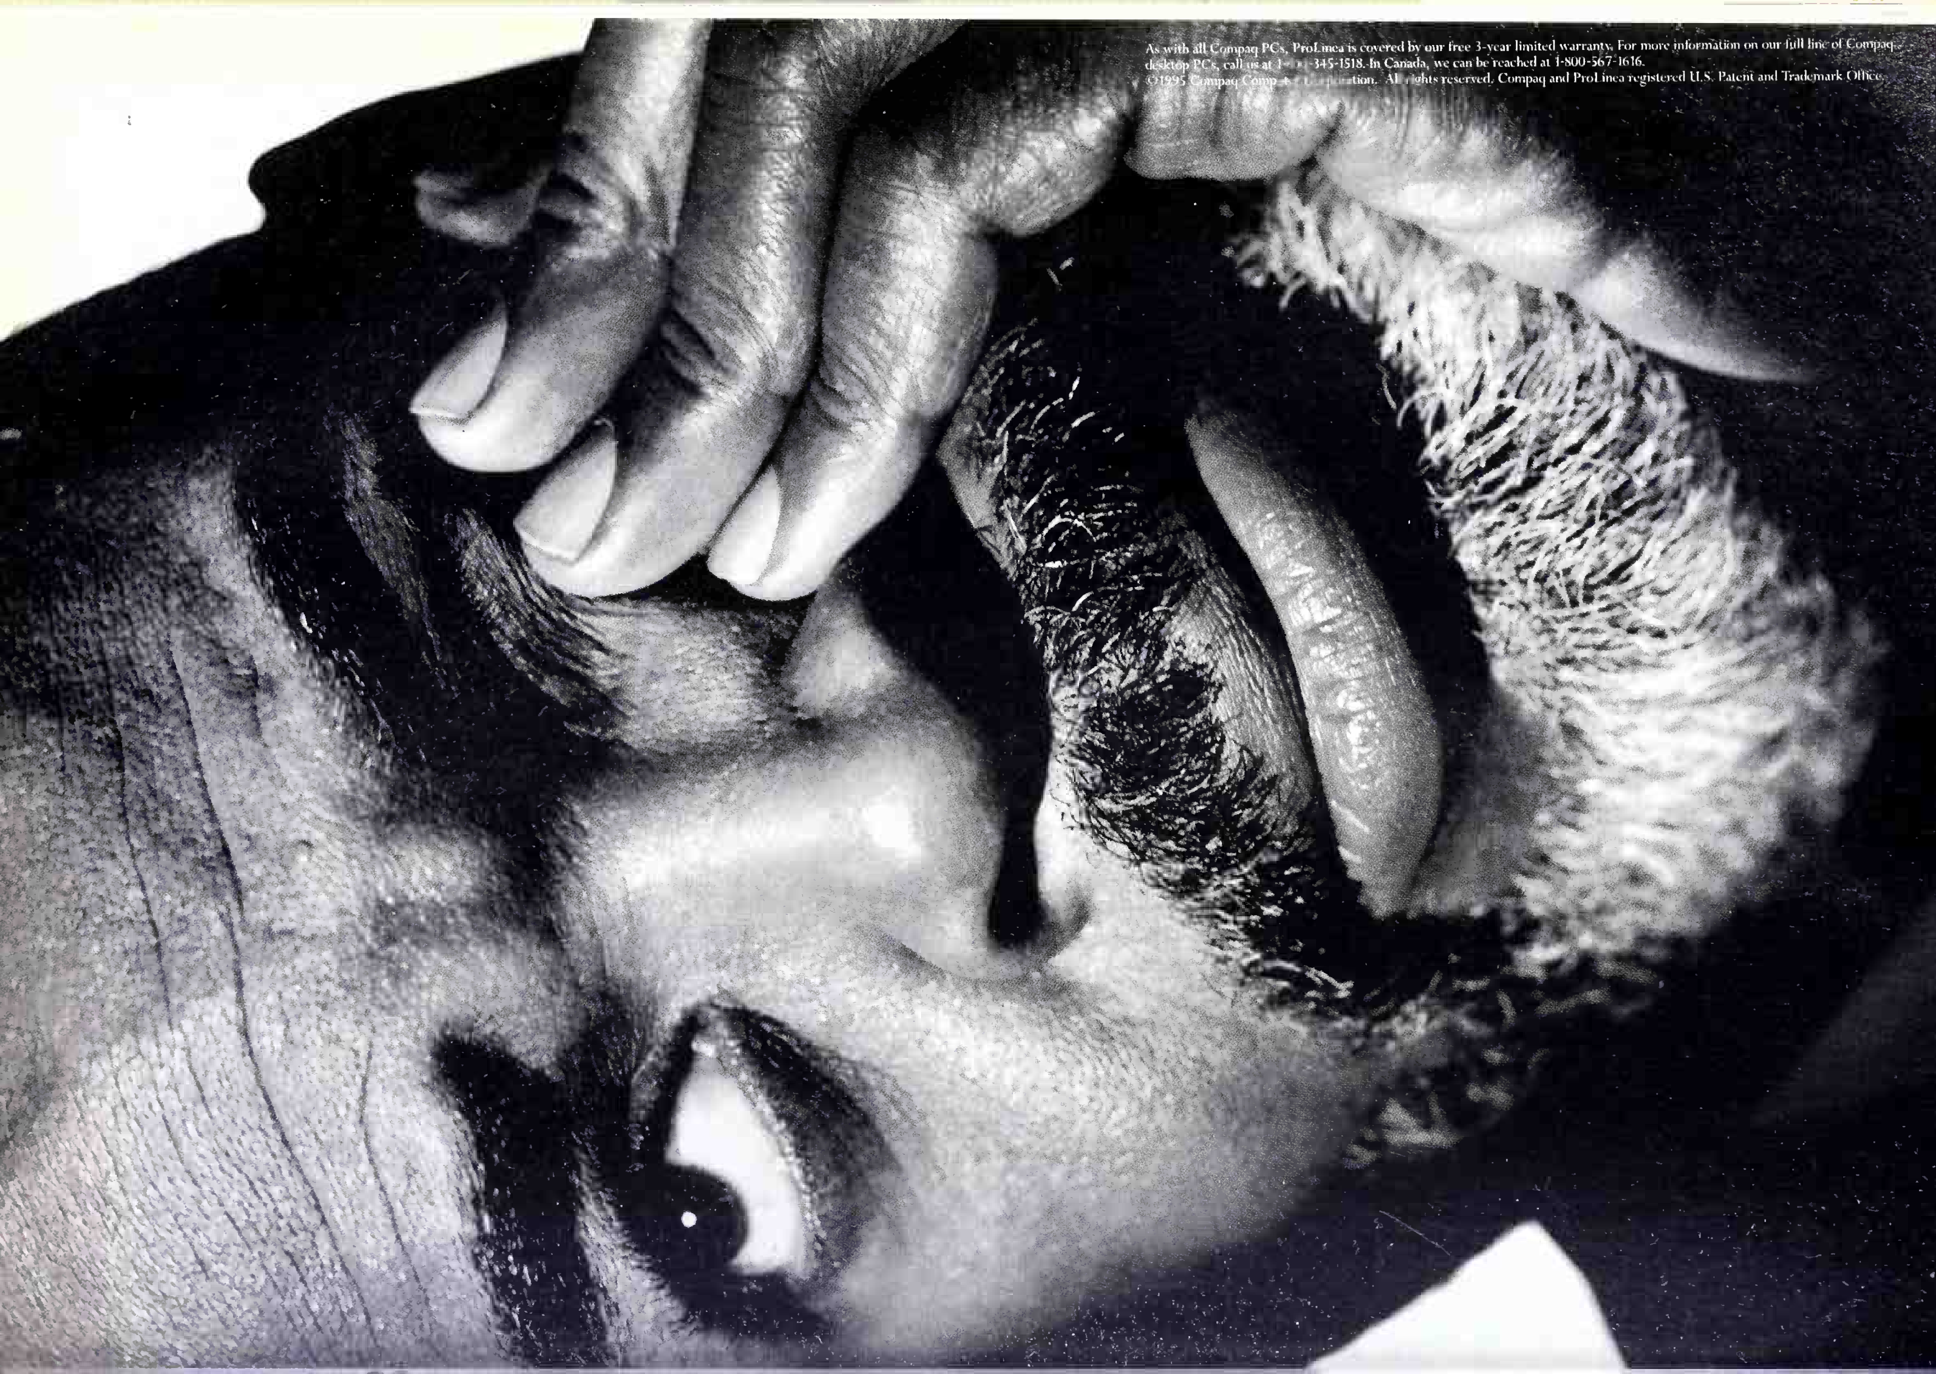
The new ProLinea is the epitome of high-quality, affordable desktop PCs. How so? Well in short (really short), it's now faster, smarter, more flexible and more upgradable. It can be networked in a snap. Literally. And, it's incredibly easy to support and maintain. Happy? You will be.

COMPAQ

Like Most PC Buyers, You're Probably Sick Of Hearing "Better Value." So We've Cleverly Disguised It As 12 Improvements.

Of course, this may all seem like just talk, but trust us – it's not. To get the complete "12 improvements" list detail by detail, you can find us on the Web at www.compaq.com or talk to your local Compaq reseller. You'll find when we say "better value," we don't mean we cut corners and then lowered the price. After all, that's everyone else's idea. Not ours.

Introducing the new Compaq ProLinea



As with all Compaq PCs, ProLinea is covered by our free 3-year limited warranty. For more information on our full line of Compaq desktop PCs, call us at 1-[illegible]-345-1518. In Canada, we can be reached at 1-800-567-1616.

present. "Brad flow-charts his entire life," says Vicki, seated at a desk in the Project's new offices in Boca Raton. While scientists hunt the A-T gene—one using an $80,000 gene sequencer donated by Perkin-Elmer Corp.—Margus is already contacting protein experts who would help develop gene therapy. He has established a bank of blood samples at Coriell Cell Repositories in Camden, N.J., and has opened channels to regulators to speed human trials once a therapy is developed. Researchers expect the A-T gene to be found within a year. Developing a cure will take years more. "It's not crazy to say that a therapy in five years is possible," says Cox. On the other hand: "How many people have succeeded in doing this? Zero."

"DOUBLE LIFE." All the while, Margus has worked to keep Kitchens of the Ocean afloat. Under tremendous stress and operating on little sleep, he says he can be short-tempered and impatient at work. "Someone's complaining to me about a tough sale, and I'm thinking, 'You're marginal, pal. For what I'm paying you, I could be funding some great scientist,'" he says.

Margus concedes that the company has suffered. When a market developed for high-end shrimp sales at retail, he was slow to respond. Reducing his international travel also slowed his move into shrimp-farming in Ecuador. When he travels now, Margus tries to visit an A-T family and a researcher or lab. "You should be thinking about your business from the time you step into the shower until you go to bed," he says. "But sometimes now, it seems a little trivial."

> "Sometimes now," Brad says, the shrimp company "seems a little trivial"

Even so, customers say, Margus doesn't neglect details. "He leads a double life. I don't know how he does it," says Roger D. Anderson, president of Seafood Partners Inc., whose unsolicited $1,000 donation was the Project's first nonfamily contribution. "He could use his situation as an excuse, but he chooses not to," says Joseph Leahy, senior seafood buyer for Red Lobster restaurants. To help keep the company on
even keel, Al Margus, 68, has return
to work nearly full-time.

Brad Margus doesn't know, of cour
if his efforts will pay off in time to he
his sons. Home from work at 6:30 o
recent evening, he watched Cole, now
and Jarrett, 6, chalk a large portrait
Vicki on the driveway. It was complet

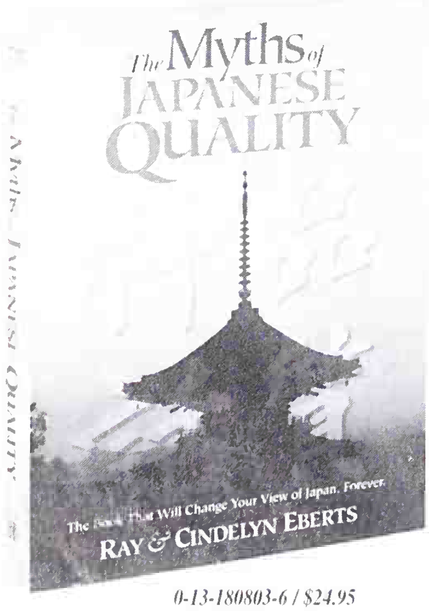
QUALITY WARS:
MYTH VS. REALITY



The Myths of JAPANESE QUALITY
The Myths of Japanese Quality
The Book That Will Change Your View of Japan. Forever.
RAY & CINDELYN EBERTS

0-13-180803-6 / $24.95
Published by Prentice Hall PTR

MYTH: Japanese workers are more productive.
REALITY: U.S. workers are 30% more productive.
MYTH: More U.S. cars are recalled.
REALITY: In 1993 Hondas were recalled 13 times more than GM products.
MYTH: The Japanese education system makes their society more competitive.
REALITY: Japanese schools instill conformity, not innovation, and Japanese corporations are stagnating and failing in new markets as a result.

Startling conclusions perhaps, but the authors of this provocative critique found 10 big myths about Japanese quality that didn't hold up under the scrutiny of their new research. They found badly made products everywhere ... an economic system that discourages improvement ... and the quality theories of W. Edwards Deming doing more damage than good. It's a controversial thesis. But anyone who assumes that Japanese products are superior —or that the Japanese offer a model for American corporations and schools—will find this work impossible to ignore.

TELEVISION

AND NOW, A SHOW FROM YOUR SPONSOR

Ad-free media and too-racy fare have marketers rushing to make their own TV programs

Tide
with BLEACH

PHIL COLLAS

Procter & Gamble Co. once turned out more TV shows than any Hollywood studio. Its production arm made or bought everything from westerns to game shows, and its dominance in daytime dramas christened the genre "soap operas." Although P&G Productions still cranks out 765 hours of *The Guiding Light*, *Another World*, and *As the World Turns* each year, it long ago ceased to be a factor in prime time. As production and ad costs rose, P&G found it cheaper to leave show biz to Hollywood and just sign on for commercials.

Now, though, Procter is plunging back into programming in a big way. In March, Chairman Edwin L. Artzt announced a three-year alliance with Paramount Television Group, maker of *Frasier* and *Wings*, to develop shows for network TV and first-run syndication. Outsiders figure the deal will cost Procter $120 million or more. That's not huge compared with the packaged-goods giant's $3 billion yearly ad budget, but Procter promises more deals to come.

P&G isn't the only advertiser tuning into the TV business. Television Production Partners, a consortium of nine brand-name marketers formed early last year, aired its fourth show in April and expects to spend $30 million over the next year and a half. Hallmark Cards Inc. paid $365 million last year to acquire RHI Entertainment Inc., a leading independent producer of TV miniseries and movies, including Hallmark's wholesome *Hall of Fame* productions. Wendy's International Inc. is aggressively seeking family-oriented projects the fast-food chain can help bring to the airwaves.

PC PLAGUE. Why are so many of the nation's biggest marketers suddenly starstruck? Procter says it worries that the flood of new media may wash traditional ad-sponsored programming away, leaving it no place to run its commercials unless it owns some of the shows. Procter fears a world in which CD-ROMs, the Internet, pay-per-view, interactive-game channels, and other ad-free media further atomize the mass audience that was once divided neatly among the three networks. Others worry about the dearth of family-oriented shows.

But there's anothe less complicated re son: cold hard cas Like everyone fro Sony Corp. to Se gram Co., soap-se ers and greeting-ca merchants see t booming entertai ment industry as gold rush they'd be ter get in on.

Indeed, if there one thing everyboc agrees on when comes to the ne media, it's that all the different pla forms under co struction are goir to require a heck a lot of new conten Already, demand—and potential pro its—are growing. The back-end rev nues alone from a hit show can be stu ning: Paramount's *Cheers*, for instanc fetched more than $400 million in synd cation for its first three years. Its var ous *Star Trek* shows bring in more tha $1 million an episode overseas. And c the cost side, an advertiser luck enough to produce the next *ER* ma have more clout at the bargaining tab when it comes to buying airtime, esp cially in foreign markets.

P&G's Artzt has emphasized broade

READY FOR PRIME TIME

Advertisers are plunging into programming

TELEVISION PRODUCTION PARTNERS A consortium of nine major advertisers, including AT&T, Coca-Cola, and GM, will spend $30 million over 18 months making movies, specials, and limited-run series.

PROCTER & GAMBLE The original "soap opera" sponsor has a three-year deal with Paramount to develop network and first-run-syndication programming.

WENDY'S The fast-food chain is backing production of *Derby*, a two-hour ABC movie to be aired in June.

HALLMARK It bought RHI Entertainment, a miniseries and movie producer, for $365 million last year.

als to explain his company's renewed erest in Hollywood. He warned in a ghly publicized speech to ad agencies t May that new media threaten mass vertising—and with it, P&G's ability sell its 50 million tubes of Crest each ar. As he told another trade group Mar. 10, just days after announcing e Paramount deal: "I firmly believe at unless advertisers participate in e development of new programming, 're not going to have much to say out how new programs get paid for." octer's agreement with Paramount arantees access to advertising time ierever the programs are shown.

ILD RUSH. But while the networks ve already seen their share of the dience erode, a commercial-free fu- re is still a long way off. And even me of those fashioning the new media stems point out that they'll need ad- rtising, too, to be economically viable. ven within P&G, not everyone believes threat to access was the primary force iving the Paramount deal. "The party e is, they're doing this for access, but s not a bad business proposition," tes one source close to Procter.

Procter knows that already. In 1990, helped put *Northern Exposure* on the and won cheap airtime on a hit show the bargain. Procter agreed to pay rt of CBS Inc.'s license fee to Univer- l Pictures for the eight initial epi- des and to advertise on them without guarantee of audience size. In return, got a 10% discount on three 30-second s every week for four years. It also s undisclosed rights for syndication d other revenue-generating deals. G's role as a fixer in *Northern Expo- re* was a lucky, one-shot deal far naller than its Paramount venture. it it's an indication of the possibilities.

First, though, Procter and Paramount we to get their shows on the air. In eir initial collaboration, P&G is putting some of the cash to produce a ver- on of the studio's *Entertainment To- ght* in Germany. In return, it will get share of the license fee, along with me advertising time. Meanwhile, in e U.S., P&G and Paramount hope to rike a deal with one of the networks. he network would get a break on the ense fees of shows the partners hope produce, while Procter would get re- iced rates on its ad spots. Procter esn't envision taking most of the ad me on any single show since that ould take up too much of its budget.

Such a deal is far from a sure thing, owever. Broadcasters may well balk the idea of an entrenched ad-rate scount. "No network is going to want institutionalize a benefit for an adver- ser," says one industry veteran. And roducers might shy away from doing

BUSINESS STRATEGY
July 9 - 21

It's our top-rated program, and it draws on the very best.

This program draws on the best faculty, including two of the professors on *Business Week*'s top ten list of executive educators. The best teaching method, *action learning*, lets you use your own personal case project, apply the latest knowledge on strategies, then consult with faculty and peers. The end result is an action plan, one you can take back to the job and begin to implement right away.

Top executives from around the world take this intensive two week course to get a better understanding of: competitive strategies; managing innovation; financial implications of strategies; integrating diverse functions; and developing creativity for a superior strategy.

COLUMBIA BUSINESS SCHOOL

COLUMBIA EXECUTIVE PROGRAMS

business with a giant advertiser th could attempt to dictate the content tone of a show. P&G ad chief Robert Wehling contends that Paramount "ca make whatever they want" and th P&G will simply opt out if a particul program is inappropriate. According Wehling, P&G isn't even telling Par mount to aim its shows at men or wor en or younger or older audiences.

BIG GUNS. For other marketers, hov ever, gaining more control over th shows that carry their commercials is a important reason for their involveme in programming. On June 17, Capit Cities/ABC will show *Derby*, a two-hou movie about an adopted girl who race in the Kentucky Derby. The show wa developed with an up-front sponsorsh commitment from hamburger chai Wendy's. "We believe there's a mark for and a need for family-oriented pr gramming," says Charles W. Rat Wendy's marketing chief. *Derby* is base on a script Rath wrote 15 years ag but he doesn't foresee more screenwri ing credits in his future.

Advertiser involvement in program ming seems certain to grow. Nine giar marketers—AT&T, Campbell Soup, Coca Cola, Clorox, Coors, General Motor McDonald's, Reebok International, an Sears Roebuck—have joined Televisio Production Partners, a new venture t develop movies, specials, and limited run series. Each advertiser choose which programs it wants to be involve in and takes a portion of the commercia spots. One recent project, *Hank Aaron Chasing the Dream*, aired in April an garnered a respectable 4.6 rating.

Some marketers remain leery c plunging too deeply into programming After all, making a hit show is far di ferent from making soap flakes: Onl one in five shows makes it to the secon year. Michael Neavill, media director a AT&T, sees Television Production Part ners as one more way to get good a spots at good rates, but he's not read to join the entertainment industry. "Th networks spend $400 million to $50 million a year in developing pilots fo new series, and their success rate i 15%," he notes. "I look at that and say 'Wait a minute, we're in the telecom munications business. Why do I wan to get into the programming busines when the people who have the experi ence are only right 15% of the time?' Sure, trying to come up with a hit show is risky. But some big advertisers figur not trying could be even worse.

TSMC
introduces a foundry
for the information age.

The fire of yesterday's foundries burns today in our hearts. In our commitment to productivity and technology. • TSMC is the world's leading semiconductor foundry, presently producing one million six-inch wafers annually, representing a major share of the global market. • TSMC is a dedicated foundry, where customers are our number one priority and intellectual property is prized. And protected. We don't manufacture any products under our own brand name, so there are no licensing issues, no conflict of interest fears, no requests for equity. • Instead, there is seamless transfer of data and execution of design specs. With methods and materials that complement customer designs. • In 1995 our new billion-dollar fab will begin production. This fab will be capable of producing 30,000 eight-inch wafers per month at state-of-the-art 0.5 micron technology, migrating to 0.35 micron. More than $400 million in annual investments will enable us to produce two million six-inch equivalent wafers per year by 1997. • Find out what it means to be a partner with the world's leading semiconductor foundry. • TSMC. Forging a future in the information age.

BROADCASTING

EVERYBODY'S TALKIN' AT US

Gab radio is a godsend for AM, though few hosts have Rush Limbaugh's Midas touch

Daniel E. Cohen's good fortune began last year when football fans everywhere started asking why all the players seemed to be wearing Band-Aids on their noses. Eventually, word got out that the strips supposedly helped open nasal passages so athletes could get more oxygen. The curiosity spawned 450 articles about Breathe Right Nasal Strips and Cohen's CNS Inc., the Chanhassen (Minn.) outfit that makes them. Better yet, players sporting the strips notched 8 of the 10 touchdowns scored during this year's Super Bowl.

That's all fine. But Cohen's big bonanza came by way of Marta Limbaugh, a rabid football fan herself. Marta was wowed when she tried the strips to alleviate symptoms from her deviated septum. She told her illustrious husband, and Rush told the 20 million people who listen to his syndicated talk show each week. Overnight, Cohen says, sales went crazy. First-quarter revenues came in at $7.1 million, a 460% increase over the fourth quarter. CNS stock began a steep climb from 10 to its current 27. By April, Cohen happily wrote a fat check to sponsor the show twice weekly. "If Rush Limbaugh says to try something, there are a lot of people who will try it," Cohen says. "It's nice to pay for advertising that you can count on."

SCORCHERS. In the colorful history of radio, there has never been anything like Rush Limbaugh. His sway over the millions who tune him in is unprecedented. Not only has it helped turn the political tide sharply to the right but it also has breathed life into AM radio, which many had consigned to the dustheap. The more Limbaugh talks, the more money he and his many business associates rake in. Says David M. Kantor, executive vice-president of ABC Radio Networks: "Rush is in a league by himself."

The mad rush (sorry) to share in some Limbaugh-like success is a big reason America's airwaves are crackling with ever-more scorching dialogue. As right-wing talk radio comes under the microscope in the aftermath of the Oklahoma City bombing, it's easy to forget that the growth of talk radio began with a business proposition. "The agenda is first to get ratings and second to make money," says Michael Harrison, publisher of *Talkers Magazine*, the industry bible.

Indeed, since 1990, the number of stations that devote the bulk of their day t talk has almost tripled, to 1,130 fro 405, according to *M Street Journal*, a other industry publication. Nobody kee count of talk-show hosts, but suffice it t say that a few years ago, G. Gordo Liddy and Oliver North were merel notorious, not notorious radio stars.

The number of people actually clea ing up in talk radio, however, is small than you'd think. Rush and Howard, course, earn huge sums—for themselve their syndicators, and the stations th air them. Limbaugh alone generates $3 million in revenue for his syndicato EFM Media Inc. A second tier of long-established hosts such as Don Imus an

THE ECONOMICS OF TALK RADIO

RADIO STATIONS Almost all talk—except Howard Stern— on the AM band. Many AM stations are losing money or are ma nally profitable. The strongest are the biggest ones, often earn margins topping 40%. Tribune Co.'s WGN in Chicago is king, w estimated revenues of $37 million. Infinity Broadcasting, with stations, has an estimated $322.5 million in 1994 revenue.

BARTER DEALS A station receives a show for no cash but gives the host's syndicator about half the ad time within the s Both the radio station and syndicator sell ad time for a given p gram. Stations get popular national programming without spe ing cash. Syndicators get quick distribution. The risk: that a gi host won't generate enough audience to attract advertisers.

SYNDICATORS/NETWORKS They provide all kinds of pr gramming, not just talk shows, to as many radio stations as th can. Groups include ABC Radio Networks, which produces Paul Harvey and *The Sports Babe*, and EFM Media, with just two sho Rush Limbaugh and Dr. Dean Edell. Westwood One, the biggest syndicator in talk, has Don Imus and G. Gordon Liddy.

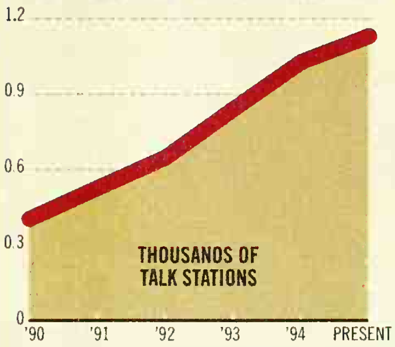
ADVERTISERS Everybody from IBM to the maker of Breathe Right Nasal Strips. Advertisers buy time from syndicators/networks and radio stations. Companies spent $10.6 billion on all radio ads last year. Some 95% of that flowed directly to radio stations. Only 5% flowed to syndicators/networks.

) Grant also earns big bucks. But
n the list drops off quickly. Although
stwood One Inc.—the biggest syn-
ator in talk with 15 shows—takes in
6 million in revenue, only a portion
that comes from talk. Says Steven
man, chief executive of Premier Ra-
Networks Inc.: "There are a few
nificant stars and a lot of planets."

The hard fact is, radio is an unusual-
ompetitive, fractured industry, with
re losers than winners. True, the cost
loing business pales next to television
almost every respect. And a well-
station can easily earn margins
ve 40%, says Michael J. Wolf, part-
at Booz, Allen & Hamilton Inc. The
npetition in radio, however, is much
re acute—especially on the AM band,
ere almost all talk airs. There are
rly 10,000 stations in the U.S., and
st cities have many more than 10 of
m vying for an audience. In TV, there
usually just four or five stations to a
rket, so the pie can be divided into
ger, more lucrative pieces.

ames Duncan, who publishes statisti-
reports on the industry, figures only
hird of all radio stations earn "sub-
ntial" profits, better than 20%. An-
er third, he says, lose substantial
ounts. Stations on AM—which over
years have lost most of the music
iness to the higher-fidelity FM band—suffer most. According to Duncan, half of all stations are AM. But because FM dominates in music, it pulled in 75% of the industry's $10.6 billion in 1994 revenue. AM stations split the remaining 25%, but not evenly. Big, urban news/talk stations such as Chicago's WGN collect most of the revenue, while many smaller stations go begging.

THE TALK RADIO EXPLOSION



*STATIONS THAT DEVOTE MOST OF THE DAY TO NEWS AND TALK
DATA: *M STREET JOURNAL*

It's easy to see why Rush has become AM's perceived messiah. His popularity not only means better ratings for almost all of the 660 stations that carry him but it has heated up interest in talk radio—good news for the many AM stations starving for listeners. Moreover, his nationwide success has shown that radio's traditional dependence on local programming was a costly anachronism. "Radio stations always considered themselves to be local, local, local," says EFM Media founder Ed McLaughlin, the ex-ABC radio executive who discovered Limbaugh in Sacramento, Calif., in 1988 and helped nurture him to fame. "What Rush was doing in Sacramento would be successful in any market. All I did was recognize that."

BARTER UP. Nowadays, with the right host or concept, news and talk radio can generate more revenue than any format on the dial. Because a host generally earns more than a disk jockey, talk is more expensive to produce than music. But since advertisers are convinced people actually listen to talk radio rather than just play it in the background, they'll pay more per rating point for talk. And since talk shows more easily segue into commercials—which are often read by the host—they can accommodate more spots per hour. The bottom line: For a highly rated host, revenues far outweigh costs.

Rush showed that syndication can produce a double benefit: It can provide a local station with a nationally known talk-show host for less cash than it would cost to produce a comparable show in-house. The alchemy that makes this possible is called barter (table). Under such deals, syndicators give stations ready-made programming in return for half of the advertising time on that show. The syndicator then sells that time to advertisers. Stern is the exception to this formula: Infinity Broadcasting Corp., his syndicator, collects cash exclusively. Rush and EFM collect both a fee and ad time. But the majority of talk syndication deals are straight barter.

Cheap satellite technology has helped syndication take off. Since the mid-1980s, the cost of transmission time has dropped by more than half as digital compression has boosted signal capacity. Receiver technology has also become cheaper, meaning more stations can afford to hook up. For a syndicator, this is crucial. The name of the game is to get your host's show on as many stations as possible. The more audience, the more you can charge advertisers.

Syndicators come in all shapes and sizes. The two most successful in talk

EMPERORS OF BLAB

Rush and Howard rule. They both get income from radio, TV, books, and promotional activity. Rush is on 660 stations, Stern is on 20 in major markets. Both send ratings sky-high but also take a piece of their shows' action. Nobody else comes close.

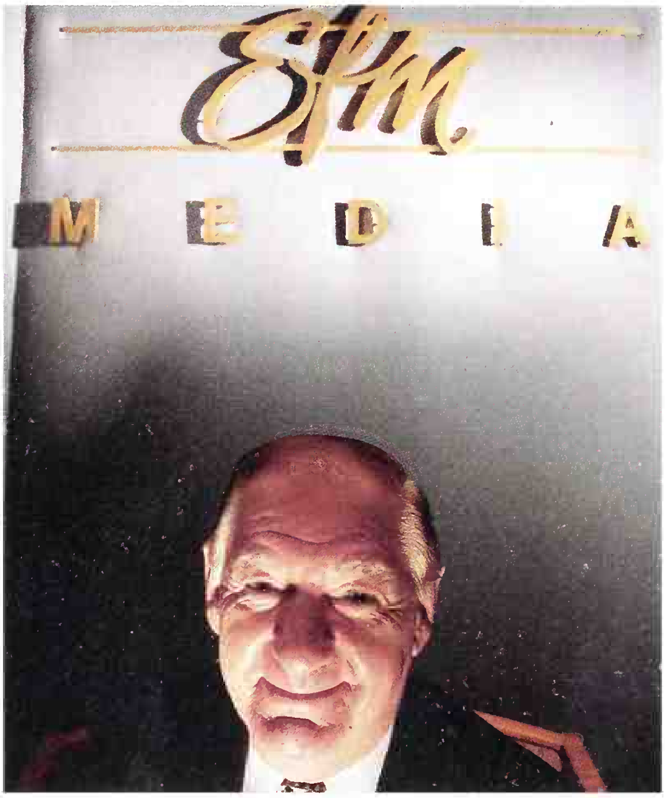
are McLaughlin and Mel Karmazin—another former radio executive turned entrepreneur. He has scored big by linking Infinity, the nation's biggest radio station owner in terms of revenue, with Westwood One. Other big players, such as ABC and CBS, own lots of stations and syndicate all types of programming, but they aren't deeply committed to talk. Those that are—outfits such as Salem Radio Network, which syndicates Oliver North, or Major Broadcasting Co., which does Michael Reagan—remain relatively small.

Perhaps the smallest talk syndicator is Cullum Communications Inc. Its principal owner is also its star: Blanquita Cullum. A former Bush Administration aide and Texas TV personality, Cullum started a local show in Richmond, Va., and lured such big-name guests as Phil Gramm, Bob Dole, and Robert E. Rubin. Then she decided to syndicate. Backed by a wealthy Virginia car dealer and Holly Coors, of the beer family, Cullum bought satellite time and has launched on 35 stations. The cost runs about $200,000 a year, and she isn't close to making money. "It's been a lot of work," says Cullum, a single mother of two. "I think Mother Teresa has a better social life than me."



MONEY TALKS EFM's McLaughlin nurtured Limbaugh—and helped wean talk-radio stations from their dependence on local programming

PHOTOGRAPH BY CLAUDIO EDINGER/GAMMA-LIAISON

RICH AND POOR. One factor creating demand for smaller shows such as Cullum's is a recent change in Federal Communications Commission ownership rules. Since 1992, owners have been allowed two AM and two FM stations per market. In total, they can own 20 of each. This has created a situation in most cities where the richest stations own some of the poorest. Because talk is hot, they will reprogram the lesser station to that format and sell ads on both stations as a package. The second station doesn't make much money, but it is an incremental benefit.

That's the case in San Francisco, where the Capital Cities/ABC Inc. outlet KGO is financing weaker sister KSFO. Jack Swanson, the program director for both stations, has been using a 50-50 mix of local talent and syndicated hosts such as Liddy and Reagan to create an ultraconservative Hot Talk format at KSFO. In liberal San Francisco, it's plenty controversial, but it has boosted ratings from 0.7 to 1.4 since January.

The trade-off is that hot talk is sometimes too hot for advertisers. For all of the Breathe Right Nasal Strip stories, most blue-chip marketers are reluctant to be associated with Limbaugh or any of the more acerbic hosts. Media buyers say national advertisers such as IBM and Philip Morris Cos.' Maxwell House will advertise but only gingerly—either by going into the show sporadically or by purchasing time around the show, hoping to catch the overflow audience. Limbaugh, most agree, is largely responsible for the rocket-like growth of Snapple Beverage Corp., an early, dauntless sponsor of his show. "Rush made Snapple what it is. He gave it instant brand recognition," says Sam Michaelson, a radio buyer for Zenith Media. "But a controversial talk show host will make most advertisers very skittish."

They don't have to look far for reasons to be nervous. After Howard Stern

SECURITIES FIRMS

LEHMAN BROTHERS: FREE AT LAST

Independent again, the firm is out to restore its once-hallowed name and business

When Richard S. Fuld Jr. made his first major trip to Israel in April, he was inspired by the spirit of the people. Despite the hardships, there was a feeling of teamwork, recalls the chief executive of Lehman Brothers Inc. "It was a wonderful sense of, 'We are all in it together.' That's the guts of our culture."

Just one year after Lehman Brothers was spun off by American Express Co., Fuld is mobilizing a lot of teamwork. His goal is to rebuild Lehman so that it will succeed as an independent firm. He has cut $182 million in costs so far this year, and axed 1,000 employees since early 1994. Fuld wins high marks from outsiders as a strong manager. Lehman shares have risen from 14 at the start of the year to its current 20 (table). Fuld and his top lieutenants have been buying Lehman stock over the past few months, a vote of confidence in the firm's future.

Despite the progress, it is still far from clear whether Fuld will be able to pull it off. Lehman is still working to overcome its past, particularly its 10 years as a part of American Express and Shearson, AmEx's brokerage unit. Until a year ago, Lehman had been suffering from a series of reconfigurations and management changes, and lacked a focused strategy. Lehman does have a commanding position in the bond business, mainly trading bonds for customers. But it is still trying to develop the set of well-rounded, high-margin capabilities that are required for success in investment banking. One glaring example: While competitors aggressively expanded globally during Wall Street's fat years in the early 1990s, Lehman concentrated on domestic markets and still lacks a major presence overseas.

HIGH STAKES. Lehman has another liability: its in-between size. Without a major presence not only in foreign markets but in some domestic markets, the firm lacks the resources and overall heft of a Merrill Lynch, Morgan Stanley, or Goldman Sachs. Yet it is saddled with costs that make it far bigger than such niche players as Donaldson, Lufkin Jenrette, which thrive by targeting few smaller businesses. "Without a lea ing position abroad or the deep pocke of some of their competitors, it remai to be seen what their comparative adva tage will be," says Samuel L. Hayes I a professor of investment banking Harvard business school.

Fuld says Lehman's size isn't a pro lem since it's "not trying to be all thin to all people. We want to be the premi investment bank serving our clients g bally. For the clients we're targetir we want to be their top 1 or 2 banke

LEHMAN'S BIGGEST CHALLENGES

INCREASE PROFITABILITY
Lehman must build up high-margin businesses such as derivatives, high-yield bonds, and emerging-market securities.

REBUILD EQUITY RESEARCH
The ranking of Lehman's once-preeminent research unit has fallen from first place to ninth.

GLOBALIZE Lehman lacks a major presence in most foreign markets.

DATA: BUSINESS WEEK

There's little doubt that Lehman now has a strong management team. Fuld, 49, and President T. Christopher Pettit, 50, both Lehman veterans, have been busy reshaping the firm. Fuld, a talented bond trader who earned his MBA from New York University at night, has quickly grown into the job of chief executive. A direct, no-nonsense leader, Fuld acts as Mr. Outside. Pettit, a West Point grad, is Mr. Inside, who runs the firm day to day. Both are strongly committed to Lehman: They receive 66% of their pay in stock. And they have remained in modest offices rather than newer, more sumptuous digs that are removed from the troops. "I like the people at the top. They are high quality," says Jack J. Byrne, a Lehman advisory director and shareholder.

Lehman has avoided the compensation disputes that have plagued other firms such as Salomon Brothers Inc. One reason is that only 6% of Lehman's revenues come from proprietary trading, according to Pettit. Paying a handful of proprietary traders a chunk of their huge profits is a recipe for infighting. To keep employees focused on teamwork and help Lehman win all of a customer's business, the firm has a "one firm, one profit and loss" approach. It has a single bonus pool and shuns special pay deals with star performers. "We just can't have people paid that way here," says Pettit. "The culture has to be a team."

But Lehman is still grappling with its basic strategy. It has an enviable franchise as the No. 2 underwriter of all debt issued by U. S. companies in 1994, according to Securities Data Co. It is ranked No. 2 in mortgage-backed securities. But these are lower-margin, commodity businesses that need to be supplemented by higher-margin areas, such as derivatives and foreign exchange. "They are late starters in so many of these high-margin areas, it puts them at a disadvantage," says Haig J. Nargesian, a senior analyst at Moody's Investors Service Inc., which just downgraded Lehman. Fuld disagrees. "Derivatives, foreign exchange, and high yield are a huge percentage of our business," he says, adding that 20% of 1994 revenues came from derivatives alone.

NEW SPIRIT. Lehman also has to revive its equity business, where it is No. 5 in global equity, according to SDC. One key to getting equity assignments is good equity research. But Lehman's equity department is in shambles. In 1994, Lehman's ranking in *Institutional Investor*'s poll plummeted to No. 9, after being No. 1 three years in a row in the early 1990s. One reason: Lehman's cost cuts, which reduced the number of analysts from 71 in 1993 to 58 today. Currently, Lehman has no analyst covering major pharmaceutical companies or the media. "I keep hearing we lost the business because we couldn't offer the research coverage," says one managing director.

Part of the problem in these units is the general feeling that they are unimportant because of the firm's strong bias toward bonds, say several Lehman managing directors. The firm is tightly run by two guys, Fuld and Pettit, who spent their careers in the bond business and who have promoted their loyal fixed-income inner circle to head equity and other departments. "Equity is a stepchild. Fixed-income rules the roost," says another Lehman managing director. Fuld says the firm has "a lot of work to do" in equities—and it is not biased. "We're looking for good, talented people," Fuld insists. "Backgrounds don't matter."

It's clear that a new Lehman is slowly taking shape. Many departments are hiring senior people, who are renovating from the ground up. For example, last July, Fuld hired a Morgan Stanley & Co. veteran, Robert Lunn, to rebuild Lehman's cadre of 350 brokers who cater to the very affluent. Lunn dismissed 100 top brokers last year and hired 30 top-notch brokers from CS First Boston and Salomon Brothers in recent months. The restaffing has resulted in a rise in average annual commissions per broker from $500,000 to $1 million. Similar efforts are under way in equities, merchant banking, high yield, and in Asia.

But perhaps the best achievement is the new spirit that pervades the firm, engendered by release from what most Lehmanites considered indentured servitude at AmEx. Lehman officials say privately they are strongly opposed to a sale. Yet Lehman will have to move fast to avoid a return to what it has tried hard for so long to escape.

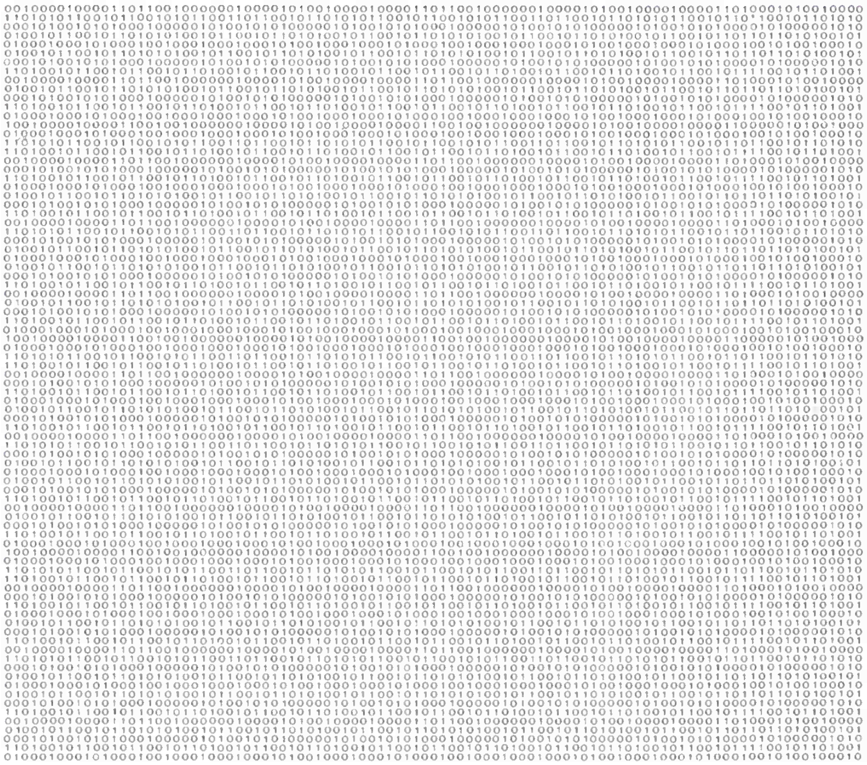
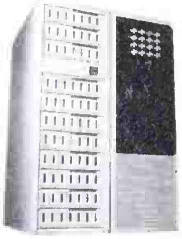
Your customer data has never really given you a clear picture of your customer.



Announcing The Open Parall

Decision support is one promise of information technology that has never been fully realized. Its aim is to help you uncover trends hidden in your databases, so you can manage information to satisfy customers and compete more vigorously.



Unfortunately, there's been no practical technology to make large-scale decision support possible. Companies that have tried haven't offered much beyond some hardware and a handshake. But now, Unisys presents the most comprehensive decision support solution in the industry. It's built around the *Open Parallel Unisys Server (OPUS)*— a joint Unisys and Intel initiative in scalable parallel processing. And it can help you **CUSTOMERIZE** your organization to be more responsive to those you serve

OPUS breaks through the barriers that have kept parallel processing from being commercially practical. It's UNIX

YOU SHOULD KNOW WHAT YOUR FUND MANAGER IS MAKING

Investors pour millions of dollars a day into mutual funds, but they do so without one piece of critical information: How are fund managers paid? For decades, the Securities & Exchange Commission has required public companies to reveal CEO pay—but that doesn't extend to mutual funds. Now that the funds hold more than $2 trillion of the public's money, new questions are being raised about why fund companies should be exempt from disclosing how much they pay portfolio managers.

Regulators have long been concerned about rising fees levied on fund investors. But they have never focused on the small part of fees that goes toward compensating portfolio managers. Some fund experts and compensation specialists say that bonus incentives have become such an important tool to attract and motivate fund managers that compensation should be disclosed as a way for investors to evaluate fund managers—much as shareholders in public companies are told what the CEO makes. "Considering how much money is in mutual funds today, it's surprising no one knows how managers are paid," says Alan Johnson, president of compensation consultant Johnson Associates in New York.

EXTRA RISK? For sure, pay for performance is an excellent way to motivate managers. But some incentive programs may come into conflict with an investor's interests. For example, there are funds that place a heavy emphasis on short-term results—with up to 80% of a manager's annual pay coming from one-year performance. A high-risk investor might go with such a fund, but it makes little sense for an investor with a long-term horizon.

At Fidelity Investments, most managers receive bonuses based on the rolling three-year performance of their fund, which encourages long-term results. But sources say at least six of Fidelity's top managers, including Jeffrey N. Vinik, who runs the $40 billion Magellan Fund, have bonus arrangements potentially worth millions if they meet certain performance goals and if the firm's profits are strong. Fidelity won't comment on the compensation of individual managers, but investors might ask: Which managers have the best deals, and might those bonus arrangements be structured in such a way that it could lead the manager to take extra risk as the plan comes up for renewal?

Bonus plans at other firms sometimes include equity in the firm—a favorable sign, say fund watchers, since the manager is likely to have a long-term outlook. Firms that don't have ownership arrangements "tend to pay up for portfolio talent and put on an enormous amount of pressure for a big hit," says James Berns, a recruiter for Korn/Ferry International. Other bonus plans encourage managers to market their funds by focusing on asset growth, which might prompt a manager to spend time on promotion that should be spent on investment.

Manager pay is such a closely guarded secret that most fund directors are not informed of how managers are paid, fund lawyers say. Directors oversee contracts that determine shareholder fees, but they rarely review specific compensation packages. Says Johnson: "If directors of mutual funds don't pay attention to how much people are paid, they're missing the point. They should know what the reward structure is and what kind of chances [managers] might take."

TOUGH FIGHT. The SEC has been gradually requiring more disclosure from the traditionally secretive fund industry. In recent years, it has required funds to actually name the individuals who manage funds and also to disclose directors' pay But portfolio-manager compensation has not yet appeared on the agency's radar screen, says an SEC source.

Jon Fossel, CEO of Oppenheimer Management Corp. and chairman of the Investment Company Institute, the fund industry's main trade organization, admits that "it's hard to argue that investors shouldn't be able to know how managers are paid," particularly when a bonus plan includes significant short-term incentives. But he suggests that fund companies would fight any new disclosure rules on compensation. What really matters, he says, are fees and performance. A manager's pay, he argues, is a "highly sensitive" and competitive piece of information.

There was a time when public companies made much the same argument. But just as the regulators did before, they may again have to consider whether to put investors' concerns ahead of the managers'.

Boston correspondent Smith covers mutual funds

Bonus Fever

Mutual-fund companies use many methods to calculate bonuses:

SHORT-TERM RESULTS	Compensation may be based on one-year performance against a benchmark index such as the S&P 500.
LONG-TERM RESULTS	Similar to short-term, but uses rolling three- or five-year returns and compares them with a benchmark.
PERFORMANCE FEES	Large portion of managers' bonus comes from the performance-based fees collected from fund assets.
MARKETING	Bonus may reflect the fund's asset growth. This may induce managers to publicly promote their funds.
COMPANY PROFITS	Bonus is based on profits of the management company or those of a group of funds.
DISCRETIONARY	Management company uses subjective criteria to evaluate manager's contribution to firm.

BORIS JORDAN: THE MAN WHO MADE MOSCOW'S MARKET

For an encore, he aims to create his own Russian bank

When Victor Paul first met Boris Jordan in Moscow in 1992, both were novice investment bankers helping the Russian government sell off thousands of state enterprises. One day, recalls Paul, who currently heads Morgan Grenfell & Co.'s Moscow operations, "Boris asked me why I wasn't trading equities. I told him the market wasn't developed enough yet. You know what Boris said? He said he wanted to create the market, not wait for it to develop."

That's just what happened. In his three years with CS First Boston in Moscow, the tall, cherub-faced Jordan, now only 28, practically built the Russian equity market from scratch. While other big foreign investment banks shied away, he created securities from the assets of Russian companies and marketed them to foreign buyers. Last year, CSFB attracted $1.2 billion of the $1.8 billion of foreign investment in Russian equities.

Now, Jordan once again is moving ahead of the curve. On May 4, he announced he was leaving CS First Boston to create a new investment banking and securities firm, together with a Russian partner. With foreign investors avoiding emerging markets like Russia in the wake of the turmoil in Mexico, Jordan is going after a big new customer base: the Russian investor. Says Jordan: "Russians are using the international 'quiet period' to grab hold of assets."

LEGEND. Jordan hopes to take advantage of this shift by setting up an indigenous operation. Russian investors prefer doing business with other Russians. Jordan also believes domestic rather than foreign banks will dominate Russia's capital markets.

His background gives him a huge advantage. The grandson of Russian aristocrats who fled the Bolsheviks, Jordan was raised in Sea Cliff, N.Y., a close-knit ethnic community where he studied Russian on Saturdays and worshipped at an onion-domed Russian Orthodox church. As a New York University undergraduate in the 1980s, he majored in U.S.-Russian studies.

JORDAN: *On his own*

GRAHAM TROTT/KATZ/SABA

Right after college, he joined Kidder, Peabody & Co. and learned how to securitize assets. Later, he joined GPA Group PLC, a financial group involved with aircraft leasing. Along the way, he picked up a grounding in emerging markets and valuable contacts among institutional investors. In 1992, Hans-Jorg Rudloff, who started up CSFB's East European and Russian businesses, recruited him for Moscow.

There, he became something of a legend. When he launched CSFB's trading business in mid-1993, he had never traded a stock or bond. But by 1994, when the Russian market took off, CSFB was handling more than 60% of the deals. Rival brokers say Jordan's inexperience was a blessing in disguise, allowing him to push large-scale Western investment at a time when others remained wary. "You ca argue with the results," says Berna Sucher, managing director of Mosc brokerage Troika Dialog. "CSFB has h an extraordinary impact on the Russi market."

Jordan's departure is a big blow f CSFB. Last year, Russian investme banking and trading produced almo $100 million in revenues, nearly half CSFB's profits. Leaving to work wi Jordan are Stephen Jennings, an expe enced investment banker who was c head of CSFB's Moscow office, and Ant Kudrashov, the firm's top Russian tra er. Other bankers in CSFB's 90-pers Moscow office may join the exodu There is also talk that Rudloff, who le CS First Boston in 1994 to sta his own investment boutique in Lo don, could join Jordan and his Russi partner.

NATIVE STRENGTHS. Jordan expects fo eign investors to remain leery of Russ until after parliamentary and Preside tial elections in late 1995 and early 199 But he believes that Russians, who ha traditionally held their $12 billion wor of savings in dollars, will get more inte ested in stocks now that inflation dropping, the ruble has stabilized, a the dollar has weakened. When foreig ers do return to Russia, he plans to e ploit that market.

Jordan is mum abo his partner's identit but Moscow broke expect him to join for es with one of Russi top commercial bank High on the list is U eximbank, the lead of a banking conso tium that has propos lending the governme $2 billion in exchang for control over number of Russia's t privatized companies.

Jordan says th Russian banks are sin ply following the exan ple of J.P. Morga which made a fortur at the turn of the ce tury snapping up an restructuring America industrial assets. Th banks are likely t shape the next phase in the Russia markets' maturity as local investors g in on the action. If past is prologue, Jo dan won't wait for the trend to develo His home-grown bank will make happen.

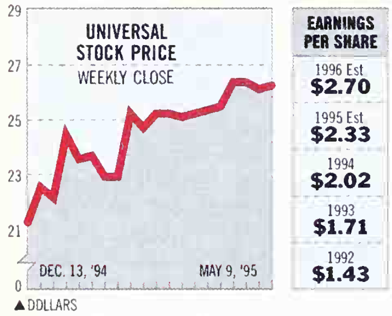
UNIVERSAL HEALTH: A SPREADING GLOW

Anybody who thinks the hospital business is in poor health should talk to Alan Miller, the upbeat CEO of Universal Health Services (UHS). Business has been so good that Universal has acquired five hospitals in the past six months. No wonder big investors have stayed with the hospital-management company. UHS shares have more than doubled since mid-1993, climbing from 12 to 26 on May 9. Fidelity Management is the largest stakeholder with 11%. Another influential holder: global investor George Soros, with 4%.

IT'S IN THE PINK



DATA: BLOOMBERG FINANCIAL MARKETS, FIRST CALL CORP.

What's behind Universal's appeal? "It's just plain cheap for what's going on in its business," says one investor. Adds Todd Richter, an analyst at Dean Witter Discover: "Compared with the other hospital-management companies we follow, UHS remains inexpensive." Richter is impressed with its solid balance sheet, strong cash flow, and book value of $20 a share. Based on Richter's 1995 earnings estimate of $2.35 a share, the stock is trading at a price-earnings ratio of 11. The hospital group's p-e ranges from 10 to 23.

One New York mutual-fund manager believes UHS has received feelers on a buyout or merger offer from several big players. The approaches have been friendly so far, says this pro, because the company has four different types of stock, designed to thwart an unfriendly takeover. Some 40% of the voting stock is controlled by Miller, who bought more shares this year.

"The fact that the CEO holds a lot of the stock wouldn't deter a takeover—if the price is right," says the fund manager. Miller will only concede that he has "been approached" more than once. Some analysts say the stock would be worth 35 to 40 in a buyout or merger.

Miller says Universal may spin off part of its assets to shareholders. Universal owns and operates acute-care and psychiatric hospitals and ambulatory surgery and radiation centers. It also owns a managed-care organization. Psychiatric admissions, which have lagged behind in past quarters, "have improved, posting a better-than-expected 11.9% same-facility increase in the first quarter," says Richter.

MOVING PAST AN ASBESTOS CLOUD

Long shunned by investors because of asbestos-related lawsuits, Fibreboard (FBD) is now catching the fancy of some smart-money pros. Why? Apart from very possibly beating the asbestos heat, Fibreboard is emerging as an attractive asset-value play. The stock reflects the switch in Fibreboard's profile: Trading at 26 in early December, the stock has hit 36. Stuart Rudick of Rudick Asset Management, puts Fibreboard's breakup value at 70 a share.

Fibreboard has "rapidly evolved into a financially thriving building-products concern, from an asbestos-impaired forest-products company," says John Stanley of Dillon Read. The company's asset gem is 80,000 acres of timberland in the Sierra Nevadas. The acreage is valued on the books at $35 million, but its current market value is about $240 million, or $28 a share, based on recent timberland sales, says Stanley. Apart from producing lumber and insulation products, Fibreboard develops and operates ski resorts in Northern California. Last August, it acquired Norandex, a low-cost producer of vinyl siding.

A federal court is expected to approve an agreement reached by Fibreboard with primary insurers to cover liabilities from asbestos lawsuits. Stanley and Rudick believe the ruling will be favorable and dissipate concern about the liabilities from Fibreboard's asbestos-linked products before 1959, when most of the exposure occurred. The agreement would have insurers pay all pending claims and provide a $1.5 billion trust fund for future claims.

Stanley figures revenues will jump to $524 million this year from $363 million last year. He sees net rising to $4.10 a share from $3.51 last year.

CURIOUS MATH AT DURACRAFT?

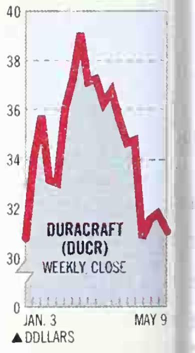
When Duracraft (DUCR) announc better-than-expected first-quart earnings on Apr. 26, the stock of t major maker of home heaters and h midifiers should have shot up. Instead slipped. Trading on Apr. 26 at 31¾, D racraft is now at 30. Blame it on t "poor quality" of the reported earnin says a New York money manager.

Despite the nice rise in earnings 48¢ a share from 44¢—the "balan sheet says something quite differen notes Charles Biderman, editor and pu lisher of *Market Trim Tabs* in San Rosa, Calif. There are real questio he says, as to how those numbers we derived. First, the inventories: Th leaped 132%, to $41.3 million from $1 million. "We have no evidence of wro doing; but inventories soaring wh gross margins seem unrealistically makes us wonder..." says Biderma Inventories could hide costs that ot erwise reduce income, says one analy

Also suspicious: The drop in reserv for questionable accounts receivabl by $1.6 milllion, which enabled the co pany to reduce expenses. "Had reserv stayed flat, earnings would have plung 28¢ instead of rising to 48¢," figures B derman. Part of Duracraft's proble he explains, is the jump in raw-material prices in China and Hong Kong, where most of the products are manufactured.

What happens next? Biderman says that because Duracraft's prices have not increased as fast as the raw-material prices, subsequent quarter profits "will have to be squeezed even more than they were in the first perio

CRUNCHING NUMBERS



DATA: BLOOMBERG FINANCIAL MARKET

Duracraft CFO Keith Seidman insis the earnings reported "accurately r flected" the first-quarter results. T inventory jump was due, he adds, product returns caused by the mild wi ter. He concedes that the rise in ra material prices "will impact" 1995 r sults. Seidman sees gross margins risi back to 31% in 1995.

CONGRESS

NO FREE RIDE FOR FREE TRADE

Big Business meets a GOP resistant to its global agenda

They love tax cuts. They hate regulation. And they never met a government agency they couldn't pare. In many ways, the 73 freshmen House Republicans look like a dream to Corporate America—a dream that quickly fades into a nightmare when the subject turns to trade.

Just ask Federal Reserve Chairman Alan Greenspan and Treasury Secretary Robert E. Rubin, who found out the hard way when they went to Capitol Hill last winter to brief lawmakers on the Clinton Administration's peso rescue plan. The duo expected kudos from probusiness Republicans, thankful that the Administration had taken a bold step to prop up Mexico's economy and stabilize world markets. What they got was a bitter thrashing from the freshmen—despite the plan's strong support from GOP leaders. Ten of the newcomers even signed a blistering letter to House Speaker Newt Gingrich (R-Ga.) denouncing the peso plan as "a handout to the international finance community."

Attacks on the business elite chasing the almighty buck used to be the province of populists on the left. But the surprising stridency of the GOP freshmen has alarmed many executives, who are increasingly dependent on foreign markets for growth. Though the GOP has historically been the party of free trade, the vast majority of first-term Republicans reject that mantra, aligning themselves more closely with America Firsters such as Patrick J. Buchanan and economic nationalist Ross Perot. Explains freshman class vice-president Mark Souder (R-Ind.): "We're hot-wired to the grass roots, so that's why you're seeing a more pro-nationalistic tone."

The frosh class constitutes one-third of a majority vote on any issue in the House—a cohesive swing bloc that has voted together more than 98% of the time on the GOP's Contract With America. Unchecked, such sentiments could leave 40 years of trade liberalization dead in the water and even reverse some gains. "I'm very concerned," confesses Dick DeVos, president of Amway Corp., a $5.3 billion direct marketer that gets 70% of its sales overseas. "Among some of those [newcomers], there is an increasingly persistent tendency to reject free trade."

SWING BLOC Stockman and his frosh House colleagues buck the leadership's line. "No one, not even business, is leaving the room without getting hit."

DeVos has good reason to worry. No longer can business count on a monolith of Republican free-traders to offset the Democrats' traditional resistance to expanded trade. On that one issue, the new Republicans are closer ideologi to the Democrats' labor-liberal wing by House Minority Leader Richard Gephardt (D-Mo.). "We are at a cr roads here," worries Representative Kolbe (R-Ariz.), a veteran free-tra "My freshman colleagues know w they were elected for, and free tr isn't part of their agenda."

Why this shift? Many of the freshmen ran on anti-Establishm platforms, promising to shake up status quo. Moreover, s freshman Representative Brownback (R-Kan.), a fore U.S. trade negotiator, m of his colleagues' beliefs based on a distrust of la institutions, whether they international organizati government bureaucracies bor unions, or multinati corporations. "They're fea of bigness—whether th one-world government or Big Busine explains Brownback.

The newcomers are aggressive their new clout, too. Their ultimate jective is to seize the policymaking on trade issues from the execut branch. Already, their agitating prompted congressional efforts ai at undercutting President Clinton's M ico policy. And opposition from House freshmen has jeopardized "f track" legislation favored by Repu can leaders to renew Presidential thority to negotiate trade agreeme

TRADE TARGETS

GOP freshmen are flaunting Republican leaders on global commerce

MEXICAN CURRENCY CRISIS Agitation by first-termers, angry over what they call a bailout of big investors, prompted congressional efforts to scuttle the Clinton Administration's peso rescue plan.

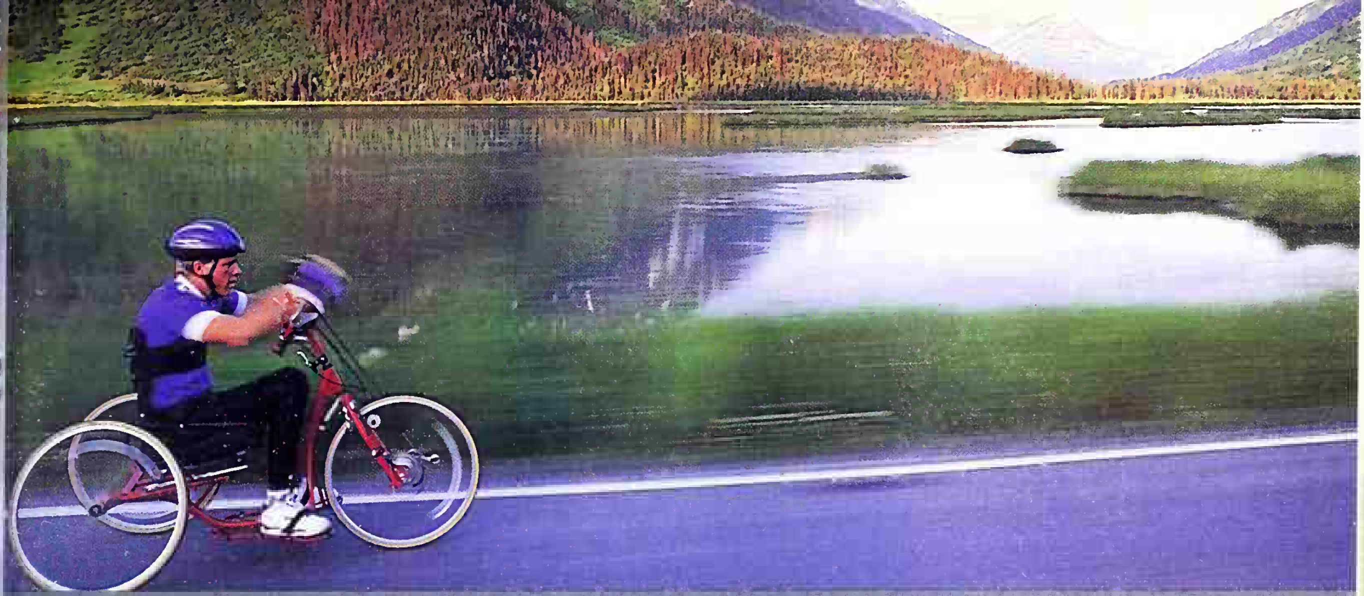
FAST-TRACK AUTHORITY Eager to assert congressional power on trade, Republican newcomers could thwart efforts to extend White House power to negotiate trade accords without amendments.

EXPANSION OF NAFTA Freshman opposition is likely to delay Congress' consideration of Clinton Administration plans to expand the North American Free Trade Agreement to Chile and other Latin American nations.

TRADE SUBSIDIES Budget-cutting conserva tives would gut Commerce Dept. programs designed to subsidize U.S. trade promotion abroad. Many freshmen want to abolish the Commerce Dept. altogether.

DATA: BUSINESS WEEK

TO BOTTOM: PHOTOGRAPHS BY CHRIS SCHRAMECK, PETE SILVA/IMA IMAGE



AFTER ALMOST 200 YEARS of HELPING UR CUSTOMERS, WE'VE DISCOVERED SOMETIMES THEY'D PREFER a CHANCE to HELP THEMSELVES.

MANAGED DISABILITY

The one thing people with disabilities want more than anything the world is a chance. A chance to make the most of their abilities.

With that in mind, ITT Hartford has developed an innovative Managed Disability rogram. One that not only helps your company control costs, but also gets employees ith disabilities back to work faster. If they can no longer perform their old job, we'll help hem find one more suited to their abilities.

For more information, call your ITT Hartford group representative. It could mean normous savings for your company. And everything to an employee with a disability.

ITT HARTFORD

without congressional amendments.

It doesn't end there. The freshmen talk of stalling legislation extending the North American Free Trade Agreement (NAFTA) to Chile and other Latin American countries. The majority backs a hawkish Gephardt proposal to slap sanctions on Japan, China, and other countries that refuse to increase U.S. imports—a proposal tougher than President Clinton's current stance on auto parts—causing many free-traders to worry that it will spark a global trade war. They want to abolish the Commerce Dept. and its export programs, which many consider corporate welfare. "We're hitting everyone," promises Representative Steve Stockman (R-Tex.), a leading freshman trade hawk. "No one, not even business, is leaving the room without getting hit."

SPILLOVER EFFECT. Most members of the group feel they were elected to pursue the Contract's domestic agenda, particularly budget slashing and tax cuts. And the Contract doesn't contain a word about trade. That explains only part of the picture. In many cases, Republicans—among them Representatives Jon Christensen (R-Neb.), Todd Tiahrt (R-Kan.), and David Funderburk (R-N.C.)—replaced Democrats in districts that long favored protection for homegrown industries like textiles, autos, and agriculture. Other GOP freshmen, including Souder, Stockman, and Helen Chenoweth (R-Idaho), won in 1994 because of strong backing from fiercely nationalistic Perot voters.

The hostility the new group feels toward global trade is spilling over to other international issues as well. These neo-isolationists have gleefully backed drives to slash the foreign aid budget, ban U.S. participation in U.N. peacekeeping operations, and adopt a more hard-line stance toward Russia.

Corporate America is so concerned that it is working overtime to "educate" the firebrands on the merits of free trade. Industry groups such as the Electronic Industries Assn. have sponsored briefings on Capitol Hill, and companies such as General Electric Co. are considering one-on-one meetings with novice lawmakers. Even the conservative Heritage Foundation will begin a trade education program for first-term lawmakers in June.

The business reeducation plans could temporarily blunt some of the freshman class's sharper edges. But unless Corporate America can convince the newcomers that free trade doesn't jeopardize jobs in their districts, trade liberalization could be a tough sell for years to come.

By Richard S. Dunham, Douglas Harbrecht, and Mary Beth Regan in Washington

MEDICINE

X-RAYS UNDER FIRE

Did earlier overuse cause much of today's breast cancer

From the library in his striking home in San Francisco's Haight-Ashbury district, Dr. John W. Gofman picks up *Nuclear Milestones*, a book that speaks to the great irony of his life's work. In it, Gofman, professor emeritus of molecular and cell biology at the University of California at Berkeley, is pictured with former Atomic Energy Commission chief Glenn T. Seaborg. In Seaborg's lab, Gofman did pivotal research on plutonium in the 1940s, speeding A-bomb development.

Today, Gofman, 77, is better known as a controversial physician and scientist who has spent much of his career agitating about the dangers of radioac
fallout. Now he is dropping a bom
his own: Based on a review of 50 y
of medical literature beginning in
1920s, Gofman claims that up to
of all breast cancers seen today
have been caused by the ionizing ra
tion from medical X-rays.

VAST OVERSTATEMENT? If Gofma
right, the message is heartbreak
Some 182,000 American women wil

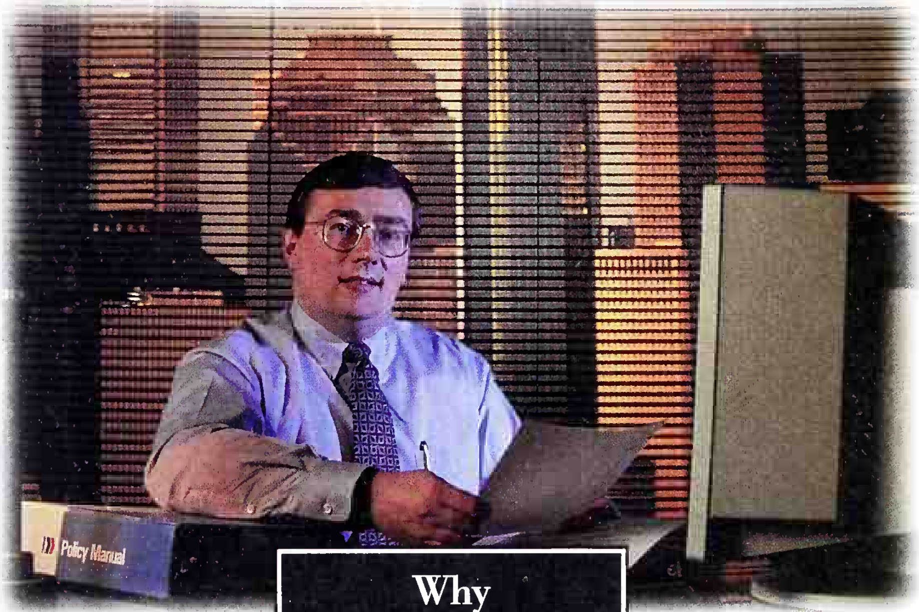
"The worst possible outcome would be for women to stop having mammograms"

— FRED METTLER

With the SAS® System, we can integrate large amounts of data and build a picture of how our fields are performing.



Why Chevron U.S.A. Production Company Relies on the SAS System

Chevron

At Chevron U.S.A. Production Company, the quest is to be better than the best. Out in the field, engineers join forces with earth scientists, operations staff, and support personnel to produce millions of barrels of oil reserves...find and develop new sources of energy... and maintain quality and low cost at every stage of the oil and gas production process.

The Means to Make Better Decisions

Providing the means to deliver accurate and timely information to improve work processes and make better business decisions is the job of George Alameda, Chevron U.S.A. Production Company's Manager of Information Technology.

The company is using the SAS System to help with enterprise-wide information delivery. "Our mission is to make financial, operational, and reservoir data available in an easy-to-use format to all the asset teams at work in CUSA Production Co.," says Alameda. "We've found the SAS System is a superior solution for analyzing data, turning data into useful metrics, and guiding our cross-functional teams toward improved work processes."

One team, in CUSA Production's Western Business Unit, is tracking the profitability of individual wells. "It's a tremendously difficult task to optimize our field operations for maximum profitability," says Alameda. "With the SAS System, we can integrate large amounts of data and build a picture to compare one field against another and challenge our asset teams to identify and share best operating practices."

Reaching for the Best

Alameda looks forward to extending the use of the metrics and performance monitoring data to employees trying to improve their work processes. He admits his vision is far reaching, but so is the SAS System. "Our challenge is to be better than the best," he concludes, "and the SAS System is helping us reach that goal."

To receive a SAS System Executive Summary, give us a call or visit us on the World Wide Web at http://www.sas.com

RAD) common for diagnostic chest X-rays today.

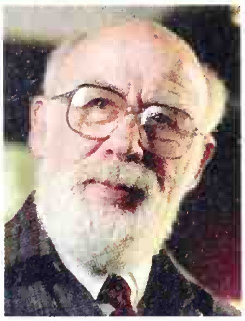
Because of the limits of historical analysis, medical record-keeping, and the complexity of cancer, it could take years to determine exactly what the impact of radiation has been. For now, the biggest concern among Gofman's critics is that his pronouncements could spread new fears about breast X-rays.

CONSTANT GLARE. Gofman says his findings have nothing to do with today's mammograms. He notes that typical exposure is now less than one-third of a RAD, or just one-hundredth as much radiation as in the 1960s. Most doctors believe that for middle-aged and older women in particular, the benefits vastly outweigh the risks. "The worst possible outcome of Gofman's study," says Dr. Fred A. Mettler, chairman of radiology at the University of New Mexico School of Medicine, "would be for women to stop having mammograms."

No one, however, disputes that ionizing radiation can be hazardous, and the breast seems to be especially vulnerable. Of 41,000 people who survived extreme exposure during the Hiroshima and Nagasaki atom bomb blasts, 295 developed breast cancer—about 50% more than normal for Japan. Higher-than-normal incidence is also found in women who have undergone X-ray fluoroscopy—once part of tuberculosis therapy. Instead of taking a split-second film, doctors observe the patient under a continuous X-ray glare. Doses have come down today. But Gofman still worries that doctors, especially overseas, are not taking enough care to minimize fluoroscopy exposure.

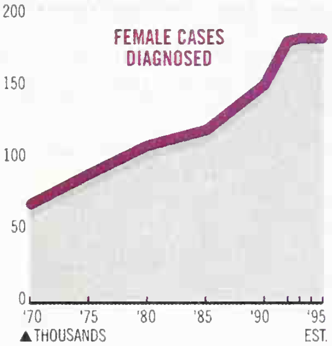
Critics complain that Gofman hasn't published his findings in a respected journal that is subject to peer review. Instead, he wrote a book: *Preventing Breast Cancer: The Story of a Major, Proven, Preventable Cause of This Disease*, just published by the San Francisco-based Committee for Nuclear Responsibility Inc.

Even before viewing the data, some experts cringe at the apparent hyperbole. "That 75% figure is ludicrous," says Mettler, who is also the U. S. delegate to the U. N. Scientific Committee on the Effects of Radiation. He points out that Hawaii has the highest incidence of breast cancer in the U.S., though X-rays were rare.



PAST IMPERFECT For decades, Gofman notes, X-rays were used for everything from shoe fittings to acne and wart removal

DID BREAST CANCER CASES SHOOT UP...



DATA: AMERICAN CANCER SOCIETY; JOHN GOFMAN, MD

...BECAUSE OF PAST ABUSES OF X-RAYS?

CONVENTIONAL WISDOM

- Medical X-rays, though overused prior to 1970, caused little harm
- Spread over a long lifetime, low-dose radiation is safe
- The causes of breast cancer are not known

GOFMAN'S BOMBSHELL

- Atom bomb studies show high-dose radiation can cause breast cancer
- Continuous "fluoroscopy" was particularly risky
- Breast cancer may be largely preventable

Other researchers believe dietary fat, hormone levels, and genetic disposition for cancer rates play a much bigger role than past X-ray exposures. Gofman's antiradiation bias, says Mortimer M. Elkind, a Colorado State University radiologist, means he "tends to see a skeleton behind every curtain."

Yet Gofman surely has found some frightening skeletons. The list of uses and abuses for "the ray," as scientists called it, is long and bizarre. Discovered 100 years ago, this invisible, short wavelength radiation was first used for imaging. Then doctors found that some patients they exposed actually improved, leading to treatments for pneumonia and bronchitis. X-rays were also used to treat post-partum mastitis, an inflammation of a nursing woman's breast. Doctors "didn't realize cancer was a disease that comes 10 or even 60 years after the radiation insult," says Gofman.

In the 1920s, beauty p
lor operators sometin
wielded X-ray machines
zap clients' unwanted fa
hair. In the 1930s and 19
"shoe fitters" arrived at
partment stores. Custom
shoved their feet into th
fluoroscopic contraptio
which showed the bones
the feet in motion. Until
1960s, dermatologists routi
ly used X-rays to zap 80 different s
maladies—from acne to warts.

By the 1950s, some scientists w
sounding the alarm. One of their fi
targets was the faddish use of fluoro
py during "well baby" visits, in wh
pediatricians would hold the butt

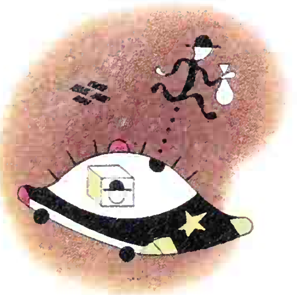
Developments to Watch

EDITED BY OTIS PORT



'SUSPECT IS TALL, BEARDED—WELL, CHECK THE PAGER'

EVEN A COMPANY WHOSE business is transmitting words—in this case, Paging Network Inc.—can't dispute that a picture is sometimes worth a thousand of them. When the police flash an all-points bulletin (APB) to be on the lookout for a crime suspect or missing child, a sketch or photo could be much more valuable than a verbal description. That's why PageNet jumped on the technology developed by Data Critical Corp.: a way to broadcast images via paging channels. Their new service, dubbed Image APB, is being tested by various federal and local law-enforcement agencies.

Software from Data Critical in Redmond, Wash., carves an image into multiple pager-size transmissions. Every police cruiser and beat cop equipped with a portable computer and a pager "card" would pluck the signals out of the air and reassemble them on the PC's display. An entire police force could be on the alert in minutes. And for cities that have already outfitted police cars with PCs, the cost would run about $300 per computer plus $14,000 for a transmitter. By summer, PageNet and Data Critical also plan to offer what might be called Image EKG—a similar service for sending electrocardiograms and X-rays to doctors who are on the move.

FIRING UP CATALYTIC CONVERTERS, FAST

THE FIRST MINUTE OR TWO OF MOST CAR TRIPS PRODUCES more pollution than all the rest of the drive. That's because the catalytic converter must be frying-hot to work properly. Companies have developed ways to get the converter to "light off" faster. But they aren't effective with engines bigger than four cylinders.

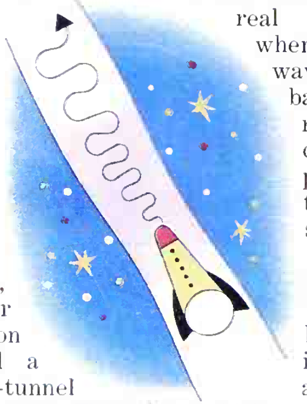
Ergenics Inc. in Ringwood, N. J., thinks it has a solution: a chemical-reaction heater that needs just four seconds to heat the front of a catalytic converter to 350C. It has two parts. Outside the tailpipe is a bottle of metal-hydride powder—granules saturated with hydrogen. In the tailpipe, a tube contains a secret alloy. When the engine starts, a valve opens and hydrogen gushes out of the powder and into the tailpipe, triggering the heat-giving reaction. Later, hot exhaust gas drives the hydrogen back into the powder.

Ergenics says independent tests show a car equipped with its Hydride Cold Start Heater can meet California's Ultra Low Emission Vehicle standard. President David H. DaCosta is seeking licensees and figures the heaters could sell in volume for about $150 apiece.

ENERGY BEAMS COULD REALLY CUT YOUR COMMUTE

IT LOOKS MORE LIKE A FLYING saucer than a sleek spaceship. It will be powered by silent microwave beams instead of roaring rockets. And its airframe is essentially a helium-filled dirigible. Despite these unconventional features, the aerospace craft being developed at Rensselaer Polytechnic Institute isn't mere science fiction.

Last month, Rensselaer's "air spike" propulsion system passed a Mach 10 wind-tunnel test with flying colors. That's only half the speed needed to get into space, but Leik N. Myrabo, the RPI associate professor of mechanical engineering who heads the research team, is confident the principle is valid for craft that could ferry tourists to the moon in six hours—or business travelers from New York to Singapore in 45 minutes.



The air-spike system works by funneling microwave energy to a spikelike antenna. Its tip generates shock waves that blast away the air in front of the saucer, creating lift to suck the airframe forward. But the real action comes when the shock waves collapse back around the rim of the saucer, forcing hypersonic air into the intakes of a special jet engine. No heavy fuel is carried because the jet burns electricity—beamed in as microwaves from high-power transmitters on the ground or in space. If the wind-tunnel results at RPI attract more funding, says Myrabo, 21st century travelers may literally ride on energy-beam highways in the sky.

DIAGNOSES THAT CAST A WIDER NET

DOCTORS HAVE LONG treated complex disease such as cancer with "cocktails" of drugs tha fight illness on several fronts. But when it comes to diagnostics, fe biotech companies have adopted multipronged strategies. Their tests zero in on a single biochemical marker—usual a particular protein the body releases when hit by a disease.

This narrow focus seems odd, because in the course of an illness, tissues undergo dynami molecular changes that can leave many differen chemical trails in the blood. While humans ma have trouble making sense of these complicated patterns, computers that run "smart" software called neural networks excel at distilling information from apparent chaos. So, for five years Horus Therapeuti Inc. in Rochester, N. Y., has been "training" neural networks to discove patterns among multiple biomarkers released when a tumor invades healthy tissue. Once the system understands the variables, it can make highly accurate diagnoses based on blood tests

In clinical tests involving 800 volunteers, a ne test for prostate cancer achieved 90% accuracy—far outperforming the popular, single-marker PSA blood test. The Foo & Drug Administration now assessing the results, but Horus isn't waiting to push ahead with similar tests for colon, ovarian, and breast cancer.

Beyond news. Intelligence.

COMPUTERS

MORE RED MEAT, PLEASE

Packard Bell, the lion of PC-Land, is widening its hunt

It wasn't all that long ago that analysts and competitors alike dismissed Packard Bell Electronics Inc. as yet another wannabe personal-computer company. Sure, it was the leader among the ragtag band of PC makers—brands such as Magnavox, Everex, and Leading Edge—that sold to consumers through mass-merchandise chains. But when the real competition jumped in—IBM, Apple, and Compaq—Packard Bell could kiss the home-PC market goodbye.

Or so they said. Not only has Packard Bell withstood the arrival of stiff new competition in home PCs, it has emerged as the country's hottest PC maker. Half of all PCs sold in chain stores are Packard Bells. In two years, sales have tripled, pushing the privately held company to $3 billion in annual revenues in 1994. This year, sales are expected to nearly double, to around $5.5 billion. Instead of ceding market share, Packard Bell has blown by the competition. Last year, it shoved aside IBM for the No. 3 spot in the U.S. In unit sales, Packard Bell has been No. 1 for the past two quarters.

Not bad for a company that has yet to buy its first national ad. Now, executives at the Westlake Village (Calif.) company have their eye on something bigger than the U.S. home-PC market. They're trying to jump-start an international expansion and push upmarket to sell low-cost PC clones to businesses, too. The company is already investing heavily overseas: It opened a factory in France last fall, started assembling computers in Brazil last month, and up an Asian division in Singapore ea er this year and is searching for a East manufacturing site. Last year, l than 10% of the company's sales w outside U.S. borders. Compaq and by contrast, sell more computers ov seas than they sell in the U.S.

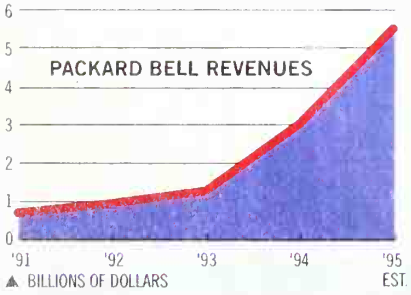
WOOING THE SUITS. The company is making aggressive moves closer home. Packard Bell has largely igno the corporate PC business. But last it recruited a Compaq Computer Co executive to build a new commercial vision. This summer, the company launch a new line of PCs, called Pack Bell Executive, which is expected to clude laptops and network servers has started building a technical sup group dedicated to corporate buy "We have always sold PCs to small medium-size corporations through retailers," says Beny Alagem, the c pany's 42-year-old Israeli-born foun and CEO. "But as we go forward, will put more emphasis on our relati ship with corporate resellers." Tran tion: Packard Bell will start sell through computer-store chains, too. has quietly signed up two chains to business PCs already.

No one expects Packard Bell to t the corporate computer market storm. For one thi this is the lucrat home turf of s mainstream compu companies as I Compaq, and D They will defend it fiercely, and—if th have to—they'll cut their prices match Packard Bell's expected come- prices hundreds of dollars below comp itive models.

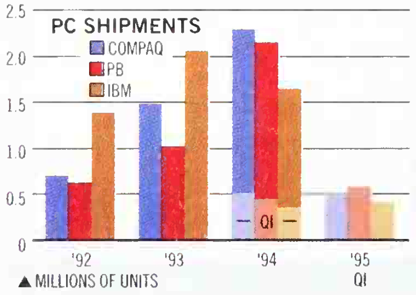
FIELD OF GREEN *CEO Alagem can't compete on price alone*

Packard Bell may also find that l prices are less important to corpor buyers than they are to consume Businesses tend to look at other f tors, such as the cost of training, s ware, maintenance, support, and u-

WITH GROWTH DRIVEN BY THE HOME-PC BOOM...



...PACKARD BELL HAS BECOME THE VOLUME LEADER...



...AND NOW HAS BIGGER PLANS

BUSINESS MARKETS New Commercial Group is designing models specifically for business customers.

INTERNATIONAL In 1994, only 10% of revenue came from outside U.S., vs. 50% or more for rivals such as IBM. The new push includes factories in France and Brazil and the launch of an Asian division.

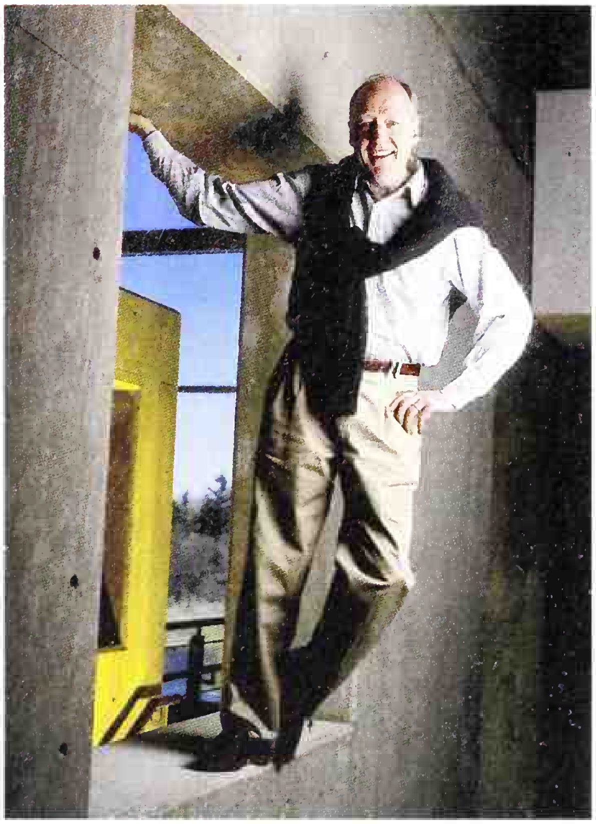
to $6.6 billion by 1998, from nearly $8 billion in 1993. In contrast, sales of software that turns out electronic forms, while less than $300 million today, are growing at least 25% a year.

As the industry leader, Moore still serves a roster of blue-chip customers. But a complacent, ingrown management let competitors "eat our lunch for 20 years," complains Braun. He says Moore's share of the U.S. forms market slipped to just 13% last year from over 30% two decades back. The result: Between 1990 and 1993, its total sales dropped 16%, to $2.3 billion, while profits nosedived. "Moore reminds me of General Motors," says the CEO of one rival. "It's awfully difficult to turn around an aircraft carrier when everyone else has a fast-moving destroyer."



MICHAEL ABRAMSON

Between 1990 and 1993, Moore's total sales fell 16%. Under Braun, it's battling back, recently sealing a $200 million, five-year deal.

Still, if anyone is up to this job, it's Braun. As No. 2 at Unisys, he won glowing reviews for guiding a brutal restructuring that restored profitability. That performance drew attention from Moore, whose board had been looking, for the first time, to hire a CEO from outside the company. In Braun, it got a disciplined leader, who relaxes by skiing and hiking in the Alps. After 25 years in computers, he quickly grasped the technical challenge.

PULP FACTION. "I don't want to be the last guy holding the flag for forms," Braun says, but in the next breath he insists that "paper is not going to vanish." While electronic forms may work well for internal communications, most companies still rely on paper for their dealings with consumers, whether it's bills or direct-mail marketing. So, Braun argues, what Moore must do is expertly apply just the right mix of paper and electronics. "If they do it right, they can retain customers and grow," says Steve Weissman of Hurwitz Consulting Group, based in Newton, Mass.

Braun's plan is to get the required technical expertise in a hurry. Last August, Moore bought 20% of Jetform Corp., a leading supplier of electronic-forms software, and negotiated an option to acquire full control. On Sept. 26, Moore signed a 10-year, $1.7 billion alliance with Electronic Data Systems Corp., General Motors Corp.'s computer consulting arm, which will help Moore streamline customers' businesses. One of the first joint projects: using laptops to reengineer and automate Moore's own sales-force and order-entry operations. Then, on Mar. 29, after announcing alliances with Indigo and Xerox Corp., Moore unveiled a digital print network. It will let customers design documents on their own workstations and instantly transmit the designs to the nearest Moore plant for printing. Using this system, for example, the Best Western chain is creating customized brochures for its motels.

Moore is winning some big orders. In December, it signed a deal, worth up to $200 million over five years, with Amerinet Inc., a large health-care purchasing organization. EDS, which previously bought forms from many companies, is also turning over to Moore its entire $75 million-a-year internal forms business. Moore can help save "mi
of dollars a year" by eliminating
less duplication of forms, helping
print forms as they're needed, an
verting paper flows to digital netw
when appropriate, says EDS Purch
Director Benny Welch.

Moore's prospects look even bri
in two smaller units—direct mai
labels—where computerization is a

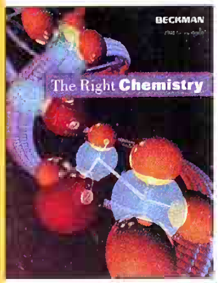
BUSINESS WEEK'S 1995 ANNUAL REPORT DIRECTORY

In today's complex economic environment, and with political uncertainty in many parts of the world...making intelligent investment decisions is not easy. Nothing tells a company's 'story' better than their annual report. The following companies in this BUSINESS WEEK Annual Report Directory are leaders in their respective industries. Each has an exciting story to tell potential investors.

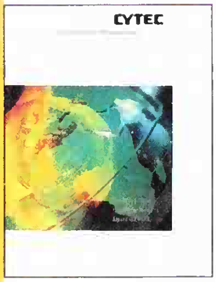
BUSINESS WEEK's reader service card in the Directory enables you to choose which annual reports you would like to receive. Simply circle the corresponding numbers on the reply card and mail it back. You will receive the annual reports selected... free of charge!

Beckman Instruments, Inc.



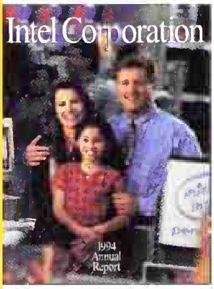
Beckman's business is focused on the chemistry of life. The company designs, manufactures, sells and services biological laboratory systems for biotechnology and life sciences researchers and hospital laboratories.

CYTEC



Cytec Industries Inc. is an integrated global specialty chemicals company that serves a wide range of industries, including water treatment, paper, chemical and polymer processing, coatings, plastics, mineral processing, oil drilling and recovery, aerospace, textile, and automotive. The Company's primary strategic focus is on value-added specialty chemicals and specialty materials, a significant portion of which utilize key intermediates manufactured by Cytec. (NYSE:CYT)

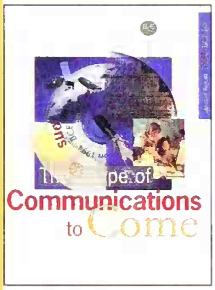
Intel



Intel (NASDAQ:INTC) is the world's largest semiconductor manufacturer, supplying the personal computing industry with microprocessors, boards, systems and software that are the "ingredients" of the most popular computing architecture. These products help create advanced computing systems for personal computer users.

Intel supports the computing industry's needs for strategic products that provide performance, mobility, connectivity and digital video computing. Intel does this through investing heavily in internal design, manufacturing and development capabilities, while driving the evolution of new generations of high-performance products.

BCE Inc.



BCE Inc. is Canada's largest telecommunications company. Subsidiaries include Bell Canada, Northern Telecom, BCE Mobile Communications, Bell Canada International and Tele-Direct. Earnings in 1994 were Cdn $1.2 billion on revenues of Cdn $21.7 billion. BCE is listed on exchanges in Canada, Europe and Japan and on the NYSE.

tions networks that are used as strategic bui
blocks in information systems for retail, manuf
ing, package and parcel delivery, warehousing
distribution and other industries.

Telia Group

telia

The Telia Group offers public and private networks for telephony, data communications and mobile telephony. In 1994, the Telia Group's revenues totalled SEK 38,000 million. Return on capital employed was 12.3%. Telia invested a total of SEK 8,300 million.

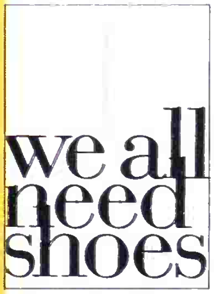
TELUS Corporation

TELUS is a $4 billion telecommunications comp
headquartered in Alberta, Canada. Subsidi
include AGT, Canada's third largest phone comp
and AGT Mobility, which achieved 58% cel
growth in 1994. Partnerships include Telece
which is licensed for combined cable TV and pl
services to over 600,000 homes in the U
Kingdom. TELUS (symbol "AGT") is in the Tor
35 index on the Toronto Stock Exchange.

CSF Holdings, Inc.

CSF Holdings, Inc. (principal subsidiary is Citizens Federal Bank which is a $4.6 billion Florida-based thrift institution) had another excellent year in 1994 achieving net earnings of $41.1 million or $4.01 per share. The Company achieved a 16.3% return on stockholders' equity and a .91% return on assets. Net earnings for the past three years totaled $137 million. Citizens was founded in 1952. The Company has a strong capital position.

Nine West Group Inc.



Nine West Group Inc. is a leading desig
developer, and marketer of womens fas
footwear in the "better," "upper modera
and "moderate" price ranges through
2000 department, specialty, and indepen
stores and 406 company-owned retail store

ouron Pharmaceuticals, Inc.

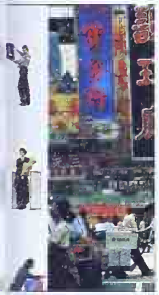
Agouron Pharmaceuticals, Inc. is a pioneer and leader in the field of structure-based drug design and is applying this technology to engineer novel synthetic drugs for use in the treatment of cancer, AIDS and other serious diseases. Currently in clinical trials are two anti-cancer drugs for solid tumors and an HIV protease inhibitor.

vay Group

Solvay is a worldwide chemical and pharmaceutical Group with consolidated sales in excess of USD 8 billion worldwide.

The strategy followed by Solvay is to be world leader in its five sectors of activities: alkalis, peroxygens, plastics, processing and health, while improving the quality of its products through continuous and cost-effective innovation.

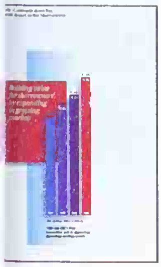
selte



Esselte is a worldwide Group focusing on the manufacture and distribution of products for offices and retail stores.

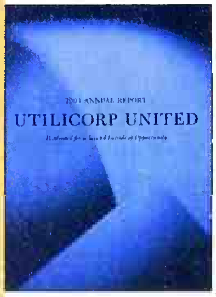
Sales for 1994 amounted to SEK 12,123 m. (11,843). Income before tax was SEK 413 m. (301). Return on capital employed increased to 11.9 percent (8.3).

C Communications



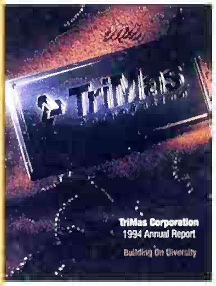
SBC Communications Inc. (NYSE:SBC) provides telephone, cellular, cable TV and advertising services and products to customers worldwide. From 1984 to 1994, a $100 investment in SBC stock would have grown to $741. Total return includes stock price appreciation plus dividends. Based in San Antonio, Texas, SBC ranked 34th on the 1994 Forbes list of the largest U.S. companies.

UtiliCorp United



UtiliCorp (NYSE:UCU) is uniquely positioned to succeed in deregulated energy markets. In 1994 the company earned a record $94.4 million and introduced EnergyOne^{SM}, a national brand for its products and services. UtiliCorp operates utilities in eight states and British Columbia, markets gas and electricity nationally, and has joint ventures in the United Kingdom, New Zealand and Jamaica.

TriMas Corporation

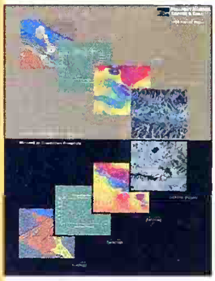


(NYSE:TMS)

TriMas Corporation, a leading diversified manufacturer of proprietary products for commercial, industrial and consumer niche markets, recorded Another Record Year in 1994. During the year, TriMas continued the successful execution of its proven strategies for growth and achieved record sales, operating earnings, cash flow and earnings per share.

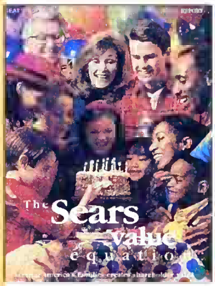
Send for our Annual Report to learn why we believe 1995 will be Another Record Year.

Freeport-McMoRan Copper & Gold Inc.



Freeport-McMoRan Copper & Gold Inc. (NYSE:FCX) is one of the world's largest and lowest cost producers of copper and gold. Through our principal operating unit, P.T. Freeport Indonesia Company, we are engaged in the exploration, mining, and milling of copper, gold, and silver in Irian Jaya, Indonesia. Even as we increase our targeted ore milling production by 74%, our reserves are estimated to exceed 25 years.

Sears, Roebuck and Co.



Sears is returning to its retailing roots by spinning off its 80 percent ownership of Allstate Insurance Co. to shareholders and selling Homart Development Co. Sears then will be composed primarily of merchandise operations that serve a customer base of 50 million households through a network of mall-based department stores and specialty stores. Sears posted 1994 earnings of $1.45 billion on revenues of $54.6 billion.

EDITED BY AMY DUNKIN

LEARNING TO LIVE WITH RISK —AND LOVING IT

INVESTING

There's no way around it: In the world of investing, risk goes hand in hand with returns. You'll need to assume many kinds of investment risk to achieve long-term goals, like saving for retirement or paying for a child's education. Yet instead of embracing risk and using it to their advantage as money managers do, individuals typically see risk as the enemy. "People are irrationally scared of it," says Jay DeMartine, head of marketing at Strong Funds. "It's like another word for bad."

Understandably, mutual-fund companies don't spend ad space extolling the risks of their funds. But several debacles last year—such as emerging-market funds crashing in December, or safe-sounding short-term government income funds losing principal—have convinced the Securities & Exchange Commission that fund companies need to do a better job describing risk. The SEC's most controversial idea is to choose a single risk measure and require fund companies to provide it to shareholders. The industry has argued that all options for quantifying risk have limitations and could confuse investors. Instead, it suggests streamlining risk discussion in the prospectus and using charts and graphs.

INTIMIDATED. Industry members will continue the debate at their annual conference in Washington on May 17-19. But now, the SEC is interested in what shareholders think. It has asked the public for suggestions on how mutual-fund risk disclosure could be improved. You can obtain a questionnaire, which must be returned by July 7, by calling 800-SEC-0330.

There are many types of risk, but the SEC has focused on one kind: the risk of volatile returns. Academics have come up with many ways to calculate this, and the SEC is evaluating them to see which ones investors find most useful. When fund-searching, don't be intimidated by terms like beta, alpha, or standard deviation. You don't need to know how to calculate the numbers; fund analysts such as Morningstar Inc. and Value Line list most of them in their publications. And while the measures have limitations, they aren't hard to grasp. Use them to choose a fund after you've narrowed your search to a handful in the same class or see how your own funds stack up on risk.

Beta typically tells you whether your stock fund is riskier or tamer than the Standard & Poor's 500-stock index (or how your bond compares to a bond ind It works very well when use it to assess diversified uity funds that follow market, says Sheldon Jac who reports beta in his ne letter, *No-Load Fund In tor*. But because it meas risk relative to an index, doesn't mean much if benchmark isn't right. funds are very risky. since they don't move the stock market, they to have low betas.

Alpha, which is deri

example, based on month-
returns, the three-year
dard deviation of the av-
ge U.S. diversified equity
l is 9.84 percentage points.
d funds rate 5.15.
tandard deviation is use-
because it can give a

range of returns you can reasonably expect in a coming year. Returns for a fund with a standard deviation of 4 and an average return of 5% should fall between 1% and 9% two-thirds of the time. Some professionals argue that doesn't do you much good, since there's still a 1-in-3 chance the returns will be out of that range. Other critics point out that a fund that declines steadily month after month will have a low risk score, even though investors are losing money all the time.

MISLEADING. Since investors are mainly concerned with the risk of losing money, BUSINESS WEEK and Morningstar use a model that only takes into account investment loss. This measure looks at the amount a stock fund trailed the Treasury-bill return each month compared to the equity fund average (or muni funds to muni funds). But Stephen Savage, editor of *Value Line Mutual Fund Survey*, which uses standard deviation to calculate risk ratings, argues it's misleading to look only at the downside, since you can't achieve a high positive return without risk.

Of course, the simplest way to illustrate fund volatility is with a series of bar charts showing total return for each of the past 10 years. That's a move T. Rowe Price is making in its brochures and that the SEC also asks about in its survey. The problem is you can't use bar charts to compare different funds. T. Rowe Price is also starting to show a fund's worst quarter (assuming it was at least a 10% loss), so investors will recognize the potential for short-term losses.

Risk By Definition

STANDARD DEVIATION Looks at how much the fund's returns vacillate each month from its average return. The higher the number, the more volatile a fund is.

BETA Measures how the fund has performed relative to a benchmark (the Standard & Poor's 500 index for stocks, Lehman Brothers index for bonds). A stock fund with a beta of 1 matched the market. A fund with a 1.1 beta did 10% better in up markets, 10% worse in down markets.

ALPHA Compares a fund's actual return to its expected return, given its beta risk. A positive alpha means the manager did better than the fund's beta would predict.

DOWNSIDE RISK Looks at loss risk based on how much a fund trailed the return you'd have gotten from a risk-free T-bill. Morningstar's (and BUSINESS WEEK's) measure expresses fund risk relative to the average fund in its class, which equals 1. A rating of 1.35 means a fund underperformed 35% more than the average fund.

Risk-Rating Some Funds

MEASURE*	STRONG SHORT-TERM BOND	FIDELITY MAGELLAN	MONTGOMERY EMERGING MARKETS
STANDARD DEVIATION	0.74	2.86	4.71
BETA	0.52	1.04	0.7
ALPHA	–0.11	2.87	2.54
DOWNSIDE RISK	0.64	0.79	1.28
3-YEAR AVERAGE RETURNS	5.34%	13.8%	10%

*5/1/92 through 4/31/95

DATA: MORNINGSTAR INC.

There are some big problems with measuring risk based on historic returns. It certainly won't prepare you for major market events, like Mexico's meltdown, or last year's extraordinary bear market for bonds. If the fund changes managers or strategies, the historic performance may not be relevant. Also, "risk measures may not be typical if the fund isn't old enough," says Jacobs.

Ultimately, the ideal way to figure out the riskiness of a fund is to get inside the portfolio and examine the holdings. But since fund managers like to keep their strategies secret from competitors, the closest you can come is to glimpse a day's worth of holdings in the annual and semiannual reports. Morningstar and Value Line can help you get a handle on currency risk, derivatives, and, for bond funds, credit risk and average maturity.

For a year, some bond-rating companies have been assessing bond funds for risk. But sorting through the portfolio is time-consuming and costly, and only funds that pay for this service are rated. Plus, the National Association of Securities Dealers, which regulates fund advertising, recently decided these measures cannot be used in ads, since readers can interpret them as predicting future returns. Sanford Bragg, head of S&P's Managed Funds Group, says this "defies logic" when the SEC is trying to improve risk disclosure.

Even if the SEC finds a better way to disclose risk, an element of trust will always be necessary in mutual-fund investing. There are several ways to minimize risk when constructing a portfolio. Invest long-term, since that way you ride out cycles. Also diversify across asset classes. And you can reduce the risk that you'll put all your money in at the market high by dollar-cost averaging—investing a set amount of money at regular intervals.

Strong Funds' DeMartine says investors need to get over their fear of risk and look it "square in the eye." You'll need to learn how risk works in your portfolio. After all, if you want decent returns, you can't afford to run away from risk. *Amey Stone*

A MODERN GARDEN WITH GRANDMA'S SEEDS

GARDENING

Dissatisfied with produce that is rough and ready rather than tender and tasty, more backyard gardeners are getting to the root of the matter by planting heirlooms. These fruit and vegetable varieties, usually 50 years old or more, owe their existence to families who passed prized seeds down through the generations, like so many tintype photos.

Old-timers such as "Get Set Red" onions, "Pink Pearl" apples, and "Yellow Ruffle" tomatoes have heritages as rich and colorful as their family-given names. Furthermore, "their flavor is absolutely outstanding. That's why people were motivated to save them," says Craig LeHoullier, a research chemist who grows hundreds of heirlooms as a hobby in his Raleigh (N. C.) garden.

Hybrids, the mainstay of most commercial seed companies' inventories since World War II, are the result of intraspecies cross-breeding. Like cattle owners who pair their best stock to produce superior calves, breeders selectively pollinate plants to create exceptional seeds. However, what is exceptional to major seed suppliers may not be so to the backyard gardener. Large companies breed hybrids to suit commercial growers, who want seeds that ripen simultaneously and yield identically shaped produce with skins tough enough to survive the bumpy road to market.

Backyard gardeners want their harvests to spread throughout the season, are bored by uniformity, and needn't tolerate toughness since their produce doesn't travel. "Hybrids may have good timing, be good for shipping, and have good color, but the good taste and texture are missing," says Tessa Gowans, seed coordinator with Abundant Life Seed Foundation, which tracks down heirlooms and makes them available to the public through its catalog (table).

Organizations such as Abundant Life are few but far-reaching. Kent Whealy of the Seed Savers Exchange says his group's membership has doubled in the past five years. When he started Seed Savers in 1975 as a clearinghouse for endangered heirloom varieties, six people comprised its seed-swapper network. Today, more than 8,000 gardeners in 32 countries exchange seeds, cultivation techniques, and plant histories by referencing the 390-page *Seed Savers Yearbook*. The tome lists more than 15,000 rare and unusual fruits and vegetables along with names and addresses of members with seeds to spare.

Seed-saving networks also preserve plant varieties that might otherwise become extinct. Flight to the cities has left aging horticulturists with no land-owning heirs to pass their seeds on to. The networks help carry on strains brought to this country by

Optimize copying productivity with a systematic approach. Have high-volume document processing with unprecedented reliability. Be a part of The Corporate Line.

The Corporate Line of highly productive high-volume copying systems is one magnificent expression of Canon's visionary thinking.

For instance, the Canon NP 9850 Copier-Duplicator is a powerful high-volume, high-speed machine. It's the latest addition to The Corporate Line to feature sophisticated document handling and finishing capabilities. Furthermore, every machine in The Corporate Line, including the NP 9800, NP 8530, and NP 6060, is a monument to reliability and durability. In other words, they're built to maximize productivity, uptime, and output to meet the needs of your business—day in and day out.

Now, as never before, you can equip your entire office, from central repro departments to just across the hall, with Canon's system solutions and make today's most advanced office technology work for you.

When the rest say you can't, Canon says you can.

THE WEEK AHEAD

SING STARTS

day, May 16, 8:30 a.m. ▶ Housing s probably rebounded a bit in April, to nnual rate of 1.28 million, according to nedian forecast of economists surveyed ms International, one of The McGraw-Companies. A drop in fixed mortgage temporarily boosted home buying. The rise would be the first increase in ebuilding since December. In March, s plunged a surprising 7.9%, to a 1.21 on pace.

STRIAL PRODUCTION

day, May 16, 9:15 a.m. ▶ Output at ation's mines, utilities, and factories ably dropped 0.4% in April, after slipping 0.3% in March. That would be the first back-to-back decline in two years. The April drop is indicated by the fall in factory jobs and work time, especially overtime. Auto makers probably led the cutbacks in manufacturing output, but the weakness was widespread. Operating rates likely also slipped lower last month. The MMS forecast expects that the capacity utilization rate fell to 84.3% in April, from 84.9%.

INTERNATIONAL TRADE

Thursday, May 18, 8:30 a.m. ▶ The trade deficit for goods and services was probably little changed in March, from February's $9 billion. The MMS economists expect little change in either exports, which rose 2.4% in February, or imports, down 2% in February. However, because foreign-made goods accounted for some of the inventory buildup in the first quarter, imports may have fallen in March. That would mean some narrowing in the trade deficit.

FEDERAL BUDGET

Friday, May 19 ▶ The U. S. Treasury is expected to report a surplus of $38 billion for April. That's more than double the $17.5 billion surplus reported in April, 1994. Stronger income growth last year boosted individual tax payments due by Apr. 17, and the second installment of the 1993 tax hike on the wealthy was expected to bring in an additional $4.2 billion.

Database Marketing Discovery For Sales Executives!

Imagine finding a hidden universe with 40,000 emerging firms, mainly private but also subsidiaries of public companies. Last year one in six of these companies expanded employment by over 40%. These firms are creating new jobs and they have demonstrated a need for almost every kind of business product or service - everything from office equipment to disability insurance to real estate.

A little known sales tool that tracks these companies is making money for sales/marketing executives who use it. Taken from the CorpTech Directory of Technology Companies, this information on disk or in print can be easily added to a contact manager or other larger database for **unlimited annual use**. It's the only resource available that uncovers America's emerging sector of technology manufacturers. CorpTech gives you their names, geographic location, growth rates for each company, plus names, titles, and responsibilities of their 133,000 key executives.

"Great investment ... made money by quickly and easily identifying customers for specific products," Mike Mueller, Manager, Mitsubishi.

Free fact kit shows 20 money-making ways this sales tool can revitalize *your* selling efforts. Call 1-800-333-8036 or mail name and address to CorpTech, Dept BSW, 12 Alfred Street, Woburn, MA 01801.

BusinessWeek ONLINE

This Week, Online

Business Week presents frequent live conferences on America Online.

It's your opportunity to ask questions about features from the magazine.

Sunday: This is the week for BW's annual list of Hot Growth Companies. Talk about the top 100 with growth-fund manager Gary Pilgrim of PBHG and BW's Jane Sasseen. **May 14**
9 p.m. EDT in the Globe

Tuesday: Investing in science and technology—advice from T. Rowe Price's Charles A. ("Chip") Morris and BW mutual-fund guru Jeffrey Laderman. **May 16**
8 p.m. EDT in the Coliseum

Watch BW Online on AOL for other special events.

For a free trial diskette including 10 free hours on AOL, call 1-800-641-4848 and mention Business Week.

DON'T BACK DOWN ON JAPAN NOW

No one wants to start a trade war. But in the aftermath of the May 5 breakdown of the trade talks with Japan, the Clinton Administration's vow to impose sanctions on Japanese imports is a sad necessity. The U. S. must continue negotiating, but it must also show that it is serious about free trade—and that means imposing punitive tariffs on Japanese-made goods unless Japan agrees to substantially open its domestic auto and auto-parts markets to U. S. companies.

The key issues are clear. The U. S. auto and auto-parts markets are, for the most part, open to Japanese manufacturers, while the Japanese have made it hard for U. S. auto companies and their suppliers to compete there. For example, U. S. parts cannot be sold in most Japanese repair shops, cutting U. S. companies out of the lucrative aftermarket. As a result of trade barriers such as these, the U. S. is running a $37 billion deficit in auto and auto parts with Japan, almost 60% of the total bilateral trade deficit. Opening up the Japanese car market and requiring Japan to increase its purchases of U. S. auto parts would go a long way toward restoring the U. S. trade balance.

The outcome of this dispute may set the tone for world trade for years to come. There's much more at stake than simply the health of the U. S. auto industry or the size of the trade deficit. Asia's developing countries are intently watching Japan's strategy of closed domestic markets and aggressive exports. If the U. S. backs off now, it will send a signal that this sort of mercantilist behavior is acceptable.

The U. S. sanctions will likely target imported Jap luxury cars and minivans. That may cause some an for U. S. dealers who sell these vehicles. Neverthele pain at home is worth the price. If the tariffs are enough, Japanese exporters will start complaining lou their government. The Japanese bureaucrats who are ing progress in the trade talks are more likely to list Toyota Motor Corp. and Nissan Motor Co. than to Trade Representative Mickey Kantor and Commerce S tary Ronald H. Brown.

In the event of trade sanctions, the Japanese have t ened to bring action against the U. S. at the World Trad ganization. Aside from the fascinating spectacle of the po ing the kettle black, the U. S. shouldn't be worried. The is planning to bring its own case against Japan, whic U.S. has a good chance of winning. A more worrisome, likely, possibility is that Japan will retaliate, either by c off the supply of critical electronic components or by sl down their purchases of U. S. treasury securities, would drive up U.S. interest rates. Either one would t the worst protectionist impulses in Congress, leading to ther escalation of the trade dispute.

Free trade is the critical glue holding the post-cold-wa bal economy together. But it only works if everyone f the same rules. Countries that keep their markets should not expect easy access to the U. S. or anywhere That's a principle worth upholding.

SCALPELS, NOT AXES, WILL FIX MEDICARE

As the Republican Congress begins considering two versions of a fiscal 1996 budget, there will be much talk of "reforming" Medicare. The federal government's health-care plan covers 34 million elderly Americans at a cost of $178 billion this year and growing by 10% a year. The system is enormously expensive and rapidly going broke. But choosing the right approach to solve both problems will require some carefully crafted policy changes and some experimentation, not just wholesale spending cuts.

With Social Security off the table, Medicare is the only place where congressional budget committees seeking to eliminate the deficit by 2002 can find the big bucks. That's because expenses for the health entitlement have been growing faster than any other portion of the budget.

The question is precisely how to cut Medicare spending. The Senate budget proposal ducks the issue by suggesting a bipartisan commission, but the temptation of the budget-cutters will be simply to cut the rates at which hospitals and physicians are reimbursed for the care they provide. This solution, though, has been tried several times in the past and found wanting. The trouble is that hospitals and doctors have to make up for the decrease in fees by charging non-Medicare patients more and by increasing the numb procedures and tests for their Medicare patients. In the the Medicare bill keeps growing, while making health more expensive for everyone else.

Instead, Congress needs to change substantially the the Medicare program is run. That means trying a vari approaches to see which ones work best. In addition t ting Medicare fees, any reform should include significa centives for the elderly to join managed-care netw which should lower costs for the government. Seniors be given vouchers to buy their insurance or health and they could be encouraged to economize by bein lowed to bank the excess. Corporations that provide employees with health insurance should be urged to kee tirees in their managed-care networks, with Medicare pi up part of the tab.

Medicare needs to be fixed, whether Congress passes cut or not. But it won't be easy—and if the Republ simply hack away at the program, the result may be worse than what's there now.

PRIME SEATS ARE STILL AVAILABLE FOR THE SPORTING EVENT OF THE YEAR.

INTRODUCING THE NEW FORD TAURUS SE

It's the Taurus with a decidedly sporty edge. Taurus SE's cast aluminum wheels, new clear lens headlamps and available spoiler make a serious statement of style.

Inside, the SE has a long list of driver-friendly touches. Even air conditioning comes standard. And, of course, Taurus SE also gives you the added safety of standard dual air bags* and available anti-lock brakes.

But the SE's news doesn't end there. There's a refined powertrain that delivers an especially smooth performance from the computer-controlled V-6 engine. And when it comes to value, Taurus performs equally as well, as a better value than its leading competition.**

FORD'S ROADSIDE ASSISTANCE!

Help is only a toll-free call away if you or your family should have a flat tire, get locked out or simply run out of gas.

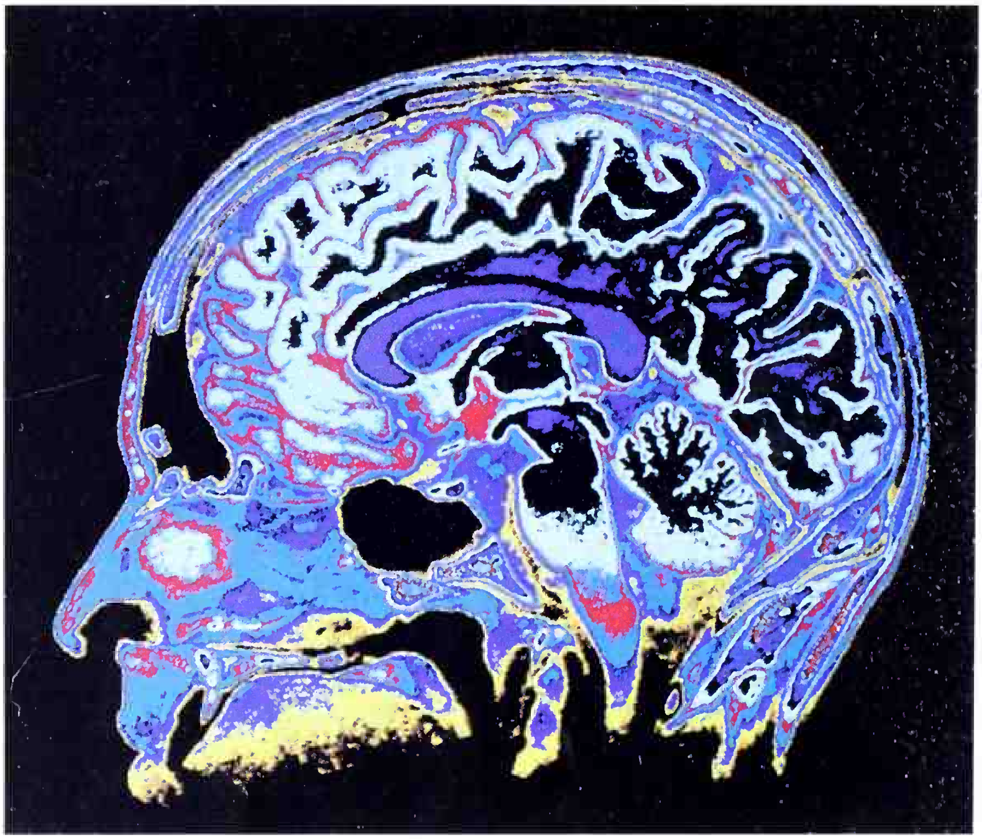
The new Taurus SE. Sit back, relax and enjoy the sporting event of the season.

*Always wear your safety belt. **Based on MSRP comparison of base Taurus vs. the leading sellers in its class. †3 years/36,000 miles. See dealer for details.

HAVE YOU DRIVEN A FORD LATELY?

Ford

1995. This is now.



This modern magnetic resonance image lets doctors see into the human body more clearly than ever before. It is a product of years of Siemens investment in research and development. Happily, you don't have to be a scientist to appreciate the results. Doctors, hospitals and clinics throughout America are giving their patients better care because of Siemens advances in many forms of diagnostic imaging, including ultrasound, magnetic resonance, nuclear imaging and computed tomography. And that's the kind of results we can all feel good about. **Siemens. Precision Thinking.**

The Mercedes-Benz E-Class Special Edition is for those who value innovation, engineering, durability and safety.

And stuff they don't have to pay for.

For years, everyone from passionate drivers to passionate magazine editors have heaped high praise on the Mercedes-Benz E-Class. (In fact, this year, the IntelliChoice® automobile survey named the E 320 the best import car value over $13,000*.) ¶ So now we're heaping thousands of dollars worth of stuff on a new E-Class Special Edition to make it an even greater value. And it'll only cost a little more than the regular E-Class. ¶ All told, nearly $2,900 worth of extras on the E 320 and E 300 Diesel you don't have to pay for. (Not to mention great savings on the E 420, too.) ¶ Just what people who seek exceptional value today could really appreciate. ¶ In short, the stuff dream cars are made of. ¶ For more information on the E-Class Special Edition, call 1-800-FOR-MERCEDES.

REVOLVING DOOR

HELLO, I MUST BE GOING

LIFE AT RETAILER MONTGOMERY Ward isn't any better the second time around. Just ask Ward's former president, Bernard W. Andrews, who on Apr. 18 quietly cleaned out his desk.

ANDREWS: *Third No. 2 to go since '93*

It was the second time Andrews quit. Both times, former execs say, Andrews left because of excessive meddling by Ward's fiery chairman, Bernard F. Brennan. After his first exit in 1990, Andrews joined electronics retailer Circuit City Stores. But after a steady stream of high-level defections, Brennan wooed Andrews back 16 months ago to fix the Chicago-based retailer's faltering apparel business, pledging that he wouldn't interfere again. "It's the same old thing," says a former Ward's exec. "Brennan promises them they'll be able to do their own thing, and then he doesn't let them." Andrews couldn't be reached for comment, and Ward's will say only that Andrews "left for personal reasons."

Andrews is the third No. 2 exec to leave since 1993. His departure comes as Ward's is in the midst of a hard-fought recovery. Its 1994 revenues rose 17%, to $7 billion, while earnings rose 14%, to $117 million. Little is known about Ward's management turmoil, because the company offers lucrative exit packages that are honored only if ex-execs stay mum for a long time. *Susan Chandler*

CRASH TEST

SCANNING FOR SCHEMERS

INSURERS ARE CRACKING DOWN on a pernicious form of fraud—staged car accidents. In this scam, con artists hire folks to cause a collision. The crooks turn a fender-bender into big bucks by inflating medical and legal bills. The schemes cost insurers millions and can cause injury to innocent motorists.

BANG-UP JOB: *Patterns emerge*

Finally, insurers are making a dent in the problem. In the past six months, 400 individuals in 12 states have been charged with filing fraudulent accident claims worth at least $25 million, says the National Insurance Crime Bureau (NICB), a nonprofit funded by insurers. How did they do it? By creating a database of 300 million records from law enforcers and insurers, NICB snoops search to see if the same address, driver's license, doctor, or lawyer appear on suspicious claims. "Common denominators begin to show up," says Glenn Wheeler of State Farm Insurance. "Then, you can start putting the pieces together." Since insurers don't share information directly, they avoid privacy and antitrust issues. *Amey Stone*

TALK SHOW "I think Orange County should be abolished frankly. That county is too good for the people who live ther"

—California State Assembly Speaker Willie Brown on county leaders' sluggishness in devising a bankruptcy-recovery plan

GOLDEN HARVEST

IT'S A-MAIZING: FOLKS CAN'T GET ENOUGH

CORN IS MAKING A COMEBACK—much to the surprise of Wall Street and to the delight of seed and fertilizer companies. Both had figured that last year's abundant harvest would cause farmers to cut back their crops in response to lower prices. Besides, how much corn could the world consume?

As it turns out, plenty. Of last year's colossal 10.1 billion-bushel crop, the feds expect the marketplace to gobble up all but 1.6 billion bushels. And 1996's surplus is forecasted to be even smaller. The high demand for products such as animal feed and corn syrup, coupled with strong exports, has driven corn futures up 26% since November, to $2.66 per bushel as of May 16. Seed fertilizer companies are ishing the boom. "For in tors, this is going to b great place to be," says vid Nelson of NatWest curities, who is bullish on oneer Hi-Bred, DeK Genetics, Potash of Saska ewan, and IMC Global.

Mother Nature has helped Corn Belt suppli A soggy spring dela planting, holding down yi and setting the stage f banner '96. Chicago-based goro will be ready, vows Robert E. Fowler Jr. The tilizer company recently quired a potash mine, panding capacity 60%. If weather holds up, corn fi could be popping up all the place. *Greg Bu*

CAR WARS

VOLKSWAGEN IS LEARNING CHINESE

JAPANESE AUTO MAKERS MAY have more to worry about than U.S. trade sanctions. Now, Volkswagen is after some of Japan's most loyal customers: Asian Americans. In a $1 million campaign, the German carmaker is running Chinese-language ads in papers and on TV in the San Francisco area. They aren't like the glamour promos of the U.S. industry, such as the one featuring soap opera queen Susan Lucci fawning over a Ford. Instead, VW's ads accent disk brakes and car frames. Stressing reliability and sturdiness, says VW's Ron Lee, is key to hooking Asian-American customers.

達177 磅／呎的剛勁
上或市區行車，

VW AD: *Big bet on a hard sell*

Volkswagen's initial ads, in such publications as *The Sing Tao* and *The China Press*, are aimed at Chinese Americans, the largest and wealthiest group of Asian Americans. A smaller effort courts Vietnamese Americans. But it will be a tough sell. In 1993, 59% of the cars a sampling of Asian-American drivers purchased were Japanese-made, with Toyota the most popular make, according to a survey by Asian Media Sales. By contrast, Japanese autos account for only 29% of the total U.S. market. Still, VW, which sells 97,000 cars in the U.S. annually, says its gamble could pay off big. The Asian-American population is expected to swell to about 11 million by 2000, up from 7 million in 1990. ☐

DIALING FOR DOLLARS

SNITCHING: THAT'S WHERE THE MONEY IS

WILLIAMS: *Someone sang*

IT TOOK EIGHT YEARS TO SNAG Johnny Madison Williams Jr., a robber who hit 56 banks for close to $900,000. The break came when banks in California, Texas, and Washington State ponied up reward money for tips. Four months after Williams' conviction, an anonymous tipster got $40,000 on May 3 for helping the feds find Williams, a.k.a. "The Shootist." (He liked to shoot up bank ceilings.)

That's quite a payday, since rewards average around $1,000. Even so, bounties and informant phone lines such as "We Tip" are credited with slashing bank heists. In Southern California alone, they plummeted to 1,200 in 1994 from 2,641 in 1992.

At Wells Fargo, rewards have also been used to combat frauds such as bad checks. Program director Lisa Wilhelm says the bank has saved at least $12 million since 1991.

As for Williams, he's behind bars serving a 92-year sentence. *Nanette Byrnes*

SMOKING: A NOT-SO-DIPLOMATIC IMPASSE

FAR FROM THE TRAVAILS IN Bosnia or Somalia, U.N. Secretary General Boutros Boutros-Ghali faces a pressing matter closer to home: smoking at U.N. headquarters in New York. He will soon review a proposal to snuff out smoking in most of the U.N. The problem is that many delegates and staff don't particularly cotton to people telling them to put out their butts. In the Delegates' Dining Room, for instance, a 1987 circular says "smoking will generally be discouraged." But ashtrays and matches are still on nearly every ta Even an outright ban smoking in small confere rooms isn't always honor

After all, the curity staff isn't powered to ar people who bi the rules. U.N. is also mune from N York City's covering pu places. Ta leaves peer p sure. Says Pe vian diplomat C ton Ibanes, smokes, but not while at U.N.: "So many peo stopped smoking that it become an antisocial hab Boutros-Ghali himself is ing to quit. *Peter C*

THE BIG PICTURE

WORKING IT OUT

The civil litigation boom may have peaked. After a steady rise for at least a decade, a new report shows that the number of cases filed in 1993 dropped to the lowest level in six years. The National Center for State Courts speculates that the drop is due to the increasing use of mediation and arbitration to settle business disputes, as well as to soft business conditions.

Readers Report

GENES: WHO MADE PROFITS THE PRIME CONSIDERATION?

Your article "The gene kings" (Cover story, May 8) is a typical mischaracterization and misunderstanding of how scientific research functions in the U.S. The two scientists that you espouse to be "kings" have no clothes, and their "achievements" come from the labor of thousands of dedicated scientists across the world who have built this technology that they are trying to exploit in a get-rich-quick scheme.

Your article does point out a rather unfortunate direction in the research community—a focus on profit over making a positive contribution. One thing is certain: The lawyers for these parties will get very rich.

Douglas Coffin
Great Falls, Mont.

Reading your article reinforced our commitment to examine the ethical issues that result from gene research and therapy. In addition to the legal ethics related to patenting gene sequences, a central issue surrounding gene therapy is how this technology affects patient populations. These ethical issues include the availability of gene testing to low-income patient populations, and discrimination by employers and health- and life-insurance companies toward people carrying a cancer or disease gene.

As medical technology progresses, the ethical application of these advances needs to be discussed.

Dr. Norman T. Mendel
City of Hope National
Medical Center
Duarte, Calif.

MISCAST

"The two scientists yo espouse to be 'kings' have no clothes, and their 'achievements' come from the labor o thousands of dedicate scientists..."

MAINSTREAM LIBERAL MEDIA: 'BLIND TO THEIR OWN BIAS'

hen was the last time the British were this excited about anything?

uch festivity is understandable.

Not merely because the 1995 Range over 4.0 SE is the first entirely new ange Rover in 25 years. But also because ere's never been a vehicle like it.

Off-road, its new 4.0-liter V8 engine, ong with second-generation electronic action control and all-terrain ABS, akes it easier than ever to gracefully nquer minor obstacles.

Like Guatemala.

And on-road, the new Range Rover not only puts other 4x4's to shame, it also out-amenities other luxury cars.

The fact is, from dual airbags to the Range Rover's unique electronic air suspension, we rethought, redesigned, and upgraded virtually 100% of every system, and every last feature and function in the Range Rover, to create the Range Rover 4.0 SE.

Of course, this new Range Rover also comes with a new price of $54,000.*

To understand why many people already consider this reasonable for a vehicle so exceptional, we urge you to call 1-800-FINE 4WD for a dealer near you.

After all, we may not come out with another new Range Rover until 2020.

RANGE ROVER

Always use your seatbelts. SRS/airbags alone do not provide sufficient protection.

deny that the liberal bias in the media exists.

The popularity of radio talk shows will remain high, and the credibility of the mainstream media continue to erode, until the mainstream media move their opinions off the front page and onto the editorial page where they belong.

WHY HEALTH CARE ISN'T FEELING SO HOT

The article "Sudden illness" (News: Analysis & Commentary, May 8) should serve as a wake-up call to all who espouse Health Maintenance Organizations and managed-care organizations as the ultimate solution for health care in this country.

While no one disputes the impact of HMOs and managed-care organizations on health-care costs, market forces and controls imposed by the government cannot work forever to their advantage. Presently, bureaucratic remedies (public and/or private) and arm-twisting tactics are forcing hospitals and health-care providers to accept bargain-basement rates resulting in huge profits for these organizations and in some savings for businesses. The 1% to 2% cost savings enjoyed by businesses, and the profits accumulated by these organizations to the tune of several billion dollars per year, are not sustainable in future years.

Streamlining health care in this country will take more than slogans and cheers. Rational debate rather than legislative fiat should prevail if real reform is contemplated.

Dr. Istrati Kupeli
Wellesley Hills, Mass.

WHAT DOES THE EEOC NEED? TEETH

As its past director of investigations, I read with interest your article "The EEOC: Too swamped to shoot straight" (Social Issues, May 1). I don't think it has ever been a question of shooting straight but rather of having the wrong weapons, not enough ammunition, and too few soldiers.

The Equal Employment Opportunity Commission was originally funded by Congress to handle 2,000 cases a year. When the EEOC opened its doors, there were 8,000 cases waiting, and the complaints haven't stopped since. It never has had enough money, and it never has had enough staff. Staff costs already consume 85% of its budget, its investigators are carrying workloads of up to 150 cases each, and productivity is high. So, there's not much room for improvement there.

CORRECTIONS & CLARIFICATIONS

"Mr. Bush heads for Hanoi" (Up Front, Apr. 10) incorrectly said the last U.S. President to go to Vietnam was Lyndon Johnson in 1966. Richard Nixon paid a five-hour visit there on July 30, 1969.

A chart in "Silicon Valley's other power elite" (Legal Affairs, May 8) about the investments of law firm Wilson, Sonsini, Goodrich & Rosati misstated the percentage of its portfolio committed to the life-sciences industry. It is 25%, not 30%.

In passing Title VII, Congress set up a complaint process for the EEOC to use but didn't give the EEOC any enforcement teeth where investigation of a complaint showed there was discrimination. A complaint process is extremely inefficient because the agency investigates discrimination based on who files a complaint rather than concentrating resources on employers and unions where there is evidence of discrimination.

To reinvent the EEOC, politicians would have to permit it to investigate without the need for a complaint. They would have to give it the authority to direct employers and unions to take corrective action rather than having to go to court each time an investigation shows the law is being violated. And they would have to adequately fund the agency to deal with its caseload.

John Rayburn
Silver Spring, Md.

HOT B-SCHOOLS HAVE COLD SHOULDERS

Your article "MBA madness is back" (News: Analysis & Commentary, May 8) certainly hit home. I applied to four of the top five BUSINESS WEEK-ranked B-schools and have received the standard rejection form-letter from three thus far. (I expect my fourth thin envelope any day now.) Stanford University Dean A. Michael Spence may claim to be comforting candidates, but I found no consolation in my "Dear Mr. Chow" letter that wasn't even signed by him.

I would expect that two years of senior management experience for a multinational company in China, consulting for the World Bank and foreign governments, founding a nonprofit organization at age 15 to raise $90,000 in six weeks, small-business expertise, multiple board-of-director experiences, and a 95-percentile Graduate Management Admission Test score would count for something. Guess not!

After spending hundreds of h
on the applications, I guess I'll
have to settle for a BUSINESS W
second-tier school.

HEADY BOUQUETS—AND A SHARP HEADACHE

LINE 'EM UP

The author contemplates a selection of reds at the Vinitaly competition, a showcase for premium winemakers

It's 9 a.m., and I'm on my, let's see now, fourth bottle of Chianti. I'm not a lush (yet), nor am I trying to relieve the stress of working for BUSINESS WEEK's Rome bureau. I'm taking part in one of Europe's toughest wine competitions: Vinitaly, a three-day affair in which almost 1,000 wines will be sampled in a splendid 16th century villa in Verona.

Unlike the other 60 members of the international jury—mostly distinguished wine writers and cellar masters from as far away as New Zealand—I am no oenophile. My appreciation of the grape is of the instinctive, tastes-O.K.-to-me school. But the powers that be at Italy's Foreign Trade Institute apparently viewed my potential readership as credentials enough. When they asked me to sit on a panel of wine experts, I just couldn't refuse.

So here I am, marinating in some of Italy's finest wines: Barolos, Barbarescos, Brunellos. They are becoming a must in fancy restaurants from New York to the Seychelles. Thanks to giant leaps in quality throughout the 1980s, upmarket Italian wines—those that retail at $20 or more—are gaining on their more prestigious French cousins. In the process, a big market is developing for the more affordable midlevel brands.

In fact, the whole point of this somewhat pompous competition and the gigantic wine fair that follows is to lend luster to lesser-known quality wines and dispel any lingering stereotypes of Italian wine as cheap plonk. Says Pablo Harri, marketing director at U.S.-owned Banfi Vintners in Montalcino, winners of the competition for the second straight year: "We're fighting a distorted image of Italian wine as low-brow, ordinary table wine."

Victory may be at hand. Because of their surging popularity, "some 'Super Tuscans,' such as a 1990 Sassicaia, are almost impossible to find in New York wine stores," says Edward V. McCarthy of New York-based *Wine Enthusiast*. In addition to such premium wines, even some lesser Italian stars are getting scarce on shelves and racks, despite the fact that 45% of America's wine imports are from Italy.

But running out of wine is the least of my problems. A battalion of sommeliers, with what look like oversize tea strainers dangling around their necks, march into the room carrying dozens of anonymous, hooded bottles. I sniff, slurp, and swallow. At first I can't bring myself to expectorate the wine—maybe because my mother always told me ladies don't spit. Anyway, this sample doesn't convince me. It smells like soap.

If the Italian vintners don't do better impressing the real experts here, their industry—the world's largest—could suffer. The Italians' move upmarket is aimed at keeping ahead of a flood of cheap wines from South Africa, Chile, and Australia. Companies that bottle cheap and cheerful Lambrusco, such as Cantine Cooperative Riunite in Reggio-Emilia, are having to upgrade their product or risk having sales evaporate. So they are making big investments in wooden casks, innovative vinification methods, and experimentation. Already, upmarket wines account for 17% of total Italian wine production, compared with only 10% in 1985, according to the Milan-based producer group Wine Union.

SOGGY NORWEGIAN. But defending the honor of good *vino* isn't enough. Italian wine houses are also having to rethink their marketing strategies to meet growing overseas demand while domestic sales languish: Wine consumption in Italy fell from 120 liters per capita per year in 1985 to 50 liters today as health concerns prompt Europeans, particularly the younger ones, to drink less wine—but wine of a higher quality. Florentine winemaker Marchesi de

How Apple is making it easier to move a refrigerator like this.

Today's sales environment is more competitive than ever. Which is why Whirlpool armed its field force with the ultimate sales weapon: the Macintosh® PowerBook® computer.

The reason? Says Erv Barnes, "After evaluating all the notebooks on the market, we chose PowerBook because it was by far the easiest for any salesperson to learn. Instead of becoming a doorstop, the PowerBook is being adopted by the field with unbelievable enthusiasm."

Salespeople are able to tap into Whirlpool's information base at the home office to get competitive information, pricing, inventory data—instantly, during a sales call. This way, they can answer questions more quickly and accurately, make better-informed decisions, appear more professional and, ultimately, close more sales. Plus, with the built-in multimedia capabilities of the PowerBook computer, salespeople can show videos and animations, making a normal sales presentation more persuasive than ever.

All of which can give your salespeople a new power, too. The power to be more responsive, more productive, more effective. The power of Macintosh. The power to be your best.®

Director of Information
Technology, and
Ed Herrelko (right),
Executive Vice President
of Group Sales, at
Whirlpool Corporation,
Benton Harbor, Michigan

"Making the sale means having the answer. With this computer, we can get the information our customers need, right on the spot. Making the sale means being persuasive. By delivering presentations on the PowerBook, we can get our point across with enormous impact. Combine this with the fact that it works with our mainframes, Intel-based PCs and Windows, and we're talking about a tool that's not just giving us a competitive edge. It's transforming the way we do business."

–Ed Herrelko
